As a sequel or continuation of the 'Ancient Nahuatl Poetry,' containing twenty-seven Mexican poems and published in 1887, Dr. Brinton now presents to the scholarly student another series of twenty shorter poems, which originated among the same people. The editor discovered them in two manuscripts containing the works of one of the earliest missionaries among the Mexican natives, Bernardino de Sahagun, whose importance for the mythology and customs of the Nahua exceeds that of any of the contemporaneous or later writers on the same subject. Sahagun had mastered the Aztec language so thoroughly that he found no difficulty in composing his 'History of New Spain' in that language, from which he afterwards made the Spanish translation which now forms the base of our printed editions. These editions do not by any means contain the complete works of Sahagun; the Laurentio-Medicean Library in Florence, however, owns a complete copy of the Nahuatl original in three volumes, beautifully illustrated with 1,378 pictures, most of them colored. From this manuscript Brinton copied the twenty "hymns" in April, 1889, but in his preface he omits to tell what connection these songs hold to the text of Sahagun's work. These same songs he found in an older Nahuatl manuscript of Sahagun, preserved in the library of the King of Spain in Madrid. From this Dr. Brinton copied a continuous Nahuatl gloss or text explanatory of the songs, which is wanting in the Florentine manuscript, and also extracted a few *lectiones variæ* of the texts. The five illustrations of divinities or their symbols mentioned in the songs are taken from the Florentine codex and appear there in colors, being probably reproduced from hieroglyphic books in which the Nahua used to record their ancient lore.

The items belonging to each song are presented by the editor in the following order: Title in Nahuatl, as Tlalloc icuic ("of Tlaloc his song"); Ixcoçauhqui icuic ("of Ixcoçauhqui [the fire god] his song"); text of the song, divided into paragraphs, and followed by variants and the corresponding gloss; Brinton's attempted translation; notes explanatory of names, antiquities, etc. The deities are represented very characteristically in the pictures; we see among them the rabbit-gods Totochtin, regarded as the genii of the drunkards; the god of the silversmiths in his festive array; and the goddess of food and drink, Chicomecatl ("seven guests"). Colors in Mexican paintings are always significant, and hence Brinton's photographic reproductions of them lose considerably in value.

Most of the songs presented in this volume seem to be of a ceremonial character, and have little or nothing religious in them. There are also drinking, dancing, and travelling songs among them, and nothing can be more misleading than to call them "hymns" and to compare the collection with the contents of the Rig Veda, which is preëminently religious in its character. The "Rig Veda Americanus" of the title-page is grammatically correct as to its masculine gender, but on page 13 *Veda* suddenly appears as put in the feminine—"Rig Veda Americana"—and in large type too. This mistake of the Philadelphian "professor of linguistics" is fully equalled by another mistake of his. Of Centeotl, the deity of maize-crops of the earth, and of fertility, he makes a god, whereas all the ancient Mexicans, especially the Totonac people, worshipped this deity as a *goddess* and not as a male god.

The wording of some songs in the collection is extremely obscure, which is partly caused by the faulty condition of the text and gloss. Obscurity is also a characteristic of the songs of our Northern Indians, and many of these can, on account of their archaism, laconicism, and apcsiopesis, be understood only when the Indians who make or sing them give a full explanation of each term and sentence. The gloss of several poems in Brinton's collection is still more obscure than the text, and often manifestly incorrect. The English paraphrase furnished by the editor to every song does not, under these circumstances, pretend to be accurate in every word or verse, and we can reasonably suppose that it often strays far from the true meaning.

When texts so full of errors and inconsistencies as this have to be edited verbatim from the manuscript, the errors should at least be corrected throughout in foot-notes or commentaries; or the editor might publish the corrected text, and then add the readings of the original in foot-notes. Brinton simply prints the faulty text of the original verbatim, and then lets the studious reader shift for himself in unravelling the enigmas which such a text involves. Corrections are suggested in a few instances only in the notes and in the glossary appended.

To give a few instances, the editor prints: Quetzalcalla, house of the Quetzal, equivalent to 'place of joy,' and tetzaubpilla, 'master of fear,' not only in the text and the gloss, where he found these forms, but also in his glossary, although he ought to know that calli and pilli are the only correct forms for *house* and *master*. Tlaxotla, page 15, he declares to be the passive form of tlaça, 'to hurl,' 'to throw'; but the grammars of Nahuatl do not show any passive forms in -tla, for -lo and -ua are the principal passive endings. Carochi mentions, as the passive form of tlaça, tlaçalo *or* tlaço. Sometimes the pronoun ni, 'I,' is written separately from the verb to which it belongs; sometimes both are written as one word, as on page 36. The sentence vii., 6 (same page), should be made more intelligible to students by adding its correct orthography in a note: tlachtli ica paca aya, uel in cuica aya, quetzalcucux aya, quin nanquilia Çinteutl, a-aay. So, also, should the orthography toçiquemitla, yya be discussed in a note and the correct form given: toçiquemitl aya, the first word being the compound term to-çitl-quemitl, 'the vestment of our ancestress.' On page 18, "can" should be spelled çan, 'only.' In using the terms "metastasis" instead of metathesis and "sandles" for sandals Dr. Brinton enriches the English language in a way that is quite unexpected.

Those who are desirous of studying the historical, metrical, and artistic side of Mexican poetry will find ample material in Brinton's 'Ancient Nahuatl Poetry,' the most complete sketch on this subject heretofore published.

Natürliche Schöpfungs-Geschichte. Gemeinverständliche wissenschaftliche Vorträge über die Entwickelungs-Lehre im Allgemeinen und diejenige von Darwin, Goethe, und Lamarck im Besonderen. Von Ernst Haeckel, Professor an der Universität Jena. Achte umgearbeitete und vermehrte Auflage. Berlin: Georg Reimer; New York: Westermann. 2 vols. 8vo, pp. xxx, 832.

Earlier editions of Prof. Haeckel's 'Natural History of Creation' have made it very well known. It has been translated into a dozen languages, a distinction based on real merit. Whatever the ultimate fate of some of his theories or of some of the hypothetical steps in his scale from spontaneous generation to the highest zoölogical developments, our author's work ranks with the most valuable at present on the shelves of the naturalist's library. The fact that it has already been reviewed and discussed so often renders extended comment on the matter in general unnecessary.

The twenty years or more that have passed since its first appearance have been those of most rapid scientific progress, and the changes made, on account of the advance, in successive editions of this book, give something of an idea of the character and extent of the impulses and movements effecting evolution in science. The present arrangement of the matter, though modified in some respects, is not essentially different from the former. "Allgemeine Entwickelungs-Lehre (Transformismus und Darwinismus)" is an explanatory title given to the first volume; the second bears that of "Allgemeine Stammes-Geschichte (Phylogenie und Anthropogenie)." Originally there were twenty chapters, the last previous edition had twenty-four, the present has thirty. From the first to the seventh, mainly of an historical character, including discussion of the views and theories of Linnæus, Lamarck, Kant, Goethe, Cuvier, and many others, the text has a familiar appearance; from the eighth to the fifteenth,

on transmission, adaptation, selection, divergence, etc., it has been so much extended and modified as practically to have been rewritten.

In the second volume (discourses sixteenth to thirtieth), in connection with the author's phylogenetic system, genealogical trees, and kindred topics, modifications and additions are numerous. The drift of radical Darwinians in the last decade towards the speculative and metaphysical has made demands upon Haeckel for space and discussion, but we do not see that he has been in the least carried away by it. His position agrees with that of the conservatives who look up to Herbert Spencer as chief among evolutionists; who consider Darwin's great work to have been the establishment of Lamarck's theory of descent by means of the theory of selection; who see in natural selection one of a number of factors in organic evolution; who firmly believe in the inheritance of acquired characters, etc., etc. Haeckel's bias is towards the monistic, the materialistic, and mechanical; he has no interest in the spiritualism of Wallace, and is really a much better exponent of the Darwinism of Darwin. The comprehensiveness of his plan, and the excellent manner in which it has been carried out, involved treatment of the views of many of the more important investigators; in the main the references are fair, to his favorites often complimentary. The most of the citations direct the reader to the 'Generelle Morphologie der Organismen' by Ernst Haeckel. While we may not subscribe to various theories and conclusions, or accept certain links in his chains (suppositions concerning derivation) as more than mere expedients and approximations finally to be swept away by the tide of investigation, there is, in our opinion, no equally comprehensive work the knowledge of the contents of which will be more beneficial to the student, or that will put him in possession of a better idea of general zoölogy, than the subject of this notice. Its popularity and usefulness in some circles might have been increased by omission of flings at thoughtless and ignorant opponents, sneers at religion, the clergy, "der unfehlbare Papst," and especially of a few somewhat bitter allusions to contemporary authors. Whether consequences of wounds inflicted by them or of injuries done his opponents by the author, a reader neither knows nor cares; he only gets from such expressions a glimpse of narrowness and spitefulness that detracts seriously from an otherwise flattering estimate.

The Theory of Credit. By Henry Dunning Macleod. Vol. II., Part I. Longmans, Green & Co. 1890.

WHAT Mr. Macleod has here to say about the exchanges is not without value, although there is little in it that is new. The remainder of this book, however, is almost entirely vitiated by several fundamental fallacies, and the whole of it is disfigured by the overweening conceit of the author. Mere vanity, even if as egregious as his, is not an unpardonable sin; but when accompanied with glaring misrepresentations of the views of others, expressed in very abusive language, it passes toleration. Mr. Macleod's mildest expression, when criticising a current opinion, is that it is a complete error, and some of Mill's conclusions—which, we may parenthetically observe, are as little affected by Mr. Macleod's vaporings as the pyramids by the winds that blow about them—are denounced as dogmas of "preposterous folly," which can meet with no acceptance from statesmen or practical men of business. In fact, Mill's reputation as an economist "is now utterly exploded among all intelligent persons."

A single illustration will suffice to show either the dishonesty of Mr. Macleod's practices or the confusion of his thought. He quotes Mill as saying, "The uses of Money are in no respect promoted by increasing the quantity which exists and circulates in a country; the service which it performs being as well rendered by a small as by a large aggregate amount." He then exclaims: "But is it not possible to develop new works and new industry by means of introducing new Capital? According to this dogma, the introduction of new Capital into a country can do it no service." It would be easy to fill all our space with instances of misrepresentation quite as disgraceful. He caps the climax of this absurdity by asking the question: "Has not the prodigious increase of the Wealth of Scotland during the last 150 years been due entirely to the Cash Credits of the Scotch Banks?"

As a rule Mr. Macleod's statements are as inaccurate as they are positive. Even in speaking on a subject of all others requiring preciseness, that of the exchanges, he declares in the first place that there is, as near as possible, one-fourth more pure gold in an English sovereign than in a Napoleon; then that if the English sovereign were taken as the standard, it would be equal to 1.25 Napoleons; and finally that the English sovereign is, after all, not exactly 1.25 Napoleons. We are told many times that the legal relation between Banker and Customer is *simply* that of debtor and creditor; but we are elsewhere informed that the customer constitutes his bank his agent, and again that there is another important distinction between an ordinary debtor and a banker debtor. After listening to numerous sneers at the "pure delusions" of other writers and many contemptuous references to their vagueness of thought, we are presented with the following specimen of exact definition, occurring in an account of what is done with notes and checks: "The customer himself, or the holder of the note or check, may demand payment of it: if they do so, the banker's liability is extinguished." If this be law, we need not wonder at the fortunes made in banking. It may be urged by the merciful reader that it is easy to see what the writer means. We are not so sure of that, having looked over his whole exposition; but even if it were true, it is to be remembered that we are dealing with an author whose pages are crowded with bitter reflections upon those who express themselves inaccurately concerning these subjects.

The greater part of Mr. Macleod's confusion is due to his disregard of the distinction between money and capital and to his misconception of the nature of credit. A bank is not a "manufactory of credit," as he supposes. Credit existed before banks, and banks are but the instruments through which the credit that already exists is utilized. Credit is the belief that a man will pay what he says he will, founded upon the fact or the belief that he has or will have sufficient property to enable him to pay. If this property consists of promises to pay, these must eventually have a material basis. A, who has known material possessions, endorses B's note, believing that B has or will have sufficient goods to meet it. C exchanges his wares for this note, believing that between A and B he is safe, and then passes the note to his banker, believing that his banker is able to pay all demands that will be made upon him. The banker, if he is accommodating, acknowledges his indebtedness on his books to C, or, if he is cautious, postpones this acknowledgment until he has collected the note, or stipulates that C shall add his guarantee to that of A. Then C's banker sends the note to B's banker, and gets money for it or cancels a debt with it, B having meanwhile paid his banker money or other paper having a like history, the process being interminable. Here is much credit and many debts, but the entire transaction is based upon the existence of material property somewhere to the amount of the note. It may not prove to be in A's possession or in B's possession, but in that case it will prove to be in possession of C or of the banker. If C, as we supposed, delivered wares for the note, there we find the material basis at once; if the note was accommodation paper, we may not be able to tell where it is, but it is somewhere—generally, when things go wrong, in the possession of the bank's stockholders.

Now, the debts created in transactions of this general character are considered by Mr. Macleod to be wealth: "The mere will of man has created vast masses of wealth out of nothing." The contemplation of the results arising from this proposition naturally throws him into paroxysms of amazement over the stupidity of those who are suspicious of the magical character of this wealth, and leads him to statements that remind an American reader of the fanatical appeals of our colonial advocates of paper money. Of course he holds that public debts are public wealth, and, as a corollary, that "every person's income is paid out of the income of some one else." It would seem that a tiller of the soil who satisfies his own wants would therefore have no income. After this it need occasion no surprise that Mr. Macleod should explain the fall in the rate of interest from 20 or 25 per cent. to 3 per cent. as due to the increase of banking credits.

A study of the following sentence throws the fallacy of this theory of credit into clear relief: "Now if it be admitted that Money expended in agricultural improvements is used as productive capital, how can it be denied that credit employed in exactly the same way, and which produces exactly the same effects in every way as Money, and produces exactly the same profits, is also equally productive capital?" Mr. Macleod deceives himself with words. It is not money that is expended in agricultural or other improvements. When they are completed, there is just as much money as there was before. What is expended is the labor of men and beasts, food and clothing, spades and ploughs, carts and harness, and many other tangible things. If the soil were upturned with ploughs made of gold coin, and pulverized with harrows made of bank-notes, Mr. Macleod's theory might be admissible. With the facts as they are, we can only say that it is the same old will-o'-the-wisp that has deluded so many ambitious financiers.

The Agamemnon of Aeschylus, with an Introduction, Commentary, and Translation, by A. W. Verrall, Litt.D., Fellow of Trinity College, Cambridge. Macmillan & Co. 8vo, pp. lxii, 272.

EDITIONS of the 'Agamemnon' appear so frequently—the present is the fourth one, each by a different editor, published within a few years by Macmillan—that one more would ordinarily call for nothing further than an announcement of its publication. Not so with Dr. Verrall's work. He had previously published an edition of the "Seven against Thebes," and he says: "This edition of the 'Agamemnon' is the second instalment of that edition of Aeschylus which I hope to com-

plete in course of time." He adds that the present volume "was commenced long before" the other and has been "frequently rewritten." The result of this long and patient study is an entirely new interpretation of the drama as a whole.

The plot of the "Agamemnon" has always been explained in accordance with an "hypothesis" prefixed to it by some Byzantine grammarian or scholiast of unknown name and date. This plot, Dr. Verrall asserts, and in our opinion proves, is full of glaring, gratuitous, and useless inconsistencies, absurdities, and impossibilities. It violates all the rules of dramatic art, more especially of Greek dramatic art, and is contrary to the practice of Aeschylus himself as exhibited in his other extant dramas. Two questions immediately present themselves: first, how came the author of the "hypothesis" to give an absurd explanation of the story of the play? and, secondly, why have all the modern editors acquiesced in this explanation? It is precisely in answering these two questions that Dr. Verrall makes his strongest point. He says that the Byzantine scholiasts "never read the play as literacure at all." They searched the text for strange words, archaic forms, obsolete meanings; but for the drama as a whole, as the fruit of constructive poetic genius, they cared nothing at all. They studied the play from a purely grammatical and lexicographical point of view. In regard to the point of view of an Athenian audience witnessing its performance, they knew nothing and cared nothing. Of the complete indifference of the Byzantine critics to the structure of the play, and of their utter want of artistic sense, there is a remarkable proof. That each of the *dramatis personæ* should speak the words which the poet intended he should, would seem to be of the very essence of a play. The Byzantine critics cared nothing for this. So careless were they that no modern editor has paid any attention to the manner in which they arranged the dialogue, whenever the sense seemed to demand a different distribution. An editor who should scrupulously reproduce their divisions of the MS. would be regarded by both critics and readers as a fool. Dr. Verrall thinks that their exposition of the plot should be treated with equal contempt.

Turning now to the second question, Why have modern editors acquiesced in the Byzantine interpretation? Dr. Verrall says that this acquiescence has been more apparent than real. The earlier editors were necessarily and rightly occupied with preliminary linguistic and grammatical difficulties. It is only within the memory of living men that the play has been studied as a whole and not piecemeal. Dr. Verrall thinks, and brings a mass of evidence to show, that most, if not all, the editors who have studied the play with reference to its structure as a dramatic whole to be explained according to the Byzantine "hypothesis," have been as well aware of its absurdities and impossibilities as he himself. He does not claim to be the first discoverer. But these editors failed to ask themselves whether the Byzantine interpretation was necessarily the true one. They have endeavored to make the best of it. In order to do this no one of them has ever dared to tell that story fully and frankly. Such of its absurdities as they could ignore without attracting the attention of their readers, they have ignored. Those that were too manifest to be passed over in silence, they have softened down and glozed over and then withdrawn from notice by calling attention to the "deep moral feeling" of the play, its "bold delineation of character," its "splendor of language," its "resounding rhythm." In a word, they have endeavored to hide the nonsense of the plot under the nobleness of the poetry.

Dr. Verrall then proceeds to do what no editor has yet ventured to do, to tell "fully and frankly" the story of the "Agamemnon" as it was conceived by the Byzantine critics, and as it has, with more or less suppression, been adopted and taught by modern editors and professors. Having thus exposed its absurdity and impossibility, or, rather, having allowed it to expose itself by telling it in full, Dr. Verrall throws it aside as unworthy of a third-rate modern playwright, and proceeds to give the story as he understands it, and as he believes the Athenian audience who listened to it and awarded it the highest prize understood it. In this process of interpretation, the history of the Greek drama, the place which Aeschylus occupies in that history, the story of Agamemnon after the fall of Troy as it is related by Homer in different places in the 'Odyssey,' the points of difference between the Greek and the modern drama, the great dissimilarity in the conditions under which an Athenian audience listened to the first presentation of a new play and those under which a modern audience listens, and many other matters which we have no space to allude to, are all brought to bear upon the interpretation of the story. And what is the result? The absurdities become logical sequences, the inconsistencies are all reconciled, the impossibilities vanish, and the drama as a whole stands before us a consistent and symmetrical creation of the highest dramatic genius, worthy to take a place beside the best historical plays of Shakspere.

It is worthy of notice that Dr. Verrall, in supporting his view of the play, has not, even in the smallest degree, tampered with the text. On the contrary, he prides himself on the fact that for a long time no editor has adhered so closely to the MS. reading as himself. He goes even further. Comparatively few and slight as are his deviations, yet, he says, if he were to go over it again he would adhere still more closely to the MSS.

His book has two appendices. The first contains minute examinations of twenty-six passages, which, from their length, could not conveniently be included in the commentary, although they form an essential part of it. They are remarkable specimens of wide reading, acute criticism, and keen insight into the subtleties of the Greek language. The second appendix treats of the metres of the play in accordance with the principles of J. H. H. Schmidt. Then follows an English prose translation of the entire play. Dr. Verrall has not prefixed the epithet "literal" to his translation; and while it fairly represents the text, in details it is very free. Any "bad boy" who should attempt to use it as a "pony" and to "crib" translations of difficult passages from it, would pretty surely come to grief. Two indexes, one Greek the other English, complete the volume.

Four Years in Rebel Capitals. By T. C. De Leon. Mobile: The Gossip Printing Co.

A PARTICIPANT'S account of stirring events has a quality of personal interest not belonging to more ambitious history. In this way these pages may attract more at the North than at the South. For four years the social and civil life of an enormous part of our country was hidden behind a more than Chinese wall. Northern society was only incidentally affected by the war for the Union, but at the South all was changed. The curious mental effort to imagine themselves foreigners first of all had its subjective effect on Southerners. Then their self-built barriers led to the usual consequences of inclusion and isolation, and very soon the pressure of want, doubt, and impending failure, combated by pride, did mould them into a peculiar if not an alien people.

The author disclaims writing history; but every now and then he brings into notice conditions generally ignored by those who looked upon the South as a nation spontaneously in arms. Against the judgment of Mr. Davis, the earlier troops were accepted for twelve months, instead of for three years or the war. But when the winter of 1861-'62 had passed, "fifteen months of quiet endurance of hardship, danger, and doubt . . . had done their work," and enlistments could not be stimulated. While "the soldiers of the South were more anxious than ever to meet the foe," "they had a vague feeling that they must fight nearer home," and "each yearned for the hour when he would be free to go and strike for the defence of his own hearthstone." So, with the wisdom of the serpent, the Conscription Act of April 16, 1862, was passed, Sumter one year old. As the writer naïvely remarks: "It retained, of course, every man already in the field, and its intent was to put in the army every man in the country between 18 and 35." He frankly adds: "Had the men whose time expired been once permitted to go home, they could never again have been collected"; and this before any really hard fighting had begun. With the Conscription Act was coupled a Bill of Exemptions that fully justified the cry that it was the rich man's war and the poor man's fight. In September, 1862, the conscription age was extended to 45; and later all exemptions were abolished (on paper), and, still later, lads from 16 to 18 and men from 45 to 60 were drafted as home-guards, and sometimes actively served as such. It does no harm to recall occasionally the kind of unanimity with which the South maintained its lines.

The most interesting of the serious chapters are those treating of the failure of the Confederate currency. The plan that Secretary Memminger did not adopt, but which the author puts forth as the true one pressed upon him by business men, namely, to buy up with Confederate bonds all the cotton in the country in 1861, to ship it to Liverpool, and to sell it there at rapidly increasing prices for gold, hardly recognizes the factor of transportation and entirely ignores free-will in the planter. The latter might have been dispensed with, but not the former.

The writer adds really little to our knowledge of men or measures, but he throws some side-lights upon the fashion and opinion of those days, upon the gayety of Richmond and upon its sorrows. The rage for speculation with a valueless currency, the influence of the gambling hells as the days grew darker, the innocent dissipation of the city where woman sought to lighten the hardships of the field—all have their place. The book does not all run in one vein, and much of it is fourth-rate. But the comments upon Davis, his Cabinet and Congress, upon the generals on both sides; the transcript of popular feeling in Richmond, as Big Bethel, Rich Mountain, Manassas, Hatteras Inlet, Fort Royal, Mill Springs, Roanoke Island, Newbern, Donelson, opened the way for the deadlier conflicts; the elation and the gloom of the populace, and the evident despair of the more intelligent long before the close of the war was in sight—are worth reading.

Newspaper Reporting in Olden Time and To-day. By John Pendleton. A. C. Armstrong & Son. 1890.

THIS little volume appears in the "Book-Lover's Library," and, so far as material embodiment is concerned, it is not unworthy so to appear. But its substance is of the slightest. There are a few extracts from the "Acta Diurna," supplied originally by Dr. Johnson to the *Gentleman's Magazine*, and then we pass on to the seventeenth century, when the newspaper as we know it had its beginning. But of its development we are told nothing, and it is not until the subject of reporting in Parliament is reached that the author—who writes from personal experience—has anything to say. Even here we find nothing that has not been told before, except perhaps some of the incidents and traditions of "The Gallery," and the chapter on "Reporting To-day in the House," where we have a cut showing the allocation of the representatives of the various journals. Most of the stories are old, but we do not recollect seeing this rather striking anecdote of Peter Finnerty, the manufacturer of Wilberforce's famous "potato speech." For a libel upon Lord Castlereagh, Finnerty was imprisoned for eighteen months, and upon his release Lord Castlereagh, seeing him in the street, went up to him and bluntly asked him how he was. "Well enough," Finnerty replied, "to hope to live to see the day when you will cut your throat." Some years after, the hope was realized.

The chapters upon shorthand and the reporter's work amount to nothing, and that upon reporters' experiences is the lightest of gossip. The stories of reporters' errors and printers' blunders are entertaining enough, and might serve to fill the "funny column" of a newspaper, but need not be quoted here. The book evidently cost the author no great labor, and it should be reserved for the very idlest of half hours.

BOOKS OF THE WEEK.

A Dead Man's Diary, Written after his Decease. Ward, Lock & Co. $1.
Allen, W. F. Tacitus: The Annals. Books I–VI. Boston: Ginn & Co.
Andrews, Jessie A. Etecocles: A Tale of Antioch. Lew Vanderpoole Pub. Co. $1.
Barret, F. A. Smuggler's Secret. John W. Lovell & Co. 50 cents.
Briefe über Merkwürdigkeiten der Litteratur. Stuttgart: G. J. Göschen.
Carrol, L. The Nursery "Alice." Macmillan & Co. $1.50.
Craig, Mary A. The House by the Medlar Tree. Harper & Bros.
Deighton, K. Shakespeare: The Merchant of Venice. Macmillan & Co. 40 cents.
Elementary Schools: How to Increase their Utility. London: Percival & Co.
Expatriation. D. Appleton & Co. 50 cents.
Hardy, A. S. Elements of Calculus. Boston: Ginn & Co. $1.65.
Hetherington, Helen F., and Burton, Rev. H. Paul Nugent, Materialist. E. P. Dutton & Co. 50 cents.
Jarvis, T. S. Geoffrey Hampstead. D. Appleton & Co. 50 cents.
Kipling, R. The Phantom 'Rickshaw, and Other Tales. John W. Lovell Co. 50 cents.
Landon, Beatrice. Tempted. The Minerva Publishing Co. 25 cents.
Lawless, Emily. With Essex in Ireland. John W. Lovell Co. 50 cents.
Lee, Margaret. A Brooklyn Bachelor. Frank F. Lovell & Co. 50 cents.
Lee, S. Stratford-on-Avon. Macmillan & Co. $2.
Lelsewitz, J. A. Julius von Tarent. Stuttgart: G. J. Göschen.
Linton, E. L. Sowing the Wind. John W. Lovell Co. 50 cents.
Mann, H. A Few Thoughts for a Young Man. John B Alden.
Marshall, A. Principles of Economics. Vol. I. Macmillan & Co. $4.
Maupassant, F. de. The Two Brothers. John W. Lovell Co. 50 cents.
Memoirs of the Military Career of John Shipp. Macmillan & Co. $1.50.
Moles, E. Pure Saxon English. Chicago: Rand, McNally & Co. $1.
Mollett, J. W. The Painters of Barbizon. 2 vols. Scribner & Welford. $1.25 each.
Montgomery, D. H. The Leading Facts of American History. Boston: Ginn & Co. $1.10.
Moritz, K. P. Über die bildende Nachamung des Schönen. Stuttgart: G. J. Göschen.
Müller, F. M. Three Lectures on the Science of Language. Chicago: The *Open Court* Publishing Co.
Musset, A. de. Pierre et Camille. Boston: D. C. Heath & Co.
Ohnet, G. Peter's Soul. Chicago: Sergel & Co. 50 cents.
Ohnet, G. The Soul of Pierre. Cassell Publishing Co.
Patterson, H. The Captain of the *Rajah*. Union Square Publishing Co.
Payn, J. Notes from the 'News.' John W. Lovell Co. 50 cents.
Philips, F. C, Margaret Eyng. John W. Lovell Co. 50 cents.
Poor's Manual of Railroads, 1890. H. V. & H. W. Poor.

HENRY HOLT & CO., New York,

Offer for use in secondary schools or lower college classes:

REMSEN'S (IRA) INTRODUCTION TO THE STUDY OF CHEMISTRY. 12mo. 389 pp. Price to teachers for examination, $1.12.

The success of this book at home has been nearly approached abroad, it having passed through several editions in England and been translated and published in Germany and Italy—a record which no other American text-book on any subject can show.

MARTIN'S (H. NEWELL) THE HUMAN BODY—BRIEFER COURSE. 12mo. 377 pp. Price to teachers for examination, $1.20.

Prof. Sedgwick of the Massachusetts Institute of Technology voices the general verdict of authorities when he says: "I regard [it] not only as an excellent text-book of elementary physiology, but as, on the whole, the best." This opinion is still further witnessed by the use of the book in so many of the best schools and colleges.

PACKARD'S (A. S.) ZOÖLOGY—BRIEFER COURSE. 12mo, 338 pp. Price to teachers for examination, $1.12.

Both a laboratory manual for the examination of typical animals and a general descriptive text-book for the class-room. The book is widely used in schools and colleges, and is officially recommended to fitting schools by many colleges, among them the University of Michigan.

NEWCOMB (S.) & HOLDEN'S (E. S.) ASTRONOMY—BRIEFER COURSE. 12mo. 366 pp. Price to teachers for examination, $1.12.

"I have used the Briefer Course of Astronomy during the past year. I can heartily recommend it as a text-book admirably adapted to schools of the grade of Phillips Academy. It is up to the times, the points are put in a way to interest the student, and the size of the book makes it easy to go over the subject in the time allotted by our schedule."—*From W. B. Graves, Master, Scientific Department of Phillips (Andover) Academy.*

WALKER'S (F. A.) FIRST LESSONS IN POLITICAL ECONOMY. 12mo 323 pp. Price to teachers for examination, $1.00.

"The new and clear presentation of the laws of distribution by which the correlation of the shares in distribution becomes more prominent, is to my mind a piece of work not surpassed by any other like contribution to economic literature—not even by Mill himself."—*From Simon N. Patten, Professor in the University of Pennsylvania.*

"I have not seen and do not expect to see any treatise which in so simple a manner and so compact a form gives such an adequate and sensible exposition of just those economic truths which for practical purposes, and to practical men, are the most essential and fundamental."—*From H. S. Foxwell, St. John's College, Cambridge, England.*

JOHNSTON'S (J.) AMERICAN POLITICS. 16mo. 350 pp. Price to teachers for examination, 80 cents.

An entirely new edition, revised and somewhat enlarged, by Prof. William M. Sloane of Princeton University.

JOHNSTON'S (A.) HISTORY OF THE UNITED STATES FOR SCHOOLS. 12 mo. 473 pages. Price to teachers for examination, $1.00. Officially recommended to candidates for admission by twenty-odd colleges, among which are Harvard, Johns Hopkins, Princeton, and Michigan Universities.

"Incomparably the best short history of the United States with which I am acquainted."—*John Fiske, the well-known writer and lecturer on United States History.*

"The best school history, it seems to us, which has yet been presented to the public."—*The Nation.*

"Among the numerous short histories of the United States prepared for the use of teachers and classes in our schools, the one before us is destined to hold the highest place."—*The Magazine of American History.*

GARDINER'S (S. R.) ENGLISH HISTORY FOR SCHOOLS. 16mo. 471 pp. Price to teachers for examination, 80 cents.

The New York *Nation* refers to the book as "the work of a man who is confessedly the highest living authority on one period, and that perhaps the most important in English history, and second to none in his familiarity with the whole field."

The *Christian Union* says: "Prof. Gardiner is less flippant than Dickens, but fully as attractive. Indeed, if simple, natural story-telling ever was attractive to a boy, this is the book for him."

This book is recommended to fitting schools by the authorities of the Johns Hopkins, Michigan, Wisconsin, Minnesota, Princeton, and Lake Forest Universities.

WHITNEY'S (W. D.) COMPENDIOUS GERMAN GRAMMAR. 472 pp. 12mo. Price to teachers for examination, $1.30.

The usefulness of this well-known work has been greatly increased by an entirely new collection of exercises for practice in translation and composition. Prof. Van Daell of Boston says: "The Whitney German Grammar has justly been considered as the foremost book of its kind published in America."

OTIS'S (C. P.) ELEMENTARY GERMAN. 431 pp. 16mo. Price to teachers for examination, 80 cents.

Formerly published in two parts, which are now combined into one volume, revised by Prof. H. S. White of Cornell University. The regular edition is now printed throughout in German type. The book aims to combine a brief but systematic treatment of the grammar with abundant practice. The element of conversation is managed in a very fresh and charming way.

WHITNEY'S (W. D.) GERMAN AND ENGLISH DICTIONARY. 900 pp. 8vo. Price to teachers for examination, $2.00.

The distinguishing features of this work are the brief etymologies and the indication by full-faced type of the historical correspondences between English and German words. It is believed to be one of the best working dictionaries, and the recent reduction in price should bring it within the reach of all students of the language.

WHITNEY'S (W. D.) PRACTICAL FRENCH GRAMMAR. 442 pp. 12mo. Price to teachers for examination, $1.30.

The result of the author's long experience as an instructor in French, and marked by his usual clearness of presentation. Dr. H. A. Todd of the Johns Hopkins University recommends it as "the best of grammars in English, both for school and college use." The First Part, with some additions, is published separately under the title 'Practical French.'

CLARK'S (J. S.) PRACTICAL RHETORIC. 381 pp. 12mo. Price to teachers for examination, $1.00.

Represents the widespread revolt against the old-fashioned manner of teaching the *theory* of rhetoric. The book grew out of the actual experience of the class room, and its naturalness and freshness go far to account for its popularity.

A full descriptive catalogue free on application.

The following books, in editions suitable for school use, will be published October 1st.

Sans Famille. By Hector Malot.
12mo, paper, $1.60. Cloth, $1.50.

This excellent story has been arranged for school use by Prof. Paul Bercy, B.L., L.D.

Les Travailleurs de la mer. By Victor Hugo.
12mo, paper, $1.00. Cloth, $1.50.

The above, which is one of Hugo's best stories, is added to the beautiful edition of his prose masterpieces already published.

L'Homme à L'Oreille Cassée. By Edmond About.
Making another number in the popular "ROMANS CHOISIS."
12mo, paper, 60 cents.

The attention of French teachers is directed to the following excellent series of text-books edited by Paul Bercy, and which are now in general use in our leading schools and colleges.

LIVRE DES ENFANTS, *Pour l'étude du français.* By PAUL BERCY, B.L., L.D. A simple, easy, and progressive French Primer, in the natural method, for young students, with upwards of fifty illustrations. 12mo, cloth, 100 pages, 50 cents.

LE SECOND LIVRE DES ENFANTS. A continuation of "LIVRE DES ENFANTS," illustrated with over fifty pictures upon which the lessons are based.
12mo, cloth, 148 pages, 75 cents.

LA LANGUE FRANCAISE. *1ère partie.* Méthode pratique pour l'étude de cette langue.
12mo, cloth, 292 pages, $1.25.

LA LANGUE FRANCAISE. *2ème partie* (for intermediate classes), variétés littéraires et littéraires.
12mo, cloth, 276 pages, $1.25.

Complete new catalogue of French books will be mailed on application.

JOHNS HOPKINS UNIVERSITY,
BALTIMORE.

Announcements for the next academic year are now ready, and will be sent on application.

G. P. Putnam's Sons,

27 and 29 West 23d St., N. Y.,

HAVE RECENTLY PUBLISHED:

The Story of the Jews Under

ROME. By the Rev. W. DOUGLAS MORRISON. (No. XXIX in The Story of the Nations Series.) 12mo, illustrated, $1,50.

"Presented with singular lucidity, and with an admirable combination of brevity in style with completeness of matter. . . . This work is a worthy addition to this admirable series of historical volumes."—*Scotsman.*

The English Novel in the Time

OF SHAKESPEARE. By J. J. RUSSERAND, author of 'English Wayfaring Life.' Translated from the French by Elizabeth Lee. Revised and enlarged by the author. 8vo, $6.00.

The work is illustrated by six heliogravures by Dujardin of Paris, and twenty-one full-page and many other smaller illustrations in the text, executed in fac-simile.

"We hasten to invite the attention of the reader to one of the brightest, most scholarly, and most interesting volumes of literary history which it has been our good fortune to meet with for many a long day."—*Speaker (London).*

A Son of Issachar. By E. S. BROOKS.

A Romance of the days of Messias. 12mo, $1.25.

It is a stirring story of life and experiences during the closing days of Christ's ministry, and is, in reality, the romance of the son of the widow of Nain and the daughter of Jairus. As one of the three prize stories published by the Detroit *Free Press*, it has already created a profound impression in the columns of so thoroughly secular a journal, and its appearance in book form will arouse an even wider interest in its dramatic situations, its strong character studies, and its vivid pictures of the communities which witnessed the career and heard the teachings of Christ.

"The volume represents the finest work Mr. Brooks's fertile and versatile pen has yet produced. It has a strong and original plot, vigorously treated, and is, withal, a magnetic and thoroughly interesting romance."—*Brooklyn Times.*

In the Time of the Cherry View-

ING. An episode in Japan. By MARGARET PEALE. 16mo, paper, 25 cents.

"The story is told with striking truth to the far-Oriental background and environment."—*Nation.*

"The story is brisk, bright, and charmingly conceived. . . . Just the thing for a railway ride or an evening hour of refreshment."—*Critic.*

"A more charming and amusing piece of literary work has not lately appeared. . . . It is a book full of delicate wit and satire, graceful, original, modest, and altogether charming."—*New York Sun.*

"The story is unquestionably clever and amusing."—*Chicago Journal.*

"A charming little sketch which would be quite idyllic did it not show traces of dealing with actual experiences. . . . It will prove that a journal of a journey in a far-away land may be written so as to be entertaining to those who read it."—*Boston Times.*

JUST OUT.

The Sensation of the Day in Paris.

(Worthington's International Library, No 12.)

FLIRT.

By PAUL HERVIEU. Translated by HUGH CRAIG, with designs by MADELINE LEMAIRE. 1 vol., 12mo, cloth extra, $1.25; or in paper, 75 cents.

A delightful novel of to-day, presenting exact types of the highest circles of society. The story is pure in deeds; the language chaste and limpid; the conversations sparkling with wit.

D. Appleton & Co.'s

NEW BOOKS.

I.

A New Historical Romance.

JUST PUBLISHED, IN

TOWN AND COUNTRY LIBRARY.

DMITRI.

A TALE OF OLD RUSSIA.

By F. W. BAIN, M.A., Fellow of All Souls College, Oxford. 12mo, paper cover. 50 cents.

NOTICES FROM THE ENGLISH PRESS.

"The story of the impostor, Dmitri, the wandering monk who learned soldiering from the Cossacks of the Dnieper, and, pretending to be the son of Ivan the Terrible, overthrew Boris and Feodor Godunoff, and reigned for a while in their stead, is one of the most remarkable chapters in Russian history, and might well be taken as the framework of an historical novel."—*The Saturday Review.*

"The author has got a capital subject—the story of the false Czar—and he has treated it with freshness and spirit."—*The Athenæum.*

"This Russo-Polish romance is really a remarkable book of its kind."—*The Academy.*

"The work may be fairly characterized as dramatic, and the freshness of the interest it excites will secure for it, at the hands of those who begin its acquaintance, attention throughout."—*Manchester Examiner.*

"Mr. Bain tells the tale in a rapid, concentrated fashion, and with a dramatic sense which strongly impresses the reader. One cannot choose but go from page to page until the end is reached."—*Globe.*

II.

Volume 67 of the International Scientific Series.

The Colours of Animals

THEIR MEANING AND USE.

ESPECIALLY CONSIDERED IN THE CASE OF INSECTS.

By EDWARD BAGNALL POULTON, F.R.S. With Chromo-lithographic Frontispiece and 66 Figures in Text. 12mo, cloth. Price, $1.75.

"Mr. Poulton is to be congratulated on having produced so readable and suggestive a volume on one of the most attractive departments of natural history, and on having by his own researches contributed so largely to the solution of some of the more interesting problems which it presents."—*Alfred R. Wallace, in Nature.*

III.

DRAGON-FLIES vs. MOSQUITOES.

Can the Mosquito be Exterminated?

The Lamborn Prize Essays.

By Working Entomologists. 8vo, cloth. Illustrated. $1.50.

This book embodies the results of a scientific study of the mosquito nuisance. For the first time scientists have undertaken a careful, practical investigation of this question, and their reports show how the mosquito pest may be mitigated.

D. Appleton & Co., Publishers,

1, 3, AND 5 BOND STREET, NEW YORK.

LATEST PUBLICATIONS OF

GINN & COMPANY.

The Pilgrim's Progress. By John

BUNYAN. Edited by W. F. Allen. With Notes and a Sketch of the Author's Life by D. H. Montgomery. 12mo, vii+119 pp. Boards, 30 cents; Cloth, 40 cents. 34th volume of Classics for Children.

In this edition the second part, which is universally considered only a weak echo of the first part, is not given.

The Nine Worlds. Stories from

Norse Mythology. By MARY E. LITCHFIELD. With Vocabulary and References. Illustrated. 12mo, vii+163 pp. Cloth, 50 cents.

This book tells in a simple way the story of the old Norse gods, and is calculated to awaken an interest in the beliefs of our Teutonic ancestors. It is based chiefly upon the Eddas. The introductory chapter gives a clear idea of the relative position of the "Nine Worlds" of the Mythology, and tells in a few words the relation of the gods and giants to objects in nature. The book is suited to children of any age, and will possess equal interest for general readers.

ANGLO-SAXON.

Ueber Thomas Castelford's Chro-

NIK. By Prof. M. L. PERRIN of Boston University. 8vo. 48pp. Paper, 50 cents.

This monograph, which is written in German, was presented by the author as an inaugural dissertation at Goettingen University. Its subject is a parchment manuscript recently brought to light among some ancient Middle-English folios that probably found their way into Germany at the time when close relations existed between England and Hanover. The manuscript contains a metrical chronicle of England, of about 40,000 lines, and is no doubt the fourth oldest chronicle now known in the English language.

MATHEMATICS.

Wentworth's School Algebra.

By G. A. Wentworth, Professor of Mathematics in Phillips Exeter Academy. 12mo, half-leather. v+362 pp. $1.12.

It is sufficient to say of this that it is believed to be better in itself and better for use than the author's Elements of Algebra, its predecessor.

The Directional Calculus.

Based upon the Methods of Hermann Grassman. By E. W. HYDE, Professor of Mathematics in the University of Cincinnati. 8vo, xii+248 pp. Cloth. $2.00.

This work deals with space of two and three dimensions. The first two chapters give the theory, and fundamental ideas and processes, of Grassman's admirable and comprehensive geometric method, with sufficient fulness and completeness, it is believed, to enable the student to pursue the subject satisfactorily through the remaining chapters, contain applications to pure and solid geometry and mechanics; or, to enable him to read, with comparative ease, Grassman's original works.

Elements of the Differential and

INTEGRAL CALCULUS. Method of Rates. By A. S. Hardy, Professor of Mathematics in Dartmouth College. 8vo, xi + 239 pp. Cloth, $1.50.

From the author's experience in presenting the Calculus to beginners, the method of rates is believed to give the student a more intelligent, that is, a less mechanical, grasp of the principles within its scope than any other. No comparison has been made between this method and those of limits and of infinitesimals. This larger view of the Calculus is for special or advanced students, for which this work is not intended; the space and time which would be required by such general comparison being devoted to the applications of the method adopted.

HISTORY.

The Leading Facts of American

HISTORY. By D. H. Montgomery. 12mo, xii+359+lliii pp. With numerous Maps and Illustrations, Appendices, and Index. Cloth or half-leather, $1.00. Leading Facts of History Series.

In general plan and style this work will be found similar to the histories of England and France by the same author, which are recognized as standing first in their departments. The main difference is that the American history is adapted for pupils of less maturity. The greatest merit of the work is the judgment with which the leading events in the development of our country have been selected, and the vividness with which they are placed before the reader's mind. Not only are the important events clearly and luminously sketched, but their causes and results are adequately shown. Particular attention has been paid to the political, industrial, commercial, and intellectual development of the American people, no less important than our growth as a nation. Accuracy has been patiently and diligently studied, and impartiality constantly kept in view. The maps are unusually numerous, and the illustrations are plentiful and pertinent. Copious notes and cross-references supplement and illuminate the text.

** The prices quoted are introductory.**

Our Complete Catalogue mailed free on application.

THE
POPULAR SCIENCE MONTHLY
FOR SEPTEMBER
CONTAINS:

Common Sense applied to the Tariff Question. Part II.
By EDWARD ATKINSON.
In this timely article, which concludes an impartial review of the subject, Mr. Atkinson makes a strong plea for the rights of consumers.

THE FALL OF MAN AND ANTHROPOLOGY.
By ANDREW D. WHITE, LL.D.
Dr. White shows how the advance of science has compelled the abandonment of an ancient belief.

THE LIGHTS OF THE CHURCH AND THE LIGHT OF SCIENCE. By Prof. T. H. HUXLEY.
A searching examination of the Bible story of the flood, by the light of modern science.

AFRICAN PYGMIES. By A. WERNER.

THE MOSQUITO PEST.
A scientific investigation of the mosquito, and the possibility of its extermination.

Also, a Biographical Sketch and Portrait of THOMAS CORWIN MENDENHALL, Superintendent of the U. S. Coast and Geodetic Survey, and retiring President of the American Association for the Advancement of Science; and illustrated articles upon WILD HORSES, and SOME NATIVES OF AUSTRALASIA, with a study of the EVOLUTION OF BASE-BALL, and EDITORIALS, MISCELLANY, etc.

DESCRIPTIVE LIST
OF
NOVELS AND TALES
DEALING WITH
American Country Life.

The object of this list (consisting of extracts from the *Atlantic, Critic, Nation*, and other critical journals) is to direct readers, such as would enjoy the kind of books here described, to a number of novels which, in many cases, have been forgotten within a year or two after publication. It is hoped that the publication of this and similar lists will lessen in some measure the disposition to read an inferior NEW book, when superior OLD books, equally fresh to most readers, are at hand.

Respecting the list, Mr. W. D. HOWELLS writes to the compiler thus:

"I am delighted with the notion of your list of Novels about Country Life in America, and I think you have most charmingly realized it. The book will be useful to every book-lover and critic and librarian. Now that it satisfies it, I know that I have always felt the need of just such a list."

52 double-column pages. Price, 50 cents (32 specimen pages, 10 cents). Address
W. M. GRISWOLD,
Cambridge, Mass.

A Theological Curiosity.
Familiar to our Forefathers 1,500 years ago, but not now known to one man in 50,000.

The Apocryphal Books, being the Gospels and the Epistles thrown out of the New Testament by the Council of Nice, A.D. 325; translated from the original tongues with copious Notes, and Illustrations from ancient Missals and Miniatures.

Of this work, Dr. TALMAGE has recently said:
"*Christ is the joyous boy of the fields. We are not permitted to think that the shadows of Calvary darkened His pathway as a youth, and the Apocryphal Books of the New Testament show much of the early life of Christ not to be found in the four Evangelists.*"
Price, in large 8vo, cloth, $2.00. Sold only by subscription. Agents wanted in every county. Send for circulars.

School Trustees,
Principals,
Teachers,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. About 9,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading-clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Advertising rates, 15 cents a line each insertion, with the following discounts: 5 per cent. on four insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 208 Broadway, N. Y.

J. B. LIPPINCOTT COMPANY'S
NEW BOOKS FOR THE CLASS-ROOM.

JUST PUBLISHED:

An Elementary History of the United States.

By Charles Morris, author of "Half-Hours with American History," "The Aryan Race," etc. Illustrated. 12mo. Cloth. $1.00.

In this work we have, in addition to the historical details, a series of chapters descriptive of city and country life at different periods of our colonial and national history, each a picture of the people of America as they appeared at the various periods indicated. The progress of invention, striking developments of mechanical ability, and religious conditions, have been described with the design of making at once a history of the American nation and of the American people, adapted in style and language to the use of the young. The work is interspersed with new and attractive illustrations.

Elements of Plane and Spherical Trigonometry.

By Edwin S. Crawley, Assistant Professor of Mathematics in the University of Pennsylvania. Price, $1.00.

"This is a concise presentation of that portion of Trigonometry usually studied in a college course. It is done with admirable clearness and sufficient fulness, and will doubtless be appreciated by those for whom it is intended. Part I. treats of Plane Trigonometry; Part II. of Spherical Trigonometry; while an Appendix contains such Formulæ as will be found most useful in subsequent mathematical work, besides answers to some of the examples given in the body of the work."—*Penna. School Journal.*

NOW COMPLETE:

LIPPINCOTT'S NEW SERIES OF READERS.

By Eben H. Davis, Superintendent of Schools, Chelsea, Mass. Complete in Four Books, consisting of: *The Beginner's Reading-Book.* With 38 Illustrations. *Teacher's Edition.* 148 pages. Cloth, 42 cents. *Scholar's Edition.* 128 pages. 26 cents.—*The Second Reading-Book.* With 8 full-page and 62 smaller Illustrations. 208 pages. 12mo, cloth, 40 cents.—*The Third Reading-Book.* With 12 full-page and 19 smaller Illustrations. 336 pages. 12mo, cloth, 56 cents.—*The Fourth Reading-Book.* With 12 full-page and 14 smaller Illustrations. 448 pages. 12mo, cloth, 80 cents.

Cutter's Physiological Series.

Beginners' Anatomy, Physiology, and Hygiene. By John C. Cutter, B.Sc., M.D. 12mo, 140 pages, 47 illustrations, 30 cents.

Intermediate Anatomy, Physiology, and Hygiene. By Calvin Cutter, A.M., M.D. A Revision of the First Book. 12mo. 200 pages, 70 illustrations, 50 cents.

Comprehensive Anatomy, Physiology, and Hygiene. By John C. Cutter, B.Sc., M.D. 140 illustrations, 12mo, cloth, $1.00.

"The whole series is admirable in every respect, is well arranged for class use, is well illustrated, and presents in clear and attractive style the most recent and approved results of modern science."—*Journal of Education, Nashville, Tenn.*

First Steps in Scientific Knowledge.

J. B. LIPPINCOTT COMPANY, Publishers, 715 and 717 Market Street, Philadelphia.

Warren's New Physical Geography.

The publishers have the pleasure of announcing that the new edition of this popular text-book, which has been for a long time in preparation, is now in readiness.

The subject-matter has been prepared under the direction of Professor William H. Brewer of Yale University, assisted by several well-known Scientists and Educators whose suggestions and advice have contributed materially to the accuracy and completeness of the work.

The book contains twenty-four pages of colored maps, which embody the latest researches of experts in the various departments of physical science. Included in these is an elaborate geological map of the United States, the first of the kind ever published in a school text-book, prepared under the supervision of Major J. W. Powell, Director of the United States Geological Survey. A series of relief maps, reproduced with great care from moulds made especially for this work, will be found useful in securing a correct idea of the surface structure of the various land masses.

The work forms a large quarto of 144 pages, substantially bound in cloth. Price, $1.50.

A sample copy will be forwarded, postage paid, on receipt of price. Specimen pages mailed on application to the Publishers.

COWPERTHWAIT & CO., Philadelphia, Pa.

SCRIBNER'S FOR SEPTEMBER

contains the first article upon the cruise of the "White Squadron," written and illustrated by Mr. R F. Zogbaum, who sailed on the "Chicago" as the representative of *Scribner's Magazine.* "The Country House," in the Home Series, by Donald G. Mitchell, an article on Heligoland, both elaborately illustrated, are among the features of an attractive number.

Price, 25 cents; $3.00 a year. For Sale by all Dealers.

BRENTANO'S
NEW TEXT-BOOKS.

I. A Spanish Grammar.

A new method for learning Spanish as taught by the masters of the language, and for acquiring the Castilian pronunciation, with the *new rules of acentuation by the Royal Academy of Spain*, and an alphabetical index of the conjugations of all irregular, defective, and impersonal verbs. by A. M. Sotelo, author of the Gramática Inglesa para los Españoles—the actual national text-book in Venezuela. 12mo, bound. $2.00.

This grammar is reliable and practical. It has been composed by one of the foremost contemporary Spanish grammarians, and will be recognized as an authority on the Spanish language and a standard handbook for the acquisition of Spanish by English-speaking nations.

II. The "Phonetic" Series

OF HAND-BOOKS TO THE STUDY OF LANGUAGES.

No. 1. Colloquial French for Travellers and Students.

Handy sized 16mo; tasterully bound in cloth, 50 cents.

This is the first volume of a series of hand-books which has two aims—one to give a careful analysis, for students, of the sounds employed in speaking various languages, as compared with English, with an explanation of the differences in easily understood terms; and the other to be thoroughly useful phrase-books for travelers.

III. Nouvelle Edition Berlitz.

1ère Série: Comédies, ea..... .25
2ème Série: Nouvelles, ea..... .25

HARPER'S MAGAZINE
FOR SEPTEMBER.

☞ **The publication of the September number of "Harper's Magazine" was postponed from August 22d to August 26th.**

This was due to an unforeseen delay in the presentation of "Across the Andes." Mr. Child visited South America for the express purpose of giving to the readers of HARPER'S MAGAZINE *an intelligent view of that country. The series will contain maps and numerous illustrations by well-known artists.*

FIRST PAPER IN

AN IMPORTANT SERIES ON

SOUTH AMERICA.

By THEODORE CHILD.

The first article, entitled

"Across the Andes,"

describes a journey made in January, 1890, along the line of the great Transandine Railway from Buenos Ayres to the Pacific Slope. It is accompanied by thirteen Illustrations from photographs, and from drawings by W. HAMILTON GIBSON, T. DE THULSTRUP, and others.

Port Tarascon: The Last Adventures of the Illustrious Tartarin. (Fourth Instalment.) By ALPHONSE DAUDET. With seventeen Illustrations from Drawings by LUIGI ROSSI, LOUIS MONTÉGUT, and F. DE MYRBACH.

Recent Discoveries of Painted Greek Sculpture. By RUSSELL STURGIS. With fifteen Illustrations from Drawings by F. GILLIÉRON, Athens, and from photographs.

The Social Side of Yachting. By J. D. JERROLD KELLEY, U. S. N. With fifteen Illustrations by T. DE THULSTRUP.

The Wild Garden. By W. HAMILTON GIBSON. With twelve illustrations from drawings by the author.

Harvard University in 1890. By CHARLES ELIOT NORTON.

Mountain Passes of the Cumberland. With Maps. By JAMES LANE ALLEN.

The Metric System. By H. W. RICHARDSON.

OTHER INTERESTING FEATURES.

Lively and Fascinating Stories

By Mrs. S. P. MCLEAN GREENE.
Miss MARY E. WILKINS,
and BARNET PHILLIPS,
and the usual variety of Illustrated Articles, Poems, etc.

When no time is specified, Subscriptions will begin with the current number. Postage free to all subscribers in the United States, Canada, and Mexico.

CHOICE FICTION.

A NEW VOLUME

IN

THE ODD NUMBER SERIES.

The [illegible] by the Medlar-Tree.

By GIOVANNI VERGA. Translated from the Italian by MARY A. CRAIG. An Introduction by W. [illegible]. 16mo, Cloth, Ornamental, $1.00.

A story of humble life in an Italian village, dealing with phases of existence to which most American readers are strangers. The air of simplicity and sincerity which seems entirely to permeate the story—to enter into the character of its actors, and even to influence the diction and style of the narrative—helps to make of this work a charming piece of literature, which will be welcomed and admired by all lovers of the better forms of fiction.

In Uniform Style.

THE ODD NUMBER: Thirteen Tales by GUY DE MAUPASSANT. The Translation by JONATHAN STURGES. An Introduction by HENRY JAMES. 16mo, Cloth, $1.00.

PASTELS IN PROSE. (From the French.) Translated by STUART MERRILL. With 150 Illustrations (including Frontispiece in Color) by H. W. MCVICKAR, and Introduction by W. D. HOWELLS. 16mo, Cloth, $1.25.

MARÍA: A South American Romance. By JORGE ISAACS. Translated by ROLLO OGDEN. An Introduction by THOMAS A. JANVIER. 16mo, Cloth, $1.00.

The Aztec Treasure-House.

A Romance of Contemporaneous Antiquity. By THOMAS A. JANVIER. Illustrated by FREDERIC REMINGTON. Post 8vo, Cloth, Ornamental, $1.50.

"This powerful and captivating story may well be ranked among the wonder books. . . . It is a book which no story-reader should miss, for it is different from anything he has ever read."—*Christian at Work, N. Y.*

A Fascinating Historical Novel.

The Captain of the Janizaries.

A Tale of the Times of Scanderbeg and the Fall of Constantinople. By the Rev. JAMES M. LUDLOW, D.D., Litt.D. *New Edition.* 16mo, Ornamental, Cloth, $1.50.

"Something new and striking interests us in almost every chapter. The peasantry of the Balkans, the training and government of the Janizaries, the interior of Christian and Moslem camps, the horrors of raids and battles, the violence of the Sultan, the tricks of spies, the exploits of heroes, engage Mr. Ludlow's fluent pen."—*N. Y. Tribune.*

The above works are for sale by all booksellers, or will be sent by the publishers, postpaid, to any part of the United States, Canada, or Mexico, on receipt of price. Harper's Catalogue sent to any address on receipt of 10 cents in stamps.

J. B. Lippincott Co.

HAVE JUST PUBLISHED:

MRS. A. L. WISTER'S NEW STORY,

'O Thou, My Austria.'

Translated from the German of OSSIP SCHUBIN. 12mo, cloth, $1.25.

This novel has the same elements of strength and interest that we find in the author's previous work, 'Erlach Court.' She introduces us into good society, and imparts to her characters a charm that is natural and pleasing. Mrs. Wister's readers will know that none of the fascination of the story is lost in her translation.

Two Modern Women.

A Novel. By KATE GANNETT WELLS. 12mo, cloth, $1.25.

A spirited story, that will commend itself to the reader for the originality of its plot, the realistic characters, and the vivid power in description.

Rejected Addresses.

By HORACE and JAMES SMITH. With an Introduction and Notes, by PERCY FITZGERALD, M. A., F. S. A. 16mo, cloth, gilt top, $2.00; ¾ calf, gilt top, $3.50.

For sale by all booksellers, or will be sent by the Publishers, free of expense, on receipt of price.

HOSSFELD'S METHODS FOR THE Study of Modern Languages: A series of four volumes, GERMAN, FRENCH, SPANISH, and ITALIAN. For the use of Schools or for Self Instruction. These books are in no sense patent methods, but are based upon well-established rules for the study of Modern Languages. Their merits consist in the clear and concise arrangements of the sixty lessons, each of which is divided into four pages. The GRAMMAR is followed by Practical Exercises and Conversations with readings and translations, fully demonstrating and applying the rules of the Grammar. Uniform in size (12mo, about 360 pages, $1.25). Especially adapted to the needs of those contemplating European travel. KEYS and TASKS for self-correction, supplementary to the French and German Methods. ENGLISH-FRENCH, ENGLISH GERMAN, ENGLISH-SPANISH Commercial Correspondents. Of special value to those interested in International Exposition or Pan-American affairs. Order through Booksellers. For Catalogues, etc., address "HOSSFELD'S," No. 65 Duane St., New York.

EUROPEAN WINTER AND SUMmer Resort. University town of Innsbruck, Tirol, Austria; 1,900 feet above sea, with dry, bracing climate. Hotel Tirol open all the year. Carl Landsee, Proprietor. Large, airy, sunny rooms, well furnished. Elevator. Superior cuisine (table d'hôte or à la carte). Reduced rates in winter. Carriages and sledges at low rates. Charming excursions made from the hotel at all seasons. Unusual advantages for securing teachers of the languages, history, science, art, music, etc., at very moderate terms. Eminent medical care and skilled nurses if desired. Best English and American references. Illustrated pamphlets sent on application.

The Nation.

NEW YORK, THURSDAY, AUGUST 28, 1890.

The Week.

WHILE sensible people understand that the Force Bill is really dead, the Republican party during the pending campaign must suffer all the odium of having it still on its hands. The Bourbon leaders in the Senate and the press of the George F. Hoar and New York *Tribune* type will, of course, insist that it is only in a comatose condition, from which it can and will be revived next December; and the Republican newspapers in the West which have denounced it and demanded its death, will find it hard to meet the claim of its friends that the breath of life is still in it. The consequence will be that the Republican party can get none of the advantage which always springs from having done something when one sets out to do it, while the Democrats can appeal to all independent voters for support, on the ground that only a sweeping Democratic victory in November will prevent the Radicals from still trying to make the bill a law. If one wishes to know how the mere agitation of this question has affected the party, he need only study the figures of the recent State election in Alabama. There are a number of cities in that State where many white men from the North have settled of late years, most of whom have voted the Republican ticket, and thereby sometimes carried the county for that party, as notably in Talladega, long a "Republican stronghold." There is no complaint of any unfairness in these places at the recent election, and yet there was nothing short of a political revolution in them. Here are the figures in 1888 and 1890 for three counties which contain such cities:

	1888.		1890.	
	Rep.	Dem.	Rep.	Dem.
Jefferson (Birmingham)....	3,001	5,508	921	7,921
Lauderdale (Florence).....	1,120	1,637	435	1,473
Talladega (Talladega).....	2,179	1,983	937	2,472

The simple explanation of these changes is that hardly any white Republicans would vote the Republican ticket after the party had taken up the Force Bill—less than fifty out of several hundred in Birmingham, and only two of the large number in Talladega. What was true of Alabama will be true of the South generally, and the same cause will lose the party thousands of votes in every Northern State as well.

Mr. Henry Cabot Lodge, who was sent the other day in haste to Maine to make speeches in Speaker Reed's district, is demonstrating his weakness as a stump orator. He made a speech in Portland the other evening which is reported pretty fully in the Boston *Advertiser*. It is in effect a defence of the Elections Bill which the House has passed, and which is so badly splitting up the Republican Senators. The whole tone of the speech shows that the Republican leaders of the House see that their course has put them on the defensive. Here is one of Mr. Lodge's "points":

> "The first cry that is raised against the bill is that it is a force bill, that it is bristling with bayonets in every line. Now Mr. R. Q. Mills, who is as accurate a statistician as he is calm in statement, has stated that there are 35,000 polling places in the United States. We know there are 25,000 United States troops. Then if you admit that it is a 'force bill,' it is easy to see you would have five-sevenths of a soldier at every polling place in the United States. When I think of the 65,000,000 people in this wide country groaning under the despotism of five-sevenths of a soldier at each polling place, the picture it conjures up is positively appalling."

If this silly talk is worth anything, the same "argument" can be applied to the use of the army for any purpose. There are, for instance, about 250,000 Indians in the United States. If any tribe should go on the war-path, all their chief would have to say to inspire them with courage would be: "Fear not! The Great Father has only one soldier to every ten Indians." Again, Mr. Lodge said:

> "There is no proposition of force in it. It is a law of the United States, and it is the duty of the President to enforce the law of the United States if it is opposed or defied, whether it be tariff law, election law, or any other kind of law. The laws of the United States are to be obeyed; and the same 'force' lies behind election law that lies behind tariff law, or internal-revenue law, and there is no other force to be considered."

This is, of course, an admission of the very thing the speaker sets out to deny. It is the introduction of Federal "force" at elections, to which Mr. Lodge so clearly points, that is so distasteful to the American people.

The condemnation of the Force Bill by the Wisconsin Republican State Convention, which, meeting on the day that Senator Hoar of Massachusetts was advocating its passage, refused to say a word in its favor, recalls the fact that fifteen years ago a Wisconsin Republican in the Senate opposed another measure of the same sort which was supported by the same Massachusetts Bourbon. When the Civil-Rights Bill was before the Forty-third Congress, George F. Hoar was one of its strongest advocates, while Matthew H. Carpenter, thorough-going Republican though he always was, did his best to prevent its passage. Senator Carpenter held that the measure was unconstitutional, as the Supreme Court declared the moment the question was submitted to it, but he also opposed it on the ground that the evils at which it was aimed could not be cured by Federal legislation. While deploring and condemning the prejudice against the negroes in the South which caused the discriminations against them that the Civil-Rights Bill was intended to stop, Mr. Carpenter declared that this was not the way to overcome it. "Haste is not always speed," he said in a speech in the Senate on the 27th of February, 1875; "and especially is this true of attempts to coerce sentiment or suppress prejudice. This can only be accomplished by time, kindly entreaty, reason, and argument. And all experience demonstrates that every unavailing attempt to force men into compliance with social, religious, or political dogmas has the effect to postpone the end desired." This unanswerable argument applies as well to the Force Bill of 1890 as to the Civil-Rights Bill of 1875, and it will not be long before every candid man will pronounce the pending measure as absurd as the one which Mr. Hoar championed fifteen years ago.

That was an interesting spectacle in the Mississippi Constitutional Convention last week when a negro who was once a slave of Jefferson Davis's, pleaded and maintained his right to a seat against the contesting claim of a white man. "He presented his case," says a Jackson despatch, "in a speech of thirty minutes' duration, and his earnest but modest and respectful manner and homely eloquence made a deep impression on the Convention." The majority of the Election Committee had reported in favor of the contestant, but an ex-Attorney-General of the State who was one of the minority advocated the other side, and the negro's right to his seat was sustained by a vote of 79 to 28. The result is not only interesting but important, as it retains an intelligent Republican representative of the colored voters upon the Committee on Suffrage, of which he was made a member.

In reply to Mr. W. L. Scarborough, a colored professor in Wilberforce University, Ohio, the Atlanta *Constitution* denies the story which appears to be going the rounds of the Western press, that there is a newsstand in Atlanta at which negroes are not permitted to buy papers. The *Constitution* adds:

> "Here in Atlanta we have negro lawyers, physicians, and dentists; negro merchants, tailors, undertakers, shoemakers, tinners, painters, carriage-makers, blacksmiths, and wheelwrights; negro contractors, who employ white as well as colored workmen; negro machinists, carpenters, cabinet-makers, bricklayers, plasterers, and plumbers; negro workers in shops, in every trade and business for which their ambition and their ability fit them; and opportunities open to them in every direction that their capabilities may suggest."

Where can anything like this be found in the East or in the West? We happen ourselves to know of the negro dentist in Atlanta. He resigned a good position in the Treasury Department a few months since in order to practise his profession in that city. But think of negro contractors who employ white workmen—and in the South, too! Can Senators Hoar and Chandler name many—or any—such instances at the North, or such a diversity of industries among the colored population as that shown by the *Constitution*?

Many years ago, on the score of economy,

long sessions of Congress were assailed in the House. No one suggested at that time limiting debate, though excessive speechifying was the great cause of the lengthening of the session. The plan proposed was to decrease the pay of the members as the length of the session increased. The report of the Committee making this suggestion is to be found in Document (H. R.) No. 922, first session of the Twentieth Congress. The majority of the Committee recommended that the *per-diem* allowance then granted to Congressmen be reduced to $2 after the first Monday in April if Congress should sit beyond that day. This plan was founded on the basis that (in the opinion of the majority of the Committee) four months would be ample time in which to transact public business. "If," they added, "Congress, either from procrastination, short daily sessions, *or an excessive indulgence in debate*, should remain in session longer than the first Monday in April, then a sum not more than sufficient to cover the absolute expense of subsistence should be allowed during such prolongation of the session." John Sergeant and Edward Everett submitted a minority report, in which they admitted that it was desirable to shorten the sessions of Congress, but great care, they thought, should be exercised in applying any suggestions which had been made on that point. "The public business *and the public information* are the chief end and aim of our doings," said they, and they added, "We ought not too readily to yield to any plan that would have the effect of defeating *either*." "The privileges of the members," they declared in language which Speaker Reed has often extorted from the Democratic Representatives of this Congress, "are the privileges of their constituents, and cannot be curtailed without infringing upon the rights of the people." So it is not alone our public business that concerns us, but also information concerning affairs, and it is to an untrammelled Senate, which Mr. Reed cannot control, that we owe much necessary light on the items of the Tariff Bill which was rushed through the House.

A number of causes have contributed to bring about the recent stringency in the money market, as, *e. g.*, the silver speculation and the rush of importations caused by the fear of the two McKinley bills. The latter is considered by the banking fraternity the more potent of the two; indeed, the most potent of all. Another cause is the drain from New York to the West for currency to move the crops. This, however, is an annual occurrence, as regular in its coming as the seasons, and would not be much noticed if it did not happen to coincide with other forces contributing to the same result. The operation of the McKinley bills is two fold. An abnormal importation of foreign goods calls for abnormal payments to the foreign producers. It calls also for excessive payments of duties—excessive in the sense that unusually large payments are made at one time, and in advance of the customary time. Thus it comes about that the Treasury has been draining the Street, and the Secretary has been at his wits' end to get the money back into business channels. It would be idle to predict what a day may bring forth, but the usual ingredients of a general panic do not exist. The prices of commodities are not inflated. Speculation is at a low ebb. Even stock speculation was at the minimum when the recent squall struck it. If the situation were the same that it was in the autumn of 1873, when everything was booming, we might expect a similar catastrophe. But it is widely different.

The Federation of Railway Employees at Terre Haute has given Mr. Powderly and the Knights of Labor a hearty endorsement, and poured out a deal of indignation on the head of Vice-President Webb, but for all practical ends and purposes has voted for Webb and against Powderly. The only object of holding the Terre Haute conference was to do something good for Powderly and something bad for Webb. The opposite course has been followed. It was almost inevitable that it should be so, since any strike ordered to assist Powderly would have been a sympathetic one, and a sympathetic strike must have extended over thousands of miles of railway and thrown out of employment tens of thousands of men who had no interest whatever in the dispute between Powderly and Webb. Who would support these men and their families through the coming winter, was a question of extreme gravity, no doubt. Having resolved not to incur this risk, the conference tackled the other problem, how to get out of the scrape and save appearances. This was accomplished by praising Powderly, condemning Webb, and adverting to the fact that the Knights of Labor are not members of the Federation of Railway Employees, and therefore have no claim upon the latter body. As for Powderly, or Lee, or whoever started the New York Central strike, he has, like *Falstaff*, led his men where they are all peppered. Powderly says that the strike is still "on." In like manner the strike on the Third Avenue Railroad is still on, nobody having declared it off. The Reading strike is still on. The only railroad strike we now recall that has been officially declared off is the Southwestern strike, one peculiarity of which was that, although Powderly declared if off very early in the fray, Martin Irons declared that it was still on. The Central strike is now wholly imaginary.

The full weakness of Powderly's cause stood revealed in the long and bombastic "address" which he issued "to the people" on Thursday last. There was absolutely nothing in it but wind. He has no grievance except that the Central Railway Company has discharged Knights of Labor from its service without the consent of Mr. Powderly, and has persistently denied all recognition of his right to inquire into the matter. There is nothing else in the controversy, yet this is one of the ways in which Powderly states it:

> "H. Walter Webb stands to-day the representative of over $200,000,000. He is new to the position, and the novelty of the situation has turned his head. The writer represents, directly and indirectly, over 20,000,000 of workingmen. Shall dollars alone be heard, and must humanity remain silent? Will dollars rule when flesh and blood is shot down in the streets of the capital city of the Empire State at the dictation of this wealth? Shall an aristocracy rule and ruin without giving an accounting why they did it? These questions can best be answered by the 20,000,000 of industrialists of the United States, and they can best answer them by holding up the hands of the men along the line of the New York Central Railroad who are strong for the principle of justice, men who, strong in the justice of their position, ask to be heard and care not who hears the story."

Mr. Powderly's statistics are as original and unfettered as his grammar and rhetoric. There were in the whole United States in 1880 less than 13,000,000 adult males, and the total number now cannot much exceed 15,000,000. When he speaks of himself, therefore, as the representative of over "20,000,000 of workingmen," he magnifies his own importance on the same generous scale as he misrepresents the other facts in the controversy.

Mr. Webb's statement in reply to Powderly removes the last shadow of an excuse for a strike or a tie-up of any kind. The only ground which Powderly had for his demand for arbitration was that the Central Railway Company had discharged the men whose case had been made the excuse for the first strike, simply because they were Knights of Labor. He has declared many times that the company's conduct showed a determination to "down the order," and that consequently the whole Vanderbilt system must be "tied up" in order to defend the right of Labor to organize for its own interest and protection. Now Mr. Webb says distinctly:

> "No man has been discharged from this company because he was a 'Knight of Labor,' or a member of any other labor organization. The company has discharged men, irrespective of their membership in the order of the Knights of Labor, for drunkenness, incapacity, breach of duty, insubordination, and for the lack of sufficient work to employ them; and it will continue to do so whenever proper occasion arises."

A national "tie-up" to compel a railway company to get Mr. Powderly's consent before discharging employees guilty of drunkenness, incapacity, neglect of duty, or insubordination, would be a spectacle poorly calculated to advance the cause of labor in the estimation of the people.

The Meat-Inspection Bill, which has passed both houses of Congress, provides that whenever the President shall be satisfied that unjust discriminations are made by or under the authority of any foreign State against the importation to or sale in such foreign State of any product of the United States, he may direct that such products of such foreign State so discriminating against any product of the United States as he may deem proper shall be excluded from importation to the United States. Another section provides for the exclusion by the President of any article of food or drink that he may find to be adulterated to an extent sufficient to be injurious to health. The measure is directed chiefly against France and Germany, on account of their exclusion of our pork

on the ground of unhealthfulness. Exclusion on the ground of "protection to home industry" would not be objected to provided the exclusion were general; that is, provided it were applied to all foreign pork. This is official notice to France and Germany that they had best frame a tariff sufficiently high to keep out our pork, and retract their slanderous accusations. It ought not to be difficult for Germany to do this. She has a new Emperor and a new Chancellor, neither of whom is responsible for the anti-pork decree. They might cancel it at once and adopt the other device without any trouble at all. As for France, she might rescind the decree and adopt the leading features of the McKinley Administrative Bill to keep our pork at a respectful distance. This bill, according to the Paris *Temps*, is interpreted by the American Consul at Lyons to require, in all invoices of merchandise, statements of all the separate items of cost of the articles, such as wages, raw materials, superintendence, and "each and every outlay of whatsoever nature incident to such production," and also that the manufacturer himself (not any agent appointed by him) shall come to the Consul's office and sign the invoice so made out; and if any part of the goods comes from another place (Zurich, for example), a similar statement from the Zurich manufacturer. Now it is suggested to M. Ribot that a similar requirement as to pork would accomplish all that the invidious decree accomplishes. Let it be required that the pork-packer furnish a statement of all of his costs of production, including wages, fuel, cooperage, etc., and a statement from the farmer who raised the pigs, *viséd*, of course, by a French consul, giving all of his costs of production. Then let the American system of compound duties be adopted—say five francs per kilogramme and 40 per cent. ad valorem—and the whole thing is done and nobody discriminated against.

The House of Representatives is now engaged in tickling the farmers with compound lard bills and option trading bills, and other measures adapted to an infantile state of mind. The Lard Bill has passed the House, and the Option Bill is, as we write, likely to pass Probably both will be killed in the Senate, or postponed till the next session. The Senate has already passed an option bill, and has shown what view it takes of such legislation. As originally introduced by Senator Ingalls, it prohibited trading in grain, cotton, etc., for future delivery, unless the person selling actually owned the property he agreed to deliver. After two days' hot discussion, it was amended, on the motion of Ingalls himself, so as to prohibit trading in futures unless the seller *intended* to deliver the property at the agreed time. Of course no option dealer could object to that, since his intentions could be known only to himself. That the Option Bill, if it could be passed and enforced (as it never could be), would greatly injure the farmer, has been shown over and over again. It would limit the farmer's market to hand-to-mouth purchases, and, since he is generally a non-capitalist, it would put him at the mercy of the miller, who generally is a capitalist. The man who can wait always has the advantage in a trade, and that man is seldom the farmer.

The decision of Judge Cullen that the receiver of the North River Sugar Refinery must be allowed a place as defendant in the Sugar Trust litigation, although the property and assets of the corporation have been taken out of the "combine," indicates that the suit instituted in Brooklyn as a preliminary of "reorganization" must embrace the whole question raised by the Attorney-General in his action against the Trust, and cannot be settled on any narrower issues. That action was brought to wind up the affairs of the North River Company because it had entered into a conspiracy to produce a monopoly. Each and every corporation of this State that joined the Trust is equally guilty and equally exposed to receivership and dissolution. It is not in the power of the Attorney-General to pardon them or any of them. Nothing that can be done in the Brooklyn suit can remove them from the net in which they were caught when the Court of Appeals rendered its decision. The presence of Receiver Gray as a party to the new litigation insures a rather more speedy liquidation than would have taken place if he had been excluded, but it can hardly be said that it changes the destiny of the Trust.

The new State of Washington may well "point with pride" to the figures of the census just taken, which show a total of 343,564 inhabitants, with two districts still lacking. As the population in 1880 was only 75,116, this shows a growth during the past ten years of more than 357 per cent. This is a larger proportional growth during a decade than has ever been recorded in any Territory or State of the Union which had as many as 75,000 people. Colorado's gain between 1870 and 1880 was at the rate of 387 per cent., and Dakota's during the same period 853 per cent.; but Colorado had less than 40,000 people, and Dakota only about 14,000, as the basis of these gains. The growth of Washington's population has been of the most normal character, and the outlook for the new State is most encouraging. The remarkable gain in Washington renders more incomprehensible the census showing for Oregon. It seems plain that the work of enumeration must have been badly botched in the latter State. Both Washington and Oregon have held State elections this year. Washington cast 58,443 votes, and Oregon 73,400. Washington's population exceeds 343,564, and, allowing the same ratio of inhabitants to voters, Oregon's should be above 430,000, while the census count shows only 284,242. The injustice is so palpable that even Washington confesses it, and the Seattle *Post-Intelligencer*, as a Republican newspaper, calls for a new count of Oregon, on the ground that the present figures will deprive the latter State of one of the Representatives in Congress to which she is entitled, and the Republican party of a vote in the Electoral College which it ought to have.

The abnormal growth of cities and towns as compared with that of the country is hardly less noticeable in the West than in the East. There are just 100 places in the State of Wisconsin which have 1,000 or more inhabitants, and their aggregate population is 656,706, or more than 39 per cent. of the entire population, whereas in 1880 such places contained only 29 per cent. of all the people. The gain of these 100 places during the ten years has been 263,000 out of a gain of 367,000 for the entire State—or about 70 per cent.—although, as has been said, in 1880 these cities and towns contained not quite 30 per cent. of the entire population. Such figures from a comparatively young State like Wisconsin are even more striking than the showing of urban growth in old commonwealths like Massachusetts and New York.

Mr. Bachelder, the New Hampshire Commissioner of Agriculture and Immigration, has made his first report under the Act of 1889 of efforts made to repeople the abandoned farms of the State. Mr. Bachelder's procedure, which was of a very intelligent and practical character, carried on with diligence, and even with enthusiasm, has issued in a very considerable success. Out of the whole number of abandoned farms in New Hampshire, almost a full one-fourth part have been reoccupied during the eleven months of his operations—22½ per cent. is the exact proportion, or, in numbers, 301 out of 1,342. "Gratifying as these facts may be," says the Commissioner, "they are doubly increased in significance when we consider that the class of people purchasing and renting these farms is generally such as appreciates the grand scenery, healthy climate, and association with an intelligent class of people, for all of which New Hampshire has become noted. . . . A large number of these farms have become occupied by city people to whom a home in the country has been a fond anticipation for many years, and it is needless to say that they will find in a New Hampshire farm all the opportunities for gratifying any worthy desire in establishing a home for comfort, health, or pleasure. They come, not to make money, but to spend it, and fortunate indeed will it be for the State when the unsold abandoned farms are utilized by this class of people." Such a result might be anticipated, perhaps, from an analysis of the Commissioner's wide correspondence, 60 per cent. of which proceeded from the States of New York, New Jersey, Pennsylvania, Massachusetts, Connecticut, and Rhode Island, communities in which seekers for summer homes would be likely to abound. A striking thing is that just 4 per cent. of the inquiries about abandoned farms in New Hampshire were from Vermont, and more than 10 per cent. came from the Western States, ranging from Ohio to Oregon. Mr. Bachelder acknowledges the "powerful agency" of the press in assisting his work.

THE LINE OF DIVISION.

THE only interesting feature of Senator Hoar's long speech in favor of the Force Bill last week was the interruption by Senator Paddock of Nebraska. The Massachusetts Senator was quoting a number of old Republican platforms, to show that "the Republican party was pledged to the policy of the bill by everything that could bind a party," when Mr. Paddock rose and pointed out that a Republican State Convention was held in Nebraska only a short time ago, which was attended by a thousand of the representative men of the party, and that not a word was said in either the speeches or the platform on the subject of the pending Election Bill.

Even more significant was the attitude of the Wisconsin Republican State Convention, which met in Milwaukee on the very day that the discussion opened in the Senate which was to decide the fate of the Force Bill. If the Republican party in Wisconsin favored the passage of such a measure, every possible consideration called for the insertion in the platform of a resolution heartily endorsing the pending bill. A long platform was adopted, but it contains not one word in favor of the Force Bill, or of Federal legislation of any sort regarding elections in the South. This significant silence is, of course, to all intents and purposes, the same thing as a condemnation of the policy, and it shows that the Republican party of Wisconsin sustains the position taken by the Milwaukee *Sentinel*, when it reaffirmed its opposition to the Force Bill on the ground that "it will not be effective to assure honest elections where the great frauds upon the ballot-box are practised, while it will be used, as it is already used, by political demagogues to perpetuate unjust animosities against the Republican party, and open still wider the fountains of sectional distrust and hatred in the South."

The recent Republican State Convention in Minnesota was equally silent on this question, and thus showed that the Republican party in that State endorses the course of the St. Paul *Pioneer Press*, which has been from the first an earnest and effective opponent of any Federal election law. There is no way of arguing against such facts as these. When the representative Republican newspapers in such strongly Republican States as Nebraska, Minnesota, and Wisconsin condemn the Force Bill, and Republican conventions in all of these States decline to say a word in its favor, it is evident that the St. Louis *Globe-Democrat* is right when it declares that "the masses of the party in the West are turning against it."

The platform adopted by the Wisconsin Republicans is also significant as to party sentiment in the West regarding the other great issue of the day—the pending Tariff Bill. Considering the way that the McKinley Bill is being hammered in the Senate, if the Republicans of any State favor the measure, there is no question but they will say so. Did the Wisconsin Republicans endorse the McKinley Bill, and express a hope that the Republicans of the Senate would follow the example of their brethren in the House by passing it? On the contrary, the platform contains not one word regarding the measure, while it "commends the efforts the Administration is making to establish reciprocal trade relations with the several nations of this continent upon such a basis as will be mutually advantageous." In this respect also the Wisconsin Republican platform agrees with those framed by the party conventions in Minnesota and Nebraska, and it all means that the Republican politicians of those States understand the condition of public sentiment. The St. Louis *Globe-Democrat* the other day noted the fact that "nearly every prominent Republican paper in the States west of Ohio is opposing that part of the McKinley Bill proposing to increase duties," and said: "The views thus expressed are not confined to the editors formulating them. They represent the sentiment of an overwhelming majority of the Republican party of the Mississippi Valley."

It is evident that a sharp line of division exists between the Republicans of the East and those of the West on the two great issues of the day. The Bourbon leaders of the bloody-shirt Republicans of New England and of the high-tariff Republicans of the Pennsylvania school are equally blind to one of the most important developments of recent politics. Senators like Hoar and Frye, and organs like the Boston *Journal*, New York *Tribune*, and Philadelphia *Press*, talk about reading out of the party Republicans who will not toe the mark on the McKinley Bill and the Force Bill, in apparent ignorance of the fact that the masses of their party in the great West are opposed to both those measures. The representatives of those masses in the press are beginning to tell these Bourbons the truth in tones loud enough, it would seem, to pierce even their deaf ears. Take, for example, this recent deliverance from the Omaha *Bee*:

> "Eastern Republican journals furiously denounce Western Republican Senators for working and voting for reduced tariff, and threaten to read them out of the party. By what right have the champions of the McKinley Bill become the keepers of the Republican conscience? When it comes to reading Republicans out of the party for opposing prohibitive duties, the yeomanry of the West will be on hand, and Eastern autocrats may discover that the party leaders are not in position to bid defiance to public sentiment in Kansas, Nebraska, Iowa, and Minnesota."

The Washington correspondent of the Philadelphia *Inquirer* concludes a review of the situation developed by the Quay resolution with the statement, that "there is great fear that the complications, if not promptly reconciled, will lead to the defeat of both the Tariff and Election Bills." Strange as it may seem to the fossils who edit many Republican newspapers at the East, nothing would give greater satisfaction to many Republicans in the West than this very result. "Drop Both Bills" was the earnest injunction used as a title to a leading article in the St. Paul *Pioneer Press* of Saturday week, which said: "If there is in Washington any due appreciation of the state of feeling of the country at large, the Senate will conclude to drop both bills and go home. There is no demand or necessity for either of them. There is, in the Republican ranks, a pronounced hostility to both which is not worth while to encounter."

THE VALUE OF DELIBERATION.

IT was considered an axiom among the founders of our Government, and was accepted as such during the first century of our history, that deliberation was the first essential to a successful administration of democracy. The system was intended to secure the execution of the will of the people, but only after it had been made perfectly clear that it was their well-considered purpose which was being carried out. Every precaution was therefore taken to prevent the danger of enacting a law which did not obviously represent the settled convictions of the people, but which might, instead, express only a sudden gust of passion among the populace, or a cunningly devised scheme of political tricksters.

This was the main reason for the creation of a Senate. The quickest and surest way of reflecting every ripple which sweeps over the pool of public opinion would, of course, be to have only one legislative assembly, whose will should be absolute. But every thoughtful mind in the Constitutional Convention of 1787 perceived the dangers of a system which should intrust legislation to the unchecked impulse of a body elected directly by the people, and the only question from the first was as to the manner in which the Senate should be constituted. The necessity of such a check was universally conceded. "Such an institution," said the *Federalist*, "may be sometimes necessary as a defence to the people against their own temporary errors and delusions. As the cool and deliberate sense of the community ought, in all governments, and actually will in all free governments, ultimately prevail over the views of its rulers; so there are particular moments in public affairs when the people, stimulated by some irregular passion or some illicit advantage, or misled by the artful misrepresentations of interested men, may call for measures which they themselves will afterwards be the most ready to lament and condemn. In these critical moments how salutary will be the interference of some temperate and respectable body of citizens, in order to check the misguided career, and to suspend the blow meditated by the people against themselves, until reason, justice, and truth can regain their authority over the public mind!"

After a half century's trial of this experiment, Justice Story, in his 'Exposition of the Constitution,' thus summarized the advantages of this division of the legislative power: "In the first place, it interposes a great check upon undue, hasty, and oppressive legislation. In the next place, it interposes a barrier against the strong propensity of all public bodies to accumulate all power, patronage, and influence in their own hands. In the next place, it operates indirectly to retard, if not wholly to prevent, the success of the efforts of a few popular leaders, by their combinations and intrigues in a single

body, to carry their own personal, private, or party objects into effect, unconnected with the public good. In the next place, it secures a deliberate review of the same measures by independent minds, in different branches of government, engaged in the same habits of legislation, but organized upon a different system of elections. And, in the last place, it affords great securities to public liberty, by requiring the coöperation of different bodies which can scarcely ever, if properly organized, embrace the same sectional or local interests or influences in exactly the same proportion as a single body."

The failure of the Force Bill is a striking proof of the value to the nation of the deliberation secured by the system of two legislative bodies with equal powers. If the House of Representatives had been supreme, this revolutionary departure, which violates the spirit of the Constitution and which teems with evils to the nation, would have become a law weeks ago. It may even be conceded that its passage would have reflected the will of the people, in the sense of meaning by that term the great mass of the Republican party. Grant that a few weeks ago, when the Speaker pushed the bill through the House, without fair opportunity for debate and for exposure of its real character, the bill did represent the controlling impulse among Republicans, so far as the question had stirred any impulse among them. The more fully one concedes every claim made by the Reed-Lodge managers as to the popular strength of the measure when they put it through the House, the more remarkable is the change wrought by these weeks of deliberation. During the interval it has been shown, through the commendable investigation made by the Philadelphia *Press*, and through a mass of confirmatory evidence from other sources, that the most intelligent Southern Republicans, both white and black, oppose the scheme, and believe that it will work only harm to their interests, both as citizens and as partisans. At the same time, discussion and reflection have convinced many Northern Republicans of its folly, until a number of the most influential party journals are now outspoken against the bill. The change is graphically portrayed in these comments by the St. Louis *Globe-Democrat* upon the statement that the President favors the passage of the measure: "It is probably true that Gen. Harrison favors the passage of the Federal Election Bill. At least he desired legislation of this sort a few months ago. However, the situation has changed materially since then. Four out of five of the Republicans of the South, who, presumably, should be better judges of the effect of such action than residents of other parts of the country, oppose it. The masses of the party in the West are turning against it, and many of the Western Senators are anxious that the project be not pushed. The President, too, will probably soon realize that the matter should be dropped."

It thus appears that, but for deliberation, a bill would have been hastily enacted into law which, upon sober second thought, is condemned by the masses of the dominant party and rejected by enough of its Senators to secure its postponement if not its defeat. "A few popular leaders, by their combinations and intrigues in a single body, to carry their own personal, private, or party objects into effect, unconnected with the public good," succeeded in getting it through the House of Representatives; but reflection was fatal to their scheme. "Tom" Reed may still "thank heaven that the House is not a deliberative body," but the nation is profoundly grateful that the Senate still affords an opportunity for "the cool and deliberate sense of the community" to find expression.

FREDERICK HENRY HEDGE.

Dr. Hedge was born in Cambridge, Mass., December 12, 1805. His mother was a granddaughter of Edward Holyoke, who was summoned from his pastorate in Marblehead in 1737 to be President of Harvard College. His father, Levi Hedge, was a teacher of logic, ethics, and metaphysics in the College from 1810 to 1822, and his 'Elements of Logic' was a famous text-book in its day. His grandfather, Lemuel Hedge of Warwick, Mass., was a man of singular and striking character, a sturdy patriot in the Revolutionary struggle, and an intimate friend of Gen. Joseph Warren. Prof. Levi Hedge was ambitious for his son, and pushed him so hard that in his twelfth year he was fitted for Harvard in the manner of the time. Too young to enter, he was sent to Germany in the care of George Bancroft, who had just graduated, and was intending a course of study at Göttingen. In Germany he studied for five years in various gymnasia. It was his own opinion that his education would have made better progress if he had stayed at home. As a foreigner he was indulged and left too much to his own devices at a time when he should have had the benefit of wholesome regulation. But he acquired a thorough knowledge of the German language, and became deeply interested in German poetry and the idealism of German metaphysic. It is difficult to see how he could otherwise have qualified himself for one of the most important functions of his life—that of a pioneer of German poetry and metaphysic in the United States.

Returning to Cambridge in 1823, he entered the Junior Class, and was graduated in 1825. His dislike of mathematics prevented him from taking the highest honors, but his standing was respectable. His ambition while in college was to be a poet. Like Milton, he would sing "a song to generations." Nothing less than an epic would relieve the passion of his heart. What he actually attained to in his youth was the honor of being the poet of his class and the poet of the Phi Beta Kappa Society in 1828, when he composed his poem of several hundred lines entirely in his head before committing a line of it to paper. He always had this power of strong immediate memory. His early sermons were delivered memoriter, as were the ten or twelve orations which were the most brilliant points in his career. His oration in Boston on the four hundredth anniversary of Luther's birth, given when he was nearly seventy-nine years old, was delivered entirely memoriter and without a particle of hesitation. It was at the opposite extreme of epic largeness that Dr. Hedge's real success in poetry was to be secured. As a translator of German lyrics his equals have been few. His translation of Luther's famous hymn, "Ein' feste Burg ist unser Gott," is much stronger and better than Carlyle's. His original poetry has been mainly in the form of hymns, and that hymns can be poetry, Mr. Arnold to the contrary notwithstanding, he has fully proved; witness his hymn for Good Friday. A splendid and rescunding rhetoric is characteristic of his hymns as of his prose. Of lyrics that are not hymns, one called "The Morning Star" is his best work. This was not Wordsworth's "Emotion Recollected in Tranquillity." It was emotion economized at once; composed in bed, and afterwards written out from memory—a feat somewhat remarkable in view of the complicated character of the metrical arrangement.

Young Hedge's choice of a profession was medicine, but his father's wishes overbore his own, and he became a student of theology under the leadership of Dr. Andrews Norton. During the last year of his theological course he made the acquaintance of Emerson, with whom he soon became extremely intimate. They were ordained in the same year—Emerson in March, 1829, in Boston, and Hedge in West Cambridge in May. Their relation was one of mutual benefit, not merely one of mutual admiration. Emerson read his early poems to Hedge, and was encouraged by his liking for them to publish them and further cultivate his gift. When Emerson's 'Nature' appeared, Hedge asked him the next time they met, "And now why don't you write something about *nature?*" In 1834 we find Emerson recommending to Carlyle essays by Hedge, which had appeared in the *Christian Examiner*, on Swedenborg and Phrenology. These were the second and third of Hedge's printed essays. His first was an essay on Coleridge in the same periodical. The essay on Phrenology made a good deal of talk and writing. It prefigured the Transcendental Movement, which was developed largely in opposition to that form of sensationalism in philosophy represented by phrenology. In 1830 he married Lucy T. Pierce, daughter of the excellent Dr. John Pierce of Brookline, whose reputed exclamation on arriving in another world was, "Just fifteen minutes from earth! Walked all the way!" The good old man was very proud of his walking, and got his death from overdoing it at the Cochituate Water Celebration. The reputed saying was one of several imagined by Dr. Hedge as appropriate to the clergy of his time on their arrival in a higher sphere of being. Norton's was "Spinoza here!" or, "A very promiscuous assemblage!"

The plan for a periodical representing the new tendencies of thought, in harmony with Coleridge and the German idealists, was broached as early as 1835. Hedge was urgent for it and was to be its editor. His removal from West Cambridge caused the scheme to languish for a time; then it revived again, and the *Dial* was the result. Emerson, Hedge, and Ripley were at the bicentennial celebration at Harvard, in 1836, and, after the exercises, fell into conversation about the state of thought and religion in the churches. They resolved to form a club, and did so. The outside world called it "The Transcendental Club." Its members never called it so, but simply "The Club," and often "The Hedge Club," so important was his part in it, and because its meetings were held, after he went to Bangor, whenever he was in Boston. He went to Bangor upon Emerson's recommendation, who had himself been invited there and was much tempted to go. The settlement was a kind of exile, but on the whole was an advantage, favoring mental independence, and allowing a freer in-

tellectual development than could have been possible at the Unitarian centre. In a letter to Carlyle in 1847 Emerson gives this account of his friend:

"Henry Hedge is a recluse but catholic scholar in our remote Bangor, who reads German and smokes in his solitary study through nearly eight months of snow in the year, and deals out every Sunday his witty apothegms to the lumber-merchants and town ship-owners of Penobscot River, who have actually grown intelligent hearers of his riddles by long hearkening after them. They have shown themselves very loving and generous lately in making a quite munificent provision for his travelling. Hedge has a true and mellow heart, and I hope you will like him."

In due time Carlyle answered him:

"Hedge is one of the sturdiest little fellows I have come across for many a day. A face like a rock; a voice like a howitzer; only his honest gray eyes assure you a little. . . . Hedge came to me with tall, lank Chapman at his side—an innocent flail of a creature, with considerable impetus in him; the two, when they stood up together, looked like a circle and a tangent, in more senses than one."

One excellent result of Hedge's seclusion at Bangor was his 'Prose Writers of Germany.' It was a work of great labor, biographical and critical, with illustrative translations, generally his own. Hedge was, in fact, the American Carlyle, as respects introducing a better knowledge of German literature and philosophy to his fellow-countrymen. He had able coadjutors as time went on, but he was the pioneer in this direction and the most accomplished leader of the German party in the Transcendental Movement. It was from him that Margaret Fuller got her German impulse. It was his article upon Coleridge, which had warm praise in it for Kant, Fichte, and Schelling, that turned the attention of George Ripley to these men, to such good purpose that in 1839 he was able to take up the cudgels of debate for them with Andrews Norton, who had assailed them in the 'Latest Form of Infidelity,' a counter-blast to Emerson's Divinity School address of 1838.

Hedge's literary labors at Bangor were not, however, at the expense of his preaching and parochial duty. The Society was a thrifty one, containing an unusual number of highly intelligent men and women. The lawyers counted by the dozen, and active politicians by the score. At one time there were four candidates for the Governorship in the congregation. Dr. Hedge's (he was made a Dr. by Harvard in 1852) lively interest in politics dated from his Bangor settlement. He was an earnest anti-slavery man, but never in sympathy with the abolitionists. He honored Garrison, he said, but Channing more, and Wendell Phillips not at all. His likes and dislikes were strong and sometimes without sufficient basis.

His European travel in 1847, when Geo. Wm. Curtis was his young companion, was a needed respite from the exacting duties of a secluded parish, but in 1850 he felt obliged to avail himself of the opportunity for further change afforded him by a call from the Second Unitarian Society in Providence, R. I., to be its minister. He had been in Bangor fifteen years; he was six years in Providence, and then went to Brookline, Mass., where he remained till 1872, when he was appointed Professor of German Literature in Harvard College—a position not wholly congenial to him, as it involved instruction in the language, for which he had no liking and no special fitness, as well as lecturing, for which his fitness was remarkable. The quality of his lectures can be determined by the curious by an examination of his 'Hours with the German Classics,' published in 1886, and his most important publication with the exception of his 'Prose Writers of Germany.' While he was preaching in Providence he gave a course of Lowell Lectures on Mediæval History. Their ability and brilliancy secured for him the position of Instructor in Ecclesiastical History in the Cambridge Divinity School. This position he held in connection with his Brookline pastorate, but his appointment as German Professor in 1872 obliged him to give up his parish and take up his residence in Cambridge. He was still eagerly sought for by Unitarian societies for occasional services, and no preacher was listened to by his coreligionists with more respect and admiration; and it was always as a Unitarian preacher and scholar that he wished preëminently to be regarded. As a preacher he was unique among his fellows, exceptional in the dignity and gravity of his thought and manner. He was master of a very imposing style; of a rhetoric clear of "purple patches," yet rising appropriately with the subject. His voice, always at first harshly guttural and not inviting, could soften on occasion to the most winning cadences.

Dr. Hedge's standing in his denomination was peculiar. Conservatives and radicals admired him equally, and alike were often disappointed by his tone. Free in criticism, and daring in speculation, he was at the same time ecclesiastically conservative. At critical moments his influence was often thrown against the men who felt that they had a right to count on his support. In 1864 his sermon before the graduating class of the Divinity School on "Anti-Supernaturalism in the Pulpit" was hailed "with tumult of acclaim" by the conservatives, while it would not have been difficult to discover in his writings striking examples of the tendency he so earnestly deplored. He was fond of telling a story about a man who wished to run his ox at a horse-race, and was refused. "For how do I know," said the proprietor, "what your d—d ox will do?" The fable was for him as well as for some others. He could not be reckoned on. Men drew a long breath when he was through if they had come out of it unscathed. The old-school Unitarians never liked his insistence that in the old Arian controversy Athanasius was more nearly right than Arius.

In philosophy there was never any difficulty in determining Dr. Hedge's whereabouts. He was where the Spencerians, the sensationalists, the experimentalists were not. He was always with the idealists, the intuitionalists. His admiration for Kant was very great, and he regarded Schopenhauer as a much truer continuator of Kant than Hegel, who seemed to him something of a charlatan. His philosophical opinions are best expressed in his volume entitled 'Atheism in Philosophy.' His theological and religious opinions are elaborated in his volumes 'Reason in Religion,' 'Ways of the Spirit,' and 'The Primeval World of Hebrew Tradition.' As a preacher, he was not mainly theological or speculative. He was mainly ethical, and could search men's consciences as effectively as any preacher of his time. He seldom printed without others' urgency. He wrote articles for the *Dial*, *Putnam's Magazine*, and the *Atlantic*, but more for the *Christian Examiner*, of which he was at one time editor. His skill in biographical delineation was greater than in any other kind of work. He was not good at eulogy at the obsequies of distinguished persons. His frankness on such occasions was sometimes refreshing, and at other times alarming.

Though in his casual manner somewhat brusque, to know him well was to find him warm-hearted, generous, affectionate, and tender to a remarkable degree. A dinner offered him on his eightieth birthday anniversary, at which Dr. Holmes presided and read one of his most charming occasional poems, made evident in what great esteem and warm affection he was held by many friends. His own address was a modern *De Senectute*, worthy of choicest preservation. Among the Transcendentalists, where Emerson is easily first, he takes the second rank, but not alone. Theodore Parker stands beside him, differing from him very much as Luther differed from Erasmus—each great in his own way.

THE RUINS OF CASAS GRANDES.—I.

Santa Fé, August 11, 1890.

The name of Casas Grandes, or "Great Houses," has been applied for over two centuries to a group of fairly preserved Indian ruins in the canton of Galeana, State of Chihuahua, Mexico. These ruins are situated nearly due south of Deming, on the Southern Pacific Railroad, at a distance of one hundred miles from the United States boundary line. They lie within half a mile of the village of Casas Grandes, a thriftless agglomeration of decaying adobe houses inhabited by about twelve hundred people.

It is well to discriminate between the Casas Grandes of Chihuahua and the Casa Grande of Arizona, on the middle course of the Gila River, eighty-five miles northwest of Tucson. The latter means 'Great House,' because the only well-preserved ruin is a clumsy building, three stories of which still remain. At Casas Grandes none of the edifices are as intact as the one on the Gila, but the pueblo was more extensive, and in one instance four stories can be clearly discerned. The architecture of both places bears the same characteristics. They seem to have been reared by tribes occupying the same level of culture, having the same ideas of life, social organization, religion, and art. Of the Casa Grande it is positively known that the ancestors of the Pima Indians built and occupied it. Concerning the Casas Grandes no definite tradition is known. What was told me by an Opata Indian from Huachinera in the Sierra Madre, namely, that the Opatas built and held the pueblo, calling it Hue-hueri Kita (Great Houses), is not impossible, but far from certain, as yet.

The valley of Casas Grandes is one of the few fertile spots in northwestern Chihuahua, outside of the Sierra Madre. The little river affords permanent water for irrigation. Groves of tall cottonwood trees line its sandy banks. The soil is white and seems sterile. Nothing but low mezquite, ocotilla, catsclaws, and tasajo—all thorny shrubs—cover it with a dusty vegetation. But, wherever irrigated, this apparently arid ground is productive of rich yields. The climate is warm in summer. Snow not seldom falls in winter, for the altitude reaches 4,000 feet, and the latitude is slightly less than 30° 30'. High parching winds are felt along the whole valley more or less; at Corralitos and Janos more so than at Casas Grandes proper.

The main ruins cannot be separated, archæologically or geographically, from the remainder of the banks of the stream from its formation at San Diego to Ascension, full eighty miles below. There are, however, two breaks in the extent of fertile bottoms. One is between Corralitos and Janos; the other between Janos and Ascension. These intervals are due to abrupt and arid heights or chains of heights, outposts of the Sierra Madre, through which the stream has forced a passage. There no

extensive ruins can be looked for, whereas around Ascension (beginning at the north), Janos, and from Corralitos to a point above Casas Grandes, the remains of ancient habitations are frequent. They all bear the same general character. The material is a marly clay, and they indicate houses of one or more stories, usually in groups indicating small villages, the centre of each group being occupied by a building apparently higher than the rest. The edifices are not contiguous, and the distances separating them vary a good deal. Large structures, also isolated from all others, are not infrequent. This is chiefly the case at Ascension and along the rivers Palanganas and Piedras Verdes, by the junction of which at San Diego the Rio des Casas Grandes is formed. For miles away the mounds are seen to rise above the dusty levels. Excavations reveal walls of several feet in thickness, rooms completely filled with the pulverized material of which the upper stories and the roofs were made. Pottery, handsomely painted and with a thin, fine gloss, is frequently found entire, for, as no rocks were used in the construction of the houses, the fine rubbish has enveloped the fragile earthenware and protected instead of shattering it. Not infrequently the houses rest on terraces supporting the vestiges of parapets of clay.

The number of these groups of buildings is considerable. Between Casas Grandes and Corralitos, a distance of twenty-eight miles, I counted and surveyed not less than ten distinct clusters, not including the main ruins at the former place. It seems that the four vales or basins, so eminently fitted for the wants of an agricultural Indian stock, were inhabited by several branches of a tribe in the same manner as the Queres now inhabit the Rio Grande valley from Cochiti to San Felipe and the banks of the Jemez stream from Zia to Santa Ana, and the Tehuas the Rio Grande above San Ildefonso in three pueblos within a space of twelve miles. In times previous to the occupation of New Mexico by the Spaniards the pueblos were smaller, on an average, than they are now, but more numerous. From 300 actual surveys made by me of as many pueblo ruins, I gather that the average number of souls did not exceed 300. There were of course some pueblos which, like Pecos, the Pueblo Bonito, and others, sheltered a much larger number, but they were exceptions. The rule was a number of small villages not far apart from each other. So the Piros occupied on the Rio Grande sixteen pueblos on a line sixty miles long.

It is not certain that the inhabitants of the villages around Ascension, for instance, were of the same linguistic stock as those about Janos. In New Mexico the former village of the Queres of Santa Ana was only five miles from the most northerly pueblo of the Tiguas near Bernalillo. Jemez is eight miles from Zia, and each village speaks a distinct tongue. Neither is it certain that the towns were all coeval. As a rule, if we divide the total of ruined pueblos by fifteen, we obtain a still exaggerated figure for the number of those that were occupied at one and the same time, for traditions are abundant and sufficiently explicit to prove how easily the sedentary Indian removes from one site to another, and on what slight provocation. The great number of ruins dotting the course of the Casas Grandes River is not, therefore, positive evidence of a large population at any given time. Nor, with all the natural resources of the region, could a considerable Indian population support itself with the aid of stone implements and without beasts of burthen.

The cluster of buildings called Casas Grandes *par excellence* is remarkable for its good preservation and its size. It is difficult to examine all the structures, since modern houses have been constructed on and from several of the mounds. However, to any one familiar with the aborigines and their mode of life it will become clear at once that the place could not have harbored over four thousand people. The ruins show at least six huge mounds, each of which was a tall house three or four stories high, with walls as thick as five feet, made of what Mr. Cushing has quite appropriately termed "basket adobe-work." The wall is formed by rows of poles bound together by a trellis of branches (of ocotilla mostly), and the space between filled with soil firmly pounded. A plastering of the same material covered both outside and inside, and a wash of gypsum, sometimes painted red, was applied besides. This basket work enabled the Indian to make his walls very thick, and thus to rear tall edifices without the innumerable partitions of the northern pueblos. It was an architecture combining purposes of defence with that of abode, and allowing for the exigencies of a warmer climate by making the rooms larger and higher, with a corresponding increase in the size of the doorways and air-holes. In one place I noticed what may possibly have been a wooden staircase. The roofs are preserved in some places on smaller edifices, as well as the holes of the beams that supported ceilings. It was the so-called pueblo roof—round timbers fastened in the wall and covered with transverse poles, then with brush or grass, finally with earth well pounded and smoothed over.

The great structures at Casas Grandes are so close to each other as to seem contiguous, but it is evident that each stood by itself, narrow alleys separating them. There is no regularity, as in the northern pueblos; it was simply a cluster of tall, clumsy edifices huddled together on a comparatively limited space. Smaller buildings, one-storied and containing from three to a dozen rooms, are scattered along the bases of the high mounds, but they are not so numerous as to lead to the inference that the bulk of the people occupied them. On the contrary, the many-storied houses constitute by far the principal portion of the settlement. From this, and from the fact that all sorts of household utensils have been and are constantly being taken out of them, it must be inferred that they were dwellings, not temples or palaces, and that the smaller buildings (as is the case of the pueblos of to-day) were houses constructed by such as no longer found room in the main structures, or were occupied by outcasts, who, for some crime or other, were not tolerated any longer with their clans, or possibly both. For so-called summer-houses, such as the Pueblos of to-day occupy on their fields, they are too close to the place, nor do they seem to have served for religious purposes.

There is no trace at Casas Grandes of the circular estufa, that semi-religious, semi-social architectural feature of the pueblos. Nothing has as yet been noticed that would indicate an edifice for purposes of worship. Fetishes have been found, however, among which I saw and copied (the painting is now at the Vatican) a fetish of the panther or puma, closely resembling those in use among the New Mexican Pueblos. One very interesting find was made many years ago. In a small room on the first floor of one of the tall edifices a monstrous meteorite was discovered. It had been enveloped in cotton cloth, therefore carefully preserved, and was, when found, of a silvery hue. The cloth covering crumbled as soon as it came in contact with the air. The stone was carried to Chihuahua, where it still exists. Of its size and weight I could only ascertain that it was very heavy, since it required great effort to remove it.

The artificial products exhumed from the ruins all show a superior degree of skill—not the pottery alone, although it is strikingly handsome. Greater or less perfection in ceramics is due often to local causes only. This is well exemplified in New Mexico. From a characteristic pueblo ruin near San Mateo, pottery was exhumed that will compare favorably with the best of Casas Grandes. Only a few miles away, similar ruins have yielded very inferior specimens. The same thing occurs in the Moqui country, where Ahuatuyba furnishes the handsomest ceramics of northern Arizona, far superior to those of other ruins in its neighborhood. The Indian adapted his arts to what the locality afforded. His commerce was too limited to furnish him with material from the outside in large quantities, for he had no beast of draft or burthen to transport them any distance. There are traces, at Casas Grandes, of aboriginal trade and barter. Shell-beads are frequently found, so are turquoises and marine shells. Some of the latter I had determined by specialists: they proved to be from the Gulf of Mexico and from the Pacific Coast. Casas Grandes lies midway between both.

Objects of stone and flint are not uncommon. The stone-axes which I have seen and copied are not any better made than those of New Mexico. The arrow-heads are the same in form and make, but the hand-mills, or "metates," are far above anything I ever found as far north as the thirty-sixth parallel of latitude. They are tolerably well squared and finished. I also saw a double "metate" and a stone pestle with the head of a mountain sheep nicely carved on it. Many other stone implements as rude and as clumsy as those elsewhere found accompany well-executed specimens of the same utensil. The specific Indian trait of character, inequality of workmanship, displays itself at Casas Grandes as well as elsewhere—no uniformity in execution, but on the other hand, in pottery especially, great sameness in the patterns and designs.

It is a very striking fact that, from southern Colorado and Utah down to the twenty-ninth parallel at least, the pottery decorations should show the same symbols, locally or individually modified. These symbols we are well acquainted with from the New Mexican pueblos; we know that the double staircase signifies the clouds; the spiral and the Greek fret, the whirlwind; the forked line, lightning. We know how the rain is depicted, how the sun, moon, stars, the rainbow. The innumerable modifications of each typical form are also known to us. The fundamental decorations on the pottery of Casas Grandes are the same as those of Pueblo pottery and of Pima baskets or Moqui trays. Still, at Casas Grandes and in the Sonoran Sierra Madre, near Huachinera and Baserac, I have met two figures that were new—the heart and the flag. More remarkable yet is the fact that at Casas Grandes pottery is found decorated with human figures in relief. This indicates progress, emancipation from stereotyped models, the creation of new symbols, perhaps. The heart is frequently met with on Zuñi vases, but always in connection with some animal, never alone by itself, as at Casas Grandes. As to the flag, I know of nothing like it in New Mexico or in Arizona.

Still greater progress is evidenced at Casas Grandes in the vestiges of irrigation. The

acequia, or ditch, which runs towards the ruins from the northwest, shows traces of filling and of cutting. It is no longer the primitive method of slavishly following sinuosities of the ground in order to avoid obstacles. The ditch of Casas Grandes runs almost straight. It crosses gulches that could have been passed by means of wooden or stone channels alone. It rests on a bed of stones. Hugging the western edge of the great buildings with one of its branches, it winds the other around the east side, and terminates in the Casas Grandes River. Where the western arm approaches the pueblo, it is lined by a chain of artificial eminences, composed almost exclusively of pebbles, and from three to fifteen feet high. Some are rectangular, others circular, and one has the form of a star with four arms of unequal length. Treasure-seekers burrowed in several of these mounds, but found nothing. They were neither fortifications nor lookouts, for the great houses far exceed them in height, and these same houses were the best fortresses that could be devised against an Indian enemy. Places of sacrifice? Possibly; but although I was informed that charred bones and skeletons had been found on one of them, nothing in the sections made by digging or by decay indicates their use for sacrificial purposes. Furthermore, while every part of the ruins abounds with specimens of broken pottery, this is strikingly scarce on these gravel hills; still there is no doubt that they are artificial. On the southwestern edge of the ruins the ditch runs into two circular tanks. Only one ruin, possibly of Spanish origin, is found outside of the ditch. It was a one-story house, with interior court, differing in plan from the other edifices.

AD. F. BANDELIER.

THE NEW WORLD IN THE OLD.

LEAMINGTON, England, Aug. 11, 1890.

AN American intent on finding stray bits of association with American history does not unprofitably wander over southern and southwestern England, and it is some advantage, too, for his sense of perspective that he does not find there the shoals of his countrymen which he encounters here in the midlands. I found it not easy to bring back, at Southampton, the town of James's time, when the *Mayflower* and *Speedwell* came there from London to take the little band of pilgrims on their adventurous voyage. Here it was that they picked up John Alden, the cooper, as a useful man to take with them, but I could find little to connect with him amid the bustle of the modern seaport, except that the name is still not unknown in that part of England. Of his Priscilla I encountered a reminder at Salisbury. It had long been supposed that William Mullins, the father of that damsel, had been a Walloon, who had joined the Pilgrims at Leyden, as it is known that other French Protestants did, and that the name had been Anglicized from "Molines." Very likely it was, and those of the name now in England may have come from a Huguenot stock which came into Devon and Wilts after the revocation of the Edict of Nantes, bearing names and trades which are not yet exterminated; or, indeed, they may have come over with the Conqueror. At all events, the English Mullins was a name in vogue in the Pilgrims' time, and it is not long since Waters, our American genealogist, discovered in Doctors' Commons the will of the *Mayflower* Pilgrim, which had been sent to England for record. So at Salisbury I was not surprised to find, on the pavement of the Cathedral, the name of Mullins, among those olden worthies of the last and preceding century who were buried there, and over a shop, near one of the gates of the close, I read, "William Mullins, valuer," or appraiser. Again, at Barnstaple, I found in the parish church, among the mural tablets, the name of William Mullins, as belonging to a person of some consideration in the seventeenth century; and when I asked the sexton if Mullins was a common name in that part of England, he told me it was, and that his grandmother was of the name. So it would seem that just north of Southampton, in Hants, Wilts, Devon, and Somerset, the Mullins family were and are prevalent, and it is not at all unlikely that William Mullins and his family were not unknown to the Aldens of the same locality.

I find it, further, striking to observe how family names have followed town names to New England. At Bath, not far from Barnstaple, I fell into the hands of a gentleman whose archæological tastes find sustenance in the traces of British occupation of that neighborhood, where the lines of their encampments on the surrounding hills mark the struggles of the West Saxons in forcing their way in their conquests. His name was Hallett—not an uncommon name, he said, in that neighborhood and in the neighboring Barnstaple. I recalled how the youngest son of John Alden and Priscilla—whose homestead, in which John Alden died, in Duxbury, Mass., is still occupied by a John Alden—married Abigail Hallett of our Cape Cod Barnstable, of a family that had, with others from the old-country Barnstaple, given the name to their new settlement, for its associations with home.

The borough librarian and a local antiquary, Mr. Worth, were of much help to me, in the Devon Plymouth, in hunting out old bits of the town which could carry me back to that summer of 1620 when a distressed little bark, with her sinking consort, put into that port for safety and a temporary refuge. Plymouth Sound, with its breakwater, the modern dockyards of the Hamoaze and the commercial haven of the Catwater, with all its bustle and prosperity, has little on the exterior to remind you of that olden port. You may see the American flag flying at our consulate. It was displayed at the peak of the *Jamestown*, one of our training-ships then lying in the Sound, denoting that modern interests connect the town with the new nation of the west; but the steep, winding alleys of the old town about the fish-market were what I sought to give me a picture of the Plymouth which the *Mayflower* left as its last English haven. This fishmarket is a noisy, odorous quay, lining a little pocket of the Sound, which is here called Sutton Pool, and it goes by the name of the Barbican, as marking an out station of the old castle, the gateway of which is the only fragment still left, half-way up a narrow lane, and converted into a fisherman's house. It is still quaint and old-worldish, filled with the fishermen's boats, which one morning I saw pass in procession, scores of them, with their dun-colored sails, out into the Sound and beyond the breakwater and the Eddystone, to get their fares for the market. They were not much smaller than the *Mayflower*, which took its hundred souls across the sea; and the basin of the Pool, the tide still flowing as it did when the *Mayflower* cast there her anchor, was in reality, with its changed waters, almost the only thing, besides the contour of the high lands beyond the Catwater, upon which Carver and Bradford could have looked.

But Plymouth is not unmindful of the associations which give it such interest to the New England wanderer. You can see, among the stained windows in her new and lordly Guildhall, the scene of the embarkation at the "Barbican" portrayed as one of her civic glories. They have raised a statue to Drake on their imposing Hoe, placed where it commands a wide view of the Sound, and of the offing, where the Spanish Armada was discovered, and they have recently put up beside it a still unfinished memorial of Drake's exploit in scattering the hostile fleet. The Hoe will never be adorned as it ought to be till it also bears a fitting monument to commemorate the refuge which those humble English found here in this Devon town. What is now a Baptist church claims to be the descendant of the little Nonconformist congregation from which Bradford says that he and his lowly companions received hospitality and comfort; but it has no records to establish the belief which they fondly cherish. I went into the muniment-room of the town, in the hope that I might find in the records some symptoms of a popular interest in their adventurous voyage; but it was hardly to be expected. I did, however, read with interest the items that were penned in their books when Drake was making ready to go out against the Armada, and recording his return from his voyage of circumnavigation. It gave me some comfort to see that their muniments, though housed in a way to protect them from fire, were not in better order than I have often found similar records in our American towns.

I was disappointed in not finding that the Bristolians quite appreciated the act which enables them to say that they gave to England its right to North America, for John Cabot, sailing from Bristol in 1497, under a patent from Henry VII., to discover new lands, and under the auspices of the Merchant Venturers of that town, might give them a bearing for their 'scutcheon not inferior to the claims for historical prominence possessed by any other English town. But they seem to care little for it. They even know so little of Cabot that they fancy he was a Frenchman, or at least in pronouncing his name they drop the final *t*. I met a leading scholar at the library in Bristol, and when I said *Cabot*, in the next sentence he said *Cabo*. I went to Merchants' Hall, the building of the still existing Venturers' Company, and the old gentleman who received me, in telling me that their records did not go back of the seventeenth century, assured me that I probably knew more of *Cabo* than they did. A few days later, when I was visiting Freeman, the historian, at Somerlease, and spoke of Cabot, he went on talking of *Cabo*. "Why," I said, "is it possible that Zuan Caboto, a Venetian, coming to settle in Bristol, would have Frenchified his name?" "No," no," he replied; "you are quite right. I never thought of it before. We are only stupid in our pronunciation." JUSTIN WINSOR.

Correspondence.

TAYLOR THE PLATONIST.

TO THE EDITOR OF THE NATION:

SIR: I shall be glad if you can give hospitality to the statement that I have printed a small edition (100 copies) of the two articles on Thomas Taylor the Platonist which appear in the July and August numbers of the *Library*, and have reserved copies for the United States. There are some American students who are interested in Taylor, and to any of them who care to apply I shall be glad to give a copy of this little monograph. In this way I may perhaps secure corrections and additions to my

sketch, which at all events has been a labor of love.—Yours truly,

WILLIAM E. A. AXON.

AUGUST 9, 1890.

NEWSPAPER LOTTERIES.

TO THE EDITOR OF THE NATION:

FRIEND: At last the days of Government-protected lottery advertising seem to be coming to an end. It is well, and in the prospect there is general rejoicing. And now that the moral sense of the community has been stirred upon the subject as never before, would it not be manifestly consistent in all the newspapers which, for the purpose of increasing their circulation or for any other object, have of late been maintaining little lotteries of their own, to withdraw their prospectuses, confess judgment, and honestly declare that they also have been offenders, and have done a determinate part in stimulating the betting, gaming, lottery and policy-playing, and "guessing" mania?

There are some papers—a good many, indeed—which have had no part or lot in these discreditable schemes. They have had no part in them so far as any direct participation therein is concerned; and yet, perceiving the wrong and knowing how pernicious must be the effect upon the people, they have failed to point their weaker brethren of the press to the fact that they were taking hold of an unworthy and belittling business. The "courtesy of the press" is admittedly a thing to be generally observed, but silence is at times akin to unfaithfulness.

An item upon the subject which I have presented was lately contained in a letter of the English correspondent of the *Christian Advocate*. It contained a piece of information relative to action taken by the British Government which, had it come by Associated Press, would have been given proper publicity and have helped to stop an evil which has rapidly grown to large proportions in this country. The item referred to is as follows:

"A very important step in the direction of putting down gambling has been taken by the Government. For some time the newspapers in their advertising columns have offered prizes for competitions. These competitions, in which the public have been invited to take part, have not been literary, or in any way educational. They have been of the nature of lotteries; they have not depended on the skill of the competitors, but on sheer chance; and they have undoubtedly fostered the spirit of gambling which has been rapidly spreading among all classes. Such competitions are now declared to be illegal, and a strong blow has been struck at what threatened to be a very grave evil."

Now, when a newspaper in Brooklyn announces prizes to subscribers, of the (alleged) value of from $1 to $1,500, payable to those who shall make the nearest guesses of the number of beans in a certain sealed jar; when a daily journal of Cincinnati issues a similar prospectus of prizes to those purchasers of the sheet who shall make the nearest correct guess as to what will be the size of its circulation upon a specified date; and when an afternoon paper of Philadelphia displays a bold placard upon the front of its publication building promising "$500 for 2 cents," and daily, for months together, tells how those who get the paper may, by properly filling up the "coupons" printed therein (they are guesses as to winning base-ball teams) and sending them to the office of the paper, take their chances in getting the prize—I say while lottery schemes such as these are permitted in the three cities named, and in the cities generally throughout the North, is it not time for the self-respecting journals of the land, while warning their readers (with much truthfulness and propriety) concerning the one big lottery of Louisiana, and instructing Congress concerning its manifest duty touching lottery advertisements in the mails, to honestly condemn the whole business of newspaper lotteries, withdrawing the right hand of fellowship from all who persist in managing or abetting such dishonorable and illegal undertakings? Meanwhile, have the commonwealths' attorneys no duty to attend to in the matter?

JOSIAH W. LEEDS.

PHILADELPHIA.

NEGLECTED OPPORTUNITY.

TO THE EDITOR OF THE NATION:

SIR: The following passage from the London *Spectator* of August 9 presents an irresistible temptation:

"What is even more noticeable is the difficulty of ascertaining what the popular will is, and the growing timidity of responsible statesmen in interpreting that popular will in the absence of decisive indications. We not only hesitate a great deal before making up our minds, but when we have made up our minds, we hesitate a great deal more in taking action upon our convictions, while we are still quite uncertain whether or not our convictions will be confirmed by what is called public opinion."

In reading this, we should keep in mind that what is called in England the Government—that is, the Ministry—does not emanate from the people at all. The nation is never called upon to give a vote as a whole. What it does do is to elect some 600 members of Parliament by districts, and the majority of these practically elects the Ministry. But the motives which govern the districts in electing members and the motives which govern members in electing a Ministry may be very different from those which would direct a vote of the whole people for a common leader. Suppose, on the other hand, that the Prime Minister was elected at stated intervals by the whole nation, and selected the other members of the Cabinet at his pleasure. His and their relation to Parliament would be wholly different. Their authority would have much more of firmness and vigor. Parliament would listen much more respectfully to an authority of which the source was so much wider than that of any members. The press would be always studying the will of the country, instead of that of localities, and the Ministry, relying upon that will, could venture upon more decisive action. Bye-elections of members would give much more of judgment upon policy, while a general election would give a much more decided approval or rejection.

This is not saying that the result would of necessity be any wiser or better, but only that it would give a more direct and decided expression of the popular will, though it remains true that the larger the area over which a vote is taken, the freer it will be from local and personal prejudice, and the more in accordance with general principle.

In the United States we have precisely this element which is wanting in Great Britain. In the President of the United States, the governors of all the States, and the mayors of all the cities, we have single agents elected by the whole body politic, and so deriving their authority from a source independent of and superior to that of members of the legislative bodies, and therefore fitted to enforce the general will and interest against local and private. Apparently this does not do us much good, to judge from the concluding words of the same article of the *Spectator*. After suggesting some expedients, it adds:

"Or it may not be cured, but become chronic, as it has become chronic in the United States, where the legislatures dwindle in importance, and the people take less and less interest in their proceedings."

The reason of this is, that we reject and refuse to make use of the instrument which we possess, that we tie the hands of President, Governor, and Mayor, forbid them to take any part in the conduct of business, or the business itself, allow them no voice in shaping policy or legislation, but confine them to a negative upon whatever the Legislature may happen to evolve, while the chief motive power in the Legislature is secret intrigue, and the people have, much less than in Great Britain, the means of making their wishes and influence felt. If ever the country gets tired of legislative anarchy and lobby rule enough to insist upon a real executive who shall act as the efficient and responsible agent of the general public will, we may teach our English friends something in parliamentary government, as we have taught them a good many other things. G. B.

BOSTON, August 23, 1890.

A RECTIFICATION.

TO THE EDITOR OF THE NATION:

SIR: I am very sorry that the *Nation* should have permitted itself to be found napping to the extent involved in its quoting with approval Senator Vance's argument in the debate on iron. His position rested entirely on a blunder of the grossest kind. If the amount of labor entering into the production of a ton of iron is to be considered at all in the determination of the duty, the labor cost all the way back, and not only the cost of the final process, must evidently be taken into account. To say that "the laborer in every preceding process has already been protected" is to commit a glaring fallacy; for it is precisely on this account that the maker of the finished product, who has to pay the cost of these preceding processes as well as of the last, needs to have a "compensating" duty covering the previous processes, and only what he gets over and above this is his own special protection. All this is, of course, not only obvious in itself, but is the familiar principle which is constantly applied in the fixing of duties on finished products when there is a duty on raw materials; and it is not objected to by free-traders except in so far as they object to the duties in themselves. It would be manifestly absurd to act upon any other principle; for example, if the duty on the woollen cloth in a suit of clothes were $10, and the labor cost of making the suit $5, to say that $5 was ample protection on the suit, since it was equal to the whole cost of the labor employed in making it, would be obviously ridiculous.

Of course, I am far from defending either the duty on iron or the crude way of measuring its justification adopted by those to whom Mr. Vance was replying; but as far as absurdity was concerned, it lay entirely on Mr. Vance's side. And I cannot help adding that in my judgment no better service could be rendered to its cause by a journal devoted to tariff reform than a stern rejection of all the hollow and fallacious arguments that are made on its own side, which are unfortunately very numerous. The subject is confusing enough to the average mind without the presence of bewildering errors on both sides; and the only way to keep the plain man's face steadily turned in the right direction is to avoid all arguments that cannot stand searching examination, and to make him feel, besides, that his

teacher is ready and eager to expose clap-trap, even when it is used on his own side.

Yours very respectfully, F. F.

AUGUST 16, 1890.

Notes.

G. P. PUTNAM'S SONS will publish in the early autumn 'The Unwritten Constitution of the United States,' by Prof. Christopher G. Tiedeman of the University of Missouri; 'The Battle of Manassas,' a reply to Gen. J. E. Johnston by Gen. G. T. Beauregard; 'The Trees of Northeastern America,' by Charles S. Newhall, with illustrations from the tracings of leaves; 'Dust and its Dangers,' by T. M. Prudden, M. D.; 'Little Venice, and Other Stories,' by Grace Denio Litchfield; 'Gilbert Elgar's Son,' by Harriet E. Davis; 'A Young Macedonian; or, From Troy to the Tigris with Alexander the Great,' by the Rev. Alfred J. Church; Amicis's 'Holland and Its People,' in Caroline Tilton's translation, newly printed and with numerous illustrations; and 'The Diary and Letters of Mme. D'Arblay,' edited by W. C. Ward.

J. B. Lippincott Co.'s announcements include 'The Distribution of Wealth,' by Rufus Cope; 'Hermetic Philosophy,' by J. S. McDonald, and a new "Aldine" edition of 'Rejected Addresses,' by James and Horace Smith, limited to 250 copies for America.

'Our Early Presidents, Their Wives and Children,' by Mrs. Harriet Taylor Upton, is in the press of D. Lothrop Co., Boston. It will present authentic likenesses.

Ginn & Co. will have ready next month 'Selections in English Prose from Elizabeth to Victoria (1580-1880),' by Prof. James M. Garnett of the University of Virginia.

A volume of verse by Mrs. S. Frances Harrison ("Seranus") will be shortly brought out by Hart & Co., Toronto.

Mr. Austin Dobson has followed his biographies of Hogarth, Fielding, Bewick, Steele, and Goldsmith by yet another eighteenth-century life, and Dodd, Mead & Co. will publish in the fall, in a limited edition, his 'Memoir of Horace Walpole.' The same house will also issue, as a gift book, his poem of the 'Sun-Dial,' illustrated with photogravures and pen-and-ink drawings by Mr. G. W. Edwards; and their Giunta Series will begin with 'Four French women,' outlines of the lives of Charlotte Corday, Mme. Roland, Mme. de Genlis, and the Princesse de Lamballe, written by Mr. Dobson and adorned by a portrait of Mlle. de Corday, etched by T. Johnson.

We receive from Mr. John C. Nimmo, London, his prospectus of a new uniform and limited edition of the works of the late Sir William Stirling-Maxwell, Baronet, in small quarto cloth, with a few large-paper copies, both printed from type and not from plates. This edition will comprise 'The Annals of the Artists of Spain' (4 vols.), 'The Cloister Life of the Emperor Charles the Fifth' (1 vol.), and 'A Volume of Miscellanies,' containing a memoir of the late Sir William Stirling-Maxwell, and a complete bibliography of his works and his literary and artistic productions, as well as a selection of his privately printed pamphlets on various interesting subjects of art, etc. The reprints in this series will all be revised and extended from the author's working over, and will contain many fresh illustrations.

Mr. Henry Marion Howe's 'Metallurgy of Steel' (New York: The Scientific Publishing Co.) is a thoroughly readable treatise, which subserves also the purposes of a manual through its rational topical arrangement and careful index. Having mastered its contents, one may rely upon possessing accurate knowledge of the whole science and craft of practical steel-making. It fills a quarto volume of some 400 pages.

M. Émile Faguet is a graduate of the Normal School, like Taine, About, Paradol, Sarcey, and Lemaitre. Like them, he has the solid learning of the scholar and an individuality of his own, without which criticism is arid and uninviting. His new volume on the 'Dix-huitième Siècle: Études Littéraires' (Paris: Lecène & Oudin; New York: F. W. Christern) is to be recommended highly to all who are fond of literature. M. Faguet is not quite as firm as M. Sarcey or as brilliant as M. Lemaitre, but his thinking is vigorous and his writing is direct, with a partiality for antithesis and for paradox. The eleven figures whom he has taken as typical of the eighteenth century are Bayle, Fontenelle, Le Sage, Marivaux, Montesquieu, Voltaire, Rousseau, Buffon, Mirabeau, and André Chénier. We miss D'Alembert and Beaumarchais, as important as Le Sage and Marivaux, to say the least. Especially worthy of note is M. Faguet's likening (p. 402) of Rousseau to Tolstoi, and his proof that Buffon had at least a glimpse of the theory of microbes.

M. Faguet's French is easy and not at all academic. It lacks the point of M. Lemaitre's, also very free; but it does not sink to the trailing carelessness of M. Brunetière. One very modern phrase deserves to be detached. Lowell has already pointed out the curious similarity between the French "s'orienter" and the New England "about East." There is a Western expression to the effect that so and so "did not scare worth a cent." It is with some surprise that we find an equivalent phrase in M. Faguet's pages. He declares that Voltaire was essentially bourgeois—that is to say, he was not at all an artist: "Voltaire n'a pas été artiste pour un obole" (p. 193).

With the July number the *Bookbinder* completes its third year and is enlarged into the *British Bookmaker*, which is obviously modelled on the American magazines devoted to the craft, although with a less artistic aim than is apparent in the American journals, and with a fuller proportion of trade news, sinking often into mere shop gossip. Among the illustrations are portraits of the Zaehnsdorfs, father and son, and a reproduction of a well-designed and well-tooled binding from their shop. For the specimen cloth covers stamped in colors there is nothing to be said on the score of taste.

The statement which we have observed in several well-informed papers to the effect that the excellence of the *Atlantic* during the past decade was in no small degree due to the new editor, Mr. Horace E. Scudder, in the capacity of assistant, deserves correction. The *Atlantic* has had no assistant editor during this period. Mr. Scudder's collaboration extended no further than the routine oversight of the issue of numbers, practically already prepared, during Mr. Aldrich's occasional vacations.

Petermann's Mitteilungen for July contains the first part of a contribution to the study of Polynesian ethnography by Otto Sittig. In this he brings together all the instances noted by European navigators of natives being involuntarily driven by storms or currents from one island group to another. From these data he apparently expects to prove the unity of the race. The accompanying map will show the various canoe tracks in what may be termed the four drift areas into which he divides the island region. This is followed by a description of the proposed Nicaragua Canal, by Dr. H. Polakowsky, and a paper, with a map, on the amount of salt contained in the surface water of the North Atlantic and its distribution, the greatest density being in the southeastern part of the Sargasso Sea. The editor, Dr. Supan, discusses the Anglo-German agreement with especial relation to eastern Africa. He takes a rather gloomy view of German colonial prospects, and advocates the diversion of the caravan routes, with the help of a railway, from Bagamoyo, opposite Zanzibar, to the ancient port of Dar-es-Salaam.

The August Proceedings of the Royal Geographical Society contains an account by Mr. J. Theodore Bent of his explorations in Cilicia Tracheia. This is a region, lying on the slopes of the Taurus, which eight centuries ago was "probably one of the most flourishing corners of the world, as is testified by the innumerable ruins of towns and villages crowded upon it, not only on the coast line, but up to a height of 6,000 feet above the level of the sea," but now is "given up to almost impenetrable brushwood, forest, and rocks," inhabited by a few nomads. Many inscriptions were discovered and copied, among which was "a list of 162 names, beginning with early Cilician names, running into ordinary Greek names, and the later ones showing evidences of Roman intermixture." The last name was that of King Archelaus, who ruled the district prior to its becoming a Roman province, and from this and other evidences it appeared to be "a list of the Teucrid dynasty or priest-kings of Olba," mentioned by Strabo; but this is disproved by Messrs. Ramsay and Hogarth in a communication to the *Athenæum* of August 16. Mr. Bent was so fortunate as to discover and identify the ruins of the capital of the kingdom of Olba, among which was the "great temple of Jove, which gained for the rulers of this district the additional title of priests." On a lintel found in these ruins, which he describes as among "the finest left standing in Asia Minor," was an inscription in a hitherto unknown script, "and which has not yet been deciphered by the epigraphists of the British Museum."

The current number of the *National Geographic Magazine* opens with a pithy abstract of a lecture by J. B. Bernardou on Korea and its people. It is accompanied by facsimiles of native maps of the country, which, according to the lecturer, has never been cartographically delineated in Western atlases from surveys by Europeans. He gives much curious information about roads, courier service, signal fires, mineral wealth, tides, and climate, and expresses his belief in the ease of devising a system of transliteration for the Corean "simple and very perfect alphabet." The second paper is an interesting account of the Ordnance Survey of Great Britain. The rest of the number is occupied with a discussion of geographic nomenclature, to which is appended the British, French, and German rules for the proper spelling of foreign geographic names. This magazine, it appears not to be generally known, is the organ of the National Geographic Society at Washington.

Cyprus is the subject of the opening paper in the *Zeitschrift* of the Berlin Geographical Society, No. 147, by Eugen Oberhummer, whose extensive routes of travel are exhibited on the accompanying colored map.

A novel suggestion is made by Dr. Nehring in the *Naturwissenschaftliche Wochenschrift*. It is succinctly expressed by the words "Fossil Blizzards." His idea seems to be that the singular abundance of comparatively recent fossils of large animals throughout certain small areas is very possibly due

to their death in groups during blizzards. These storms are known to be very destructive to the larger animals, exposed upon open plains, who generally huddle close together for protection. When freezing thus gradually, their positions are natural and unstrained—their bones would be in no way distorted, as would probably be the case if they had been killed by other beasts or by floods. And these easy positions are greatly characteristic of the masses of fossil remains in many regions.

In May last the library of the Brussels Observatory and the Meteorological Department were installed in the new building at Uccle. The Astronomical Department will remain at the old site until the difference of longitude between the two shall have been determined. On June 2 a monument about twenty feet high in the form of a "meteorological column," in honor of Houzeau, late director of this observatory, was unveiled at Mons.

A 'Manual for the Use of Boards of Health of Massachusetts' may well be valued in all other States by like bodies or by sanitary reformers. It is issued by the State Board of Health, and contains all the statutes in the premises with the decisions thereupon of the State Supreme Court.

Every library at least should possess itself of the 'Descriptive List of Novels and Tales Dealing with American Country Life' compiled by Mr. W. M. Griswold and published by himself at Cambridge, Mass. It is an attempt, in behalf of rational reading, to restore to novels their novelty—*i. e.*, to save from unjust oblivion such as have grown old without ceasing to be good and profitable, and so, in Mr. Griswold's words, to "lessen, in some measure, the disposition to read an inferior *new* novel when superior *old* books, equally fresh to most readers, are at hand." This laudable design will be continued in a list descriptive of American city life, and with lists of "International" and romantic stories. The first two may confidently be recommended to European publishers in search of something to translate, as a means of conveying correct ideas about this country to their fellow-countrymen. Mr. Griswold's plan is to give title, author, publisher, and year of publication, and to follow these data with a carefully selected critique from some literary review in good standing. The scene of the story is currently emphasized in bold type, but Mr. Griswold's index takes the searcher right to the desired locality. New England naturally is far in the lead; next come the Middle and the Southern, and then the Western States. New Hampshire lacks its novelist, apparently—of course judged by the compiler's standard. In families having access to a public library, this List ought to afford an answer to many troublesome questions about reading.

The ninth annual report of the Dante Society (Cambridge, Mass.) begins with a notice of the formation of the Italian Dante Society, to which (as it undertakes an exhaustive annual bibliography) the American Society relinquishes the task hitherto ably discharged by Mr. William C. Lane—in the present report for the last time. Prof. Fay's Concordance to the Divine Comedy has, it appears, not met with the demand which it merited. The Dante Prize for an essay to Harvard students or recent graduates is renewed. The collection of works on Dante fostered by the Society in the Harvard College Library now numbers 1,218 volumes, and is adequate on the side of printed sources to the needs of scholarship. Mr. Lane has indexed it most minutely in the Bulletin of the Library. An increase in the Society's membership is much to be desired.

The International Congress of Americanists will hold its eighth session in Paris at No. 184 Boulevard St.-Germain from the 14th to the 18th of October. Any one can participate as a member on payment of twelve francs to the Assistant Treasurer, M. C. Aubry, at the above address.

The catalogue of the late Dr. Döllinger's library, owing to the great amount of labor involved in preparing it, will not be printed before October. The numerous applications for it which have been received from various parts of the United States will then be met.

—The Cambridge (Mass.) *Tribune* has lately published a folio pamphlet commemorative of "the university city," partly historical, with some careful and authoritative writing about Harvard College and the town, and partly statistical of the present day. "Process" cuts in facsimile and from nature are freely employed, and when these are applied, as they are at the end, to portraiture, they furnish a considerable body of types of the New England business man. Much more care and expense has been devoted by the *Ohio State Journal* to producing its bound souvenir, which illustrates "Columbus, the hub of Ohio," whose radiating railroad spokes in fact amount to fifteen. Here, along with views of public buildings, we have a very large and important array of Western business types which will repay study. The Columbus bar is also photographically portrayed in nearly fifty examples, with ex-Senator Thurman at their head; the medical profession less numerously. Taking them together, the physiognomist has here a rich field for divination. More extensive still is the portrait-gallery comprehended in 'One of a Thousand: A Series of Biographical Sketches of 1,000 Representative Men Resident in the Commonwealth of Massachusetts, A. D. 1888-89,' compiled by John C. Rand (Boston: First National Publishing Co.). This large and handsome volume of 700 pages has almost as many likenesses of men famous and obscure, but largely of the mercantile and political class. The collection has been made to some extent on mercenary principles—*i. e.*, we believe that some men do not appear in it because they declined to pay the ten or twenty dollars needful for the expense of text and engraving. But the greater citizens could not be slighted on this ground, and we find Winthrop, Whittier, Holmes, Lowell, Ellis, Hoar, Dawes, Butler, Lodge, Long, Loring, Aldrich, etc., pictured, and Parkman, Higginson, E. E. Hale, Bartol, Joseph Cook, Parton, C. W. Eliot, Charles Francis Adams, etc., unpictured, and all alike probably untaxed. This volume is the precursor of others to represent other States, and the series, if ever completed, will be an invaluable repertory of American faces, as well as historically and genealogically an important addition to existing works of reference.

—The latest volume of the 'Archives of Maryland,' edited by William Hand Browne, extends from 1687 to 1693. This period covers the revolt instigated and led by John Coode, a former minister of the Church of England, afterwards a captain of militia, and, as the result of his successful sedition, "Commander of the Military Affairs in Maryland," and a *soi-disant* "Massinella." The panic induced by false rumors of an intended extermination of Protestants by Catholics, set down for "the latter end of August when roasting Eares were in season," paved the way for the overthrow of the Proprietary Government and the immediate intervention of Protestant King William in the control of the colony. In the confusion of the transition, the records of the Council were naturally suspended, and the gap had to be made good by our editor by means of copies of documents in the London Public Record Office. These, in which some duplicates are to be remarked, fill a third of the present volume, and greatly enhance both its value and its readability. There is, for example, a very picturesque and racy account of Coode's proceedings, privately addressed to Lord Baltimore by the Jacobite, Col. Peter Sayer of Talbot County, whose irreconcilableness ere long got him into limbo, since he could not restrain his tongue. The killing of Payne, the King's collector, when that gentleman was evidently misperforming his duties in a state of intoxication, is also well told in a variety of reports and affidavits. The Grand Jury, in their "billa vera," found that the felonious assault had been committed "with one Gunn charged with powder and two Leaden bulletts of the value of one pound Stirl'g." Indians and their "Emperors" cut a considerable figure in these records, and every treaty with them stipulates for the return of fugitive servants and slaves. The barbarous treatment of the latter, Dutch William's new Governor, Lionel Copley, was instructed to try to prevent by procuring appropriate legislation. We learn what was considered clement treatment from the case of Lewis Rennals, a mulatto, sentenced to death "for breaking open a House Chest &c and stealing from thence several Goods &c." The Attorney-General found "the Charge to be mean and but for a very small Matter," whereupon, "his Excellency being willing to shew Mercy to him," Rennals was ordered to be transported to Barbados, "to be sold and disposed of there to the most Advantage."

—The spelling and idiom of this mass of documents are full of entertainment. Nathaniel Bacon, President of the Council of Virginia, persistently spells yacht "yatch," and his correspondent Coode writes "Pyratts," and "Scharnecksteed, a towne near Albany," with "Schanagtede" for a variant. The recusant Surveyor-General, Edmund Randolph, "publickly demonstrates himself a Male Content at the present constitution and frame of Government." A like-minded Col. Fye is heard to say that "if he had the prince of orange there he would thrust his sword up to the Beame in him." This use of *beam* for guard we do not discover in Mr. Murray's Dictionary, or in any other within reach; but Murray cites an admiral who defines beam analogously as the *stock* of an anchor—not the shank, as the dictionary-makers would have it. New to us also is the adjective in the following sentence, regarding Payne's murderers: "It is verily believed that without Price and *keenely* evidence they would not have been found guilty." Old-fashioned substitutes for "bound" occur in "My wife Barbara Smith is *intended* to England, now immediately to make her personal petition"; and "I am *designed* to the freshes of Fatuxen." John Coode vouches for certain partisans as "all *unbyasted* persons." His opponents declared his Papist plot "nothing but a *slevelesse* fear and imaginacõn," and point "to that part of Virg'a where that monstrous brood of a Report was first hatcht." And so we might go on.

—It is not probable that any buildings in the world designed for such important, delicate, and complicated uses as the care of the sick and injured approach in every particular so nearly the ideal as the group making up the Johns Hopkins Hospital at Baltimore. In design and execution it is unsurpassed, and it is a conspicuous example of a great endowment

liberally and economically administered, and exhibits the wisdom of both the donor and the men intrusted with its management. Now that the end so splendidly crowns the work, those who cavilled (and there were some) at the time spent and at the superb care taken to perfect it, must be convinced that the means has been justified, and that the hospital of to-day is a full vindication of the expenditure and pains of yesterday. The trustees have just published a description of the hospital, including the Nurses' Home, written at their request by Dr. Billings, who, from the beginning, has been the expert medical adviser to the President of the Board and to the Building Committee. In his lucid style are explained the general and particular arrangements of the building, the heating and ventilation, the water supply, sewerage, drainage, and, in fact, everything about the establishment, of which much is unique and all is admirable. The work is a quarto of 116 pages letter-press with fifty-six full-page plates, and contains, besides the description, Mr. Hopkins's original letter to his trustees, and the address on the opening of the institution, which foreshadow and develop the range for good this institution covers. No exercise of sanguine imagination by the founder could equal the reality into which his fortune has been transmuted. The book is properly prefaced by a minute of the Board acknowledging and making record that whatever excellence the institution can claim as an advance in hospital construction is due to the great and deserved eminence in medical and sanitary science of Dr. Billings, and to the watchful zeal with which he directed every step from the beginning. It is printed on heavy paper with wide margins, and is no mean contribution to sanitary science.

—The college of Brasenose in Oxford has just recovered a relic of high antiquity and of the highest interest. This is no less than the original brazen nose—the palladium of the College, one might almost call it—from which, most likely, the name of the College is derived. It is a bronze knocker, in the shape of a lion's mask carrying in its mouth an iron ring, and may perhaps date from the twelfth century. At any rate, it has been absent from Oxford for five hundred years and more. In the year 1334 there was a great exodus of Oxford scholars and a migration to Stamford in Yorkshire. The students of Brasenose Hall, as it was then called, departed in a body and took the tutelary knocker with them. When a new Brasenose was built in Stamford, the knocker was fixed on its gate, and has remained there through all the chances and changes of five centuries. Possibly, as a writer in the London *Guardian* suggests, it came to be looked upon with a sort of superstitious veneration, which, as he says, has saved it from "theft, and chance, and time, and corporations." This last word is to the address of the corporation of Stamford, into whose hands the second Brasenose fell, and who ruthlessly tore it down in 1688. They spared, however, the ancient gateway, and the knocker remained also, even after the Stamford authorities sold the property, and has passed from one owner to another as a sort of heirloom of the estate. The late owner declined to sell it except with the estate itself, and Brasenose College has just bought the entire property, and recovered its ancient emblem. That it will be put back in its old place again and stay there for half-a-dozen centuries more, one may not rashly predict. To put it back might expose some young gentlemen to temptation of a kind which undergraduate virtue resists with difficulty.

—The yearly "Fêtes cigalières et félibréennes" were celebrated on August 9–18 in the southwest of France. The word *félibre* is commonly used to denote the group of Provençal poets, of which Mistral, Roumanille, and Aubanel are, or have been, the chief, and their following. Avignon and Arles have been the centres of this literary activity. Some of its productions have been worthy of a certain degree of consideration as possessing a real, if somewhat limited, interest. It was the revival for literary purposes of a patois which had ceased to be literary some six hundred years ago, and which came back again with a charm of freshness and novelty. That it was antiquated, and perhaps also somewhat factitious, suited not ill the taste of the time. It fitted in, if not with Romanticism and the revival of Gothic architecture, at least with the use of wax lights and antique furniture, and the recrudescence of "decorative art." It was at the very least a pretty and entertaining experiment that met with some success. Any such statement about the movement, however, would drive the younger set of *félibres* wild. They take themselves as seriously as any clique that ever called itself a "school" and had a "cause." They are enlisted in what one of their elders, M. Raoul Lafagette, calls a "patoisade"—a linguistic crusade which, in a measure, may revenge the crusade against the Albigenses. To bring back again the old equality between the *langue d'oc* and the *langue d'oil* would hardly be enough for them. Their plan seems to be that every writer shall use the patois of his native place, rejecting such Gallicisms as he may detect in it. (They do not accept even Jasmin's diction as pure.) As a result of poems so written in a tongue thus purified, they look for the development of three great types of dialect, corresponding to the uses of Languedoc, Provence, and Aquitaine. Afterwards "des pcèmes superbes" will follow naturally. It was not, of course, to be expected that every French newspaper, or every critic, should treat the claims of this new apostolate with complete seriousness. They have, in fact, been treated with a good deal of levity. It is none the less a rather interesting piece of work that they have in hand, even though it seems odd and foredoomed to failure.

THE BODLEIAN'S ANNALS.

Annals of the Bodleian Library, Oxford: with a Notice of the Earlier Library of the University. By W. D. Macray. Second edition. Oxford: Clarendon Press; New York: Macmillan. 1890.

THE public library of Oxford University, better known as "The Bodleian," boasts the proud distinction of being the first public library in Europe, and to its alcoves scholars of every land and nation have always found a hearty welcome. Long indeed is the roll of those who have profited by the facilities for quiet study and research afforded by its latticed cells, not inaptly compared, by one grateful student, to veritable bowers of paradise. Though no longer first in size among English libraries, being far surpassed in extent by its younger rival of the British Museum, in many respects it still maintains its preëminence; and its Annals, compiled with scholarly care by Mr. Macray, give us an interesting outline not only of the growth of the library itself, but also of the development of English learning and literary activity.

The beginnings of the University Library are traced with certainty at least as far back as the early years of the fourteenth century, when the books were kept in St. Mary's Church —some in chests to be lent out under pledges, and some chained to the desks for consultation on the spot. About 1320 Bishop Cobham began preparations for the erection of a library-room at the northeast corner of the church, but the work hung fire, and the room was not completed and occupied until 1409. During the next half-century Duke Humphrey of Gloucester made such munificent gifts to the library that this room soon became overcrowded, and when in 1444 the construction of a new library over the Divinity School was begun, the University, in recognition of his generosity, formally conferred upon Duke Humphrey the title of founder of the library. This new building, which was completed about 1480, and is still known as Duke Humphrey's Library, forms to-day the central portion of the great reading-room. But evil days were in store for this early library. In 1550 the Commissioners sent by Edward VI. to reform the University laid heavy hands upon it; all its illuminated manuscripts were ruthlessly destroyed as popish, and the others were left exposed to the chances of neglect and robbery. Wood informs us that they were in fact sold to the tailors and bookbinders until not one was left. In 1556, as we learn from an entry in the University register, the very shelves and seats were ordered to be sold for the benefit of the University chest. Thus despoiled of its contents, the room alone remained, desolate and forsaken, to show that there had once been a library in Oxford, until 1598.

In that year Sir Thomas Bodley, a graduate of the University, after a successful career as a diplomatist, "concluded," to quote his own words, "at the last to set up my staffe at the Librarie-dore in Oxon; being throwghly perswaded that, in my solitude and surcease from the commonwealth-affayers, I coulde not busie myselfe to better purpose then by redusing that place (which then in every part laye ruined and wast) to the publique use of studients." He offered to fit up the room with shelves and seats, to procure gifts of books, and to endow the library with an annual rent. The offer was gladly accepted, and two years were spent in the restoration of the building, which had suffered greatly from its long neglect. In 1600 the books began to come in, Bodley himself being one of the largest givers, and on November 8, 1602, the library was formally opened by the Vice-Chancellor. It then contained upwards of 2,000 volumes, which were, as usual in those days, chained to the shelves for safe keeping. In 1604 the library received by royal letters patent the name of its new founder, which it has borne ever since.

The text of the Bodleian statutes is not given by Mr. Macray, but a number of their provisions are mentioned, and curious enough some of the regulations seem to us. Full academical costume was required to be worn by all readers, and instances are recorded of students who were suspended from the privileges of the library for venturing to enter it without cap and gown. Heretical and schismatical books, we are told, could not be read without leave of the Vice-Chancellor and the Regius Professor of Divinity. When the catalogue was issued, it was ordered that every reader should buy a copy of it, in order to defray the expense of printing. In 1640 a German baron got into a row with a Welsh reader in the library, and cudgelled him soundly. The next day the Baron was expelled, and an order issued that henceforth no student, English or foreign, should bring into the library a staff, cane, or any offensive weapon whatsoever.

Bodley's firm determination that no books should be lent out of the library was embodied

in the statutes, and though the University had power, with the joint consent of the Chancellor, the Heads of Houses, and Convocation, to lend books, the right was very rarely exercised. There is no doubt that to the strict observance of this rule the Bodleian owes some of its most important benefactions; and while some donors stipulated, as did Archbishop Laud, that the books given by them might be lent for certain specified purposes, on the other hand the gift of Selden's great collection, numbering some 8,000 volumes, was accompanied by the stipulation that none of the books should be lent to any person on any condition whatsoever. As instances of the scrupulous regard with which this rule was observed may be mentioned the refusal of the librarian to lend books to Charles I. and again to the Lord Protector, and by both the refusal was approved. It is true that the attempt had been made more than once to abolish this restriction, and turn the Bodleian into a circulating library, but the rule remained in force until 1856, when the clause containing it was dropped from the statutes, and, in the absence of any direct prohibition, the practice of lending books under certain conditions gradually arose. In 1873 a clause was added to the statutes empowering the curators to lend books both to members of the University and others. In 1886, however, attention was called to the questionable legality of this clause as well as its bad Latinity, and, after considerable discussion, all power of lending books of any kind, except in such few cases as might be sanctioned by a special vote of Convocation, was abolished by a statute passed in 1887—a practical reversion to the earlier regulations, the wisdom of which seems to be generally acknowledged.

As we have seen, when the library was opened, the books were chained to the shelves, and this custom was long kept up. In 1654 it was stipulated that Selden's books should be chained, and 25 pounds 10 shillings was paid for chains for them. As late as the year 1751, notices are found in the account-books of payments for additional chains, but about 1757 the removal of them seems to have begun, and in 1769 nineteen hundredweight of them was sold as "old iron." At first the library appears to have been open only four hours daily, but this number was gradually increased to six hours in winter and eight in summer, and of late years the reading-room in the Radcliffe has been open daily from nine A. M. to ten P. M. By the early statutes perpetual celibacy was stringently enjoined upon the librarian, and it was not till 1813 that he was released from the obligation to remain unmarried, though, by a curious compromise, it was enacted that he, as well as the under librarians, should be unmarried at the time of election.

From its foundation the Bodleian has been the recipient of numerous gifts, its roll of benefactors including many of the most illustrious names in English history and literature. But, mingled with the greater number of valuable donations, not a few are recorded which are more curious than useful, for at some periods the Bodleian seems to have been looked upon as a general receptacle of miscellaneous odds and ends. Almost the first of these oddities, and one which proved to be a perpetual source of expense, was presented by Sir Richard Lee in 1609, in the shape of a Tartar lamb's-wool cloak. An account of this wonderful garment is given in the appendix to the Annals. Other gifts of this character include Guy Fawkes's lantern, an Irish skull, a tanned human skin, mummies, ostrich eggs, gloves; and even so late as 1813 the gift of a negro baby preserved in spirits is recorded. Most of these curiosities, however, have in course of time found their way to a more fitting resting-place in the Ashmolean Museum.

In 1610 Bodley obtained from the Stationers' Company, for the library, a grant of a copy of every book printed by them, a precursor of the present obligations imposed by the Copyright Act. This contract, however, was not always strictly enforced, and at first the growth of the library was comparatively slow. Starting with upwards of 2,000 volumes in 1602, the number in 1649 was only 16,000, and 36,000 in 1714. In 1780 complaint was made that the funds of the library were altogether insufficient for their purpose, and it seems for many years to have been dependent for its increase almost wholly on gifts. In consequence, a statute was enacted imposing an annual fee of four shillings on all readers, and also assigning a share of the matriculation fees to the library. From this time the growth was more rapid, and in 1817 the number of books, including manuscripts, had risen to 160,000; in 1885 the number was 440,000, and the present annual rate of increase is about 10,000 bound volumes, exclusive of periodicals. During the present century much attention has been given to the formation of special collections, and, under the late librarian, Mr. Coxe, whom many readers still hold in loving remembrance, great improvements were made. The new general catalogue, on the same lines as that of the British Museum, was begun in 1862 and completed in 1878. The last printed catalogue was published in 1843, with a supplement in 1851. It was chiefly the work of a Mr. Hackman, and Mr. Macray relates the following anecdote concerning him: It seems that during all the thirty-six years of his service in the library he had used as a cushion in his wooden arm-chair a certain vellum-bound folio, and when, after his resignation in 1874, it was removed from its resting-place of years, some amusement was caused by finding that the chief compiler of the last printed catalogue had omitted from it the volume on which he sat, of which, too, though of no special value, there was no other copy in the library.

Mr. Macray ends his record with the death of Mr. Coxe in 1881, as the later history of the library is given, with minute details, by the present librarian, E. B. Nicholson, in a report issued in 1888. An appendix contains some interesting documents relating to the library, lists of manuscripts, books in special bindings, etc., and an excellent index fitly completes the Annals.

SYMONDS'S ESSAYS.

Essays, Speculative and Suggestive. By John Addington Symonds. Two vols. Scribner & Welford. 1890.

THESE volumes of essays differ from the ordinary collections of miscellanies by men of letters. Some of the papers are old, some are new, and they deal with many topics; but they are so arranged as to constitute a continuous and for the most part analytical criticism of the art of expression, principally in literature, but also in architecture, sculpture, painting, and music. They comprise, moreover, the fruits of many years of experience in a wide range of scholarly interests, and sum up the reflections of their author on the whole mass of his intellectual acquirements. It is rarely our fortune to find the abstract principles of the art of expression comprehensively handled by a man of high literary culture, and it is even more seldom that he brings his illustrations so readily and in such variety from his own stores of special study. These characteristics, besides the interesting element of personality more keenly felt than in the author's historical and biographical work, give importance to these essays; and, in addition, they will be found to touch upon nearly all the critical questions which have been raised in our time in the province of literature. In noticing a work so multifarious in its matter, it will be convenient to follow a somewhat different order from that adopted by the author, that we may bring out more clearly the main traits of his thought.

The note which is persistently struck throughout is that of the evolutionist, but this is emphasized more than need be. The larger part of Mr. Symonds's conclusions is consistent with other hypotheses than that form of pantheism which he regards as the logical conclusion of the evolutionist, and which he puts in the forefront of his work as its determining idea. To this we shall recur, only noticing it here by the way for the bearing it has on his conception of the office of the critic, which he discusses at large before proceeding to define the methods of the various arts of expression. The kernel of what he has to say concerning the critic is contained in this quotation from Heraclitus: "It behooves us to follow the common reason of the world; yet, though there is a common reason in the world, the majority live as though they possessed a wisdom peculiar each unto himself alone." This "common reason," which is the result of the repeated and concurring decisions of that "wise man" whom Aristotle pronounced the final judge in matters of taste, this authoritative tradition of the past as to what is best, is the one thing which the critic must know and use to test his own "peculiar wisdom" or personal impression. To adopt Mr. Symonds's nomenclature, classical criticism consults only tradition, romantic criticism only the personal impression; to these he adds scientific criticism, which seeks only to understand how any work of art came to be what it is by virtue of its germ and its environment, but delivers no judgment and formulates no law of excellence. Mr. Symonds unites in his conception of the office of criticism the three methods, and requires an understanding of the genesis of the work, a regard for tradition, and an exercise of originality in the act of judgment, if the critic has anything new and personal to offer.

In his own case the original element, as has been said, is derived from the theory of evolution, and in his first application of it to literature there is nothing novel or specially to be remarked upon. He argues that every national type in art goes through a definite process of growth and decay; the idea first is more attended to, then comes into possession of perfect form, and lastly is subordinated to technique, after which the type breaks up and dissipates through exaggeration and separation of its traits. In support of this he adduces the history of Greek sculpture, of Elizabethan drama, of Gothic architecture, and like defined art movements. It does not seem to us that he sufficiently meets the objection that this evolution of the type is merely derivative, and only reflects the evolution of the social group in which the disintegrating energy is really inherent; and therefore his position, that men of equal genius exist at the successive epochs, but are so fatally submitted to the condition of the type contemporaneous with them that they cannot do otherwise than they do, does not appeal to us, especially as it carries levelling consequences in morals, and leads to a phase of indifferentism in that

region. The method, too, by which he accounts for those literatures which have not followed the normal course, including the Roman and our modern literatures, by merely classing them all as "hybrids," is a weak escape. The interesting point, however, is not whether he has pushed the doctrine of necessity in evolution too far in this instance and made a too narrow generalization, but to mark the willingness he exhibits to yield everything on the scientific side with a certain intemperance and unguardedness of mind. As soon as he quits the ground of evolution, however, he writes with more precision, and in the admirable chapters on the provinces of the arts we have a valuable abstract of that "common reason" of criticism with regard to them which he began by praising.

Mr. Symonds provokes discussion again when he enters on the vexed question of the relation of the artist to his work, realism or idealism. The way in which he states his conclusions may excuse a moment's detention on the well-worn theme. He starts from the fact that the artist cannot reproduce nature accurately, as is shown by the inferiority of the drawing to the photograph; there is a defect of skill. A second disturbing element lies in the individuality of the artist, who sees the object already modified by his own capacity of perception, as is shown by the difference of drawings after the same model by hands of equal craft. These two facts import a personal error into every work of art, and also an inevitable inferiority to nature itself. Such idealism as results from these conditions is involuntary; but there is, in addition, a voluntary idealism which the artist employs, by means of composition, expression, and characterization, and through which he becomes as much superior to reality as without them he is inferior. Mr. Symonds thus looks on idealism as the compensation for the necessary inferiority of art to life so long as only imitation is sought after. He goes, however, much further than this, and holds that what the artist gives of his personality and of his thought and feeling about the whole of life, is of vastly more consequence than even his artistic technique, and declares that style of itself without matter has never enforced immortality. As a most striking example of the failure of style in literature he cites the humanist imitators of Cicero and Petrarch. The contents of the work are to him the essential matter; he parts company with the school of art for art's sake as he has already left the realists, and, in opposition to both, maintains that the most possible of expression should be put into the artist's work, and that the method of idealism should be employed to this end. In this spirit he examines Mr. Pater's dictum, some years ago, that "all art constantly aspires towards the condition of music," and Mr. Arnold's more famous deliverance that literature is a "criticism of life," and comes to a more catholic and rational conclusion.

The distinction which characterizes his treatment of these questions, so vigorously debated by our generation, is that he maintains the balance of the antithesis—in Hegel's definition, which he quotes more than once—that "art is the apparition of the idea in sense," or, in his own words, that it is the middle term between reason and sensation. He describes it as "indissolubly bound up with the spiritual nature of man," but at the same time attends closely to the limitations all art is subject to in consequence of that necessity of "form-giving" which Goethe declared was its essence. In the more confined arts, such as sculpture, these limitations are easily analyzed, but no writer, we believe, has treated so directly the less obvious ones which exist in the languages and modify literatures, as is here done in the very interesting chapters upon national style, to which we can only refer. In all this portion of his work we observe a metaphysical prepossession, a tendency to render the world in terms of mind, an exaltation of the spiritualizing faculty in man, and in general the traits which are not habitually associated with that scientific leaning already noticed as characteristic of the author's thought.

The point of union between the evolutionary and idealistic elements in Mr. Symonds's conclusions is a religious feeling. To express this seems to be one of the main purposes of his present work. The argument is sufficiently suggested by our saying that the denial of the advent of mind by special creation in this world, which Mr. Symonds thinks necessary to a thoroughgoing evolutionist, implies to him the existence of universal mind. The term mind he does not limit to what is known to us as mind "in its human differentia"; he postulates mind below and above man's mind, and asks if "we shall not then be bold enough to say that all form is fundamentally a mode of mind?" Again he says: "We may surmise that what appears as intelligence in the biological series was formerly the same power existing under another manifestation in the inorganic series, just as heat is a mode of motion. . . . In other words, the common substance of the world would now be thought of in successive moments of its evolution, first as endowed with the capacity of form, next as endowed with the capacity of life and progressive consciousness in addition to form." And as regards "mind" in the "ascending scale of existences," he adds: "Paradoxical as it may seem, it is not incredible that the globe on which we live is more conscious of itself than we are of ourselves; and the cells that compose our corporeal frame are gifted with a separate consciousness of a simpler kind than ours." This is nearly all the light we have been able to obtain upon Mr. Symonds's conception of "universal mind" as he has unfolded it. He attacks the subject, however, in a somewhat different way in the assertion that "the conceptions of God and Law tend to coalesce in the scientific theory of the universe"; and this statement he afterwards explains by defining Law as "the order of the whole regarded as a process of unerringly unfolded energy," and God as "that same order contemplated by human thought as in its essence mind-determined."

This is the clearest account that we can extract of the matter with the best will to be fair to an idea which the author regards as a substitute for religion, and advances with the zeal of a propagandist. He goes on to remark that the Christ-idea, devotion to humanity, is now separated from the originally metaphysical and Alexandrine, but latterly anthropomorphic and Catholic, conception of divinity, and that it is desirable to reunite the Christ-idea with the older Greek conception of God as "the prime principle of law and order," made vital again by science. He sums up the conclusion of the whole matter by saying, "What religion has to do, if it remains theistic, is to create an enthusiasm in which the cosmic emotion shall coalesce with the sense of social duty, in which self-abnegating submission to the natural order and self-abnegating service of man shall be regarded as the double function of all human beings in the evolution of the universe." Of the reality and energy of this "cosmic emotion" he seems to have no doubt, and there are indications that he expects that this new phase of religious awe will be something more than a private and personal matter, and may become the principle of a church. In the discussion of Wordsworth's relation to science he says: "The time might come, indeed may not be distant, when lines like those which I have quoted above from the poem composed at Tintern Abbey should be sung in hours of worship by congregations for whom the 'cosmic emotion' is a reality and a religion"; and elsewhere he prognosticates the same honor for some of Shelley's lyrics.

Such speculation belongs with that kind of philosophy which is commonly called "poetical." Its literary application is all that concerns us at present. The author makes use of it in three capital instances. He employs it to rehabilitate the myths of the Greeks, to invigorate the imaginative feeling for landscape, and to supply a basis for "democratic art." The Greeks were superior to us in the directness and fulness of their perception of spirituality in nature. The element of truth in their mythology consists in this perception; for, as Mr. Symonds puts it, the world is all soul, and soul in man communicates with soul in nature, nor does the fact that man is compelled to think of soul as human prevent his "entering into a sub-conscious intercourse with beings which are not human and from recognizing their essential spirituality." Of this intercourse Greek mythology is a record and a revelation; and though it came to be disbelieved when nature was regarded, under Christian influences, as the opposite of spirit, we may now resume the truth which it contained, since science has restored spirituality to nature. All this seems to us a very laborious method of asserting the truth of Greek myths for the imagination, as a form of poetry; and if beyond this, as appears to be the case, the author would affirm their truth for the understanding as a form of knowledge, the method is not laborious enough. The mythopœic genius of Shelley is a modified instance of the Greek habit of nature-interpretation: his poetry shows in what way the use of this faculty can be resumed by a modern mind; but no different truth can be predicated of the ancient myths than of Shelley's conscious symbolism. Mr. Symonds admits this parallelism, but would import a certain reality into Shelley's inventions.

In his essay upon landscape he comes upon ground better fitted for his argument, and, apart from this philosophical theory, his account of the development of the feeling for landscape from Greek to English days is a valuable general view of a most interesting subject. He notices the pantheistic temper of the Roman poets, but it is rather in the renascence of the ancient theory in Bruno and the German transcendentalists that he finds the source of the poetic emotion of Goethe, Wordsworth, and Shelley, which ascribes spirituality to nature and penetrates to it as universal mind in the Virgilian rather than the Greek way. The decadence of this pantheistic sentiment in the later poetry of this century does not escape the author's attention, but he relies upon the influence of science to make this mood of contemplating nature habitual and necessary and to develop new motives. The "religion of the future," he adds, will "supply this branch of art with ideality."

But by all odds the most striking application of this philosophy is made in the essay upon Walt Whitman, in which it is invoked as the ground of "democratic art." This as yet unrealized efflorescence of the masses, and particularly of "America," is made necessary by "the advent of the people." Mr. Symonds, in-

deed, says frankly that the European nations cannot be expected to give up their past; but in America he sees little objection, apparently, to "beginning over again." The matter of democratic art, he announces, is all things whatsoever, since freedom of topic and treatment has been achieved for us by the victory of the Romantic revolution; but he finds a better basis for this unlimited choice and method in the following declaration: "God the divine is recognized as immanent in nature and in the soul and body of humanity; not external to these things, not conceived of as creator from outside, or as incarnated in any single personage, but as all-pervasive, all-constitutive, everywhere and in all. This is the democratic philosophy." The application of this to Walt Whitman's catalogues of objects—his "engine-driver," "member of a fire brigade," "snag-toothed hostler," "farmer's girl boiling her iron tea-kettle and baking shortcake," and to his Orphic sayings, such as, "Whoever you are! how superb and how divine is your body or any part of it" (we take Mr. Symonds's quotations)—is plain and easy. An immanent divinity, equal and the same in all, clearly permits no discriminations, and justifies a very general interest in all sorts of phenomena. The intoxication of the fixed idea in the brain cannot go further than this grotesque exhibition of itself. Democracy must have a "religion," as well as an art and literature, all its own, and "America" finds its gospel as well as its epic in the 'Leaves of Grass'! "Cosmic emotion" and "social duty" may pass as phrases of the literary prayer-book, but a pantheism that ends in making Walt Whitman its hierophant is its own burlesque and caricature.

The metaphysical weakness of these volumes, which has been self-exposed, cannot but obstruct the reader's sense of their many excellences in the department of literary criticism. It is, nevertheless, easy to disengage the really solid and valuable matter, which constitutes four-fifths of the work at least, from the vague and hybrid speculation which impairs it as a whole, and which is mainly of interest as an example of the working of an eclectic and assimilative mind amid the confusions of modern thought. As a critic of literature the author brings no inconsiderable matter of his own wide gathering, for he has been a student of culture all his life, and speaks from a various experience. We have touched upon only a small portion of the ideas with which he brings the reader in contact, and these the most general, since they seemed formative in his mind; but he is at his best in dealing with detail, as in the study of the influence of Ausonius and Catullus on the poetry of the rose, or in the notes upon national style, or in the explanation of the spiritual allegories (not the nature-myths) of the Greek mind. His metaphysical method, too, however unsound in itself and fictive in its results, is seriously pursued, and deserves the regard which sincerity, however misdirected, receives.

The Life of Alexander Pope. By William John Courthope, M.A. London: John Murray. 8vo, pp. xvi, 538.

MR COURTHOPE'S Life of Pope brings to a conclusion the last and best edition of Pope's works. This edition was first announced in 1854, and was to have been undertaken by John Wilson Croker, the editor of Boswell, assisted by Peter Cunningham, who edited the Works of Oliver Goldsmith, Johnson's Lives of the Poets, and the Letters of Horace Walpole—all standard editions. Croker died in 1857 and Cunningham in 1869; their successor was the Rev. Whitwell Elwin, for several years editor of the *Quarterly Review*. The actual publication of the work did not begin till 1871, with vols. i and ii (Poetry i and ii) and vi and vii (Correspondence i and ii). In 1872 appeared vol. viii, being the third volume of the correspondence. Mr. Elwin then retired from the editorship, and was succeeded by Mr. Courthope, whose qualifications for his task can hardly be overrated. The work now suffered an interruption of nine years. In 1881 appeared vol. iii, and in 1882 vol. iv, completing the poetry; in 1886 vols. ix and x, completing the correspondence (in five volumes). The Life, which brings up the rear, is vol. v.

It will be seen that this work has had a romantic career, requiring eighteen years for its completion, to say nothing of the interval of thirty-five years between its first announcement and its final volume, and enlisting the services of four separate editors, all of them men of the first competence. But that is not all. The most singular circumstance connected with it is the wide discrepancy in the attitude of the last two editors. What would have been Mr. Croker's and Mr. Cunningham's attitude if they had lived to publish the work is only a matter of conjecture; but from what is known of them, and of their general sympathy with the eighteenth century, it may be safely conjectured that they would have approached Pope with sentiments of enlightened reverence—in such a frame of mind, in fact, as, on general principles, one would naturally expect any editor to cultivate. It is difficult to see why one who disapproves of an author should edit and elucidate his works. But Pope has been particularly unfortunate in this respect. Warburton, his first editor (1751), was, it is true, a most ardent advocate, but Mr. Elwin says that "he employed his sagacity less to discover than to distort the ideas of his author, and seems to have thought that the more he deviated from the obvious sense the greater would be his fame for inventive power. He has left no worse specimen of his perverse propensity than the spurious fancies and idle refinements he fathered upon Pope. They are among his baldest paradoxes, are conveyed in his heaviest style, and are supported by his feeblest sophistry. His lifeless and verbose conceits soon provoke by their falsity, and fatigue by their ponderousness."

This passage may well serve not only as a specimen of Mr. Elwin's vigorous way of putting things, but also as an apt characterization of the whole tribe of commentators.

The next editor, Warton (1797), gave as his reason for undertaking the work "the universal complaint that Dr. Warburton had disfigured and disgraced his edition with many forced and far-sought interpretations, totally unsupported by the passages which they were brought to elucidate." He was the first of Pope's hostile editors, and although he ranked him "next to Milton and just above Dryden" (a judgment the reverse of Johnson's), he labored, in his "essay" (which Mr. Lowell calls "the earliest public and official declaration of war against the reigning mode") to demonstrate that the largest portion of Pope's works is "not of the most poetic species of poetry." This not very happy remark Mr. Courthope calls a remarkable fallacy which "has been adopted by all enemies of Pope from that day to this, and is, indeed, the source of most of the confusion of thought which has obscured the controversies respecting his poetical merits."

Of all the enemies of Pope, perhaps the most dangerous was his next editor, the Rev. William Lisle Bowles (1806), who was a school-boy at Winchester when Warton was head-master, and who, as an outspoken champion of romanticism, had no more call to edit Pope than a Roman Catholic has to write a biography of Luther. The ground taken by him was controverted by Campbell, who thus brought on a famous controversy which raged from 1819 to 1826, and in the course of which Byron, in his championship of the classical school, which his own writings did so much to supersede, went so far as to maintain that Pope's works were better worth preserving than those of Shakspere and Milton.

By a natural reaction, the next edition of Pope (1824) was undertaken by a warm partisan, William Roscoe, author of the Lives of Lorenzo de' Medici and Leo X. He was not, however, specially qualified for the task, and Mr. Croker considered his edition the worst of all. It is curious to note that each succeeding editor, commentator, biographer, and critic of Pope has a very poor opinion of his predecessors.

We have at last come back to the present edition of Pope, which was begun by a detractor of the poet, but, fortunately, brought to a conclusion by a discriminating admirer. Mr. Leslie Stephen, who has himself indulged in some pretty severe remarks on Pope's character and writings, devotes an entertaining essay to defending him against the damaging strictures of Mr. Elwin. While he admits, what no one can deny, that Mr. Elwin's book must be the storehouse from which all future writers on Pope shall draw their materials, he goes on to say that

"The main outcome of his ponderous volumes, so far as they have gone [in 1871], seems to be a demonstration that they were not worth writing. Mr. Elwin has spent years in cleaning and resetting one of our national jewels, and the result of his labors is that it is nothing but a bit of colored glass. . . . Mr. Elwin, though anything but a dunce, makes himself the mouthpiece of the dunces. . . . Mr. Elwin is an amateur detective, and, with the help of the late Mr. Dilke's discoveries, discharges the function of a whole private-inquiry office; . . . he passes his microscope slowly and almost gloatingly over every unhealthy symptom revealed in his elaborate dissection; he collects all the hostile criticisms that have ever been put forward, endorses them all, and piles them as a monument over his victim's mangled remains."

After making due allowance for any exaggeration into which the cleverness of the essayist may have carried him, enough sober truth remains to show that Mr. Elwin did not come to his task with the proper bias; and we venture to repeat that it was fortunate that he made way for Mr. Courthope, of whom it may almost be said that he is the ideal editor. The latter was placed in a delicate position by having to continue the work of an editor whose point of view was radically different from his own, and from many of whose criticisms he entirely dissented; and he has extricated himself from his difficulties with great skill. We thus have the curious spectacle, not often found in one and the same work, of opinions advanced in the earlier volumes and controverted in the later ones. An amusing illustration is that Mr. Courthope deems it necessary to defend Pope against Mr. Stephen, who, as we have just seen, set himself up as a champion of Pope against Mr. Elwin, Courthope's associate. Mr. Courthope thinks that Mr. Stephen has little sympathy with Pope, and is the natural successor of Warton and Bowles; further, that

"He surveys the literature of the eighteenth century from the position of superiority which critics of the nineteenth century have long imagined themselves entitled to occupy; and he judges the poetry of Pope as a decided ad-

vocate of the Lake school, to which the former is in spirit so essentially opposed."

The present edition of Pope owes its exceptional value in great part to the discoveries made in 1853 by Mr. Charles Wentworth Dilke, and published by him in the *Athenæum* and *Notes and Queries*, between 1854 and 1860. These papers, reprinted in 1875 by his grandson, the present Sir Charles W. Dilke, in a volume entitled 'Papers of a Critic,' first made positively known the remarkable system of trickery and deception pursued by Pope in his endeavors to get his correspondence before the public in anything but a genuine shape. The chapter in Pope's Life which was thus revealed is the reverse of edifying; and while his biographers are perhaps not at liberty to pass it over in charitable silence, the general reader may ignore it, adopting as his own the sentiment of Mr. Courthope, that "the world is, after all, more concerned with Pope's performances as a poet, as a satirist, and as one of the chief architects of our language, than with his character as a man."

Aside from Mr. Dilke's investigations, the present edition has had the benefit of many hundred letters never before printed, and of some newly discovered MSS. of Pope's works; it is provided with notes clearing up many allusions that were obscure even to writers as near to Pope's own time as Johnson; and Mr. Courthope's 'Life' not only replaces all former biographies, but will make any future one superfluous.

Die Ueberlieferung: ihre Entstehung und Entwickelung. Von Ernst von Bunsen. Leipzig: F. A. Brockhaus. 2 vols.

THE author of this book on the development of traditions is already known as a bold thinker and a diligent writer, but particularly as an ingenious chronologist. His former work, the 'Chronology of the Bible,' contained very much to startle us, especially the synchronism of the birth of Shem and the capture of Babylon by the Medes in 2458 B. C. With respect to another work, the 'Angel Messias,' its fault is the obscurity of the argument, and in some parts, as we think, its hasty conclusions. There is a more sober tone and a better arranged method observable in the present book. The author begins with the much contested subject of the location of Eden; his conclusion is that it was situated on the Pamir plateau near the origin of the four rivers, Indus, Oxus, Jaxartes, and Tarim. This last river, however, is rather an unimportant and uncertain one, disappearing in the sandy region near Lake Lob, and would hardly be catalogued with the great rivers of the earth.

The serpent in Paradise he explains as referring to a member of a non-Aryan, black-skinned race, who accomplished the fall, physically, of the pure Aryan family, dwelling in the region of the four rivers. It is contrary to all Biblical tradition, however, to suppose that Adam (the black-headed) was himself the tempter of Eve. It requires more than a passage in a cuneiform inscription to render such an inference at all tolerable. The tree of life and of knowledge of good and evil is supposed to refer to the maternity of Eve, as she was, in a sense, the spring of spiritual knowledge or skill (*Kraft*) in men, and from this sprang the knowledge of good and evil, right and wrong.

Bunsen next proceeds to investigate the wanderings (migrations) of the early races of mankind. He supposes that the records found in the fourth and fifth chapters of Genesis refer to a high-caste and a low-caste race, *i. e.*, Sethites and Adamites. These races were intermingled in the land of Mesopotamia, and finally were conquered and driven out of Babylon by the Japhetic Medes, and from this fresh intermixture sprang the Shemites.

It is impossible here to follow the successive conclusions arrived at in each chapter of this remarkable book. The author refers to the earliest knowledge of astronomy and astrology possessed by mankind; the legends of the flood; the Cherubim and Seraphim; the source of the Bible, as it embodies a distinct series of traditions, and so on.

The most curious conclusion arrived at in the fifteenth chapter of the first volume is that the Septuagint date for the building of Solomon's Temple, in the fourth year of his reign, viz., 477 B. C., is derived from the year of Buddha's death. The author arrives at this extraordinary synchronism in the following way: The time of the Septuagint translation was also the period of Asoka's reign in India, viz., about 280 B. C. We know that Asoka had relations with Ptolemy Philadelphus (from Tablet XIII of Asoka's Edicts), and it is not unlikely to suppose that envoys were sent from India to Alexandria, to carry out negotiations connected with the points of agreement alluded to in the Edict. The spirit of inquiry abroad at this time, and the collection of the Great Library, would lead to explanations regarding India, and especially relating to the great building-epoch inaugurated by Asoka. This would connect itself with the Buddhist date of the Nirvana. This date, being 477 B. C., would, through the association of Asoka's building enterprises, connect itself with Solomon, the great builder of the Jewish Temple. Accordingly the two dates were identified, and so, following the LXX, the fourth year of Solomon's reign falls precisely in this very year of Buddha's death, viz., 477 B. C. This argument is ingenious, and, if established, would be valuable as proving the connection of the Alexandrian school of writers with the religious schools of India. But at present it is a pure hypothesis of no scientific value whatever.

The author's remarks upon the Essenes are original, as in fact the whole of the book is. We leave it in the hands of judicious readers.

Electrical Influence Machines. By John Gray, B.Sc. London: Whittaker & Co.; New York: D. Van Nostrand Co. 1890. 12mo.

Electric Bells, and All About Them. By S. R. Bottone. New York: Excelsior Publishing House. 12mo.

Electricity in Modern Life. By G. W. de Tunzelmann. Scribner & Welford. 12mo. 1890.

THE author of 'Electrical Influence Machines' has attempted to bring together all that is known about "influence" machines which may be regarded as of interest or value. In Part I. we have in three successive chapters a general sketch of the phenomena of static electricity, a working hypothesis of the electric field, and an account of the different electrometers, including all the best forms. Part II. opens with a very complete history of the gradual development of machines of this kind from the electrophorus of Volta. The different forms of influence machines are then described, with sufficient detail, while the third part contains notes on practical construction. The book is likely to be useful to teachers as well as to students.

'Electric Bells' hardly requires special notice. It belongs to the class of artisans' manuals, and as such contains a good deal of matter of practical value.

Tunzelmann's work is intended to give a popular account of the various applications of electricity in modern life. The author has been fairly successful in treating a difficult subject in such a way as to make it intelligible to readers who have had little or no scientific training. The historical part of the work is tolerably complete, perhaps sufficiently so for ordinary purposes. Very scant justice is done to Morse and his system, and far too much space is devoted to the instruments of Wheatstone, which have, we believe, never been used out of Great Britain, and which have now a strangely antiquated look. On the other hand, a great many very interesting subjects are treated, and on the whole in a creditable manner. While we cannot speak with enthusiasm of the book, we believe that it will be found on the whole both interesting and useful.

Mémoires et Souvenirs du Baron Hyde de Neuville. Paris: Plon. Volume I. 1888 (La Révolution — Le Consulat — L'Empire). Volume II. 1890 (La Restauration—Les Cent Jours—Louis XVIII.).

A HIGH and dry legitimist, M. Hyde de Neuville, with his English name and descent and his French sympathies, was not the man to leave behind him personal recollections of much interest. To Americans, however, he is of some value, for he came here as a refugee in 1807, and only departed in June, 1814, after fifteen years of proscription, to learn on his way out the welcome news of the return of the Bourbons to France. His journeys through the United States took him as far west as Niagara, and at one time he thought of becoming a farmer in western New York, but his friends in the city, the Crugers, the Wilkeses, the Churches, and especially the warm friendship he formed with Gen. Moreau, then living near Trenton, kept him in the city. Here too he established an "Economical School," especially for the children of the numerous French refugees in New York, and Dewitt Clinton formally thanked him for his good work.

He came back twice to the United States—in 1816 as French Minister, when he was heartily welcomed by his old friends, as well as by the authorities in Washington. His sympathies were all for his exiled fellow-countrymen, and he took particular pains to show acts of kindness to Joseph Bonaparte, to Grouchy, to Clausel, and to Lefebvre-Desnouettes. Dupont de Nemours was particularly active in enlisting his help. Moreau, largely influenced by Hyde de Neuville, had returned to Europe, and met his death fighting with the allies against France. Lefebvre-Desnouettes was one of a large party of exiles who were full of zeal for a French settlement on the lower Mississippi, near New Orleans, and afterwards tried to foment a feud between Spain and the United States on the question of Florida. The projects for helping Napoleon to escape from St. Helena, and for active participation in the budding revolutions in South America, kept the French Minister in a lively state of excitement, but most of all he prided himself on securing for the Bourbons two such sturdy supporters as Grouchy and Clausel, who returned to France in 1820, and afterwards took a leading part in the successive Governments. Lakanal was supposed to be trying to revive Burr's conspiracy, in the hope of establishing a new empire for Joseph Bonaparte in the Southwest, and Gen. Jackson settled the question of the numerous claimants of Florida by his violent invasion of Spanish territory, leading ultimately to the sale of Florida to the United States. Hyde de Neuville

took an active part in the negotiations which brought peace to all the parties in interest.

He came a third time to the United States in 1821, to negotiate a treaty of commerce, and then returned finally to France, where he took a respectable place in the Government, always manifesting a lively interest in the United States and his friends there, and comparing his recollections of travel in America with Chateaubriand and the other men of his party. The two volumes of his memoirs close with the end of his American experiences, and it is hardly likely that those which are to tell the story of his later life will add much to the chapter of the French exiles. It is to be hoped that some one will eventually gather together all the printed and any unprinted material in reference to the French men and women who found refuge in the United States during the storm and stress of the revolutions in France and its colonies.

The Theory of Determinants in the Historical Order of Its Development. Part I. Determinants in General: Leibnitz (1693) to Cayley (1841). By Thomas Muir, M.A., LL.D., F.R.S.E. Macmillan & Co. 1890.

THE only history of much interest is that of the human mind. Tales of great achievements are interesting, but belong to biography (which still remains in a prescientific stage) and do not make history, because they tell little of the general development of man and his creations. The history of mathematics, although it relates only to a narrow department of the soul's activity, has some particularly attractive features. In the first place, the different steps are perfectly definite; neither writer nor reader need be in the least uncertain as to what are the things that have to be set forth and explained. Then, the record is, as compared with that of practical matters, nearly perfect. Some writings of the ancients are lost, some early matters of arithmetic and geometry lie hidden in the mists of time, but almost everything of any consequence to the modern development is in print. Besides, this history is a chronicle of uninterrupted success, a steady succession of triumphs of intelligence over primitive stupidity, little marred by passionate or brutal opposition.

Dr. Muir, already well known by many investigations into determinants and continued fractions, and by a charming little 'Introduction to Determinants,' has thoroughly studied the history of this subject, and has arranged his account of it with remarkable clearness. Each writer's results are stated in his own language, followed by a luminous commentary. An ingenious table shows the history of forty-four theorems, and at the same time serves as an index to the first half of this volume, which, it is to be presumed, is one-half of the first part, and not more than one-fourth of the whole work.

Perhaps Dr. Muir attaches a little too much importance to theorems, as contradistinguished from methods and ideas. Thus, he speaks rather unfavorably of Bezout's work (1779), although it contains the idea of polar multiplication; but because this is not made a theorem, Dr. Muir hardly notices it. The first paper analyzed in the book is by Leibnitz, and contains the umbral notation, which is the quintessential idea of the theories of determinants as well as that of matrices, to which the theory of determinants is but an appendage.

We have already mentioned that the last number of the *American Journal of Mathematics* contains an admirable memoir upon matrices by Dr. Henry Taber of Clark University.

BOOKS OF THE WEEK.

Brewer, Prof. W. H. Warren's New Physical Geography. Philadelphia: Cowperthwaite & Co.
Collier, W. F., and Willis, O. R. The Great Events of History. Chas. E. Merrill & Co.
Crowes, F. J. Musical Groundwork. Frederick Warne & Co. $1.
Day, D. T. Mineral Resources of the United States. Washington: Government Printing Office.
Essays of Montaigne, Translated by John Florio. Edited by Justin Huntly McCarthy. Macmillan & Co. $2.50.
Fitzgerald, E. Rubáiyát of Omar Khayyám, the Astronomer-Poet of Persia. Rendered into English Verse. Macmillan & Co. $3.

HENRY HOLT & CO., New York.

Late Educational Works:

BALDWIN'S (J. MARK) HANDBOOK OF PSYCHOLOGY. Senses and Intellect. 8vo. 343 pp. Teachers' price by mail, $1.97.

Used in Johns Hopkins University, Universities of Va. and S. C., Lake Forest University, University of Toronto, etc. Prof. Schurman of Cornell University says: "In my opinion, Baldwin's Psychology is the best book of its size in the language." The *Nation* concluded its review thus: "Taken as a whole it is about the best we know."

HARDY'S (IRENE) ELEMENTARY COMPOSITION EXERCISES. 16mo. 169 pp. Price to Teachers by mail, 86 cents.

Suggestive chapters, based on experience, on ways of furnishing boys and girls in school with straw for their composition bricks. It makes its points by example and illustration, omitting the commonplace of pedagogical exhortation.

MARTIN'S (H. N.) THE HUMAN BODY AND THE EFFECT OF NARCOTICS. 12mo. 399 pp. Teachers' price by mail, $1.33.

A modification of the author's well-known "Briefer Course" in which the part devoted to "the effect of narcotics" fulfils the requirements of the most exacting State laws on the teaching of the subject.

WILLIAMS'S (C. T.) EXTRACTS FROM GREEK AUTHORS. 12mo. 231 pp. Price to Teachers for examination, $1.20.

Short pieces for sight-reading in connection with the Anabasis, supplied with most useful helps in the way of vocabularies, maps, notes, and verb lists.

Ready Soon:

BRIDGMAN (J. C.) AND DAVIS'S (H. C.) BRIEF DECLAMATIONS. (*Ready in Sept.*)

The selections are drawn mostly from current public speaking, and are restricted in length to a three-minute limit of time.

JAMES'S (WM.) PSYCHOLOGY. 2 vols. 8vo. About 1,400 pp. (*Ready in Sept.*)

This treatise, on which Prof. James has been working for many years, may be expected to give the most complete statement yet made of the present aspects of this progressing science.

JOHNSTON'S (A.) SHORTER HISTORY OF THE UNITED STATES.

This long-delayed book, which was finished and twice reviewed by its author before his lamented death, will be issued early in the fall.

Send for complete descriptive catalogue.

FRENCH, GERMAN, - - - - SPANISH, ITALIAN.

You can, by ten weeks' study, master either of these languages sufficiently for every-day and business conversation, by Dr. ROSENTHAL'S celebrated MEISTERSCHAFT SYSTEM. Terms, $5.00 for books of each language, with privilege of answers to all questions, and correction of exercises. Sample copy, Part I., 25 cents. Liberal terms to teachers.

MEISTERSCHAFT CO., 299 Washington St., Boston.

THE FORUM.

Contents for September.

(This number of The Forum begins Vol. X.)

MONEY INTERESTS IN POLITICAL AFFAIRS. E. L. GODKIN, editor of *The* (N. Y.) *Evening Post*.—How protection breeds political corruption.

THE TRAINING OF TEACHERS. PRESIDENT G. STANLEY HALL, of Clark University.—Practical suggestions based on the study of European educational methods.

FEDERAL CONTROL OF ELECTIONS. SENATOR JOHN T. MORGAN, of Ala.—A reply to Senator Chandler.

RAILWAY REORGANIZATION. SIMON STERNE.

THE CHRISTIANITY OF THE FUTURE. PROF. JOHN S. BLACKIE.

FORMATIVE INFLUENCES. REV. DR. EDWARD EVERETT HALE.

A SHORT STUDY OF "MACBETH." JAMES E. MURDOCH.

THE LATEST ASTRONOMICAL NEWS. PROF. CHAS. A. YOUNG.

PROTECTION AGAINST TORNADOES. LIEUT. JOHN P. FINLEY, of the U. S. Weather Bureau.

THE DOMESTIC PURSE STRINGS. ALICE E. IVES.

MATRIMONY AND THE STATE. REV. M. J. SAVAGE.

THE FORUM, New York. Sold Everywhere. 50 cents a copy; $5.00 a year.

The Commercial Forum (Descriptive Advertising Department) contains explanations of the industrial opportunities offered at Staunton, Lynchburg, Basic City, and Salem, Va.

NINE GREAT DICTIONARIES.

Harper's Latin Dictionary.

A New Latin Dictionary, Founded on the Translation of 'Freund's Latin-German Lexicon.' Edited by E. A. ANDREWS, LL.D. Revised, Enlarged, and in great part Rewritten by CHARLTON T. LEWIS, Ph.D., and CHARLES SHORT, LL.D., Professor of Latin in Columbia College, New York. Royal 8vo, Sheep, $6.50; Full Russia, $10.00.

Latin Dictionary for Schools.

A Latin Dictionary for Schools. By CHARLTON T. LEWIS, Ph.D, Editor of 'Lewis and Short's Latin Dictionary.' Large 8vo, Cloth, $5.50; Sheep, $6.00.

Elementary Latin Dictionary.

An Elementary Latin Dictionary. By CHARLTON T. LEWIS, Ph. D. (*In Press.*)

Liddell and Scott's Greek Lexicon.

A Greek-English Lexicon. Compiled by HENRY GEORGE LIDDELL, D.D., Dean of Christ Church, Oxford, and ROBERT SCOTT, D.D, Dean of Rochester, late Master of Balliol College, Oxford, with the Co-operation of HENRY DRISLER, Jay Professor of Greek in Columbia College, New York. Seventh Edition, Revised and Augmented throughout. Large 4to, Sheep, $10.00.

Liddell and Scott. Intermediate.

An Intermediate Greek-English Lexicon. Founded upon the Seventh Edition of Liddell and Scott's Greek-English Lexicon. Medium 4to, Cloth, $3.50; Linen, $3.75; Sheep, $4.00.

Liddell and Scott. Abridged.

A Lexicon abridged from Liddell and Scott's Greek-English Lexicon. The *Twentieth Edition.* Carefully Revised throughout. With an Appendix of Proper and Geographical Names, Prepared by the Rev. JAMES M. WHITON, Ph.D. Small 4to, Half Leather, $2.00.

Yonge's English-Greek Lexicon.

An English-Greek Lexicon. By C. D. YONGE. With many New Articles, an Appendix of Proper Names, and Pillon's Greek Synonymes. To which is prefixed an Essay on the Order of Words in Attic-Greek Prose, by CHARLES SHORT, LL.D. Edited by HENRY DRISLER, LL.D. 779 pp. Royal 8vo, Sheep, extra, $4.50.

In this work the aim af the editor has been to exhibit a complete English vocabulary, so far, at least, as there are words in Greek by which the English words can be literally or adequately rendered, and where this cannot be done, to supply, wherever practicable, the deficiency by phrases. In every instance the authority for the word or phrase cited is given.

Thayer's Lexicon of the New Testament.

Greek-English Lexicon of the New Testament: being Grimm's Wilkie's Clavis Novi Testamenti. Translated, Enlarged, and Revised by JOSEPH HENRY THAYER, D.D., Bussey Professor of New Testament Criticism and Interpretation in the Divinity School of Harvard University. 4to, Cloth, $5.00; Half Roan, $6.00; Full Sheep, $6.50.

Stormonth's English Dictionary.

A Dictionary of the English Language, Pronouncing, Etymological, and Explanatory: embracing Scientific and Other Terms, Numerous Familiar Terms, and a Copious Selection of Old English Words. By the Rev. JAMES STORMONTH. The Pronunciation Carefully Revised by the Rev. P. H. PHELP, M.A. Imperial 8vo, Cloth, $5.00; Half Roan, $6.50; Full Sheep, $6.50.

PUBLISHED BY HARPER & BROTHERS, NEW YORK.

LONGMANS, GREEN & CO.'S
NEW EDUCATIONAL WORKS.

GEOGRAPHY.

Longmans' School Geography for North America.

By GEORGE G. CHISHOLM, M.A., B.Sc., Fellow of the Royal Geographical and Statistical Societies, and C. H. LEETE, A.M., Ph.D., Fellow of the American Geographical Society. Large 12mo, pp. 384, with 70 illustrations, $1.25 net.

*** In Longmans' School Geography an attempt is made at a new departure in the teaching of Geography by providing a text-book which is founded on the results and methods following from the great advance which has taken place in Geographical Science and Teaching on the Continent, and especially in Germany. The aim of the author has been to exclude from the book almost all details which pupils cannot be expected to keep permanently in mind, but to take care that what the book does contain should consist of what is most effective as discipline, and of most importance to know. In the American edition prepared by Mr. Leete, the portions on America in general, North America, and the United States have been newly written. The other parts have been changed but little, though alterations and adaptations have been made wherever they seemed called for by the fact that American instead of English or Australian pupils were to be the readers.

*** Full prospectus and specimen page sent on application.

Handbook of Commercial Geography.

By GEORGE G. CHISHOLM, M.A., B.Sc., Fellow of the Royal Geographical and Statistical Societies. With 29 maps. 8vo, 528 pages, $5.00.

"The work of Mr. Chisholm, with its succinct style and admirable method, is well fitted to promote a growing sense of the importance of the geographical element in industrial life. It has been his effort to impart an intellectual interest to the facts of geography as relating to commerce. He has kept in view three classes of readers: teachers desiring to enliven the ordinary work in geography by illustrations from commercial life; students in institutions giving especial attention to commercial education; and lastly those beginning commercial life who take an intelligent interest in making their private studies bear upon their business. The most important facts are graphically represented in twenty-nine maps, while an adequate index completes what is one of the best examples of text-book workmanship it has been our pleasure to examine."—*The Nation.*

A Smaller Commercial Geography.

By GEORGE G. CHISHOLM, M.A., B.Sc., &c. Crown 8vo, 90 cents.

*** This book is in a large manner an abridgment of the author's 'Handbook of Commercial Geography,' modified in arrangement so as to meet the wants of junior students, and supplies information on the elementary facts of geography assumed to be possessed by the reader of the Handbook.

"For boys of fourteen years of age who are intended for a mercantile career, nothing more useful could be devised than a careful course of training or such a book as this. It brings before them the whole world of commerce."—*Glasgow Herald.*

SCIENCE.

Advanced Physiography.

By JOHN THORNTON, M.A. With 180 Illustrations, 6 Maps, and a Colored Plate of Spectra. Crown 8vo, pp 350, $1.40 net. (Longmans' Advanced Science Manuals.)

This work may be regarded as a continuation of the Author's treatise in "Elementary Physiography." It carries the student into wider realms of nature and includes a fairly well-defined and well-ordered series of facts connected with the study o the universe.

"Mr. Thornton has done his task conscientiously; he has avoided the staleness of old text-books, and has introduced many results of recent investigation. . . . The author is evidently a practised teacher, and his chapters, paragraph headings, and illustrations show an aptitude in methods of statement and explanation that must bear good result."—*Science.*

The Elements of Laboratory Work.

A Course of Natural Science. By A. G. EARL, M.A., F.C.S., Science Master at Tunbridge School. With 57 Diagrams and Numerous Exercises and Questions. Pp. xii.—179, crown 8vo, $1.40 net.

[*Just Ready.*

In this book an effort has been made to arrange a course which shall point out the main lines of investigation in Natural Science, in preference to an attempt at explaining any one branch in detail; it is hoped that the course may give something of a training in that habit of directly appealing to nature which is the root of all scientific progress. . . .

Longmans' Elementary Science Manuals.

Practical Plane and Solid Geometry. By I. HAMMOND MORRIS. 12mo, 80 cents net.

[*Nearly Ready.*

*** Full list of the series and prospectuses sent on application.

School Hygiene:

Including simple directions respecting Ventilation, Eyesight, Infectious Diseases, and First Aid in Injuries. For schools and families. By W. JENKINSON ABEL, B.A. 12mo, 30 cents net.

A Manual of Anatomy for Senior Students.

By EDMUND OWEN, M.B., F.R.C.S., Surgeon to St. Mary's Hospital, London, and Co-Lecturer on Surgery, late Lecturer on Anatomy in its Medical School. With 210 illustrations. Crown 8vo, 534 pages, $3.50.

"A valuable addition to our medical and surgical literature. It covers the essential points in the entire range of anatomy and is well illustrated. It also traverses the domain of the physician and specialist. . . . The advanced student and the practitioner will find it well suited to their needs. . . . In hospital practice this volume will be a practical reference-book not only in the surgical wards, but also in the medical and special departments."—*Journal of the American Medical Association.*

ENGLISH.

Longmans' School Grammar.

By DAVID SALMON. 12mo, pp. 272, 75 cents net.

"The author has produced one of the best working grammars we have ever seen, and this applies to all its parts. It is excellently arranged and perfectly graded."—*New York Teacher.*

Longmans' Junior School Grammar.

By DAVID SALMON. 12mo, pp. 124, 30 cents net.

The Junior School Grammar is an adaptation of the first half of the author's School Grammar, with some of the explanations simplified, with many of the exercises amplified, and with a few of the difficulties omitted.

Longmans' School Composition.

By DAVID SALMON. Crown 8vo, pp. 310, 80 cents net.

". . . Its direct sensible method is to be praised almost without reserve. The Notes for Teachers at the end of the book are excellent in conception and as practical instructions."—*N. Y. Nation.*

Longmans' Junior School Composition.

By DAVID SALMON. Crown 8vo, pp. 120, 30 cents net.

This book is identical with Part I. of Longmans' School Composition, with "Notes for Teachers" added.

A NEW HISTORY OF GREECE.

A History of Greece.

From the Earliest Times to the Macedonian Conquest. For the Use of Middle Forms of Schools. By C. W. C. OMAN, M.A., F.S.A., Fellow of All Souls' College, and Lecturer at New College, Oxford. With maps and Plans. Crown 8vo, $1.50 net.

". . . The best of all School Histories of Greece. . . . It combines liveliness with solidity as they are rarely combined, and it deserves to meet with a large and rapid sale."—*Spectator.*

Bright's History of England.

THE GROWTH OF DEMOCRACY. Victoria: 1837-1880. Being Part IV. of 'A History of England.' By the Rev. J. FRANCK BRIGHT, D.D. With Maps and Plans. 12mo, cloth, $1.75.

Part I. MEDIÆVAL MONARCHY. A.D. 449-1485. $1.50.

Part II. PERSONAL MONARCHY. 1485-1688. $1.75.

Part III. CONSTITUTIONAL MONARCHY. 1689-1837. $1.75.

EDUCATIONAL WORKS

Selected from the Complete Catalogue of Cassell Publishing Company.

This Catalogue, now ready, will be forwarded to any address free on application.

The Iliad of Homer.

ΟΜΗΡΟΥ ΙΛΙΑΣ.

HOMERI ILIADIS CARMINA.

Edidit ALOISIUS RZACH.

Pars Prior: Carm. I–XII.

Pars Altera: Carm. XIII–XXIII.

Price per volume, cloth, $2.00.

We have here the complete text of Homer's immortal Iliad in two volumes, with a valuable summary and copious notes. Students will find this edition valuable not only for its text and notes, but for its mechanical excellence. It is a book for the library as well as for the class-room.

Q. Horati Flacci.

OPERA.

Ediderunt O. KELLER et I. HAEUSSNER.

One volume, octavo, cloth, price $2.00.

It is with no little pride that the publishers point to this beautiful edition in the original of the works of Horace. It contains a carefully written preface and conspectus metrorium, together with a copious Index nominum et rerum memorabilium, and critical notes.

THE CHEAPEST AND MOST COMPLETE FRENCH DICTIONARY PUBLISHED.

Cassell's French Dictionary.

(French-English and English-French.)

New and Enlarged Editions. 282d Thousand. 1,122 Pages. Price, $1.50. Among the special features of the New and Enlarged Edition are the following:

It has been enlarged by the addition of 200 pages, and now contains 1,122 pages, extra crown 8vo. New words to the number of 3,000 have been added. It has been revised by the latest edition of the Dictionary of the French Academy. It has been entirely reset in new type. It has been corrected by Prof. Roubaud, B.A. (Paris). It contains many new features not found in any other existing dictionary. It is the cheapest, the most complete and extensive, and, so far as modern spelling is concerned, the only accurate dictionary of the French language published in this country. *Specimen pages sent free on application.*

CASSELL PUBLISHING COMPANY,

104 and 106 Fourth Avenue, New York.

A PARTIAL LIST OF
T. Y. Crowell & Co.'s Fall Announcement of New Books.

THE FOUNDING OF THE GERMAN EMPIRE BY WILLIAM I.

Translated from the German of HEINRICH VON SYBEL by Professor MARSHALL LIVINGSTONE PERRIN of the Boston University. 5 volumes, 8vo, cloth, $10.00; half morocco, $15.00.

This work, on the publication of the first volume, was instantly recognized by the German critics as a masterpiece of historical writing; at the same time its genuine popularity was attested by the fact that an edition of fifty thousand copies was almost immediately exhausted. It is a calm, but at the same time brilliant and complete portrayal of the most portentous creation of modern times. The present edition is translated by Professor Perrin, whose scholarly accuracy and care are visible on every page. It is in five volumes, illustrated with portraits of William I., Bismarck, Von Moltke, Friedrich, and the present Emperor.

JANE EYRE.

By CHARLOTTE BRONTE. With 48 illustrations, engraved by Andrew. Carefully printed from beautiful type on superior calendered paper. 2 volumes, 12mo, cloth, gilt top, boxed, $5.00; half calf, $9.00. *Edition de luxe*, limited to 250 numbered copies, large paper, Japan proofs mounted, $10.00.

'Jane Eyre' is one of the books which seem destined to live. Its original and vivid style, its life-like and powerful plot, its tremendous moral purport (once misunderstood, but now recognized) make it one of the most absorbing novels ever written. The present illustrated edition is as perfect as will ever be produced. Press-work, paper, illustrations, and binding combine into a whole that is a delight to the eye and a cynosure for the library.

THE PORTABLE COMMENTARY.

By JAMIESON, FAUSSETT, and BROWN. Two volumes, crown 8vo, cloth, $4.00.

This convenient manual has a world-wide reputation as the best book of its kind in the English language; It is full, yet concise, easily understood, clear in type, convenient in size; a work that should be in the hands of every student of the Bible.

THE NARRATIVE OF CAPTAIN COIGNET, Soldier of the Empire, 1776-1850.

An autobiographical account of one of Napoleon's Body Guard. Fully illustrated. 12mo, half leather, $2.50; half calf, $5.00.

The recollections of Captain Coignet, perfectly authenticated, come to us like a voice from those mighty masses who, under Napoleon, made Europe tremble almost a hundred years ago. It is the record of the daily doings of a private soldier, who fought in many great campaigns. They are marked by quaint frankness and *naïveté*, an honest boastfulness thoroughly Gallic, and a keen sense of the picturesque value of truth. Nothing like these memoirs has ever been published. They are original, shrewd, clever, and they make the Napoleonic days live again.

BRAMPTON SKETCHES of Old New England Life.

By MRS. MARY B. CLAFLIN. Illustrated. 16mo, unique binding, $1.25.

The old New England life is rapidly fading, not only from existence, but even from the memory of people. It is therefore well that those who were in touch with the best elements of this quaint and homely life should put to paper and perpetuate its traditions and half-forgotten memories. This Mrs. Claflin has done for the town of Hopkinton, where her parents lived, and 'Brampton Sketches' stand out as a truthful record of a peculiarly interesting provincial town.

GOLD NAILS to Hang Memories On:

A rhyming review, under their Christian names, of old acquaintances in history, literature, and friendship. By ELIZABETH A. ALLEN. 8vo, gilt edges, $2.50.

This is the most original autograph book ever published. It aims to give a history and record of the more or less familiar Christian names, and at the same time to commemorate the most familiar and famous men and women who have borne them. The book, therefore, has not only an interest of its own, but is distinctively educational. Spaces are left on each page for autographs.

REAL HAPPENINGS.

By Mrs. MARY B. CLAFLIN. 12mo, booklet style, 30 cents.

Under the above attractive title, Mrs. Claflin has collected into a little volume of less than fifty pages, five simple, unaffected stories from actual life. They are all pleasantly told, and are filled with a warm feeling of love and humanity.

BOURRIENNE'S MEMOIRS OF NAPOLEON BONAPARTE.

SPECIAL LIMITED EDITION, with over 100 Illustrations. 5 volumes, cloth, gilt top, half leather, $10.00.

FAMILY MANNERS.

By ELIZABET GLOVER, author of 'Talks About a Fine Art,' etc. Booklet, half cloth, 30 cents.

TOM BROWN'S SCHOOL DAYS.

By THOMAS HUGHES. With 53 illustrations engraved by Andrew, carefully printed from beautiful type on calendered paper. 12mo, cloth, $2.00; full gilt, $2.50. *Edition de luxe*, limited to 250 numbered copies, large paper, Japan proofs mounted, $5.00.

Praise or comment on this classic would be a work of supererogation. Every parent sooner or later puts it into his children's hands. We can only say that the present edition is by all odds the best that has ever been offered to the American public. Printed from large type, well illustrated, and handsomely bound, it makes a book worthy of any library.

FAMOUS EUROPEAN ARTISTS.

By Mrs. SARAH K. BOLTON, author of 'Poor Boys Who Became Famous,' etc. With portraits of Raphael, Titian, Landseer, Reynolds, Rubens, Turner, and others. 12mo, $1.50.

In this handsome volume Mrs. Bolton relates sympathetically, and with her usual skill in seizing upon salient points, the lives of Sir Joshua Reynolds, Turner, and other artists whose names are household words. The sketches are accompanied by excellent portraits.

FAMOUS ENGLISH AUTHORS OF THE 19TH CENTURY.

By MRS. SARAH K. BOLTON, author of 'Poor Boys Who Became Famous,' etc. With portraits of Scott, Burns, Carlyle, Dickens, Tennyson, Robert Browning, etc. 12mo, $1.50.

During a recent visit abroad, Mrs. Bolton had the opportunity of visiting many of the scenes made memorable by the residence or writings of the best known English authors, and the incidents which she was thus enabled to invest with a personal interest, she has woven into the sketches of Tennyson, Ruskin, Browning, and the other authors of whom she writes. These two companion volumes are among the best of the famous "Famous" Series.

GOSPEL STORIES.

Translated from the Russian of Count L. N. TOLSTOI by NATHAN HASKELL DOLE. 12mo, $1.25.

Count Tolstoi's short sketches of Russian life, inspired generally by some pregnant text of Scripture and written for the masses, perhaps even more than his longer works show the man's real greatness. Sixteen of these, selected from various publications, are here presented in a neat and attractive volume.

PHILIP; or, What May Have Been.

A story of the First Century. By MARY C. CUTLER. 12mo, $1.25.

An appreciative notice of this story contains the following words: "Reverence, accuracy, a chastened feeling of perfect sincerity, pervade this book. . . . We have read it through, and can confidently recommend it as in every way fitted to give the old familiar facts of the Gospel history a new interest."

HALF A DOZEN BOYS.

By ANNIE CHAPIN RAY. 12mo, illustrated, $1.25.

This is a genuine story of boy life. The six heroes are capital fellows, such as any healthy lad, or girl either for that matter, will feel heart warm toward. The simple incidents and amusements of the village where they live are invested with a peculiar charm through the hearty and sympathetic style in which the book is written. It is a book quite worthy of Miss Alcott's pen.

THE ROBBER COUNT.

By JULIUS WOLF. Translated from the Twenty-third German Edition by W. HENRY WINSLOW. 12mo, cloth, $1.50.

This masterpiece among Julius Wolf's prose romances is laid in mediæval times, and, as in 'The Saltmaster,' the author has caught the spirit of those days and transferred it to his pages. It will be a notable addition to our list of historical fiction.

ALSO IN PRESS, BY THE SAME AUTHOR:

"FIFTY YEARS, TWO MONTHS, AND THREE DAYS."

From the Fifteenth German Edition. 12mo, cloth, $1.50.

FOR SALE BY ALL BOOKSELLERS.

THOMAS Y. CROWELL & CO., PUBLISHERS, New York.

For Teachers, Students, and Readers

PHYFE'S WORKS ON PRONUNCIATION.

I.—7,000 WORDS OFTEN MISPRONOUNCED. A Guide to Correct Pronunciation. By W. H. Phyfe. 16mo, cloth, $1.25. Popular Edition, 16mo, cloth, 75 cents.

"This little volume is the most complete we have seen, and deserves immediate recognition as a valuable assistant to all, whether cultured or desiring to use cultivated and refined language. It should be on every library table, and frequent reference to it will result in many surprises."—*Boston Times.*

II.—HOW SHOULD I PRONOUNCE? OR, THE ART OF CORRECT PRONUNCIATION. 16 mo, cloth, $1.25.

"I appreciate its value and endorse your work as a most serviceable aid to all who wish to speak our language correctly."—*Edwin Booth.*

III.—THE SCHOOL PRONOUNCER. Based on Webster's Unabridged Dictionary. 16mo, pp. 366, cloth, $1.25.

"I earnestly desire that your little volume may do a great deal of good—and doubt not that that will be the case."—*Prof. W. D. Whitney, Yale College.*

HEROES OF THE NATIONS.

A series of biographical studies of the lives and work of certain representative historical characters, about whom have gathered the great traditions of the Nations to which they belonged, and who have been accepted, in many instances, as types of the several National ideas. The Series will be under the editorial supervision of Evelyn Abbott, M.A., of Balliol College, and the volumes will be issued by Messrs. Putnams simultaneously in New York and London. The volumes are beautifully printed in large 12mo, and are fully illustrated, selling, in different styles, for $1.50, $1.75, and $3.50 per volume. A full prospectus sent upon application.

I.—NELSON AND THE NAVAL SUPREMACY OF ENGLAND. By W. Clarke Russell, author of 'The Wreck of the Grosvenor,' etc. *(Now ready.)*

"No romance could possess a deeper interest, and certainly none could reveal a more thorough mastery of materials or an imagination more enthusiastically coöperating with the purposes and knowledge of the writer. The story is told with a spirit and an impulse which carry the reader along from page to page, without pause or break, to the very end."—*Christian Union.*

TO BE FOLLOWED BY

PERICLES AND THE GOLDEN AGE OF ATHENS. By Evelyn Abbott, M.A., Fellow of Balliol College, Oxford.

GUSTAVUS ADOLPHUS, AND THE STRUGGLE OF PROTESTANTISM FOR EXISTENCE. By C. R. L. Fletcher, M.A., late Fellow All Souls College, Oxford.

THEODERIC THE GOTH, THE BARBARIAN CHAMPION OF CIVILIZATION. By Thomas Hodgkin, author of 'Italy and Her Invaders,' etc.

THE STORY OF THE NATIONS SERIES.

Each complete in one volume, fully illustrated and beautifully printed. Price per vol., in cloth, $1.50; in half leather, $1.75.

A series of graphic historical studies, intended to present to the readers the stories of the different nations that have attained prominence in history. In the story from the current of each national life is distinctly indicated, and its picturesque and noteworthy periods and episodes are presented in their philosophical relations to each other as well as to universal history.

XXIX.—THE STORY OF THE JEWS UNDER ROME. By W. D. Morrison.

"Presented with singular lucidity, and with an admirable combination of brevity in style with completeness of matter. . . . This work is a worthy addition to this admirable series of historical volumes."—*Scotsman.*

XXVIII.—THE STORY OF RUSSIA. By W. R. Morfill of Oriel College, Oxford.

"A really admirable book, the value of which, it should be added, is largely increased by maps and a number of exceedingly interesting illustrations."—*Manchester Examiner.*

XXVII.—THE STORY OF THE BARBARY CORSAIRS. By Stanley-Lane Poole, author of 'The Moors in Spain,' etc. With the collaboration of Lieut. J. D. Jerrold Kelley, U. S. Navy.

"He has produced a volume at once creditable to his literary sense and his historical knowledge, and at the same time of absorbing interest and value to any reader who will take it up."—*N. Y. Times.*

XXVI.—THE STORY OF EARLY BRITAIN. By Alfred J. Church.

"A better volume than 'Early Britain' will scarcely be found, and when we say that about it, we mean to praise it very much indeed, for the series is a most admirable one. Prof. Church has succeeded not only in gathering an enormous amount of information into little compass, but he has also been successful in making it read like a story book."—*Civil Service Gazette.*

XXV.—THE STORY OF THE HANSA TOWNS. By Helen Zimmern.

"Unique in the series and unique in itself. . . . Miss Zimmern's work is admirably done. . . . It will be read with an unusual interest and profit by many students of history who have hitherto had to deplore the lack of any book of the kind."—*Scotsman.*

TABULAR VIEWS OF UNIVERSAL HISTORY. A series of Chronological Tables presenting, in parallel columns, a record of the more noteworthy events in the history of the world, from the earliest times down to 1890. Compiled by G. P. Putnam and Lynds E. Jones. The Tables are so arranged that the reader can see at a glance who were the contemporary rulers, and what was going on in the different realms of the world at any given date, not only as to political changes, but in the progress of society. The earlier Tables, prepared by the late G. P. Putnam, have been continued to date, on the same general plan, by Lynds E. Jones. Square octavo, cloth extra, $2.50.

IRVING'S POPULAR WORKS. Sleepy-Hollow Edition. 16mo, with frontispiece, in new style of binding, with rich stamp, per volume, 75 cents. Comprising:

I.—ALHAMBRA. II.—BRACEBRIDGE HALL; or, THE HUMORISTS. III.—CRAYON MISCELLANY. IV.—KNICKERBOCKER. V.—SKETCH-BOOK OF GEOFFREY CRAYON, GENT. VI.—WOLFERT'S ROOST AND OTHER PAPERS.

New Educational Catalogue and Descriptive Prospectus of the Nations Series and Heroes Series sent on application.

G. P. PUTNAM'S SONS, 27 and 29 West 23d Street, *NEW YORK.*

Robert Clarke & Co.,

HOUGHTON, MIFFLIN & CO.,
BOSTON.
11 East Seventeenth St., New York.

GINN & COMPANY'S ANNOUNCEMENTS.

Sidney's Defense of Poesy. Edited by Professor A. S. COOK of Yale College. 12mo, cloth, 188 p. *Ready about Sept. 10.*
The attempt is here made, by modernizing the spelling and punctuation, and by providing an introduction and a copious body of notes, to enable any intelligent reader to draw profit and delight from this masterpiece of poetical philosophy. SHELLEY'S DEFENSE OF POETRY, also edited by Professor Cook, will be issued later in the fall in a similar form.

English Prose from Elizabeth to Victoria. Edited by Professor J. M. GARNETT of the University of Virginia. 12mo, cloth, 800 pp. *Ready early in September.*
The object is to provide students with the texts themselves of the most prominent writers of English prose for the past three hundred years in selections of sufficient length to be characteristic of the authors—so far as possible, complete works or sections of works.

Open Sesame. Vol. II. Edited by Mrs. B. W. BELLAMY and Mrs. M. W. GOODWIN. Sq. 12mo, cloth, about 384 pp. *Ready about Oct. 1.*
This will be similar in character and purpose to the first volume, which has received a most cordial welcome, but is intended for children from ten to fourteen years of age. Vol. III. will follow soon.

Synopsis of English and American LITERATURE. By Prof. G. J. SMITH of the High School, Washington, D. C. 12mo, boards, about 125 pp. *To be published early in September.*

Webster's First Bunker Hill Address. 12mo, paper, about 30 pp. *To be published early in September.*

Tarbell's Lessons in Language. By B. S. TARBELL, Superintendent of Schools, Providence, R. I. Part I. will be published in *September*. 12mo, cloth, 216 pp.
This is to be a two-book course of grammar, language, and composition for common schools.

Allen and Greenough's Ovid. Revised by Prof. H. N. FOWLER of Phillips Exeter Academy. 12mo, half leather, illustrated. This will be issued with the old vocabulary *about the middle of September*. The new vocabulary, by Prof. J. B. Greenough of Harvard University, will be added later in the fall.

Handbook of Latin Writing. By PAEBLE and PARKER. Revised Edition. 12mo, cloth, 166 pp. *Ready about September 15.*
A manual of Latin composition for advanced students. It aims to attract attention to ideas rather than words, and is opposed to all mechanical methods.

Heauton-timoroumenos and PHORMIO OF TERENCE. Edited, the former by J. C. ROLFE, the latter by F. W. NICOLSON, instructors in Harvard University. 12mo, paper, each about 100 pp. to 75 pp. *Ready in September.*
The only additions to the text are stage directions inserted where they belong.

The Gorgias of Plato. Edited by GONZALEZ LODGE, Associate in Bryn Mawr College. Sq. 12mo. Text and notes, cloth; text, paper. *Ready early in October.*
In the COLLEGE SERIES OF GREEK AUTHORS.

Myers's History of Rome. By Professor P. V. N. MYERS of Adelbert College. 12mo, cloth, 240 pp., with maps and illustrations. Also to be issued with Myers's Eastern Nations and Greece, under the title of MYERS'S ANCIENT HISTORY. 12mo, half leather, 617 pp. *Ready in September.*
This work, dealing less with the details of constitutional and administrative matters than Allen's History of the Roman People, is recommended for classes that have time for only a short course.

Harvard Historical Monographs.
Published under the authority of Harvard University. I. A HISTORY OF THE VETO POWER IN THE UNITED STATES. By EDWARD C. MASON. *Ready in September.* No. II. AN INTRODUCTION TO THE STUDY OF FEDERAL GOVERNMENTS. By ALBERT BUSHNELL HART. *To follow soon.*

Political Science and Comparative CONSTITUTIONAL LAW. By Prof. JOHN W. BURGESS of Columbia College. Two vols. 8vo, cloth, 350 to 400 pp. each. *Ready about October 1.*
The keenness of the author's analysis and the breadth and freshness of his generalizations make this work an important contribution to political science.

Our Government. Revised and enlarged edition. By Prof. JESSE MACY of the University of Iowa. 12mo, cloth, about 300 pp. *Ready about September 25.*

Other books which will soon appear are:
FROM COLONY TO COMMONWEALTH. By Mrs. NINA MOORE TIFFANY.
STICKNEY'S WORD BY WORD, Advanced.
THE MORNING HOUR. By EMERSON, BROWN, AND GAY.
NEW FOURTH MUSIC READER. By L. W. MASON and G. A. VANDEUSEN, JR.
BUSINESS BOOK-KEEPING. By GEORGE E. GAY.
HYGIENIC PHYSIOLOGY. By Dr. D. F. LINCOLN.
HANDBOOK OF HISTORIC SCHOOLS OF PAINTING. By Miss DORSHEIMER.
MACAULAY'S SECOND ESSAY ON THE EARL OF CHATHAM.

GINN & COMPANY,
Boston, New York, Chicago, and London.

NELSON'S NEW BOOKS.

Classic Gems of English Literature. Vol. I.—Selections from Milton, Addison, and Goldsmith. 18mo, cloth, gilt top, 50 cents.

——Vol. 2.—Selections from Cowper, Scott, and Macaulay. 18mo, cloth, gilt top, 50 cents.

Lives of English Authors. A Biographical History of English Literature. From Chaucer to Browning. 12mo, cloth. Illustrated. 323 pp., $1.00.

Great Authors: First Period— From Chaucer to Pope. With Biographies and copious Selections from their Writings, Portraits, Notes, etc. 12mo, cloth, 272 pages, 75 cents.

—— Second Period—Goldsmith, Johnston, Gibbon, Burke, Burns, Cowper, Byron, Scott, Southey, Wordsworth. With Biographies and copious Selections from their Writings, Portraits, Notes, etc. 12mo, cloth, 266 pages, 75 cents.

"The selections are in good taste, and are well set in short biographical prefaces, with the necessary notes and comments."—*Mail and Express.*

The "World at Home" Readers.
A New Series of Geographical Readers. With beautiful maps and diagrams.

No. I.—1. Simple Lessons on the Plan of the School and the Playground. 2. Simple Lessons on the Plan of the School. 3. The Meaning and use of a Map. 64 pp. 16mo, cloth, limp. Beautifully illustrated, 25 cents.

No. II.—1. Simple Lessons on the Size and Shape of the World. 2 Geographical Terms Explained and Illustrated by reference to the Map of England. 3. Physical Geography of Hills and Rivers. 96 pp. 16mo, cloth, boards. Beautifully illustrated, 30c.

No. III. The Physical and Political Geography of England and Wales. 160 pp. 16mo, cloth, boards. Beautifully illustrated, 50c.

No. IV. The Physical and Political Geography of the British Islands, British North America, and Australia, with knowledge of their productions. 240 pp. 16mo, cloth, boards. Beautifully illustrated, 75c.

No. V. The Physical and Political Geography of Europe. Latitude and Longitude. Day and Night. The Seasons. With numerous maps and illustrations, 75 cents.

No. VI. The Geography of the World generally, and especially of the British Colonies and Dependencies. Interchange of Productions, etc. With numerous maps and illustrations, 75 cents.

"These delightful books, beginning in the first number with simple lessons on the plan of the school and the playgrounds, progress in the true direction from the known, reaching out gradually to the physical and political geography of the whole world. The truest and most progressive teachers are the ones most highly to appreciate them."—*School Journal.*

The Empire. A Complete History of Britain and the British People from Roman Times to the Present Day. 12mo, cloth. Profusely illustrated. $1.25.

"In style simple yet dignified, the story of the mother country moves on with irregular grace and rapidity and attaches itself to mind and memory as with hooks of steel."—*Journal of Education.*

Higher Grade English. History of the Language: Analysis; Style; Prosody, etc., etc. 18mo, cloth extra. 50 cents.

Lower Grade English. Grammar, Analysis, Punctuation, Paraphrasing, Derivation, etc. 18mo, cloth extra. 40 cents.

"Higher Grade English is worthy the attention of American teachers in high schools and academies."—*Journal of Education.*

Journal of Researches into the NATURAL HISTORY AND GEOLOGY of the countries visited during the voyage of H. M. S. Beagle round the world under the command of Capt. Fitz Roy, R. N. By Charles Darwin, M.A., F.R.S. 1 Vol. 12mo, 615 pp. Copious Index. Fully illustrated. $2.00.

The Duke of Argyle has said that "the most delightful of all Mr. Darwin's works is the best he ever wrote, i. e., his Journal as a naturalist in the Beagle in her exploring voyage round the world."

NEW YORK.

"The Nation."

1865-1890.

In commemoration of the 25th anniversary of this journal, Mr. Kruell has engraved on wood, in the highest style of the art, after a recent photograph by G. C. Cox, a portrait of the founder and present editor of the *Nation*,

EDWIN LAWRENCE GODKIN.

The size of the block is 9x6 inches; the impression is on Japan paper, under the personal supervision of the artist, and is loosely mounted. *Only one hundred proofs* will be offered for sale, and each will be signed and numbered. Price, Ten Dollars, carriage prepaid. Address GUSTAV KRUELL, East Orange, N. J.

*** Mr. Kruell offers at the same price, and in the same style, proof portraits of CHARLES DARWIN (one in his prime, one in old age), ASA GRAY, WILLIAM LLOYD GARRISON, and WENDELL PHILLIPS. The edition in these cases is limited to 200 copies for all except Gray (100).

"*Certainly we may look in vain among other graphic arts for anything comparable with these portraits.*"—The Nation, January 23, 1890.

U. S.:

Curious Facts in United States History.

By MALCOLM TOWNSEND. 12mo, cloth, $1.50, net; paper, 75 cents, net.

Five hundred closely printed pages, made accessible by model indexes and supplemented by an invaluable bibliography. A collection of all the curious facts about the United States that every one wants to know, yet can never tell just where to find. A book that should be in the hands of every American, unique, instructive, entertaining, fascinating. Never before has just such a compilation of facts and fancies been made. One cannot open the book anywhere without coming upon something of absorbing interest and information.

"If a person wants to find an interesting yet out-of-the-way fact about the geography, politics, history, coinage, army or navy or national songs, extension of our territory, topographical or racial nomenclature, postage, or any of those thousand and one things that nobody knows for sure, but is apt to have a hazy idea of, just let him refer to Mr. Townsend's book."—*N. Y. Star.*

		U. S. History.	Johnston	*Hebrew and Semitic.*	Brown Harper Weidner Lansing Lyon

Supplementary Reading. Drake, Wright, and Eggleston.

And many others, noteworthy and recent. No instructor should be without this catalogue. Correspondence invited.

YOUTH
should be shown "the sweep of the tide."
YOUNG
scholars can catch the logic of events, they can comprehend their country's character.
CHILDREN
are entitled to, they are the best field for, the products of literary talent, historic genius, intellectual vigor.
PARENTS, SCHOOL OFFICERS, AND TEACHERS
owe it to their own, to themselves, and to the future to see to it that the intellectual food of children, in school as well as out, be of the highest order, the work of masters.

Now that the powers of such distinguished authors as
EDWARD EGGLESTON (Hoosier School Boy),
Prof. ALEXANDER JOHNSTON (in U. S. History),
SAMUEL ADAMS DRAKE,
MARY MAPES DODGE,
are directed to the service of School Children, choice work may be confidently expected.

In the field of history and of reading books an excellent beginning has been made.

We hope to hear that you are interested.

CHARLES SCRIBNER'S SONS, Publishers, 743-745 Broadway, New York City.

Warren's New Physical Geography.

The publishers have the pleasure of announcing that the new edition of this popular text-book, which has been for a long time in preparation, is now in readiness.

The subject-matter has been prepared under the direction of Professor William H. Brewer of Yale University, assisted by several well-known Scientists and Educators, whose suggestions and advice have contributed materially to the accuracy and completeness of the work.

The book contains twenty-four pages of colored maps, which embody the latest researches of experts in the various departments of physical science. Included in these is an elaborate geological map of the United States, the first of the kind ever published in a school text-book, prepared under the supervision of Major J. W. Powell, Director of the United States Geological Survey. A series of relief maps, reproduced with great care from moulds made especially for this work, will be found useful in securing a correct idea of the surface structure of the various land masses.

The work forms a large quarto of 144 pages, substantially bound in cloth. Price, $1.50.

A sample copy will be forwarded, postage paid, on receipt of price. Specimen pages mailed on application to the Publishers.

DESCRIPTIVE LIST
OF
NOVELS AND TALES
DEALING WITH
American Country Life.

The object of this list (consisting of extracts from the *Atlantic, Critic, Nation*, and other critical journals) is to direct readers, such as would enjoy the kind of books here described, to a number of novels which, in many cases, have been forgotten within a year or two after publication. It is hoped that the publication of this and similar lists will lessen in some measure the disposition to read an inferior NEW book, when superior OLD books, equally fresh to most readers, are at hand.

Respecting the list, Mr. W. D. HOWELLS writes to the compiler thus:

"I am delighted with the notion of your list of Novels about Country Life in America, and I think you have most charmingly realized it. The book will be useful to every book-lover and critic and librarian. Now that it satisfies it, I know that I have always felt the need of just such a list."

52 double-column pages. Price, 50 cents (32 specimen pages, 10 cents). Address
W. M. GRISWOLD,
Cambridge, Mass.

A Theological Curiosity.

Familiar to our Forefathers 1,500 years ago, but not now known to one man in 50,000.

The Apocryphal Books, being the Gospels and the Epistles thrown out of the New Testament by the Council of Nice, A.D. 325; translated from the original tongues with copious Notes, and Illustrations from ancient Missals and Miniatures.

Of this work, Dr. TALMAGE has recently said:

"*Christ is the joyous boy of the fields. We are not permitted to think that the shadows of Calvary darkened His pathway as a youth, and the Apocryphal Books of the New Testament show much of the early life of Christ not to be found in the four Evangelists.*"

Price, in large 8vo, cloth, $2.00. Sold only by subscription. Agents wanted in every county. Send for circulars.
GEBBIE & CO., Publishers, Philadelphia.

Schools.

NEW YORK CITY, 32 West 40th Street.

THE COMSTOCK SCHOOL.—ESTABlished 1862. Boarding and Day School for Girls. Reopens Oct. 1. MISS DAY, Principal.

NEW YORK CITY, 55 West 47th Street.

MISS GIBBONS'S SCHOOL FOR Girls will reopen October 1. Three boarding pupils will be received into the family.

NEW YORK CITY, 50 West 104th St.

THE RIVERSIDE SCHOOL FOR Girls, removed to 50 West 104th Street, corner Manhattan Avenue. Miss Emily A. Ward, Principal. College preparation. Spacious quarters for resident pupils. Reopens September 17.

NEW YORK, Claverack.

CLAVERACK COLLEGE AND HUDson RIVER INSTITUTE.—Healthfully and beautifully located in the Hudson River Valley. Affords superior advantages for thorough and systematic education to young men and women. Careful attention given by a strong faculty of experienced professors and teachers to intellectual, social, moral, and physical culture. A Conservatory of Music and Art of high grade. 37th year opens Sept. 15. Send for illustrated Catalogue. Rev. A. H. FLACK, A.M., President.

NEW YORK, Clinton.

KIRKLAND HALL.—A Home School for Younger Boys. College Preparatory Course, Business Course, Terms, $350. Address KIRKLAND HALL.

NEW YORK, Fort Edward.

*FORT EDWARD COLLEGIATE IN*stitute for Young Women. Superior buildings, appointments, and advantages. $220. Send for illustrated Catalogue. Jos. E. KING, D.D., Pres.

NEW YORK, Geneva.

*HOBART COLLEGE.—COMPETI*tive entrance examination for the "President's Scholarships" (values $280, $175, $150), and general entrance examinations Sept. 16 and 17. For information, address Prof. W. P. DURFEE, Dean.

NEW YORK, Glen Cove.

DOSORIS SCHOOL.—A HIGH CLASS school for boys. $600 to $750 per year. Summer session June 16 to September 15. Terms, $75 per month. B. F. O'CONNOR, B.L., Ph.D. Director.

NEW YORK, Kingston-on-Hudson.

GOLDEN HILL PREPARATORY School for Boys. Sixth year begins September 24. JOHN M. CROSS, A.M., Principal.

NEW YORK, Long Island, Garden City.

THE CATHEDRAL SCHOOL OF ST. Paul.—Endowed school for boys. Seventeen miles from New York. Ten resident masters; seven visiting instructors. Prepares for any college or scientific school. Has graduates in the leading colleges. Military drill under U. S. military officer. Through the munificence of the late Mrs. A. T. Stewart the building is one of the finest school buildings in the U. S., and every department is thoroughly equipped. Excellent laboratories for individual work in Chemistry and Physics. English required throughout the course. Location unsurpassed in healthfulness. CHAS. STURTEVANT MOORE, A.B. (Harvard), Head Master.

NEW YORK, Poughkeepsie.

RIVERVIEW ACADEMY.—55TH Year. Prepares thoroughly for College, the Government Academies, and Business. Military drill. BISBEE & AMEN, Principals.

NEW YORK, Saratoga Springs.

*TEMPLE GROVE LADIES' SEMINA*RY.—Superior facilities for the higher Sciences, Philosophy, Languages, Music, Painting, esthetic and social culture. 36th year begins Sept. 17. C. F. DOWD, Ph.D., Pres.

NEW YORK, Syracuse.

MRS. ALFRED WILKINSON'S School for Girls. Reopens September 17, 1890. Refers to Hon. Abram S. Hewitt, George Wm. Curtis, Hon. Wayne McVeagh, Rev. Edward Everett Hale, Thomas Wentworth Higginson, Hon. Andrew D. White,

NEW YORK, Tarrytown.

HOME INSTITUTE.—A BOARDING and day school for young ladies and little girls. Will reopen Sept. 17. Miss M. W. METCALF, Principal.

NEW YORK, Tarrytown-on-Hudson.

MISS BULKLEY'S BOARDING AND Day School for Girls will reopen Wednesday, September 17.

NORTH CAROLINA, Asheville.

*RAVENSCROFT SCHOOL.—PREPAR*atory Boarding and Day School for Boys. Head Master, Ronald MacDonald, B.A., Oxford.

OHIO, Cincinnati.

EDEN PARK SCHOOL FOR GIRLS.—Tenth year. This school is remarkable for its beautiful location, high patronage, home life, unsurpassed advantages for modern languages, music, etc., etc. For circulars, address Mme. FREDIN, as above.

OHIO, Cincinnati.

BARTHOLOMEW ENGLISH AND Classical Home and Day School for Girls. Board and tuition $600; school year. G. K. BARTHOLOMEW, Ph.D.

OHIO, Cincinnati.

UNIVERSITY OF CINCINNATI, Academic Department.—Coeducational. Eight complete courses, four years each: Classical, one course; Letters, two; Science, four (Chemistry, Physics, Biology, and Astronomy); Civil Engineering, one course. The laboratories are well equipped. Tuition is free to residents of Cincinnati, and $60 per year to non-residents. Academic year begins September 18, 1890. For catalogues and other information, address the Dean, H. T. EDDY, Cincinnati.

Schools.

OHIO, Cincinnati.

MISS ARMSTRONG'S SCHOOL FOR Girls, Liddesdale Place, Avondale. Family limited to eighteen. Circulars sent on application.

OHIO, Cincinnati, Walnut Hills.

MISS NOURSE WILL REOPEN HER English and French Family and Day School September 30, 1890. Pupils take special work, or the full course for college examinations.

OHIO, Columbus, 151 East Broad Street.

MISS PHELPS'S ENGLISH AND Classical School for Young Ladies. Special advantages in Language, Literature, Music, Art, Home and Social Culture. Fall term begins September 25, 1890. New school building.

PENNSYLVANIA, Bryn Mawr.

BRYN MAWR COLLEGE, A COLLEGE for Women, ten miles from Philadelphia, offers graduate and undergraduate courses in Sanskrit, Greek, Latin, Mathematics, English, Anglo-Saxon, French, Old French, Italian, Spanish, German, including Gothic and Old High German, Celtic, History, Political Science, Physics, Chemistry, Biology, and lectures on Philosophy, Archæology, and Art. Dr. Sargent's apparatus complete. Fellowships (value $450) in Greek, English, Mathematics, History, and Biology. For Program address as above.

PENNSYLVANIA, Bryn Mawr.

*MISS BALDWIN'S DAY, BOARD*ing, and College Preparatory School for Girls reopens Sept. 30. For circular address Miss F. BALDWIN.

PENNSYLVANIA, Chambersburg.

WILSON COLLEGE FOR YOUNG Women. For Catalogue or advice on preparation, address Rev. J. EDGAR, Ph.D., Prest.

PENNSYLVANIA, Chester.

*PENNSYLVANIA MILITARY ACA*DEMY.—Twenty-ninth session opens Sept. 17. *A MILITARY COLLEGE.* Civil Engineering, Chemistry, Architecture, Arts. A Preparatory Course of one year. Circulars of Col. C. E. HYATT, President.

PENNSYLVANIA, North Wales.

NORTH WALES ACADEMY AND School of Business.—Twenty-first year September 10. Board and tuition, $240. Graduates, either sex, enter Freshman best colleges. Smith or Wellesley College graduate assistants. S. U. BRUNNER, P. O. Box 41.

PENNSYLVANIA, Ogontz, Montgomery County.

*OGONTZ SCHOOL FOR YOUNG LA*dies, removed in 1883 from Chestnut St., Philadelphia, to Ogontz, the spacious country seat of Jay Cooke, will begin its forty-first year Wednesday, September 24. For circulars apply to PRINCIPALS. Principals—Miss Frances E. Bennett, Miss Sylvia J. Eastman. Principal Emerita—Miss H. A. Dilnaye.

PENNSYLVANIA, Philadelphia, Germantown.

FRANKLIN SCHOOL, A CHARTERED institution for Boys and Young Men, offers advanced preparation for the best Colleges and Schools of Science, and extended courses in History, English Literature, French, German, Drawing, Elocution, and Vocal Music. An excellent system of physical culture (founded on Delsarte). Fine building and extensive grounds. Circulars and full information sent on application. GEORGE A. PERRY, A.M., Head Master.

PENNSYLVANIA, Philadelphia, Germantown, 202 and 204 West Chelten Avenue.

*MISS MARY E. STEVENS'S BOARD*ing and Day School. 22d year begins September 24, 1890. Prepares for Bryn Mawr and other Colleges. Bryn Mawr entrance examinations held in the school. Certificate admits to Vassar.

PENNSYLVANIA, Philadelphia, Chestnut Hill.

MRS. COMEGYS AND MISS BELL'S English, French, and German Boarding School for young ladies reopens Sept. 29, 1890. Students prepared for College. Ample grounds for outdoor exercise.

PENNSYLVANIA, Philadelphia, 1350 Pine St.

MISS ANABLE'S BOARDING AND Day School for Young Ladies will reopen Sept. 26.

PENNSYLVANIA, Philadelphia, 4313 and 4315 Walnut St.

*A THOROUGH FRENCH AND ENG*LISH Home School for Twenty Girls. Under the charge of Mme. Henriette Clerc and Miss Marion L. Pecke. French warranted to be spoken in two years. Terms $300 a year. Address Mme. H. CLERC.

PENNSYLVANIA, Swarthmore.

SWARTHMORE COLLEGE OPENS 9th month, 4th, 1890. Thirty minutes from Broad St. Station, Philadelphia. Under care of Friends. Full college courses for both sexes leading to Classical, Engineering, Scientific, and Literary degrees. Healthful location, extensive grounds and buildings, machine shops, laboratories, and libraries. For full particulars address WM. H. APPLETON, Ph.D., President.

SOUTH CAROLINA, Columbia.

SOUTH CAROLINA COLLEGE FOR Women.—This institution will open its session Oct. 1, 1890. The institution includes the South Carolina Presbyterian Institute, for Preparatory and Academic Instruction, and the South Carolina College for the higher education of women. For all its departments it has a Faculty of sixteen professors and teachers, unexcelled in ability and experience. Columbia is one of the finest health resorts of the South, having the climate and salubrity of Aiken and Summerville, and of Thomasville, Georgia. For circulars, address the President, Rev. WM. R. ATKINSON.

VIRGINIA, Bellevue.

*BELLEVUE HIGH SCHOOL.—THO*roughly equipped and of high grade, for boys and young men. For catalogue or information address W. R. ABBOT, Principal.

Schools.

WISCONSIN, Milwaukee.

MILWAUKEE COLLEGE.—FOR Young Women. Beautiful location, modern conveniences. Special advantages in modern languages, music, and art. Collegiate and Preparatory courses of study. For catalog address C. R. KINGSLEY, Ph.D., President.

WISCONSIN, Racine.

RACINE COLLEGE.—FALL TERM OF Grammar School begins September 11, 1890. Rev. ARTHUR PIPER, S.T.D., Warden.

NEUILLY, près Paris, 22 Avenue de Neuilly.

MR. A. RENACK RECEIVES IN HIS house and prepares with marked success a limited number of students for the Sorbonne, the military and scientific schools. Special courses in modern languages for Americans. Diplomatic references at Washington and Paris.

HAVERFORD COLLEGE GRAMMAR School.—Reopens Sept. 24, 1890. Boys thoroughly prepared for the best colleges and technical schools. Ample grounds; large gymnasium; healthful country location. A few pupils taken as boarders into the families of the Head Masters and teachers, for special care and instruction. For circulars address CHARLES S. CROSSMAN, } Head Masters. HENRY N. HOXIE, } Haverford College P. O., Pa.

SCHOOL FOR SALE OR TO LET—The Maryland Military and Naval Academy, Oxford, Md.—Ample accommodations for 300 cadets and their officers, with drill-grounds, assembly-rooms, and gymnasium. Fine boating and bathing. Everything perfect. House steam-heated and gas. For Catalogue, address P. O. Box 41, Oxford, Md., or S. F. NICHOLS, 295 7th Ave., N. Y.

Advertisements of schools set in display type will be found on next to the last page of this paper.

Teachers, etc.

A SUCCESSFUL, EXPERIENCED teacher desires position in preparatory school (classics, mathematics, and modern languages), or professorship of modern languages (German, French) in college. Highest references. HENRY ZICK, Ph.D. (Heidelberg), Newport, R. I.

A LADY, COLLEGE GRADUATE, who has taught Mathematics and Natural Sciences for two years in a girls' school, desires a position as teacher of Mathematics, Science, or Latin. N. P. W., care of *Nation*.

A LADY TEACHER, WHO WILL spend next winter in Europe, desires to chaperone a young lady, or accompany a lady going alone. Highest references. Address EUROPE, 111 summer Street, Boston.

AN ENGLISHWOMAN DESIRES A reëngagement as matron in a school or institution, or housekeeper in a private family. L. E. V., Nattapan, Boston, Mass.

*AN EXPERIENCED TEACHER (WO*man), who is a doctor of medicine and who has studied abroad, desires a position to teach chemistry, physics, and physiology. N. H., care of *Nation*.

*HOLMES HINKLEY, A.M., 11 EVE*rett St., Cambridge, Mass., will prepare boys for the fall examinations, and make tutoring engagements for the winter.

*CHARLES W. STONE, Tutor for Har*vard, 68 Chestnut Street, Boston.

School Agencies.

*AMERICAN AND FOREIGN TEACH*ers' Agency supplies Professors, Teachers, Tutors, Governesses, etc., to Colleges, Schools, and Families. Apply to MRS. M. J. YOUNG-FULTON, 23 Union Square, New York.

THE FISK TEACHERS' AGENCIES, 7 Tremont Place, Boston, Mass., 6 Clinton Place, N. Y., 106 Wabash Ave., Chicago, Ill., and 1203½ South Spring Street, Los Angeles, Cal. 100-paged Agency Manual free. EVERETT O. FISK & Co.

AMERICAN AND FOREIGN Professors, tutors, governesses, teachers, etc., supplied to colleges, schools, and families. French, German, and Spanish spoken. MIRIAM COYRIÈRE, 150 5th Av., cor. 20th St.

SCHERMERHORN'S TEACHERS' Agency. Oldest and best known in U. S. Established 1855. 3 East 14th St., N. Y.

A GENTLEMAN WHO DESIRES HIS son (18 years) to take a nine months', more or less, tramp tutor in Europe in a modest way, and chiefly for the physical advantage of outdoor life combined with some study, would like to hear of a gentleman of education and one or two other young men who would like to make a similar trip. Address W., care of H. H. Carter, 3 Beacon St., Boston, Mass.

A FREE SCHOLARSHIP IN A BOYS' Boarding School is open to a boy with a good singing voice. Address "J. L.," care *Nation*.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 4, 1890.

The Week.

THE amendment of the Tariff Bill reported by the Senate Finance Committee, authorizing the President, at his sole judgment and discretion, to impose duties on imports amounting in the aggregate to upwards of fifty millions of dollars, is one of the most extraordinary proposals of modern times. The terms of the amendment are that raw sugar shall for the present be admitted free of duty—the duties on refined, levied for the protection of the Trust, being left at three-tenths and six-tenths of a cent per pound according to quality—but that "on and after the first day of July, 1891, whenever and so often as the President shall be satisfied that the Government of any country producing and exporting sugars, molasses, coffee, tea, and hides, raw and uncured, or any of such articles, imposes duties or other exactions upon the agricultural or other products of the United States, which, in view of the free introduction of such sugar, molasses, coffee, tea, and hides into the United States, he may deem to be reciprocally unequal and unjust, he shall have the power, and it shall be his duty, to suspend by proclamation to that effect the provisions of this act relating to the free introduction of such sugar, molasses, coffee, tea, and hides, the production of such country, for such time as he shall deem just." Whenever the President shall be of the opinion aforesaid, and shall issue his proclamation as aforesaid, the duties on raw sugar shall be one-half of the present rate, with three-eighths and five-eighths of a cent per pound additional as protection for the Sugar Trust, and on molasses 4 cents per gallon, the duties on coffee shall be 3 cents per pound, on tea 10 cents per pound, and on hides and skins 1½ cents per pound.

Now, what will happen when the duties are clapped on by proclamation? The first thing that will happen will be a tremendous speculation in the necessaries of life. Every holder of sugar in the United States will pocket a cent a pound on his stock, every holder of coffee three cents, of tea ten cents, of hides and skins one-and-a-half cent. Of course some persons will know what is going to happen sooner than others. One of the first men to know it would be Mr. Blaine. If we assume that *he* would scorn to take advantage of such precious knowledge, there are a lot of thrifty politicians clinging to his skirts who are noted for the practice of "casting anchors to windward." It is safe to say that they would be carrying large stocks of tea, coffee, and sugar in such a crisis. At all events, somebody would be carrying them. A more prolific source of corruption has seldom been devised. But that is not the worst feature of the scheme. Far worse is the abdication by Congress of the taxing power which the amendment proposes, and the lodging of it in the hands of the Executive. The Anglo-Saxon race has hitherto been most noted for its zealous watch and ward over the power to go into the pockets of the people. Over this question it has fought through bloody revolutions, cutting off the head of Charles I. in the mother country and casting off the authority of George III. in this—the one for raising ship-money, the other for taxing tea. Are we now travelling backwards? We do not say that liberty is in danger, but we do say that this is a most dangerous precedent, and that Congress ought never to abdicate, or put in commission, the power either to raise ship-money or to tax tea.

For light summer reading we know of nothing in the market just now which can compare with the articles on which the *Tribune* is working itself into a support of Mr. Blaine's new view of foreign trade. There is one nearly every day, and each is in some respect racier than the last, and adds in some degree to the gayety of nations. Tastes, of course, will differ, but the one we prefer for our own perusal is that of Monday, which showed that Blaine, since he denounced foreign trade in 1888, had made "an advance and not a retreat" in now advocating an extension of foreign trade. "His mendacious opponents," or other "unthinking and ignorant" persons, are properly chastised for not knowing that a freer exchange of home for foreign commodities means simply "an extension and broadening of the protective policy," and much more of the same sort—as delightful funning as we ever read. These poor dunderheads, however, are furnished with some excuse by the fact that "Secretary Blaine completely entrapped his political opponents into public approval of his course before they discovered that it was in harmony with Republican policy." We do not think that, under these circumstances, his more stupid supporters can be blamed for not seeing at a glance what the great man was up to. Give them all time, you wicked wag, and they will eventually see through the whole thing. Everybody is not as clever and perspicacious as you.

The lecture which Mr. Whitelaw Reid administers to M. Ribot, touching the French policy towards American pork, is so much in the style of a slashing *Tribune* "editorial," and so little in the style of a diplomatic despatch, that it has doubtless caused a good deal of merriment in the French Foreign Office. But the style is a small matter. The argument is everything, and on one point—the discrimination against American pork exclusively—Mr. Reid apparently has the best of it; but, like his friend and model, Mr. Blaine, he ignores the fact that the United States are the principal pork-exporters of the world, and that the supplies of hog which France gets from other countries are comparatively insignificant. In pork America occupies very much the position towards other countries that England does in coal. Moreover, there is no doctrine so firmly rooted in the mind of that portion of the American public which gets its morals and political economy from the *Tribune*, as that the man who tries to import any protected article is, to the extent of his ability, an enemy of the country into which he tries to import it. New York importers are all treated as such by Congress, the Government, the Custom-house, and the *Tribune*. That the tariff allows them to import at all is a simple concession to the weakness of human nature, and meant to prevent smuggling. All foreign trade being, therefore, strictly speaking, illegitimate, there is nothing to which we can take just objection in the conduct of France in selecting one branch of it with a particular country for total suppression. It has simply prohibited that part of a harmful thing which does most harm, as a piece of domestic policy, to which Mr. Reid has no more right to object than to restrictions on the internal liquor traffic.

One portion of Mr. Reid's despatch deserves special quotation for its unconscious humor and for the way it knocks the pins from under the rest of it. After assuring M. Ribot that the Customs Administrative Bill had been so modified as to allow an appeal to the courts from the decisions of the Custom-house authorities, he says:

> "I deeply regret that that prompt response from the United States has met with no reciprocal act or recognition on the part of the French Government; and that another friendly act—the total removal of the 30 per cent. duty on works of art by the House of Representatives—passed alike unnoticed, until the Senate Committee, seeing no encouragement for steps in this direction, restored the duty."

We doubt if ever before in the history of diplomacy the willingness of a great civilized Power to allow foreigners access to its courts on questions of property was designated a "friendly act" calling for a *quid pro quo*. Such propositions are usually made by African or Asiatic potentates, who say to strangers: "I might cut your head off by executive order, but I am going to allow you a trial, and yet I have not had a word of thanks from you yet, you mutton-head." Mr. Reid's use of the duty on works of art is equally droll. Only barbarous Powers have ever before us imposed duties on foreign works of art. All civilized nations except ourselves treat them as desirable things, to be obtained without let or hindrance by every means in their power—even by purchase, in some cases, by the public treasury. Mr. Reid, however, calmly confesses to a foreign Minister that we have no appreciation of such things ourselves; that, far from admitting them free on our own account, we are only willing to admit them in order to get him to "let up" on our pork, and that, seeing he had no bowels for pork, our Senate has restored the duty. Our effort to bar-

gain for pork with pictures is, in truth, one of the most laughable as well as disagreeable incidents in the economical history of the Republican party, and Mr. Reid's apparent unconsciousness of the way it strikes the foreigner with whom he is arguing is extremely interesting. We wish M. Ribot, for the fun of the thing, would give Mr. Reid a lecture. The materials are abundant, and M. Ribot is a master both of style and logic.

If Minister Reid, in any further discussion of the pork question with M. Ribot, finds a scarcity of material, we refer him to the speech made a few days ago by Mr. McKinley, who gives a name to this year's tariff legislation, before the Convention which renominated him. Defending the Tariff Bill now before Congress, he said:

> "The public meetings which have been held in England, and the exhibitions of temper which have been witnessed in some of its great manufacturing centres and in the parliamentary bodies of other nations, protesting against our proposed Tariff Bill, must have convinced the most ignorant or incredulous that our foreign rivals regard the bill not in the interests of Europe, but in the interests of America. They see nothing in it but a diminution of their American trade and a corresponding gain to our own producers. Of course it does not please other nations, it was not framed after that fashion. The Mills bill did. That is the precise difference. It was not made to please other nations."

There seems to be no use of an American Minister trying to explain away any interpretation of this bill as hostile to the interests of other countries after this plain interpretation of it by its chief sponsor. Mr. Blaine has declared that "there is not a section or line in the entire bill that will open the market for another bushel of wheat or another barrel of pork." There are a good many sections, however, that may close the markets of the world to a good many bushels and pounds of our farm products.

Senator Davis of Minnesota made a speech on the Tariff Bill last week, which was almost as unorthodox from a Republican point of view as any that Senator Plumb has made. Indeed, he followed very closely in the footsteps of Senator Carlisle, who has made a masterly exposure of the tricks of protected cutlery-manufacturers and the sophisms of their Republican defenders. Mr. Carlisle proved conclusively that at least two cutlery-manufacturing firms which had been before the Committee on Ways and Means demanding an increase of duty, on the ground that if it were not granted they would have to go out of business, were in the habit of selling their goods for export at much lower prices than they were selling them in the home market. The only effect of the duty was to enable the manufacturers to make Americans pay a higher price than foreigners for precisely the same goods. Mr. Davis took up the twine item in the Tariff Bill, and showed that its proposed duty of 1¾ cents per pound had been put into the bill in accordance with entirely false statements by twine-manufacturers to the Ways and Means Committee.

Coming from a Republican Senator in good party standing, Mr. Davis's argument in opposition to the twine duty is most instructive. He said that twine should go on the free list out of simple justice to the farmers of the country, and especially of his own State, since it affected the latter alone to the amount of nearly a million dollars a year. The entire business of manufacturing twine, he said, including the sources from which that commodity was supplied, was governed by a combination of all (or substantially all) the manufacturers of cordage and binding twine. That combination controlled absolutely the raw material (sisal, jute, etc.) in the places where it was grown, and also limited the product of the manufactured article and fixed its price. That combination consisted of forty-two manufacturing companies in the United States and seven or nine in Canada. These companies were banded together by the cohesive force of a common interest. They were superior to all law. In the Philippine Islands they limited and controlled the price of one-half of the raw material, and in Yucatan they controlled the other half. They had one man in New York to purchase for them all, and a committee of three to limit the output and to fix the price. They were as far above legislative control as the clouds that floated above the Capitol. They were in no need of protection. They were amply able to protect themselves and to spoliate the world. And yet they came to Congress and said that they would shut up their mills and cease production unless they received the additional protection of 1¾ cents per pound. They were amenable to the law against Trusts. He showed that their profits were 40 per cent. on an aggregate annual output of $10,000,000, or $4,000,000 a year; that the evil had become so unbearable in Minnesota that the State authorities were about to set up machinery in the State prison for the manufacture of binding-twine from flax fibre grown in the State.

The Republican Convention in the Fifth Congressional District of Kansas last week adopted a platform which contains one plank that is of interest all over the country. It is in these words: "That we cordially approve the stand taken by Senator Plumb on financial and economic questions during the present session of Congress, which shows his deep interest in the welfare of all the people of the State, and especially his hearty sympathy with its farmers and laboring men." Senator Plumb is not a candidate for reëlection, and it is most extraordinary for a party convention thus to single out one of the Senators for special commendation. The adoption of such an endorsement under such circumstances shows how strong is the opposition to the high-tariff craze, among the Republicans of the strongest Republican State in the West. Even more significant and important was the special resolution of instructions to the candidate nominated by the Convention. "Resolved," it reads, "that we congratulate our Senators and members of Congress upon their bold and patriotic stand upon financial and business questions of especial importance to the West, *and we bid our nominee enter the hall's of Congress untrammelled by any dictate not founded on the original principles of the party, and that he exercise his best judgment on such questions for the benefit of the people.*" This is the second Republican Congressional convention in Kansas within a month to issue such a mandate to its nominee. The Seventh District Republicans by resolution absolved their representative "from dictation of the party caucus upon all economic issues," and "*bid him enter the halls of Congress a free man,* to battle for the material and business interests as well as the moral and political welfare of this great State."

Another Republican State convention has met in a Western State, and refused to say a word in favor of the passage of the Force Bill. This time it was the Republicans of Michigan who adopted a platform which is noteworthy for its entire silence regarding the Lodge Bill. The Republican Senators from Michigan are among those who have successfully opposed the passage of the measure at this session, and the action of the convention of their party on Thursday last shows that there is no disposition to rebuke them for their course. This action is the more important because a bloody-shirt orator who was the temporary presiding officer, had asked the Convention to demand of the Senate the passage of the pending bill, "by a voice so loud and so distinct that there could be no misunderstanding."

The proceedings in the House on Wednesday week sustain the claim that the House is not a deliberative body. A more discreditable spectacle has not been seen in either branch of Congress. The Chairman of the Committee on Appropriations, Mr. Cannon of Illinois, one of the oldest members and most prominent Republicans, assailed a Democratic Representative in language so foul that even the most subservient of Republican organs is forced to substitute stars for the words which he used. A Republican colleague from Illinois, Mr. Mason, became so incensed at Mr. Cannon's conduct that he denounced him as "a —— lying old tramp." Mr. Mason's characterization of Mr. Cannon was heartily endorsed by Mr. Beckwith, a Republican member from New Jersey, and when Mr. Wilson, Republican Representative of the State of Washington, dissented from this view, the two called each other liars and proceeded to blows. The services of the Sergeant-at-Arms were required before the exchange of epithets and blows could be stopped and order restored. It will be observed that all of the participants in these disgraceful scenes were Republicans, and that the rows occurred while the Republican Speaker was himself in the chair. The Democrats, therefore, have no responsibility in the matter, and no question of partisanship can be raised. These new legislative methods are exclusively those of the Republican majority, and there can be no division of praise or blame for them between the two parties.

When the scheme of admitting Idaho as a State was brought forward in Congress last winter, its opponents urged that the Territory had not nearly the number of inhabitants requisite to entitle it to a member of Congress under the existing apportionment, and that no Territory ought to become a State until its population had reached at least that limit. The advocates of admission were voluble and emphatic in their claims as to the great gain in population during the last few years, but they had no accurate information to present. It was pointed out that a census was to be taken this summer which would clear up all doubts in the matter, and it was urged that the scheme should at least wait until after this count had been made. But the admissionists would not consent to any delay, apparently fearing that the census would be fatal to their claims. Such has proved to be the case, for the Census Office shows by official figures that Idaho has only 84,229 people, and several thousands of these are Indians and Chinese.

The ratio of representation in the House upon the basis of the 1880 census was one to every 151,912 people, and unless the size of the body is to be unduly enlarged, the figures should now rise to one for every 175,000 or 180,000. Even if the existing system be maintained, Idaho has only a trifle more than half the number of people required to entitle her to a member of the House of Representatives, yet she is to have one member of the House, two members of the Senate, and three members of the Electoral College. It is a wrong to the older and larger States of the Union that a small body of men in a new community should be given such grossly disproportional power in the government of the nation. The only consolation is that this discreditable chapter in the history of the country is nearly finished, as there are but few Territories yet awaiting the time when considerations of partisan advantage shall convert them, fit or unfit, into full-fledged States.

That was an extraordinary illustration of the spoils system which was described by a Washington correspondent last week. A letter-carrier in a Western city, with an excellent record, was requested to resign his place, which he naturally refused to do. The Republican Congressman who had sought to get rid of the carrier, because he was a Democrat and the place was wanted for a Republican "worker," then induced the Post-office Department to issue an order for his removal. But the carrier would not give up the fight, and he sent to Washington letters of remonstrance from many of the leading citizens on his route, who declared him well-qualified, efficient, and faithful. The Congressman then made the plea that he wanted the place for a veteran of the civil war, whereupon the carrier produced a petition for his retention signed by 600 old soldiers whose mail he had been carrying for years. Nevertheless, the order for his removal was not revoked, and the papers for the appointment of his successor had been made out when his wife appeared in Washington in his behalf. "She visited the Department, learned the exact state of things in regard to her husband, and at last accounts was chasing the obdurate member of Congress around the city, resolved to convert him with the testimonials she carried with her." The Congressman has already spent probably a hundred dollars' worth of the time which the Government pays him for devoting to the public interests in this disgusting squabble over a petty office, which pays the incumbent only about $2.50 a day, and the end is not yet!

Powderly appears to have entered upon a general war of extermination. He has announced his purpose of fighting to the death with the entire railway system of the United States, beginning with the Vanderbilt roads, and working along gradually to all others. He has also declared war upon the Brotherhood of Railway Engineers, and has called that organization's chief officer, Mr. Arthur, all the hard names that he had on hand after he had finished denouncing Vice-President Webb. He has also expressed a very poor opinion of other labor organizations which failed to come to the aid of the Central strikers, and, as a final stroke of denunciation, has assailed the State Board of Arbitration for being "on horseback in the Adirondacks looking for fish," instead of remaining here and compelling the Central Railway to submit at once to an investigation of the strike, which, according to Powderly, is still so firmly "on" that the road is "effectively tied up." The wisdom of taking all this work upon his shoulders at a time when he has met with the most complete failure of his career, is somewhat questionable, but it is his usual way of showing his "power." Next to his assault upon Mr. Arthur, his denunciation of the Board of Arbitration is the most impolitic thing he has done. Under the law, the Board has discretionary power about conducting such an investigation, and its practice has been to take plenty of time.

One of the oddest contributions to the really large body of literature called forth by the "servant-girl question" is the proposal of Mrs. Francis Darwin, in an English magazine, that the servant-girl, when applying for a situation, should have the same right to ask for references from the mistress that the mistress has to ask them from the servant. For the purpose of meeting this legitimate demand, she suggests that each mistress should name two referees among her former servants who have lived with her within a year. This assumes a judicial mindedness and power of expression on the part of servant-girls which they hardly ever possess, and it assumes, also, that the servant-girls do not already act as references about mistresses for each other. The truth is, that nearly every employer's character, as an employer, is pretty well known to all the servant-girls in the neighborhood. They describe the ways of the people they live with to one another at their Sunday evening conventicles with a minuteness and prolixity which leave nothing to be desired in the way of information about temper, habits, kind and amount of work. It would be a waste of labor for any housekeeper to appoint standing referees, because their judgment would either be superfluous or ineffective, and would, besides this, be highly colored by the reasons of the referee for leaving or staying in the house.

Both parties in Spain are making every exertion to be in readiness for the approaching general election. Sagasta has followed up his somewhat guarded speech to the members of his retiring Cabinet with a more pronounced and positive address to the Liberal committees of Madrid. Universal suffrage, fairly put into operation and carried out to its logical results in the politics of the country, is evidently to be the main plank in the Liberal platform, minor stress being laid on the policy of low tariffs and international reciprocity, trial by jury and military reforms. The Conservatives, on the other hand, squarely declare for high protection, while professing to accept in good faith the new Suffrage Law. Their opponents allege that they are already making an arbitrary use of their power over municipal and university organizations so as unfairly to overcome Liberal majorities. The position of the newly organized Republican party is a curious one. It naturally seeks some sort of an alliance with the Liberals, yet Sagasta can scarcely strike up any open partnership with it, since the Government has served notice on him that if he does come to an understanding with the declared enemies of the monarchy, it will not hesitate to use force to defeat the Liberals. Sagasta replied that he had no intention of doing anything of the kind, unless it should appear that an attempt was being made to block the execution of the Suffrage Law; in such case he would resort to any means to overcome the Conservatives. Thus the little band of Republicans serves as a threat to each of the great parties. A great sensation has been caused by the language used by Cánovas in an interview with a correspondent of the *Temps*. He said that in Spain the Government always obtained a majority in the elections, and was able to put its measures through the Cortes. It was the royal prerogative, and not the will of the people, that determined a change of administration. Since the reign of Alfonso XII. it had been a settled principle to let the Conservatives and Liberals alternate in power every three or four years; and all the agitations of an electoral campaign amount to nothing beside the choice of the sovereign. These somewhat cynical remarks undoubtedly have a large degree of truth in them; but they discover such contempt for the constitutional limitations of the monarchy that they are justly regarded as the utterance of a reactionary, and probably will prove a serious political blunder.

MR. BLAINE'S NEW DEPARTURE.

We do not think Mr. James G. Blaine has in twenty-eight years of oratory and letter-writing ever made so remarkable a speech as that which he delivered on Friday at Waterville, Me. The personal bearings of it were very curious. It appears that it is to be his one speech of the Maine canvass. He opened by dwelling on the great importance of the approaching State election. He said it "involves in great part the political issues now under discussion in the national field"—meaning, of course, the McKinley Bill and the Force Bill—and that "the decision of Maine would have its due influence on other States, and that decision will be pronounced in the decisions we shall give in our four Congressional districts." He mentioned the name of the candidate in one of these districts, Mr. Milliken, but not one word did he say or allusion did he make to the candidates in the other districts—one of whom is Mr. Thomas B. Reed, the present Speaker and autocrat of the House of Representatives, and we presume we may say the author of the Force Bill and the chief pusher or promoter of the McKinley Bill. This public revelation of his hostility to Reed, and of his indifference to the two great Republican measures of the day, shows how completely alienated he is from the present party managers, and how determined he is to follow a line of his own.

His programme with regard to the tariff was even more interesting than his dismissal of Reed and the Force Bill. For years—that is, ever since 1884 at least—the tariff-reformers have been saying that the great cause of our financial and industrial troubles was that our products had outgrown the home markets; that we must have foreign outlets for them, and that in order to do this we must lower our prices by cheapening production, there being no other way known to traders of attracting buyers in open competition but comparative cheapness. In Mr. Blaine's famous despatch from Paris, he utterly repudiated this idea. He said: "We could not export staple fabrics to Europe unless we could make them cheaper than in Europe," and that we could not make them cheaper without making labor cheaper — something we should not try to do. He said that any channel such as President Cleveland recommended for an increase of exports would "simply succeed in making way for a deluging inflow of fabrics, to the destruction of home industry." He went on to denounce foreign trade and to magnify the importance of our "domestic trade," and said it was this which had "caused the wonderful growth and expansion of the republic," and that it was this "continental trade," which the genuine free-trader cannot comprehend, which "is the great source of our prosperity," and he reproved President Cleveland for proposing a policy that would "admit Europe to a share of this trade." In the speech at Waterville, however, he made the following remarkable admissions:

"In regard to national questions, I wish to declare the opinion that the United States has reached the point where one of its highest duties is to enlarge the area of its foreign trade. Under the beneficent policy of protection we have developed a volume of manufactures which in many departments has overrun the demands of the home market. In the field of agriculture, with the immense propulsion given it by agricultural implements, we can do far more than to produce breadstuffs and provisions for our own people. Nor would it be an ambitious destiny for so great a country as ours to manufacture only what we can consume or to produce only what we can eat. We are already, in many fabrics and in many products, far beyond that, and our great demand is expansion. I mean expansion of trade with countries where we can find profitable exchanges. We are not seeking annexation of territory. Certainly we do not desire it, unless it should come by the volition of peoples who might ask the priceless boon of a place under the flag of the Union. I feel sure that for a long time to come the people of the United States will be wisely content with our present area, and not launch upon any schemes of annexation. At the same time, I think we should be unwisely content if we did not seek to engage in what the younger Pitt so well termed 'the annexation of trade.'"

To this new platform, too, he has carried over the New York *Tribune*, which was silent for a good while after the letter to Mr. Frye, but now takes its stand quietly beside Mr. Blaine on the much-abused Cleveland platform.

We do not make these quotations for the purpose of enclosing Mr. Blaine in the deadly parallel or reproaching him with inconsistency. He has never been enough of an economist to make economical discussions with him very profitable. His speeches and letters on economical topics are valuable mainly as indications of what he—a very shrewd observer—thinks the drift of popular opinion is. He gets his science, in short, from the ballot-box, and cares as little as the late Senator Logan what "the bookmen say" about such things. The result is, that the arguments by which he fortifies his economical positions are sometimes incomprehensible to the professorial mind. He told his audience at Waterville the following extraordinary story about the result of our trade with several countries in 1889:

"We lost $41,000,000 in Cuba, from which our imports were $52,000,000, and to which our exports were only $11,000,000. Forty-one millions is a pretty large sum to lose in one island in a single year. In the Republic of Brazil we lost $51,000,000; our imports from Brazil were $60,000,000; our exports to Brazil were $9,000,000. In Mexico we lost $10,000,000; our imports from Mexico were $21,000,000; our exports to Mexico were $11,000,000. To sum it all up, our imports from the countries south of us, both insular and continental, on this hemisphere were $216,000,000; our exports to them were $74,000,000. The balance against us in our trade with those countries was, therefore, $142,000,000—exceeding our gains from all the rest of the world by $13,000,000. By no figure of speech can we flatter ourselves into the belief that our trade with our American neighbors is in a prosperous condition."

He obtained these noteworthy facts, of course, by comparing our imports from these countries with our exports, on the old "mercantile" plan, and he really means, if he means anything, that some hundreds of Americans kept sending enormous quantities of goods to these countries without receiving any return or going into bankruptcy. Had the facts been as Mr. Blaine states them, of course nearly every American house in the Cuban, Brazilian, and Mexican trade would have failed last year. But there is not a boy in the public schools who ought not to know that this apparent balance of $142,000,000 had to be met somehow, and was met by these houses, either by their profits on their ventures or by drafts on London and Paris, which we exported American commodities to meet.

The plan of reciprocity which Mr. Blaine proposes means simply that we are to take duties off certain foreign commodities in order to make them cheaper to our own people, and the foreigner is to take off duties on our commodities to make them cheaper to his people. The essence of the transaction is cheapness. Cheapness is what promotes trade, no matter what name you give it. You may call it "reciprocity," or anything else you please, and you may get it by treaty, or by a low tariff, or by improved processes or superior industry; but it is cheapness after all which sticks out through every arrangement that brings men together for the exchange of products. Let us be thankful that the fact is at last dawning on the Republican chief that exchange is no robbery, and that a cheap coat does not make a cheap man.

ROMERO ON THE PAN-AMERICAN CONGRESS.

No one is better fitted to give a judicial and intelligent opinion of the Pan-American Congress than the Mexican Minister, who was himself one of the leading figures in it; and it is a matter of much public interest that Señor Romero has written an adequate article on the subject, which appears in the current number of the *North American Review*, but has already seen the light in Spanish in a Mexican periodical.

Señor Romero allows himself much liberty in speaking of the proceedings of the Congress, freely referring to events about which an air of great secrecy was maintained at the time, though they were no secrets, after all, to those who were in a position to know what was going on. Indeed, he really adds little to what was before known, though his account will be of great value as confirming beyond all question what might otherwise have been set down as the guesses of newspaper correspondents. It may at once be said that he lends his unimpeachable authority to some of the severest criticisms made in the press upon the management of the Conference by the Department of State. He does this, of course, most courteously, even apologetically at times, but does it, and evidently meant to do it. A great deal of sly humor appears now and then in his explanation of some curious American proceeding.

Referring to the personnel of the United States delegation, he says that "it would, doubtless, have been preferable that they should have been able to speak Spanish, and should have had some knowledge of diplomacy"; but then, he points out, they were nominated in the way usual in filling our higher offices, so that no intentional slight could have been meant to the foreign statesmen who were asked to confer with our wagon-builders and iron-masters. He is also perfectly clear in his allusions to the blunder of putting so offensive a person as Mr. William E. Curtis in close con-

tact and official relations with the foreigners. In like measure he confirms all that has been alleged of the inadequate preparation for the Congress. The translators and stenographers provided were wholly incompetent. Apart from the question of arbitration, Mr. Blaine had absolutely no programme, and left his delegates wholly uninstructed, his idea appearing to be that instead of a gathering of representatives of several governments, under careful instructions, the Congress was a sort of town meeting where personal views were to be freely ventilated.

Taking up the much-bruited matter of arbitration, the Mexican Minister makes short work of the claims of Mr. Blaine's friends. He says that the Secretary of State submitted a complete draught of a scheme of arbitration, as he would like it, and that the only part of this adopted by the Congress was the preamble. On all the main points, Mr. Blaine had to yield to the foreigners. Even so, Señor Romero thinks, the compact agreed upon will not be ratified by several of the leading countries. Chili will not ratify it, of course; probably the Argentine Republic will not; Mexico's action is highly doubtful; nor will the United States, believes this veteran observer of our politics, agree to a measure which puts this country upon a perfect equality, in all international relations, with the smallest and most unsettled political entity on the hemisphere.

Still more plain-spoken is the Mexican Minister when he takes up the question of closer commercial relations between the United States and the republics to the south. Any idea that the Congress could accomplish a thing in that line was only possible, he says, for one who knew nothing of the political power of protection in this country. To men like himself, who had seen our tariff legislation of the past twenty years at close quarters, and the most inoffensive reciprocity treaties killed sooner or later, it was clear from the first that nothing would be done. Reciprocity is not now possible to the United States, he thinks, under the prevailing conditions, much as Mr. Blaine may exert himself to bring it about in a limited degree. This country has borrowed all its commercial legislation from England, says Señor Romero, and by and by will come to take up, under the stern and increasing pressure of economic laws, with the flouted doctrine of free trade. Until that day, it is folly to talk of enlarging the foreign trade of the United States.

Summing up the whole, Minister Romero puts first among the results of the Congress the indirect one of a better natural understanding and the dissipation of prejudices and suspicions founded on ignorance. Then comes the arbitration measure, which will be highly important if finally ratified. The action, or rather want of action, on the common-coinage project, he considers "a marked step backwards." The other results arrived at, even if they should receive the necessary sanction of the governments concerned, he regards as of slight account.

Señor Romero remarks that those of the foreign delegates who were at the same time Ministers from their respective countries, found themselves considerably embarrassed in the work of the Congress by their diplomatic positions. They could not indulge in that freedom of speech which was open to more unfettered representatives. Certainly the Mexican Minister has cast diplomatic reserve pretty thoroughly aside in this article of his; and its publication, distasteful as it cannot fail to be to the Secretary of State, lends color to the rumor that Señor Romero is about to withdraw from Washington to accept the Treasury Department in the Mexican Cabinet.

THE MISSISSIPPI CONVENTION.

THE Convention which assembled in Jackson a fortnight ago, to frame a new Constitution for the State of Mississippi, is a gathering whose proceedings are full of interest to all students of "the Southern problem." The task which it has assumed is so difficult, and the possible consequences of its action are so important, that the whole nation will watch the course of events with attention.

The object of the Convention has been clearly stated by ex-Gov. Alcorn, who was chosen Executive when the Republicans controlled the State, and who represents the intelligent white Republicans in the present assemblage. "The Convention," he says in a recent letter, "was called with a view of devising some means of putting a check in the text of the Constitution upon ignorance and corruption. The people felt the sting of the North in the continued charge of forcible domination in the South of the ballot-box. The desire to free themselves from this charge, which they felt in some degree to be true, and the wish to devise some means, more in accord with civilization and statesmanship, to save themselves from the impending ruin, led to the calling of the Convention." The necessity for such a check upon ignorance is rapidly increasing, the ex-Governor estimating that the number of negroes brought into the "Delta counties" from other States last winter and spring was fully 30,000, "generally of the most ignorant class."

Ex-Gov. Alcorn shares the feeling of the more conservative whites regarding the blacks, and the fact that he is a Republican in politics will lend weight to his views with many Northern people who would pay no attention to similar opinions expressed by a Southern Democrat. After stating that the Convention organized by electing one of the most conservative public men in the State as President, he says that it has already been made "plain that the business of the Convention will be conducted with the most tender regard for the negro, whose presence among us is held to be by all intelligent men necessary on account of our soil and climate to the development of our agricultural industry, the foundation necessary for the future growth and wealth of our State." As to the attitude of the whites towards the blacks, the ex-Governor says further: "We wish to control the negro for our own welfare as well as his. We expend large sums for the education of his children. This we are forced to do, that the negro may be contented among us, and thus you will see that we must, if we would advance our agricultural interest, cultivate the most kindly relations with the negro. That we would deprive him of his vote, if the question was left to us alone, there is no doubt. He is not regarded capable of self-government by the body of our people."

The first important question before the Convention was as to the scope of its powers. When Mississippi was readmitted into the Union, Congress imposed the condition that its Constitution should "never be so amended or changed as to deprive any citizen or class of citizens of the United States of the right to vote who are entitled to vote by the Constitution herein recognized, except as a punishment for such crimes as are felonies at common law, whereof they shall have been duly convicted under laws equally applicable to all the inhabitants of said State." Of course, if this condition remains binding, the Convention's hands are tied, as the present Constitution forbids an educational or property test for the suffrage. The question was therefore referred to the Judiciary Committee, which has made a unanimous report to the effect that no action of Congress can deprive one State of the equality with the other States which it enjoys under the Federal Constitution. The report was prepared by Judge Simrall, who was Chief Justice of the Supreme Court under Republican rule, and its argument is unanswerable. Its basis is the impregnable position that "there can hardly be a conception of unequal States in the Union," which would be the case if it were held that Mississippi may not impose an educational qualification upon the suffrage, while New York may.

The chief committee is that on the elective franchise, which has thirty-five members, among them being the only negro in the Convention. All sorts of propositions have been referred to it, some of them too ridiculous to deserve any notice. Two schemes are pushed seriously. One seeks to give the white counties of the State, which contain much less than half the people, control of the Legislature by a cunning system of apportionment, as in Connecticut the populous cities and towns which elect Democratic members are outvoted by the representatives of small Republican towns. The other plan would put the whites in a majority of the voters by establishing an educational or property qualification for the suffrage, which would bar out the greater part of the blacks. One great difficulty about the first scheme has been that the white politicians in the black counties did not take kindly to the idea of losing their present relative strength in the Legislature, although their consent is reported to have been secured to an apportionment which on the color-line gives the white counties a majority of nine in the Senate and twenty in the House.

A sub-committee of the Franchise Committee has reported to the full committee a scheme for restricting the suffrage which proposes that, in order to vote, a man must

be able to read any article of the State Constitution, or "be able to understand the same when read to him"; or own property of the assessed value of $200—soldiers of either the Federal or Confederate army who served honorably during the war being exempt from each of these requirements. This is an exceedingly ingenious plan. In the first place, it avoids the danger of trouble with "the soldier vote," which would be threatened by an educational or property test which many a brave, but ignorant and poor, ex-Confederate veteran could not stand. In the second place, it obviates the objection among the whites to a rigorous requirement of ability to read, by the alternative proposition that a man may vote who can understand the Constitution when read to him. In the third place, it would enable the boards which should pass upon suffrage qualifications to keep out most of the blacks who could not read the Constitution by deciding that they did not understand it, and at the same time let in almost every illiterate white. The Naturalization Law vests with a United States judge the power to declare a foreigner a citizen if it shall be made to appear to the satisfaction of the Court that, during his five years' residence in this country, "he has behaved as a man of good moral character, attached to the principles of the Constitution of the United States, and well disposed to the good order and happiness of the same." It is said of a certain Federal judge in New England, who has always been a strong partisan, that he was never known to find a foreigner vouched for by a Republican manager lacking in the qualifications for citizenship, while he is apt to discover some lack of attachment to the principles of the Constitution in the protégé of a Democrat. Doubtless the white officials of Mississippi would find it equally easy to make distinctions in using a discretionary power—though the ignorant negro would always have this power of redress, that he could learn to read if he was rejected for not understanding what was read to him.

A striking proof of the depth of feeling on this question of restricting the ignorant negro vote is afforded by the favorable reception given a woman-suffrage proposition. The movement to allow women to vote has never gained any strength anywhere in the South, and suggestions of that sort have always been denounced as worthy only of "cranks." But the other day a delegate offered a resolution giving the right to vote to every woman who owns (or whose husband, if she is married, owns) $300 worth of real estate, the vote to be cast by a male elector authorized in writing by the woman so to cast it. As scarcely any black women would be able to exercise the suffrage, it is estimated that such a scheme would add about 35,000 to the white men's votes, and the hope of such a gain has caused a large proportion of the delegates to regard the suggestion with patience, if not with approval, although, but for the race problem, it is not likely that half-a-dozen men would lend the slightest favor to the idea of woman suffrage in any form. The Suffrage Committee has since agreed, by 17 to 11, in favor of woman suffrage, on the basis of a property qualification of $400 worth of property in addition to the qualifications for male voters.

The Convention seems disposed to act with great deliberation, and it is expected that its sessions will last through September. Everything which has happened thus far indicates that the delegates appreciate the difficulties of the problem which they are trying to solve, and that they are most anxious to avoid any false step.

RAILROAD DISCIPLINE.

Mr. Chappell, the General Manager of the Chicago stock-yards, is reported as having said last week, apropos of the switchmen's strike then pending there:

"There can be but one end to this strike, and we are glad that it has been precipitated. Our men have gradually gained power until they are insolent and wholly undisciplined. We have endeavored often to get rid of them, to free ourselves from their clutches, but without result. The public safety demands the discipline of railway employees, and we can't have it with these men. Therefore we are glad to be rid of them."

This was true also of the originators of the strike on the New York Central. It must be true of every railroad and every large organization of men in which faithful, prompt, and efficient service has to be rendered, until human nature undergoes some great and indeed radical change. It is as true now as it was eighteen hundred years ago that no man can serve two masters. No soldier, or sailor, or railroad employee, or telegraph operator ever has done, or ever will do, his work with care and fidelity, day in and day out, if there be in existence a power or agency which he relies on to protect him against the consequences of laziness, negligence, or insubordination, and to enable him to set at naught or slight the lawful orders of his superior officer. No body of men, we care not who or what they are, college professors or hod-carriers, can, if they belong to an organization, escape the necessity of the kind of discipline which consists in responsibility to some one authority capable of inflicting penalties in case of neglect of duty. There may come a time when the enforcement of coöperation through discipline will not be necessary in the work of administration, but it is a time as yet indefinitely remote.

We fear there is hardly a railroad, in the Northern States at least, which has not, during the past two or three years, suffered in some degree from the more or less successful attempts of the Knights of Labor to set up among the employees an *imperium in imperio*—that is, to create among them an agency which may relieve them from the necessity of pleasing their superior officers in the manner of doing their duty. We believe, if the truth were known, it would be found that long before these late strikes occurred, or were threatened even, the mere existence of Knights of Labor among the working force had impaired the service on more than one road, owing to the natural reluctance of the managers to bring on a collision with the "noble and holy order" sooner than was absolutely necessary.

A great deal of excuse for this reluctance is, of course, to be found in the loss to the road and the inconvenience to the community which any strike that stops trains even for a day is sure to cause. Railroad managers are after all but men, and shrink from hardship and annoyance just as other people do, a fact of human nature on which all the shirks and rogues in the world rely a good deal. They therefore let the windbags and "sea lawyers" who do the work of recruiting for the Knights, go a good way for a long while before they interfere. In the meantime, although there may be no open display of insubordination, a state of mind is produced among the employees very much like that of a man who is handling other people's money without having to render any account—that is, a condition of carelessness and indifference which inevitably affects the way in which duties are performed. Every Knight, no matter what his general character may be, feels, in spite of himself, a considerable decrease in his respect for the rules and regulations of the road when he believes that, if he incurs the distrust of his superiors, his "order" will save him from dismissal. There is nothing very depraved about this. It is human nature, and it is sure to show itself in a man's manner of performing his duties, and first and foremost in producing that happy-go-lucky spirit which is the great curse and danger of railroad administration.

It was this spirit which led to the frightful accident on the Old Colony Road the other day. We have no positive knowledge as to the extent to which the Knights have ravaged that road, but we say with perfect confidence that the foreman's continuing to fiddle with the rails, without flagging the express train which he knew was due, was one of the marks of the Knightly state of mind. It is a state of mind which American trades-unions, under their present deplorable management, have produced in nearly every field of industry. Their influence has thus far, whatever it may have done to raise wages, been hostile to good and faithful work and to the sense of responsibility. Private employers have to contend with this as best they can, but railroad managers cannot afford to trifle with the Knightly spirit in the smallest degree. They owe it to the public to deal with it promptly wherever it shows itself. They have no more right to allow the existence of a divided responsibility among their employees than the colonel of a regiment in active service would have. Any man who is known to be bound to drop his work at the bidding of a third party is not fit for railroad service, and there ought to be no squeamishness about making this rule known and acting on it. Mr. Webb is reported to have said that the New York Central does not care or inquire whether its employees belong to a union or not. But it ought to care. It ought to see to it that no man whom it intrusts with the care of life and property in its line owes any obedience of any nature, as regards his official work, to outsiders, and least of all to persons who make money by getting up strikes. For Mr. Webb

really commands what is to all intents and purposes a military division which is constantly in the presence of the enemy. There is no soldierly quality which is not every hour of every day and night called into activity in the discharge of a railroad man's duty—courage, fidelity, obedience, exactness, indifference to hunger, to fatigue, and to weather. Nature, that tremendous enemy of art, is hostile to railroad transportation, and watches with a more than lynx-eyed vigilance for the slightest mistake or shortcoming, and punishes it with a remorselessness now never shown in human warfare. A blathering, mutinous "Knight" is, therefore, as much out of place driving an engine, or tending a switch, or watching a bridge or curve, as he would be on outpost duty in the presence of an army of Apaches with hundreds of women and children under his care.

LABOR FACTS AND FANCIES.

THE Report on the Statistics of Labor in Massachusetts for 1889 consists in great part of matter already published in advance bulletins, and noticed in these columns. There is added, however, an index to all the reports of this Bureau, twenty in number, which, as some of them contain statistics of permanent value, will prove serviceable. We have also a computation of the ordinary length of the work-day in a large number of establishments, from which it appears that ten hours is not far from the standard, although the tendency may be towards a lower limit. The figures relating to the employment of women in productive industries show that the proportion of laborers of the female sex is gradually increasing. They do not "show conclusively," as the compiler supposes, "that the presence of woman in industry has not decreased the number of births or marriages, nor increased the number of deaths." This conclusion is supposed to follow from the fact that "fifty cities and towns having large percentages of women at work, with 64.39 per cent. of the total population, had 69.99 per cent. of the total number of births, 69.18 per cent. of the whole number of marriages, and but 63.53 per cent. of the total number of deaths." The reasoning is vitiated by the disregard of immigration as a factor.

It is to be regretted that the persons employed by our Government to collect facts of this description should feel it incumbent upon them to express their views upon the problems of political economy, a task for which their education has seldom prepared them. Thus the first sentence in the report before us contains the statement that production involves two elements—labor and capital—a statement that could hardly have been made by any one acquainted with the elements of political economy. The subsequent observation, that the proper adjustment of a protective tariff cannot be made without evidence respecting the "labor element," reveals a degree of innocence as to the method by which the "adjustment" of duties is effected that is almost childlike. It is not easy to see how the elaborate tables showing the relation of wages to total expenses in a vast number of industries are intended to be utilized for adjusting the tariff or for any other purpose. In some industries wages are 2 per cent. and materials 98, in others wages are 90 and materials 10 per cent., and there is scarcely any material that does not go through many processes before it reaches the consumer. As to where we may find "a current political economy" that "has constantly taught that only as wages fell could profits rise," no information is vouchsafed. The true theory, it is intimated, is that the demand for products increases as "social wants" increase; so that in order to enjoy plenty it is only necessary to want it. It follows that higher wages and shorter working time, as they raise the standard of living, must increase profits. To clarify this argument, it is only necessary to inquire whether the "social wants" are sufficiently intense to dispose men to work in order to gratify them. If not, the demand for products created by such wants would not be very effective.

The corresponding report for the State of New York is a much less ambitious and more practical document. Those acquainted with the political movements in this State will, of course, understand what interests Gov. Hill would aim to propitiate in the selection of a Commissioner of Labor Statistics, and the necessity under which this officer stands of not being lukewarm in his expressions of sympathy with the trade-unions. As these monopolies are hostile and often injurious to the great majority of laborers who are outside of them, it is scarcely becoming an officer representing the whole community to manifest a bias in their favor. We must say, however, that this bias is, under the circumstances, not displayed to an unreasonable degree, and that the Commissioner has shown a creditable appreciation of the scope of his office. He has confined himself to a single subject, "a résumé and tabulation of the strikes, lockouts, and boycotts for the five years 1885–'89, in their various forms of manifestation, with causes, results, and costs, to both employers and employed." Of over 9,000 strikes in these years, he computes that nearly two-thirds were successful, including herein those that were compromised. It seems, however, that of some 340,000 persons involved, only about 67,000 secured increased wages. Wages lost amounted to $8,000,000, other losses to employees were $6,300,000. Against this is to be set the gain in wages, which, if maintained through five years, would be $18,600,000. The losses of employers are computed at over $4,000,000, but it does not appear that account is taken of interest on capital. It is gratifying to observe that the loss from destruction of goods and machinery by strikers is not very great, being some $370,000, of which $180,000 is charged to 'longshoremen, $78,000 to employees of car companies (probably horse-car lines), and $50,000 to those of sugar-houses. The number of arrests for disorders connected with strikes was 529. Upon the whole, these industrial wars must be said to be conducted in a peaceable manner. It is instructive to compare the theory of the compiler of this report, that an increase in wages of "an extra quarter or half-dollar per day is not much to the employer, who can fall back on his customers or on society at large," with the position of the Massachusetts Commissioner, that the receivers of wages constitute the customers or society at large. If the increased profits expected by the latter authority to arise from higher wages are really derived from higher prices paid by workmen for the goods they consume, the last state of "Labor" may be worse than its first.

The report of the New Jersey Bureau of Labor deserves commendation. It contains reprints of Dr. Ogle's tables of mortality in different occupations, of the Factory Acts of England and Switzerland, and of acts relating to industrial coöperation in England and this country, as well as the "Labor Laws" passed this year in New Jersey. There is also a summary of the mortgage indebtedness in New Jersey for a term of years, and of the executions in foreclosure, which it may be instructive hereafter to compare with the results obtained by the United States Census Bureau. About all that is to be learned from it is that more mortgages are made in times of brisk business, and more foreclosed when business is dull. But the report also contains a series of tables showing the common duration of life in the occupations of glassblowing, pottery, and hatmaking, which appear to be the result of an inquiry conducted in a truly scientific manner. Little can be learned from the mean age at death of men in different employments, as this does not indicate the age at which the employment is entered upon or the number that have quitted it before death. Accordingly, the Bureau instituted a detailed investigation covering the industries above specified, and embracing the cases of 4,739 workmen. In every case information was sought as to the age at which work was begun, present age, age at which powers of work were impaired or ceased, and the total number of years actually at work. The tables are of a character to furnish a basis for valuable generalizations, for no knowledge can be of more importance to a young workman than that of the comparative healthfulness of various employments. We cannot undertake to present the results attained, but we commend the example of this Bureau to those of other States as pointing out a direction in which they may render a genuine service to working people. It is probably true, as Adam Smith said, that human optimism prevents wages in dangerous employments from being so high as they should be, and the diffusion of knowledge that may correct this hopefulness is much to be desired.

THE RUINS OF CASAS GRANDES.—II.

SANTA FÉ, August 1, 1890.

THERE are also ruins on the opposite side of the river, but some distance from the main cluster. The Casas Grandes proper are the remains, as already stated, of a group of houses huddled together on the west bank, dominating the course of the stream for three miles about, up

and down, and similar to the other ruins scattered along the river. But it was a larger settlement, and is in a better state of preservation. Was it a sort of "capital" for all the others, or perhaps the last refuge of the population previous to its dispersion, annihilation, or exodus? It is very difficult to decide in favor of either of these surmises. There is, however, one point which deserves careful attention. About three miles west of the ruins rises the Cerro de Montezuma, a steep and bald mountain, at least 2,000 feet higher than the valley. It is reckoned that three leagues (eight miles and a fraction) equal the distance from the ruins to its top. That top is the culminating point of a sharp ridge or narrow "hog-back," with precipitous sides to the west, in some places. On that top, whence a surprising view is enjoyed in every direction, stands an ancient circular watch-tower. Its walls, at least two feet thick, are of thin plates of stone. A wall, now crumbling, surrounds it. Inside there appear at least four small compartments. From this watch-tower, as from a central point, well-beaten trails descend the sides of the mountain in every direction: towards the east, to the main ruins; to the north and northeast; to the west, where the villages lie on the Rio de Piedras Verdes; and to the southwest and south, towards the ruins on the Rio de Palanganas. It looks as if this watch-tower had been erected and maintained for the mutual benefit of the settlements mentioned; as if, therefore, these or a number of them had been flourishing at the same time, and as if a common bond had existed between the larger cluster at Casas Grandes and the smaller ones on either side of the Cerro de Montezuma. I must add that on the crest of that mountain, but below the tower stands a large ruined house after the type of those of Casas Grandes. That house is protected on the side towards the east by a massive and remarkably well-constructed wall of stones. Whether this building was coeval or not with the main cluster at the foot of the mountain, it is of course impossible at present to determine.

Admirably fitted for a centre of subsistence on a small scale, the region of Casas Grandes could not fail to attract all tribes that drifted within grasp of its superior natural advantages. It did not so much allure the aborigines to roam over its tracts as to settle on them. Its surroundings are not inviting to the marauding savage except in the west, where the eastern branch of the Sierra Madre (called Sierra de la Madera de Casas Grandes) rises like an unbroken wall clad in sombre green. There he found profusion of game, abundance of limpid brooks and streams, majestic pine forests, and innumerable lurking places. There, for nearly two hundred years, the Apaches had their favorite lairs, harassing the Spaniards to such a degree that twice the latter almost completely abandoned the valleys of Casas Grandes and San Buenaventura. Since the year 1884, in consequence of the late Gen. George Crook's remarkable armed peace mission into the heart of the Sierra Madre, those angels of devastation have been obliged to forsake that splendid region and to leave Sonora and Chihuahua in peace.

I penetrated into the heart of the Sierra Madre thrice in the spring of 1884. It was still dangerous. But although I was unarmed and had only one or at most two Indian guides, we never suffered any molestation. The Apaches were near, but showed themselves not; certainly not out of fear, but they were then on the move to the Arizona Reservation, and any hostile demonstration with as little returns as our persons would have yielded would have been imprudent on their part. So I was permitted to explore and enjoy a considerable portion of these magnificent solitudes, and to investigate the numerous remains of ancient Indian abodes which they contain. A broad plain separates the former hacienda of San Diego, where the Casas Grandes River is formed, from the eastern front of the Sierra Madre. This plain, about ten miles wide, was alive with antelopes. At the foot of the mountains aboriginal ruins appeared again, recalling isolated houses of clay peculiar to the Casas Grandes valleys. Little garden plots, indicated by rows of upright stones, extend on both sides of the Arroyo de San Diego, which here runs out into the plain, soon to disappear in its barren sandy soil. The ascent through the gorge called Puerto de San Diego is picturesque and grand. A strong vegetation crowds the bases of cliffs; thickets of oak, cedar, and pine alternate with plants and shrubs of a more southern flora. Towards the east the view expands unbounded. Far beyond San Diego it stretches, white and dazzling. The higher we climb the more rugged becomes the scenery, the cooler the air. At last we enter a forest of stately pines, on the first ridge of the Sierra Madre.

It is a great relief, after having for months lived in the hot and dusty valleys, in the glare of a scorching sun, to stroll in deep shade, and to breathe the fresh atmosphere of the mountains. The forest is silent in the evening, but the next morning we are awakened by the chattering of the green parrots in the tree-tops. Narrow valleys, with tall grass and clear brooks, separate the ridges of pine timber. Flocks of turkeys are seen. Deer make their appearance in close proximity to man; they fix upon him the gaze of their lustrous eyes and saunter off leisurely. We meet the vestiges of huts which the Apaches occupied only a few months ago. Following the Arroyo de los Pilares, we turn into a gorge from which the Arroyo del Nombre de Dios descends. Magnificent pines rise along its banks. Through the array of portly trunks we perceive cliffs, strangely eroded, gigantic pillars, lining the gorge on the south. Numberless small caves open in these rocks. At one place, however, the cavern is quite extensive, and it shelters a small ruined village. Nothing distinguishes this "cave-pueblo" from other ones in the north except the material of which the partition walls are built, and the potsherds, which bear the type of the Sierra Madre and Casas Grandes pottery in general. Such cave homes are found everywhere in the great mountain chain, where the formation is favorable to their construction. Who their builders were we do not know. An old church-book of the parish of Bacadéhuachi in Sonora conveys the information that as late as 1655 the Jesuit missionaries were wont to administer the sacraments to Opata Indians living in caves, where the "enemy" used to surprise and kill or mortally wound them. The Tarahumares of southwestern Chihuahua were cave-dwellers in the seventeenth century, and many of them are cave-dwellers to-day. The different types of architecture in the southwest do not correspond to distinct "stocks," still less to "races." There was no "race" or "stock" of "cliff-dwellers" or "cave-people." The Indian always yielded to the obstacles and inducements offered by nature, changing his style of abode according to circumstances. The Tehuas of Santa Clara (in New Mexico) at one time made the caves of the Puyé, burrowing out of the friable rock a whole village of grottoes. As soon as drought and decay made the place untenable, they again built pueblos in the open air as before. The Queres tell a similar story. It is therefore unsafe to speculate who the inhabitants of the cave-villages in the Sierra Madre were, and at what times they may have occupied their troglodyte homes. It is as much a mystery as the name of the tribe who built the Casas Grandes or the other pueblos scattered along the course of the river of that name on the high plain of Carretas and at the Vadito between it and Janos.

Documentary information in regard to Casas Grandes goes back to 1660. The place seems to have been discovered by a Franciscan missionary, Fray Pedro de Aparicio, who found the valley held by a tribe which he called Sumas. They were friendly, and received him with kindness. But his health soon began to fail and he died, to the sincere regret of the Indians. Sumas also lived at Carretas, and near El Paso del Norte. They and their neighbors, the Janos and Jocomes, were enemies of the Opatas of Sonora, and during the seventeenth and eighteenth centuries the history of the Jesuit missions is one sad tale of woe caused by the incursions of these tribes upon Sonoran territory.

The earliest account concerning the Sumas of Casas Grandes represents them as Indians with sedentary inclinations, and not very ferocious. The Sumas around El Paso, on the other hand, always belonged to the most dangerous class of nomads. Strenuous efforts were made to settle them, but with very poor results. This contrast between two branches of one and the same stock is significant, though not easily explained. Which were the primitive branch—the village Indians of Casas Grandes and Janos, or the nomads of El Paso? I believe the former. Still, this is a mere suggestion. What causes me to think that the sedentary branch might have been the original stock is, first, their greater numbers, and, secondly, the analogy with the case of the great Apache stock, of which the half-sedentary Navajos form the bulk, whereas the Apaches proper are but outlying bands who have become nomadic through force of circumstances. Certain it seems that the Sumas were not the builders of Casas Grandes. When Fray Pedro de Aparicio went thither, he found them in possession of the valley, but we have as yet no record of any tradition among them touching the origin of the Great Houses. According to the custom of the times, the Spaniards afterwards attached the Montezuma lore to the ruins. The mysterious remains of Indian antiquity became "palaces of Montezuma," or one of the "stations" where the Mexican tribes rested on their supposed peregrination from north to south. This manufactured lore has clung to Casas Grandes ever since, although there is no more foundation for it than for a "Montezuma legend" among the pueblos of Mexico. The name and fame of the unlucky war chief of the Nahuatl Confederacy in the valley of Mexico flitted to the north in the wake of Spanish discovery and colonization. It settled, like an unsteady fog-cloud, everywhere that vestiges of antiquity attracted attention, without offering also a clue to their makers. In 1726, the Brigadier Don Pedro de Rivera gravely tells us, of Casas Grandes, that the edifices are of hewn stone; that when the ancient Mexicans migrated towards the central plateaux, Montezuma built these "palaces," and that the number of his followers was 600,000. In 1737, Fray Francisco de Arlegui almost textually copied Rivera, extolling the great architectural skill and beauty of the buildings. Subsequent writers did the same, and it was left to John Russell Bartlett to give

us the first unexaggerated description of the ruins. In his 'Personal Narrative' the reader will find a sober and careful account of Casas Grandes, accompanied by excellent drawings.

After the death of Fray Pedro de Aparicio the valley of Casas Grandes began to attract the attention of Spanish settlers. A number of them established themselves there and at San Buenaventura, and by 1680 the district was producing good wheat, cattle, and horses. It is well known that, when Governor Otermin retreated from Santa Fé to El Paso with the remnants of the Spanish colonists driven out of New Mexico by the Pueblo Indians, the supplies that saved his famished people were furnished by the settlers of Casas Grandes. That valley was much more prosperous than El Paso del Norte. But the war-cloud rising in the north spread into Chihuahua and Sonora, and the Sumas, Janos, and Jocomes joined hands with the Apaches, who were then hovering along the confines of Chihuahua. In the fall of 1684 a secret conclave of all these and more southerly tribes met at Casas Grandes. A general uprising against the Spaniards was planned and partly carried out. The incursions of the Apaches continued thereafter uninterrupted, and they so harassed the ill-protected settlers that forty years later the place was deserted. The Church of San Antonio, the walls of which are still standing one mile north of the present village, was abandoned. The Sumas scattered, the Janos and Jocomes merged into the Apaches. The latter became the terror of Chihuahua. For one hundred and sixty years they held the Sierra Madre and devastated the valleys at its feet. Casas Grandes was settled again, but the present dilapidated condition of the village, the timid and indolent manner of its inhabitants, are the products of a long period of daily perils and of utter hopelessness.

As in New Mexico, so in Chihuahua, the feeling of helplessness has created what we are sometimes too prone to ascribe to natural faults of character or to a lack of education. The latter, of course, has been a factor also, for in the Southwest education had become almost impossible. Spain was no longer able to protect provinces so distant and of such difficult access. The Church lacked means and power to continue its work with the necessary vigor. Not unfrequently, also, the local authorities directly opposed its efforts. The Indians relapsed into their original condition, to their own detriment. The tale of the Southwest in the past and present century is a sad tale—one of superhuman efforts (principally by the Church) under the most disheartening circumstances. The modern history, also, of Casas Grandes is deeply stained with blood. For four years peace has reigned at last. The beautiful interior of the Sierra Madre becomes accessible. Casas Grandes is no longer a dangerous point. With the general progress now going on in new Mexico, we may expect its archæological features soon to become the object of research under the patronage of the Mexican Government.

AD. F. BANDELIER.

MLLE. CLAIRON.

PARIS, August 19, 1890.

I AM not, I confess, a great admirer of the novels of the brothers Goncourt, though I am ready to own that they have been among the initiators of the modern school of realism, and that they have a certain sincerity, a power of observation, which are not without a morbid charm. The Goncourts (you see it in their Journal) evidently thought themselves prophets in the literary world. Edmund de Goncourt, who survives, probably would tell you, in a moment of introspection and of melancholy, that he has been unjustly treated by his contemporaries, that Flaubert proceeds from him, as well as all the modern realists—Zola, Maupassant, Bourget, and *tutti quanti*. One thing cannot be denied: the Goncourts, perhaps, were not the sole inventors of realism and naturalism, but they undoubtedly had a very eminent part in what might almost be called the rediscovery of the eighteenth century, especially of the charming French art which was in favor before the French Revolution, and which the Revolution, with its Romans and Greeks and its school of David, had completely extinguished and condemned for many years to oblivion.

The Goncourts were addicted from their youth to what we call bric-à-brac; they were born collectors, and they did not allow anybody to inspire them—they simply collected what pleased them, and, led by their instinct, they laid their hands on all the remains of that epoch which preceded the Revolution, and which was marked by a very peculiar grace in every branch of art—furniture, bronzes, drawings, engravings, pictures, sculpture, even dress. With a degree of curiosity and of minuteness which, in such matters, becomes invaluable, they became acquainted with the smallest details of the artists of that period. They soon understood that the artistic development of the time was connected with the social life, and they studied this social life, sometimes at court, sometimes in private circles, sometimes on the stage. The 'Actresses of the Eighteenth Century' forms a series in which Goncourt means to give the biographies of Mlle. Lecouvreur, Mlle. Clairon, Sophie Arnould, Mme. Saint-Huberti, Camargo, La Guimard, Mlle. Contat, Mlle. Favart.

I have before me the volume on Mlle. Clairon, composed from her own correspondence and the police reports of the day. Clairon was one of the greatest actresses of her time; she introduced realism on the stage, and abandoned the pompous, artificial, majestic, and false manner of her predecessors. Claire-Joèphe Legris was born on the 25th of January, 1723, at Condé, a small city of Hainaut, one of the sentinels of France on its northern frontiers, fortified by Vauban, in the midst of marshes—a dark little town on the Scheldt. She was the illegitimate child of a seamstress and a sergeant. At the age of twelve she came to Paris with her mother, a brutal woman, who abused her; she had no other education than that of the street. Sometimes she was taken to the play, and, coming back home, she would imitate all the actors and actresses, and repeat much of what she had heard. She would not work with her hands; she was a born actress, and no vocation was ever more decided.

She made her début, at the age of fourteen, in a company which went to Rouen; she took her mother with her. Sometimes the company went to Caen, sometimes to Havre. There appeared at the time a book (which has become very rare), 'Histoire de Mademoiselle Cronel, dite Frétillon, actrice de la Comédie de Rouen, écrite par elle-même.' It was a satire on young Claire, already called Clairon, and the story of her love affairs with a number of people. This pamphlet has been attributed to various persons, to the Comte de Caylus among the number. Goncourt thinks it is the work of a certain Gaillard, who kept a marionette theatre in Rouen.

The police reports of Lille, where the company went afterwards, represent Clairon as being at the same moment the mistress of the colonel, the lieutenant colonel, and another officer of the Royal-Walloon Regiment. She went in another company to Ghent, where she was courted by Marlborough; finally she came to Paris, and made the acquaintance of the famous La Popelinière, and her début at the Opéra in the character of *Venus*. From that hour, we find her living in the highest society of Paris—meaning the men: the Vintimilles, the Rochechouarts, the Dillons, the Custines, the Lorges, the Duc d'Antin, the Prince de Soubise, the Duke of Luxembourg—their name is legion.

From the Opéra, Clairon went to the Comédie-Française, and there she revealed herself as a great tragedian. Nothing, alas, remains of the sensations produced by the tragic genius. *Mais où sont les neiges d'antan?* as Villon says. Can words well describe the acting of Rachel as I saw it in "Horace" and in "Phèdre"; the acting of Sarah Bernhardt as I have seen it in "Hernani," "Phèdre," "Andromaque," before she undertook to play for the millions, and while she reserved herself for a happy few? You may as well attempt to paint the delicate hue of a rose, or the smile of a child, or the charm of a young and handsome face, with cold words and dry periods. When we speak of such women as Clairon we feel that we cannot do justice to them. Goncourt must content himself with giving us the names of all the plays in which she appeared; he enlivens his story by adding the history of all her quarrels with her rivals, with the actors, with her lovers—a very disagreeable story, on the whole, and one which shows well that we must never go too near our theatrical idols. *Major a longinquo reverentia.* Of all the little worlds which divide the great world, there is none so contemptible as the theatrical world; with a few exceptions, the men and women who live before the public and for the public are eaten up with vanity and jealousy.

Clairon, with all her genius, was no exception in this respect; she was the worst *camarade* that can be imagined, the most disobedient and unruly member of her company. She was once sent to Fort l'Évêque, which was the prison for actors and actresses, but she did not remain long in it, and her deliverance became the great event of the day. She gave herself out as the representative of the dignity and the rights of the theatrical world, enlisted Voltaire on her side, and became the tragedy queen of the philosophers. Choiseul, the minister to whom she one day made complaints, said to her: "Madame, we are both of us on a stage, but with this difference, that you choose the parts which suit you, and are always sure to be applauded by the public."

Clairon left the Comédie-Française after one of her quarrels, but she did not consent to be forgotten; she played occasionally at the theatres of some of her great friends. She had become the friend of M. de Valbelle, and their liaison lasted nineteen years. Valbelle was very wealthy, but was always in debt, and the great tragedian had often to help him out of his difficulties. She had adopted a young actor named Larive, for whom she felt a sort of motherly passion, and her letters to him are very singular instances of the complexity of the feminine heart. All her letters are clever, well written, sometimes with originality; she was obviously very intelligent. She had very lax ideas of morality, but a certain sense of honor; at any rate, she knew what devotion and gratitude meant.

The most extraordinary incident of her life is her journey to the Margraviate of Anspach. She separated from Valbelle and established herself in the spring of 1773 in the house of

the Margrave—an ugly, sentimental, somewhat ridiculous Prince, who felt a great admiration for Clairon and for the French stage. Her correspondence with Larive about the court of the Margrave and about Germany is amusing. She had a dubious sort of status; she pretended at times to play a political part. The Margrave allowed her five lackeys, a valet, a maître d'hôtel. She could not endure the tedium of her new existence, she made enemies, and finally she was not very unhappy when Lady Craven replaced her in the affection of the Margrave. Clairon left him without much regret; in one of her letters she accuses him of "ingratitude and barbarity," and speaks of him as a man who fears "neither her ruin nor her death." The memoirs of Lady Craven are among the most amusing books of the time; it is necessary to read them after reading Goncourt's 'Clairon.' "Qui n'entend qu'une chose," says a French proverb, "n'entend qu'un son."

On her return to France, Mlle. Clairon took a country-house at Issy, near Paris. The silent years began for her, but the silence was broken when suddenly her Memoirs appeared in German, in 1798; a French edition appeared afterwards under this title, 'Mémoires d'Hippolyte Clairon, et Réflexions sur la déclamation théâtrale. À Paris, chez Buisson, rue Hautefeuille, No. 20, an VII. de la République.' Goncourt thinks that, though Clairon affected to be angry at the publication of the German translation of the Memoirs, she was really pleased with it; that it gratified her to blacken her old rival, Mlle. Dumesnil, and to poison the end of her life. He is very severe on the Memoirs, which he proclaims utterly insincere, a monument of vanity, without any real value for the history of the eighteenth century. The Revolution and the Terror reduced Clairon to a state of misery; her last years were spent in a deserted solitude. She was only sustained by a sort of Cornelian reminiscence of the Stoic sentiments which she had so often expressed on the stage, and which had become a sort of second nature to her. Towards the end she became devout, and attempted to convert the daughter of Diderot to Catholicism. She died on the 31st of January, 1803, from the consequences of a fall from her bed. Her tomb was in the cemetery at Vaugirard, and, at the request of the *sociétaires* of the Comédie-Française, was transported to Père-Lachaise in 1837.

Correspondence.

"NAMES" AND "THINGS."

To the Editor of The Nation:

Sir: The position of a member of the "Grand Old Party" whose conception of it was stereotyped several decades ago, so as to be incapable of change, is becoming an increasingly trying one every year. The problem of so reconciling stubborn facts and one's own preconceived notions as to put the facts themselves in the wrong, is, indeed, always a difficult one. Yet it can apparently be done, as witness the utterances of the estimable gentlemen who, several months ago, in communications printed in your columns, declared their firm belief that the distinction between the two parties, as now existing, is essentially that in the Republican party is concentrated the "better element," in the most sweeping sense, and in its opposite the ignorant and pestilent "residuum." And this in the face of the fact that the appeal of one of these writers to the political complexion of college men, as corroborative evidence, was shown by another writer to bear overwhelmingly on the other side; that the citation of the "slums" of certain selected cities as solidly Democratic was matched by equally solid Republican "slums" in other cities; that the claim of one party to possess the "native" element, as distinguished from one with foreign antecedents and tendencies, was long ago shown to be baseless; that the finger of scorn which was once able to point to so gigantic a steal as that of the Tweed ring, as being fruits of Democratic rule, may now with equal propriety be turned to the Quay dishonesty, deliberately endorsed and sanctioned by Republican political organizations; that the complaints of years against unfairness in elections south of Mason and Dixon's line have become somewhat stale by comparison with the fraudulent measures by which Northern States have been saved to the Republican party, in the wholesale purchase of voters in "blocks of five," etc.; and, to descend from matters affecting chiefly the moral sense to those offending the sense of taste, that only during the past week it was left to a Republican member of the House, in the presence of women and other spectators, to perpetrate so intolerable a vulgarity as to produce indignant protest, while two other Republican members were forcibly prevented from holding each other's throats, Democratic members meantime contemptuously suggesting that the rules of the prize-ring should be adopted.

To be sure, there is nothing essentially new in the phenomenon here observed. It is the same which Bacon, in his 'Novum Organon,' felicitously depicts under the name of "Idols of the Market-place," in words which almost seem to have been written with current events before his eyes. "The human understanding," he says, "when it has once adopted an opinion (either as being the received opinion or as being agreeable to itself), draws all things else to support and agree with it." And as it is "by discourse" that men associate, the "choice of words wonderfully obstructs the understanding." And thus "Names" rather than "Things" carry weight.

And yet, were Republican voters, as a mass, reflective students of political history, a pondering of the Whig party's last ten years of existence would serve as a wonderfully significant commentary on present conditions.

Civis.

ANARCHY!

To the Editor of The Nation:

Sir: When two parts of a mob get to cursing and calling each other names, it will not be long before, in the absence of any mediating or controlling authority, they come to blows; and this is equally true whether the mob is in the House of Representatives or in the streets of New York. When Mr. Brooks attacked Mr. Sumner with a cane, it was attributed to the "barbarism of slavery." But now that slavery is abolished, that peace and harmony may be said to reign throughout the country, and the public issues are mainly financial, we have a scene in Congress which at any rate led one member to suggest the adoption of the rules of the London prize-ring. A pleasant episode that to be sent abroad into the hands of such critics of democracy as Sir Henry Maine, Mr. Fitz-James Stephen, and the Duc de Noailles! Yet if by democracy is meant the will of the people, nothing can be more unjust than to ascribe this result to it. It is safe to say that the great mass of the people of the country will be just as much disgusted with such behavior as any Duke or Earl in the House of Lords. It is simply that the House of Representatives, as at present organized, is nothing more nor less than a disorderly mob. It is the business of the Speaker to preserve order and decorum in debate, and he could and would do that if he held his proper position, that which in the New England town meeting goes by the beautifully significant name of the "Moderator." But the Speaker has long since become the most partisan member of the House, and Mr. Reed has brought the office to that high point at which it commands the respect of neither party, his principle being that the majority is to trample the minority into subjection at any cost. Apart from the Speaker there is no controlling authority but the Sergeant-at-Arms.

It is idle to suppose that the evil can be cured by substituting a Democratic for a Republican majority, as a few years of success would teach them the lesson which Mr. Reed has enforced with so much ability. The only hope is in reforming the system by taking the conduct of business out of the hands of the Speaker, and giving it to national officials acting under the authority of, and under responsibility to, the whole people.

With a Speaker whose ambition and hope of reputation lay only in the impartial enforcement of order and decorum in debate, and a Cabinet conscious that their strength lay in setting an example of dignity, moderation, and deference to the Speaker's authority, there would be no trouble, in this respect at least, about democracy. G. B.

Boston, August 30, 1890.

THE KNIGHTS AND THE TRAVELLING PUBLIC.

To the Editor of The Nation:

Sir: I notice that a leader of the New York Central strike regards the drunkenness, negligence, or incompetence of a railroad employee as a fitting indication for arbitration, rather than immediate dismissal. As an occasional traveller, I am interested to know whether the Knights of Labor are prepared to care for my family, supposing that I am killed in a collision while the Board of Arbitration are officially engaged in investigating some previous escapade of the switchman or other employee to whose hands my life must be intrusted.

Travellers should clearly recognize the fact that the Knights of Labor, in striving to prevent the immediate dismissal of drunken or otherwise incompetent railroad employees, are simply conspiring against the lives and property of all who are compelled to use this means of locomotion. No one denies the right of laboring men to organize for legitimate purposes; but to endanger the lives of travellers in the interest of drunken employees is not a legitimate purpose. Let the Knights go much further in that direction, and the millions of people who are interested in safe travel will see to it that the obstacles between such conspiracy and the penitentiary shall be effectually removed. Traveller.

August 26, 1890.

THE THEOLOGIANS AND THE COPYRIGHT.

To the Editor of The Nation:

Sir: While reading Mrs. Oliphant's 'Memoir of John Tulloch' I came upon a letter written by the Principal during a visit to this country in 1874. On his way to Chicago he was by some accident delayed at Cincinnati, and

missed his connection. He had learned that two of his books had been republished at Cincinnati, and now availed himself of the opportunity to investigate the matter in person.

"I sallied forth into the large unknown town, and after various inquiries the 'Methodist Book Concern' was pointed out to me. I inquired for my books, which I got at once. I said, 'Now I am quite willing to pay for these copies, but I think you ought to give me them for nothing, as I am the writer of them.' The man looked amazed, and referred me to the head of the establishment, who also looked amazed. When he understood who I really was, he was very gracious, and of course had a copy of each put up for me. I gathered that they both sold largely—one of them being the volume of whose limited sale Macmillan, you may remember, complained. The joke is, they were all dear—dearer, in fact, as everything here is, than at home. Their selling price is one dollar twenty-five cents, or five shillings, according to the present currency. 'Beginning Life' was never more than 3s. 6d. at home, and the other volume can be got abundantly for eighteen pence. They are a strange lot, to steal a man's brains in that way and never offer him a cent, never, till asked for, a copy of the book. One of the bishops writes a long and flattering introduction; one might say, 'Less of your manners and more of your siller, my pious Methodist.'"

Now, in all this there is nothing new; only it serves, in another concrete instance, to bring home to us the iniquity and the disgrace of a Christian nation fostering this theft and robbery. In Principal Tulloch's case it was a matter of considerable importance what payment he received for his literary labor. His salary at St. Andrews was to the last absurdly inadequate, yet, in spite of larger pecuniary offers, he remained there out of devotion to the work. That salary, therefore, required supplementing, and in this his pen was constantly engaged. So much did he take upon himself that repeatedly his health broke down under it. There is something more than mere playful humor in it when he says, "Less of your manners and more of your siller."

WILLIAM F. FABER.

WESTFIELD, N. Y., August 23, 1890.

ONE "ABANDONED FARM" LESS IN NEW HAMPSHIRE.

TO THE EDITOR OF THE NATION:

SIR: The marked interest which you have taken in the subject of abandoned farms in New England, as shown not only by your excellent editorials, but by the publication of articles by various correspondents, induces me to give you my experience during the present summer in this direction.

Whoever has followed up the Merrimac to its principal tributary, the Winnepesaukee, cannot fail to have been impressed with the grandeur and loveliness of the lake which is its source. The purity and transparency of its waters, the irregularity of its outline, the numerous wooded islands and jutting points of every shape and size, the adjacent hills gradually retreating from its borders until at varying distance they rise in an amphitheatre of stately forest-clad mountain ranges—all serve to form a picture at once noble and impressive. Nor is this region entirely destitute of legendary lore, which always invests even the tame and barren with zest and interest. Upon the shores of the "Spirit's Smile" dwelt or wandered various savage tribes, branches of the great Abenaqui nation. On its bays and tributaries "the Indian paddled his light canoe and wooed his dusky mate." Over its extended waters the French, with their savage allies, found a convenient highway for their incursions upon the defenceless southeastern frontiers of Massachusetts Bay, and many unhappy captives were forced "to track the shores with their blood." Here dwelt the "beautiful Winnepesaukees," and on the eastern shores the Ossipees had their wigwams. Here the valiant Passaconaway, afterwards the sagacious Sagamore of Pennacook, held sway, succeeded after many years of chieftainship by his son Wonnalancet; the names of both being perpetuated by noble mountain peaks which look down upon their former trails and warpaths. At its outlet, assembled at the proper season all the adjacent Indian tribes, to feast and make merry over the abundant capture of fish by means of weirs. The ploughshare still turns up in the neighboring fields many a relic of barbarous handicraft. In close propinquity, at the dividing line between lake and stream, just where a gentle current is perceptible, lies embedded the Endicott rock, bearing upon its exposed surface the carved initials of Gov. Endicott and the Massachusetts surveyors sent out to find the head of the Merrimac. The inscription bears the date of 1652, and is one of the most interesting relics of colonial days.

I have not the space to record the legend which gave the massive, symmetrical, defiant peak the name of Chocorua, nor the story of Lovewell's fight with the Pequaket tribe, in which the Chief Paugus was slain, whose memory is also enshrined in one of the grand granitic formations of the same range. Nor can I here speak of the heroic conduct of the provincial troops led against the savage enemy by brave leaders, or of the sufferings and privations of captives, as well as of the early pioneers of the Lake country. The records of New England offer abundant material to the lover of wild and fascinating stories, which clothe this entire region with poetry and romance as well as with pathos.

An early acquaintance with these localities, so imperfectly described, is associated with a pedestrian excursion made many years ago in company with a Harvard classmate, whose pen has added so much to the history of our country, and who has depicted the wild life of forest and prairie in such truthful and charming language. A desire to gratify my love for a sojourn in camp (or, rather, at the present time, for a more or less rough style of living beneath a roof more pretentious and substantial than that offered by a tent), and instigated by the letter of your correspondent published in the *Nation* of November 21, 1889, in which he says, "There are tracts, indeed, in New England, such as the White Mountain region and the Berkshire hills, where almost every farm can be made to furnish a picturesque summer home for the city refugee, and there a healthy, natural, and profitable business can be done," I started in the early days of June in search of a farm, not necessarily an abandoned one, but one which could be purchased perhaps on nearly equal terms. I determined that it should be in the White Mountain region, and that it should combine close propinquity to the shores of a lake—in fact, that it should be on its borders—that it should possess fine forest growth, noble mountain views, pleasant surroundings, and, if possible, respectable buildings, ample enough for a summer campaign of a few weeks, and which, even if occupied, could be vacated in a very short period. After several days of search and of variable experience, chance directed me to a locality with which I fell in love at first sight. I do not intend, for various reasons, to give the exact position of my purchase, but will describe the property and its surroundings.

The approach to the farm, which contains about 125 acres, is by a grass-grown road, through woods, which turns off from the travelled highway at about a mile's distance. The house, a plain, low, long, one-story and a half typical New England cottage, built a century ago, painted only by the hand of time, with a capacious chimney in the centre, and overshadowed by a noble tree, presents a most picturesque appearance. A capacious, large framed barn stands at convenient proximity, with widespread doors at either end, through which glimpses of the lake and of the near mountain ranges are to be seen. From the house-porch, looking to the south, Mount Belknap, the principal elevation of the Gilford range, raises its majestic front through an opening in the forest. A short lane passing between stone walls, venerable with lichens, and flanked by old apple trees, and with a turf which matches the verdure of any artificial lawn, leads to a pair of bars. Beyond these, and descending through a pasture a few hundred feet, a clean white sandy beach, offering the very best facilities for bathing, stretches along the shore for the distance of a quarter of a mile, bordered by a superb forest of hemlock and pine. Through this leads a cart-path, on either side of which grow in great luxuriance graceful ferns and other shade-loving vegetation. A long wooded point juts out into the lake, affording shelter to the boats and retirement to the beach, while numerous wood-clad islands add beauty to the scene.

Amid these islands the Great Northern Divers breed unmolested, and repay us with their weird notes at all hours of the day and night. The baldheaded eagle is still seen in all his majesty, especially at an early hour of the day, when we seek the beach for our morning ablutions. The waters of the lake afford ample piscatorial amusement to the lover of the rod, and many a fine black bass yields up his life to the scientific tactics of the present day. On all sides, and at almost every point of view, distant mountain peaks are visible, while nearer the ranges of the Sandwich and Ossipee cast their morning and evening shadows. The solitude and quietude of the farm are broken only by the distant tinkling of the cow-bell and by the strange cawing of the crows assembled in some secret conclave.

Such are the elements that go to make up the summer home. The days are all too short for the many agreeable ways of spending them. In addition to the usual outdoor sports, there is always something which demands attention upon the newly acquired territory, of which the owner feels the lord of all he surveys and superlatively proud; while within doors there are many little alterations to be made and conveniences to be added. Nor must the social evenings be forgotten, when the family circle is gathered about the driftwood fire, which roars up the great chimney and throws out its sparks harmlessly upon the wide stone hearth.

I need not add that the purchase thus far has proved most satisfactory, and that the "city refugee" is perfectly confident that the future will repay him for his choice, and that the investment will be a good one, even if nature is allowed to be foreman upon the farm.

DANIEL DENISON SLADE.

CHESTNUT HILL, MASS.

THE AMERICAN "IMMORTALS."

TO THE EDITOR OF THE NATION:

SIR: Your reference in the current issue to the *Critic's* "Forty Immortals" calls to mind the circumstance that at the time that paper called for ballots on the subject, the *Herald-Crimson*, a daily paper published by Harvard students, also instituted a similar contest, the results of which, with the original ballots, were forward-

ed to the *Critic*. If my recollection serves me correctly, there were about sixty undergraduate votes cast in the limited time allowed, and the Harvard constituency necessarily had a large influence on the result of the *Critic's* contest.

Harvard's "Forty" were as follows: George William Curtis (on every ballot); Thomas B. Aldrich, George Bancroft, Bret Harte, O. W. Holmes, J. R. Lowell, C. D. Warner (on every ballot but one); George W. Cable, Francis J. Child, Henry James, and J. G. Whittier (on every ballot but two); James Freeman Clarke, E. E. Hale, W. D. Howells, E. C. Stedman, and R. G. White (on every ballot but three); Asa Gray, Julian Hawthorne, and William Dwight Whitney (on every ballot but four); S. L. Clemens, Prof. W. W. Goodwin, and Walt Whitman (on every ballot but five); John Fiske and President McCosh (on every ballot but six); G. P. Lathrop, Whitelaw Reid, and Carl Schurz (on all but seven); Edgar Fawcett, J. Brander Matthews, C. E. Norton, and R. H. Stoddard (on all but eight); C. A. Dana and W. G. Sumner (on all but nine); John Burroughs, Josiah P. Cooke, R. W. Gilder, John T. Morse, jr., John K. Paine, N. S. Shaler, and Moses Coit Tyler (on all but ten).

Comparing this list with that of the *Critic*, it will be found that twenty-six names are on both lists. Carl Schurz and President McCosh received enough votes to be on the *Critic's* list, but that paper declared them ineligible as not being native-born.

It is worthy of note that three of the nine chosen by the "Immortals" themselves were members of Harvard's "Forty."—Yours,

C. T. Greve.

Cincinnati, August 25, 1890.

THE LATE EUGENE SCHUYLER.

To the Editor of The Nation:

Sir: I presume that some more extended account of the life and work of the late Mr. Schuyler than the appreciative notice in your columns will be prepared by some competent hand. But, while his memory is still fresh, I should like to draw attention to a phase of his character which has made a very deep impression upon me.

When Eugene Schuyler entered Yale College, he was the smallest and, with one exception possibly, the youngest of the undergraduates. Few who knew him at that time will forget the gentle, rosy-cheeked, large-eyed boy, who seemed so out of place among the somewhat rude and noisy members of the class of '59. Naturally he never kicked football nor played "wicket" (a kind of bastard cricket much in vogue in those days), and very rarely did he venture into a boat. I am not sure that he ever climbed to the top of either East or West Rock. To this disinclination to all outdoor sports or exercise was joined a real timidity and shrinking from anything involving hardship or danger. More than once have I guarded him to his room in the evening during our periodic hostilities with the New Haven firemen. Even still more marked was a feminine sensitiveness to a rough word or hostile criticism. In these respects he remained unchanged to the end of his college course, though in other ways he matured. In our last years he took the women's rôle in the college theatricals, and looked his part to perfection.

After graduation our paths separated, and I knew almost nothing of him for years beyond the mere fact that he had gone to Russia. Great was my surprise, therefore, to have him brought suddenly to mind one day, when reading the opening chapters of MacGahan's 'Campaigning on the Oxus.' In these I found Schuyler on the threshold of one of the most adventurous and perilous journeys which a man could undertake in 1873. The least that it demanded was the greatest powers of endurance. One might almost say that the easiest, certainly the safest, part was the beginning, the four weeks of travel, day and night, in a tarantass, across the Siberian plains, with the thermometer from thirty to fifty degrees below zero. But to penetrate into farthest Turkestan, almost alone, at the very time that Russia was advancing upon Khiva and intensifying every Turkoman's hatred of the Christian, demanded a perfect fearlessness of danger joined with the ability to compel unwilling men to perform one's will, and an inflexibility of purpose overcome by no obstacle, which only few men have possessed.

The courage which, to recall a single instance, enabled him to face unflinchingly the mob of Bokhariot pilgrims whom a fanatic was inciting to murder him, was displayed in a still more striking manner three years after this during his investigation of the Turkish atrocities in Bulgaria. With only seven companions he traversed the harried region, at times riding by "paths so steep," writes MacGahan, who is again with him, "that we were obliged to dismount and walk half the time, without then seeming quite safe from rolling down into some abyss." Schuyler had two interpreters, the one a smooth-tongued Greek, the other a rough Armenian, if my memory does not fail me. It was his custom, during the examination of ordinary witnesses, to employ the Greek. But when one of those Turkish brutes like the mudir of Batak was before him, he browbeat him into cringing subjection by the aid of the Armenian. It is difficult for me to imagine a greater contrast than that presented by the gentle, almost girlish collegian that I knew, and this Consul-General, nearly alone in the heart of the Balkans, surrounded by men still red-handed with Christian blood and thirsting to shed his, yet calmly compelling them by the pure force of his will to do his bidding.

A few years ago, when his active career was nearly over, I saw him in Boston. Naturally we talked of what he had done, and, in answer to a remark of mine in reference to this change in him which I have noted, he said: "In all my journeyings I never mounted my horse in the morning without a shudder of terror." So, after all, the natural timidity, the constitutional shrinking from hardship and peril, was still there, but kept under by his will. Just as he mastered the Uzbek, the Bokhariot, and the Turk, so he compelled his fears to yield to his determination to extend the bounds of knowledge at one time, to bring aid to an oppressed people at another. From that day I have regarded Eugene Schuyler as the bravest man whom I have ever known.

James Mascarene Hubbard.

Boston, August 26, 1890.

Notes.

By a singular oversight the address of Mr. William E. A. Axon was omitted from his letter in last week's issue relating to his monograph on Thomas Taylor, the Platonist. It is Armytage, Ashley Road, Bowdon, Manchester, England.

Charles Scribner's Sons will publish this month the fifth and sixth volumes of Henry Adams's 'History of the United States,' covering the first Administration of Madison; an 'Introduction to Philosophy,' by Prof. Geo. T. Ladd; 'The Evidence of Christian Experience,' by Prof. Lewis F. Stearns; 'Belief in God,' by Prof. J. G. Schurman; 'Citizeness Bonaparte,' from the French of Imbert de Saint-Amand, by Thos. S. Perry; and 'A Little Book of Western Verse' and 'A Little Book of Profitable Tales,' by Eugene Field.

Macmillan & Co. will add to their "Adventure Series" 'Fellow's Adventures and Sufferings during his Twenty-three Years' Captivity in Morocco,' edited by Dr. Robert Brown; a one-volume edition of Shelley's Poetical Works, complete, edited by Prof. Dowden; 'The Conflict of Capital and Labor,' by George Howell, M.P. (a second edition), and 'Stories from the Bible,' by the Rev. A. J. Church.

Cassell & Co. announce the fifth volume of Prof. Henry Morley's 'English Writers,' ending with a review of the 'Canterbury Tales'; 'The Anglomaniacs,' a story which has made its mark in the *Century*; 'Horse Stories, and Stories of Other Animals,' by Col. T. W. Knox; and 'Wanted—a King; or, How Merle Set the Nursery Rhymes to Rights,' by Maggie Browne, with illustrations by Harry Furniss.

A new work for popular reading and for use in schools, 'Civil Government in the United States, considered with some reference to its Origins,' by John Fiske, is on the eve of publication by Houghton, Mifflin & Co.

Harper & Bros. announce for immediate publication 'Campaigning with Crook,' by Capt. Charles King.

Mrs. Gen. Charles H. T. Collis, author of a pleasant little volume, 'A Woman's War Record,' has prepared for the press an account of what may already be called a fashionable tour—grand and thronged at any rate—namely, by the Northern Pacific Railroad to the coast, and to Sitka. It will be entitled 'A Woman's Trip through Alaska,' and will be illustrated by Mrs. Collis's camera.

E. P. Dutton & Co. have in press 'The Record of the Life of the Rev. Stephen H. Tyng, D.D.'; 'Inspiration and the Bible,' by Robert P. Horton; 'The Relation of Confirmation to Baptism,' by the Rev. Arthur J. Mason; 'Christian Socialism, What and Why?' by the Rev. Philo Spragus; 'Modern Criticism Considered in its relation to the Fourth Gospel,' by Canon Watkins; and 'The Causes of the Soul,' sermons by the Rev. William R. Huntington.

Among the speedy publications of Thomas Whittaker will appear 'A History of the American Episcopal Church, from the Planting of the Colonies to the Close of the Civil War,' by the Rev. S. D. McConnell; and 'The World and the Man,' being Bishop Thompson's Baldwin Lectures for 1890.

T. Nelson & Sons have nearly ready the 'Finger New Testament,' a miniature volume of 552 pages, weighing less than an ounce.

Jæger's biography of Ibsen has been translated into English by William Morton Payne, and will be issued, with illustrations, by A. C. McClurg & Co., Chicago.

J. W. Bouton, 8 West Twenty-eighth Street, will be the American agent of the new limited edition of the works of Sir William Stirling-Maxwell, announced from London last week.

Mr. B. F. Stevens, No. 4 Trafalgar Square, London, puts out a supplemental prospectus of his great 'Facsimiles of Manuscripts relating to America, from 1763 to 1783, in the Archives of England, France, Holland, and Spain,' of which the fifth volume, closing the first series, is now being delivered on this side of the water. The next five, we are told, "will open the important correspondence from 1776 of the American Deputies in Paris, the diplomatic relations of France with the American, French,

Dutch, and Spanish officials, and much commercial and political intelligence from merchants and private parties concerning America and American affairs." The eleven thousand pages of Peace Transcripts now on deposit in the Department of State are not included in the present series. Mr. Stevens calls attention to the value, from an heraldic and historical point of view, of the seals he reproduces with all faithfulness. More rapid progress is secured by the erection of photographic studios at the Foreign Office Archives in Paris and the Public Record Office in London, which will allow ten volumes to be issued yearly. Mr. Stevens justly appeals for a more extended support.

From Westermann & Co. we have the prospectus of an important publication by Hachette & Cie., 'Premiers Monuments de l'Imprimerie en France au XVe Siècle,' by O. Thierry-Poux, one of the curators of the National Library. It will be adorned with plates, embracing 289 facsimiles in heliogravure. The work is issued under the auspices of the Minister of Public Instruction. The art of printing was exercised in France during the fifteenth century in no fewer than 41 places, and there were 145 printers and booksellers.

Mr. Joseph Forster publishes, under the title 'Four Great Teachers' (Scribner & Welford), papers upon Ruskin, Carlyle, Emerson, and Browning, chosen from a number of lectures which he is accustomed to read. They do not fall short of the requirements of the platform for an hour's popular entertainment; as literary essays they are valueless.

Thomas Nelson & Sons publish 'The Lives of English Authors,' which fails of being either a text-book or a manual. Chaucer is included in the roll, but Spenser is the next name, and the subsequent development of literature is divided into three periods not happily discriminated. Longer biographies, mainly made up of dates and other uninteresting matter blocked off in numbered paragraphs, are furnished of the greater writers, and these are supplemented by short notices of the remainder. In this way about seventy authors, thirty being in the first class, are summarily and dryly disposed of. The quality of critical faculty and knowledge exhibited may be judged by the fact that while Beattie and Falconer and McPherson and Knowles are in the list, Collins, Keats, Shelley, Landor, to name only a few, are omitted from the English portion, and Hawthorne, Emerson, and Cooper from the American, while Lowell is reduced to the dimensions of a note.

A new edition of Johnson's 'Lives of the Poets' (Bohn's Standard Library, Scribner & Welford) meets a real need. Cunningham's edition tampered greatly with the text, though with the laudable purpose of correcting its material errors and lessening its inherent defects; but in this way he impaired much of its value. He inserted matter omitted by Johnson himself, and rearranged paragraphs, besides changing names and dates. The present editor, Mrs. Alexander Napier, has restored the text of Johnson's revised edition of 1783, and has made all the needed corrections, verified quotations, and given explanatory matter at the foot of the page, with credit for what has been taken from other commentators. Mr. J. W. Hales furnishes an introduction, in which he points out the real value of the work as historical, being in the main a summary of what the eighteenth century thought about its own literature. In the appendices is some new matter, especially in the interesting note contributed by Dr. Kopernicki and M. Pauli of the Jagolonienne University of Cracow, upon the Scotch settlers in Poland, from whom a tax decimation was levied by the Diet in 1650 in aid of Charles II., realizing £10,000. The general belief in 1620 was that there were 30,000 Scotch families in that kingdom, of whom the major part must have been peddlers, a class well known by the proverb, "Scotch Peddler in Poland." Decrees regarding them are given as early as 1585, and in the records of Warsaw Scotch names are given from 1573. Many returned home (the example of the Skene family is cited in detail), and to these Lithgow refers when he says: "Poland was the mother of our commons, the first commencement of our best merchants' wealth, or at least the most part of them." Among those who remained was a Gordon branch, who now assume the title of Marquis of Huntley, and are settled north of Cracow. The note contains many interesting quotations and details on this obscure historical point. So far as we have observed, the editor's work has been very faithfully done, and her information is abreast of the latest minute researches into the biographies of the eighteenth-century writers, and she has consulted the best authorities upon the older poets who came into Johnson's survey. The edition is in three well-printed volumes.

The new edition of Dr. Burckhardt's learned work on 'The Civilization of the Renaissance in Italy,' translated by S. G. C. Middlemore, in a single closely printed volume (Macmillan), signalizes the estimation in which this most elaborate and thoughtful account of the disintegration of the mediæval spirit and the rise of modern ideals in Italy is held by scholars. It is an indispensable work for the study of the period, and its publication in a cheaper form is to be welcomed.

A new edition of Mr. Robert Waters's popular 'Life and Writings of William Cobbett' has just been published by the Worthington Company. The readability of it has been much enhanced by the appendix, containing several charming letters to the author from one of Cobbett's daughters, a lady of the old school, in her eighty-first year. These afford, also, biographical data of some importance by way of correction. Cobbett's posterity seems to be both hardy and numerous.

The second part of the Prolegomena to the eighth edition of Tischendorf's 'Novum Testamentum Græce,' prepared by Dr. Caspar R. Gregory, has lately been issued by J. C. Hinrichs, Leipzig (New York: Westermann). It consists, besides some addenda to the preceding catalogue of uncial codices, of a catalogue of the miniscule codices in which a continuous text of the New Testament occurs, and those here noticed number 2,800, while 200 others have been seen by Dr. Gregory; and a catalogue of lectionaries, also very extensive. The late lamented Ezra Abbot was an associate in this enormous labor.

The weighty utterances of Bishop Potter in the domain of politics and in the forum of the scholar's conscience should make a large demand for No. 23 of *Sun and Shade* (Photogravure Co., 137 West Twenty-third Street, New York), in which the first plate is an excellent portrait of this divine. Another of the plates continues the Gettysburg series with a view of Spangler's Spring. Of the remainder, the scene from Yucatan most deserves mention.

St. Nicholas, which, but a short time ago, wisely adopted larger type for its "Letter-Box," is, in its September issue, guilty of a serious lapse into evil typographical ways. "A Page of Sketches by a Young Contributor" consists of a number of drawings, the descriptive legend of which is so microscopic as to defy any but a very myopic eye. Two lines in particular, which few adults will have the hardihood to decipher, are among the smallest we have ever seen in print, and we shudder to think how many youthful eyes have attempted the task.

The Astronomische Gesellschaft of Leipzig is an association of astronomers and friends of astronomy, with the object of advancing that science, particularly in such directions as require systematic coöperation. At its second meeting, in 1865, the Society organized a system of meridian-circle observations, according to a definite programme, to obtain accurate positions of all the stars of the 'Bonner Durchmusterung' down to the ninth magnitude, included in a zone 82 degrees in breadth, whose northern limit is the parallel ten degrees from the north pole. The execution of this programme, involving perhaps the greatest amount of astronomical routine work ever undertaken, was begun at once, thirteen observatories coöperating, eleven European and two American. Many years later, the programme was extended into the southern skies, making the entire zone 103 degrees in breadth. The eminent German astronomer, Dr. Arthur Auwers of Berlin, has the general direction of this great work, which has now so far advanced that publication is already begun. The first two quarto volumes have reached us, the work of Dr. Krueger at Helsingfors and Gotha, and of Prof. Lewis Boss at the Dudley Observatory, Albany. The latter volume contains the customary catalogue-data for more than 8,000 stars, and the former for nearly 15,000. Besides Albany, the other American observatories coöperating in the completed programme of the Gesellschaft are at Cambridge and Washington.

In Gottfried Keller, whose death occurred at Zürich on July 15, German literature has lost a writer who, in freshness of imagination and originality of language, if not in constructive power, excelled most contemporary novelists. As he inclined to depict the exceptions rather than the normal type of humanity, Keller perhaps stopped short of the highest goal of literary greatness; but some of his productions at least, above all the 'Leute von Seldwyla,' the 'Züricher Novellen,' and the inimitable 'Legenden,' will always remain revelations of human nature at large. Since the days of Haller no Swiss writer has exerted such a powerful influence upon German literature as Keller; a fact which, taken together with the Böcklin craze raging all over Germany, is as creditable to the intellectual activity of Switzerland as it is significant for the literary and artistic stagnation of the new German Empire.

—The September *Atlantic* has, first and last, a great deal of history in it. Mr. Justin Winsor leads off with a disquisition on how to write and how not to write historical narrative, and leaves the reader with a mind full of uncertainty and an expectation of endless rewriting of the past. History, if we read the somewhat gnomic sentences correctly, is, in the writer's view, in a state of perpetually unstable equilibrium, and will continue to fall about our heads as soon as built. In interesting juxtaposition with this is the all-comprehensive "Development of Modern European Historiography," by Prof. Jameson, in which we are taken through the successive stages of historical composition, shown how one age differed from another in glory and method, and what particular course was adopted in each epoch and all European countries, so that we have a bird's-eye view of what European historical

works have in fact been. To what extent Mr. Winsor's opinion is borne out by this survey the reader must judge. Mr. John Fiske deals with the special topic of the "Disasters of 1780," and offers a practical illustration of at least one new way of writing American history, and a most stimulating one. We find yet further on in the number an account of Mme. de Montespan and her immediate family, made up mainly from the memoirs of the time by the way of abundant quotation, with a thread of gentle comment tending to conciliate the reader and direct attention to the personal qualities of mind and manner of this group of persons, to interest us in their fortunes, and especially to mark out the strain of family tradition in all the members—that "Mortemart brilliancy" which was recognized by every one in them and in the young people they brought up, so that Mme. de Maintenon, praising a granddaughter of Mme. de Montespan, could say, "Elle s'exprime en Mortemart." The personal delineations in this paper are remarkably cut, and the literary *finesse* of the writer is wholly successful. Mr. Lowell's lines on Fielding give poetic distinction to the number.

—First to arrest the eye in *Scribner's* are Mr. Zogbaum's spirited illustrations of the cruise of the United States squadron to Lisbon, in which various aspects of ocean weather and of the interior life of the men aboard ship are effectively drawn. The text of this paper is something more than a log of the voyage, and is written, not without success, in the impressionist style. The illustrations with which Mr. Donald G. Mitchell adds interest to his charming account of country-houses also are prominent, and are well selected to reinforce the comments of the writer on the historical examples of country-house architecture on our eastern coast North and South. He confines his attention, it should be said, to the real and abiding country-house, not the villa for the summer, but one that is meant to be inhabited the year round. He writes in his always agreeable style, and with a love of country living which alone would account for the wide knowledge he displays of the American manor and wayside houses of the older time. The right of the citizen to his own property gives occasion for a general view of the gradual encroachment of public interests in matters anciently considered wholly private, with respect to property, and more particularly for some brief discussion of the recent, already famous decisions of the Supreme Court which seem to open ground for an indefinite development of the control of the Legislature over private business. The writer shows a decidedly conservative tone of mind. Mr. Thomas Stevens writes of the African river systems, Prof. Shaler of the influences of geography upon the early races, and C. Emma Cheney upon Heligoland, a short but sufficient description of this miniature community. Mr. W. C. Larned defends Millet from some recent criticism, and in the region of literature we observe one of Mr. T. R. Sullivan's carefully studied stories, and a poem by Mr. Scollard, in which he reaches the extreme point of talent and technique in the latter-day poetic manner; but to be really memorable in that sort one must invent a new *genre*.

—The prominent paper in *Harper's* is the first in the promised series upon American colleges, the subject in this instance being Harvard and the author Prof. Norton. There is but little detail in the paper, which is less a description of the University as it is than a general view of its lines of development in the last twenty years in connection with the collateral development of the nation. Prof. Norton sees in the many changes which have taken place under the administration of President Eliot the growth of a distinctive American ideal of the University, and in his judgment progress has already proceeded so far that we have no occasion to lament any serious deficiencies in the general scheme of study. He points out the undesirable results of the tendency to multiply small institutions of learning instead of concentrating endowments upon those already in existence, and he notices the fact that the college-bred class does not keep pace in numbers with the increase of the population. He also declares that, notwithstanding the large funds of the College, five millions more are needed to allow it to do all that it is capable of doing; but he exhibits the multiplicity of studies, the richness of the collections, the growth of the new graduate department, the excellence of the physical régime, the improved standard of conduct among the students, the democratic character of their life, and the comparatively low necessary cost of education. He estimates that if a student obtains an average scholarship, $236, an equal sum of his own is all that is really required for college expenses, exclusive of clothes. This strikes us as certainly a minimum. He calls attention to the fact that a degree can now be earned in three years. His remarks upon the influence of very rich students and the benefit of their residence to themselves are noticeable. The only unfavorable comment he has to make is upon the lack of architecture in the college buildings, and upon the comparatively low degree of attention bestowed on those studies which cultivate the imagination directly. The view taken is an optimistic one, and suggests no doubt of the wisdom of the changes already made, not even the reduction of the course, which has seemed to many a concession to the practical and materialistic spirit whose operation in American life Prof. Norton has most distinctly considered disproportionate. The entire paper must be regarded as a defence and eulogy of the new Harvard of the time.

—The *Century* contributes a clerical paper to the discussion, always more or less active, of the meaning and importance of socialistic ideas which have an alarmist signification to a certain group of people with philanthropic sympathies. Prof. Shields writes it, with some assistance from Bishop Potter. The attempt is made to define different phases of socialism, to show their relations with "the Church," and to argue in favor of unity of the Protestant sects in an "American Catholic Church" as a means of exerting a social influence for the regeneration of "the State." The paper is conveniently divided into headings, among which we find a group: "Christian Doctrine of Social Distinctions," "Christian Doctrine of Property," "Christian Doctrine of Poverty." This intimates that civil polity is a part of religion, and makes the same assumption that is involved in the occasional letters of the Pope to the world at large, in which he declares the "Christian doctrine" of liberty of the press and of the duty of the masses to their established rulers, etc.; but scrutiny of the "Christian Doctrine of Property," for example, as pronounced by the present authority, does not show us any close connection between corporate rights, land tenure, or the like, and the Sermon on the Mount, the Lord's Prayer, or St. John's Gospel, or any other of the sources of our "religion." The customs of the Jewish law or the moral maxims of Christ supply a rule of life, but a "doctrine of property" is another thing. We are told, for example, that "the voice of Divine Wisdom . . . calls upon rich men to weep and howl for the miseries that are to come upon them in the day when the cries of laborers whose hire is kept back by fraud have entered into the ears of the Lord of Sabaoth," and exhorts laborers to treat their employers as brethren, "not with eye-service as men-pleasers, but in singleness of heart, fearing God, and having his blessing when they suffer wrongfully." But the Day of Judgment threatened the rich and "the blessing of God" as a comfort to the victims of the sweating system are far-off things, and hardly competent to a "doctrine of property." It is not so long since this same "Christian doctrine" meant, being interpreted, compensation to slaveholders. In brief, State policy as a part of religion was long ago left behind, and the present discussion shows no aptitude of the clerical mind for statecraft. The notion that "the Church," as such, contains a system of civil polity in its "doctrine" which is capable of regenerating society by "organized" Church unity of action, is one of the most dangerous ideas that ever begot tyranny in the past, and there is no reason to think that it would be a less serious misfortune to-day if the Church had power. In our civilization the idea has no place. As for the "Christian Doctrine of Social Distinctions," the very phrase is satire on what Christians have made of Christ.

—The session of the Harvard Summer School of Geology, now about closing, is the most successful in point of numbers of any that has been held since the first camping school in Kentucky, in 1875. An elementary class of sixteen students—men and women—was given instruction in the Museum at Cambridge for four weeks in July, with lectures, laboratory work, and local field excursions. This is adapted particularly for teachers who wish practice in methods of study and presentation. An advanced class of twenty students—men only—spend six weeks in moving about the country, from Utica, N. Y., to Martha's Vineyard, Mass. The class gathered at Utica early in August to study the New York series of palæozoic rocks, these lying horizontal in normal sequence, well exposed in many ravines and generally fossiliferous. A week was then given to Catskill, where the same rocks are tilted, crumpled, and broken. Peekskill, in the highlands of the Hudson, was the next stopping-place, chosen for its excellent sections of crystalline and intrusive rocks. The class then proceeded to Meriden, Conn., to examine the Triassic formation, with its sheets of intrusive and extrusive lavas, all tilted and greatly faulted. The work closes at Gay Head, Martha's Vineyard, where cretaceous and tertiary strata are exposed in the shore cliffs, overlaid by glacial deposits. Four instructors share the teaching in this class, each one taking the party for a week or more at some locality familiar to him, so that its problems can be presented in the manner most advantageous to the students. A third division of the school is attended by several more advanced students, accompanying the field parties by which certain professional work of the instructors is carried on in different parts of New England.

—In the *Revue Bleue* of July 26, M. Maurice Albert calls M. Philippe Daryl to account for saying, in his 'Renaissance Physique,' that the English game of foot-ball is identical with the Roman *follis*. Perhaps one should say almost identical, for M. Daryl admits that the *follis* was struck with the fists; nevertheless he maintains that it was practically the same game

as foot-ball, and was played by persons of all ages, quoting in support of his contention Martial's line :

"Folle decet pueros, ludere folle senes."

This is an extremely careless quotation, for Martial is by no means recommending the game as suitable for everybody, but only as a gentle sport fit for old men and boys. This appears plainly from the line that comes next before the one which M. Daryl quotes. The passage runs :

"Ite procul juvenes; mitis mihi convenit aetas;
Folle decet pueros ludere, folle senes."

The *ludus follis* of the ancients was in fact, as coins show, a game analogous to the Italian *gioco di pallone*, with perhaps a distant resemblance to shuttle-cock. The *follis* was a ball filled with air, very light, and often decorated with feathers. Clement of Alexandria and Galen recommend the game as proper for such as cannot bear much fatigue, for elderly people and convalescents. It is obvious that they could not have meant anything like modern English foot-ball. This latter game, M. Albert Maurice holds, is the same as the Spartan *harpaston*, which Lucian says was played in the time of Lycurgus, and which became a favorite amusement of the Romans down to the time of the end of the Empire. Galen describes this game minutely. A struggle for the ball was its characteristic feature, as its name denotes, and sprains and bruises, dislocation of joints, and broken bones were its concomitants, as now.

—The announcement of the death of Mme. Ackermann calls for a word of obituary notice, if it be only to remark that, in spite of the modern note of despair that is characteristic of her verse, she died one of the most obscure and least read of poets. Louise Victorine Choquet was born in Paris, November 13, 1813. In her youth she passed through many phases of religious belief, but by the year 1840 she had settled down into steady-going atheism and pessimism. About this time she met Prof. Paul Ackermann and married him, and they lived at Berlin till his death in 1846. Then she returned to Paris, where she published a volume of *contes* in 1855, and soon after retired to Nice, where she lived for the rest of her days in seclusion. While there she published 'Poésies,' 1877 ; 'Pensées d'une Solitaire,' preceded by an autobiography, 1883 ; and 'Ma Vie,' 1885. Her audience was never large, but it numbered good intellects, among whom she was accounted the most remarkable woman of letters since George Sand. She was a most austere pessimist—a "puritan atheist," Anatole France calls her, "a saint of atheism." In her eyes marriage was a loathsome crime, and to bring children into this world of misery the most wretched of sins. Anatole France relates that once, while he was visiting her, she broke completely off a lifelong friendship, and drove a companion of her childhood out of her house, because the poor lady, who was sitting beside the fire, handed the tongs to an infirm old gentleman in a manner "*trop instinctive.*" Her verses breathe her spirit. It remains only to say that, like many another pessimist of old time or of our time, she passed through this worst of all possible worlds surrounded by many comforts.

THE EARLY DIARY OF FRANCES BURNEY.—I.

The Early Diary of Frances Burney. 1768–1778. Edited by Annie Raine Ellis. 2 vols. London: George Bell & Sons.

'THE EARLY DIARY OF FRANCES BURNEY' must interest every student either of character or of society. The book is the portrait of a woman endowed with rare genius; it is the graphic picture of a society at once so like and so unlike the world of to-day that its true features are with difficulty understood by the Englishmen or Americans of the nineteenth century.

Frances Burney's eminence among the novelists of England is indisputable, yet it is often but grudgingly acknowledged by the modern readers of 'Evelina' or 'Cecilia.' They say, and with truth, that she has nothing like the finished style or the fidelity to nature to be found in many of her successors. She has not the epigrammatic turn of Miss Edgeworth; she does not paint the comfortable dulness of English parsonages or country houses with the exactness of Miss Austen; she has little, according to modern taste at any rate, of the grace of Mrs. Gaskell; she does not claim the force of Miss Brontë and her sisters, nor does she make the slightest pretence to the learning, the thoughtfulness, or the philosophy, whatever be its worth, of George Eliot. She is simply, at any rate in her best and earliest works, a bright, clever girl, who, full of spirit and sympathy and gifted with keenest observation, sketches off men and women as they passed before the gaze of her thoughtful eyes.

Her claim to distinction is, however, undeniable. It rests in part upon the effect produced by her works upon her own generation. In matters of oratory, of acting, of literary style—in all pursuits, in fact, which aim at exciting human interest and appeal to human emotions—success is its own vindication. A speaker who sways his audience at his will is, say what you like, an orator. A player who enthralls pit and gallery alike, who fills the spectators with amusement, who arouses their sense of terror, of pity, or of sympathy, is, in despite of all critics, a true actor. An unknown and anonymous novelist whose tale becomes the talk of the day, who is admired at once by every ordinary reader, and also by men such as Johnson, Burke, Garrick, and Sheridan, is above criticism. A wise critic will, in the case of such a writer as Miss Burney, analyze the novelist's powers, and describe, if he can, the nature and limitations of her genius, but he will show himself ignorant of his art if he doubts for a moment the validity of her claim to a high rank among the writers of England.

But, in truth, her title to fame rests on an even more solid basis than the admiration of contemporaries. She was the first and the most "original" (in the strictest sense of the word) of the long line of female novelists whose tales form one of the peculiar glories of English literature. She drew nothing from any predecessor. She had, we may suppose, though this is not certain, read Richardson and Fielding; but neither of these authors was exactly a model for a young lady's sketches of family life and society. She was, in the main, left to the guidance of her own genius, and she wrote not so much naturally (for you may find stilted sentences even in 'Evelina') as from nature. The comparison may seem far fetched, but in more points than one she may be compared with Dickens. Neither the author of 'Evelina' nor the author of 'Pickwick' followed any model; each trusted to natural power of expression and to a natural gift for observation; each had the keenest eye for the drolleries and the oddities of life; each was endowed with keenness of sympathy. Each—and this is no trifle—looked at existence mainly from the point of view of a Londoner, and each added to the immediate effectiveness, but detracted from the truthfulness, of their portraits by the exaggeration of quaint traits and personal peculiarities. Each, in spite of this tendency towards caricature, was guided by a natural refinement of feeling which prevented caricature from partaking of coarseness.

Miss Burney in one respect has been far more fortunate than Charles Dickens, or, indeed, than any other novelist whom we can at this moment remember, except Scott. Most story-tellers live rather in their stories than in the history of their own lives. We know Dickens from 'David Copperfield'; we know Miss Brontë from 'Jane Eyre' and 'Villette'; we know George Eliot from 'Clerical Sketches' and the 'Mill on the Floss'; our real knowledge of these writers is in reality diminished by reading their letters or their biographies. Most persons feel that Dickens and George Eliot, at any rate, to speak of no others, would be known to us much better had no one ever undertaken to write their lives. With Frances Burney it is different; the more that is known of her diaries the better for her fame. The diaries of Madame D'Arblay are fully as good reading as her novels. 'The Early Diary of Frances Burney' is as charming a piece of writing as can be found in English literature. It tells us what Frances Burney was like, and "Fannikin," to use the pet name given her by Mr. Crisp, is more lovable and more interesting than either Evelina or Cecilia. Fanny, moreover, when we see her writing her diary, or corresponding with Daddy Crisp, explains the authoress of 'Evelina.' It takes no great acuteness to trace in her earliest diaries the gifts which turned, by little more than a happy chance, in the direction of literature, and made Fanny the earliest and, in many senses, the first among the female novelists of England. It is worth while to consider for a moment what these gifts were.

Nature gave her the power of literary expression. No doubt this power is itself the result of other qualities; still, style, strange though the fact be, seems almost to be a gift of its own. When Frances was not more than sixteen, she wrote with a grace and ease which many writers never attain through the practice of a lifetime. That this was so is proved conclusively by the dedication of her journal "to a Certain Miss Nobody." The idea itself is humorous. The whole reads like a piece of Thackeray's 'Roundabout Papers.' The last paragraph is a sufficient proof that this statement is no exaggeration:

"I will suppose you, then, to be my best friend (tho' Heaven forbid you ever should !), my dearest companion—and a romantick girl, for mere oddity may perhaps be more sincere, more tender, than if you were a friend in propria persona—inasmuch as imagination often exceeds reality. In your breast my errors may create pity without exciting contempt; may raise your compassion without eradicating your love. From this moment, then, my dear girl—but why, permit me to ask, must a *female* be made Nobody ? Ah ! my dear, what were this world good for, *were* Nobody a female ? And now I have done with preambulation."

Let the reader note, too, that this "Miss Nobody" is always turning up in the earlier pages of the diary ; that the journal is not meant for the eye of any one but Fanny herself, and that the references to Miss Nobody are invariably introduced so as to add a certain sense of grace and ease and humor to the writing. When these things are duly weighed, we shall safely conclude that Fanny was born with as natural a turn for the use of the pen as falls to some geniuses for the use of the pencil. But the study of her diaries betrays much more to a sensible critic than Fanny's natural literary talent. A person may possess the

power of expression and yet have no thoughts which are worth being expressed. Now, Frances Burney had, besides the gift of putting her thought into words, a power of natural and, so to speak, humorous observation which has hardly been possessed in the same degree by any novelist except Dickens. Every page of her diary affords proof that she was constantly noting and constantly recording the humors of life. In the main this was due to turn of character; it was fostered, however, by two circumstances, the one peculiar to Miss Burney's position, the other belonging to the time in which she lived.

Her early life was passed amid musicians, actors, artists, authors; it was a life of "respectable Bohemianism," if such an expression does not involve a contradiction. The bright, silent, observant, and reflective girl saw in her father's house a great deal more of men and manners than is seen by most young ladies. Garrick, Johnson, actors, singers, and authors, were all on more or less friendly terms with Dr. Burney. Arthur Young, to whom there is more than one reference in the diaries, was a household friend. Garrick was always coming in and out, joking and playing with the pleasant daughters of his friend. The atmosphere that surrounded Fanny was literary and theatrical.

The receiving and writing of letters, again, was, at any rate in the circle in which the Burneys moved, a real interest and employment. We must remember what letters were in 1768, the date when Fanny's diaries begin. They really told news—things and events of true interest, which friends in the country like Crisp would not know except for his correspondents. Papers, magazines, reviews, constant visits to London, were, we must remember, quite unknown to ordinary English ladies and gentlemen a century ago. Johnson's voyage to the Hebrides was looked upon as at least as remarkable a performance as would to-day be a journey by a leading man of letters to an out-of-the-way part of Russia. A lady from the country who visited London, or a young woman who went from London into the country, had something of real novelty to tell her friends at home; and her friends, not being provided with an immense supply of light literature, were heartily glad to read her letters. We may be quite sure that any one who had a talent for narrative, and especially for reporting conversations, was pressed or compelled to become a letter-writer. Now, Fanny's power of narrating conversation in a vivid form was equal to that of Boswell. At every turn this gift reappears. The whole account, to take one example, of Mr. Barlow's courtship of herself, or of Mr. Seaton's attentions to Hetty Burney, which somehow just failed of culminating into a courtship, is as lively as a novel. We know exactly how Mr. Barlow blundered in his endeavors to force his attentions upon Frances, and how Mr. Seaton excited expectations which were ultimately disappointed in the mind of Hetty. The manner, the address, the very words of both gentlemen, are recorded in Fanny's diary. We can well understand why it was that Daddy Crisp presses for her letters, or how it happened that a young lady who had never published a line could describe society in letters to and from Evelina with a skill not often attained by experienced novel-writers.

The passion, indeed, for letter-writing which marked the generation to which Miss Burney belonged was so strong that it left a permanent mark upon the prevailing form of narrative. Modern readers are surprised that Richardson, Rousseau, Miss Burney, and others should have thought that a correspondence was a suitable form in which to tell a tale of romance. The letters which, for instance, tell the tragedy of Clarissa Harlowe impede the narrative, and a modern reader finds it difficult to understand how, even by a stretch of imagination, Lovelace should be supposed to occupy every spare moment in the writing of letters. The explanation is simple: people of education did in the last century give up a great deal of their time and thought to letter-writing. Events which interested a family were really related in the family correspondence. Authors who threw a tale into an epistolary form no doubt exaggerated the tendency to put down all the events of domestic life on paper, just as a dramatist exaggerates for the purposes of the theatre the habit of giving expression to feeling or thought in speech. But though it is not true that men give expression in words to all their thoughts and feelings, yet it is true that a great deal of thought and feeling is reproduced in speech; and just so, though it is not true that domestic correspondence ever tells the whole life of a man or family, still, towards the end of the last century, it was true that letters contained a great deal of family and even of public history. If Trollope had lived a century ago, letters would have played a far greater part than they do in his novels. Letter-writing has become a lost art; an age of post-cards cannot understand an age of letters.

The mere form of Miss Burney's novels, indeed, strikes the novel-readers of to-day as awkward and unattractive. They are marked at once by a stiffness and also by a simplicity very unlike the easy expression and the subtlety of sentiment which mark the novels of the nineteenth century. The ceremonious manner in which Evelina addresses her guardian, and the pomposity of the moral sentiment in which her guardian replies to his ward, strikes us as unreal and affected. There is, however, far less of affectation in Evelina's language than we should naturally suppose. The formality which surprises us was the formality of the times, not of Evelina or of Evelina's creator. There is mixed with this formality of style a very curious simplicity of idea. The jokes which amuse Evelina and her friends, and which convulsed the readers of 'Evelina' with amusement, are not the sort of humor which would amuse the young ladies whose portraits are given us by Trollope or Miss Yonge. Yet who can really doubt that Miss Burney, with the formality of her style and with the simplicity of her ideas, possessed a touch of genius never found in a single page of Miss Yonge's natural but pointless narratives of every-day life? Fanny Burney has the one supreme power of giving life to her narrative. The whole description, for example, of the private theatricals at Barborne Lodge is a vivid picture of country society in the eighteenth century. Fanny has nothing remarkable to tell, but somehow, when you have read her account of the actors and their performances, you feel at once that a scene of bygone times has been brought before your eyes. But to see Frances Burney at her very best, she should be narrating conversation; she belongs intellectually to the family of Boswell. She could not hear people talk without picking out all that was pointed in their conversation, and putting it down. One cannot help even now pardoning the unhappy Mr. Barlow all the distress he caused Fanny, for the sake of the picture which Miss Burney has left us of her interview with this most awkward and unappreciated of lovers. The conversations between them are too long for citation, but any one who will read them—and they are easy reading enough—will fully understand how Miss Burney became, from the moment she published 'Evelina,' one of the first novelists of the day. All that is good in 'Evelina' had been noted down in her diary, or at any rate in her memory.

Yet literary skill, extraordinary powers of observation, and a keen sense of humor, were not the only qualities which gave an indescribable charm both to Miss Burney's writings and to herself. She is utterly free from sentimentality. She never preaches the duty of sympathy, but every line in her diary betrays the fact that she was full of feeling. This characteristic was oddly expressed by her stepmother in a conversation with Arthur Young:

"Talking of happiness and misery, sensibility and a total want of feeling, my mamma said, turning to me, 'Hers's a girl will *never* be happy! *never* while she lives!—for she possesses perhaps as feeling a heart as ever girl had!' Some time after when we were near the end of our journey, 'And so,' said Mr. Young, 'my friend Fanny possesses a very feeling heart?' He harped on this some little time, and said he would call me *feeling Fanny*. It was *characteristick* he said, and a great deal more such nonsense, that put me out of all patience, which same virtue I have not yet sufficiently recovered to recount any more of our conversation, charming as part of it was, *which* part you may be sure I had my share in. How else *could* it be charming?"

The joke, which, be it remembered, is only recorded for Miss Nobody, cut, as jokes often do, rather deep. Arthur Young was right. "Feeling" was characteristic of Fanny. Even now it is difficult to read without emotion the narrative, written for no eye but her own, of her misery at her sister's expected death, and of her joy at Susette's unhoped-for recovery. "My sweet Susette is almost well. I think of nothing else but to thank God Almighty enough which I am obliged to run out of the room to do twenty times a day—for else I cannot breathe—I feel as if I had an asthma except when I am doing that."

RECENT FICTION.

The Mistress of Beech Knoll. By Clara Louise Burnham. Boston: Houghton, Mifflin & Co.

The Dominant Seventh: A Musical Story. By Kate Elizabeth Clark. D. Appleton & Co.

A March in the Ranks. By Jessie Fothergill. Henry Holt & Co.

The Lawton Girl. By Harold Frederic. Chas. Scribner's Sons.

Maria: A South American Romance. By George Isaacs. Translated by Rollo Ogden, with an Introduction by Thomas A. Janvier. Harper & Bros.

Pactolus Prime. By Albion W. Tourgée. Cassell Publishing Co.

The House of the Wolfings. By William Morris. Boston: Roberts Bros.

'THE MISTRESS OF BEECH KNOLL' is distinctly an advance beyond the author's previous books, and deserves commendation as showing a progress which, if it continues at the present rate, may culminate in a really good novel. The present volume is hardly that, but is a pleasant story. If its four hundred pages of lightness and sweet do not constitute a very solid or racy banquet, it is at least purged in great measure from the cheapness of its predecessors.

In musical stories the music or the story usually suffers from the yoke-fellowship. 'The Dominant Seventh' is no exception to the rule, containing, as it does, much sound sense, catholicity of judgment, and poetic feeling in

relation to music, and being, as a story, fantastic, overstrained, and disagreeably self-conscious. Ferranti, the hero, who makes his appearance with Paganini-like diablerie, proves in the end so sober and wealthy and steady-going a sort of citizen that one perforce thinks of the time-honored circus-rider who begins as a reeling inebriate and ends as the spangled pet of the fancy. As such Ferranti is a *lusus naturæ*, summoning up, with his violin-playing, ghosts to frighten young ladies, and lying down, at last, a veritable lamb. The characters have an irritating way of talking at the public and not to one another, which induces in the reader a mood of injustice to the real intelligence and breadth underlying but not shaping the story.

Miss Fothergill has a decidedly interesting way of writing which holds the attention through even 500 pages. On a review, however, of one's state of mind during the reading, it turns out that it was always on a tiptoe of expectation as to what developments would arise, and how the incidents so brightly and graphically told would weave themselves into the story. When the book is closed, one first fairly perceives that there was no plan or construction, no real evolution of character—though there is a great deal about a great many different characters—and no excuse for existence for a large part of the scenic effect. What saves the book and makes it preëminently readable is its style, which knows no stagnancy, and a certain modern boldness in its point of view, which puts a fearless finger upon the affairs and the relations of life. The book is, perhaps, too much like a piece out of real life, in its inconsequence and its unlinked happenings, to be really good art, and it is interesting somewhat as a day in a crowd is interesting, from what one picks up here and there of mirth, of prettiness, of pathos, leaving one at the end of the day rather dissatisfied and a little dizzy.

'The Lawton Girl' belongs to the "industrious and idle apprentice" type of novel; the walk through life of these time-honored heroes being fitted to conditions as modern as this morning's paper. The industrious apprentice wins the race and the girl, and obtains, but nobly fails to use, the means of punishing his not at all formidable rival. Viewed as a novel it is rather dingy reading; but where is the novel to-day which is only a novel? To review a work of fiction now is to expose to public view one's theories upon everything rather than art; in this particular case, upon the social question, upon reform clubs, trusts, and strikes. We must avow that Mr. Frederic has not thrown any light on the last two questions. His evil characters are from the outset so obviously weighted in a downward direction that the form of temptation is purely a matter of detail. In their hands the simplest matter of barter would become fraud, so that their perdition in the intricacies of a trust proves nothing against that form of competition. In the social question there is more of positive dealing with the topic. The story of the Lawton girl, betrayed and forsaken, returning to her own town to live down, among her own townspeople, her former life, has something real and hopeful in its ring. The solution of the problem may not be accepted, but it is clearly stated and fairly met. It is discouraging to find that an industrious apprentice should tell his professional secrets, very nearly overthrowing the ends of justice. Perhaps it matters the less, since in the end he elects to let the villains go unpunished, though how he reconciles this to his conscience we fail to see. His reform club, sad to say, is dropped as soon as it has hired a place of meeting, and is not at all what a well-conducted reform club in a novel should be. Some very amusing observations are put into the mouth of one of the characters, a young woman, in relation to business matters, showing a woolliness that is partially typical, it is to be feared.

'María,' as Mr. Janvier points out in his graceful introduction, is worthy the attention of English-speaking Americans because it is a specimen of the literature of a people whom we are apt to think of as wholly unliterary and dependent upon Spain for their books, namely, our Spanish-speaking sister republics of Mexico and South America. The very interesting fact mentioned by Mr. Janvier, that a catalogue of books published in Mexico before the year 1600 includes 116 titles, will be, we fancy, startling to most Americans north of New Orleans. We open Mr. Isaacs's novel, then, with the feeling that it has a pedigree, and that it is a new-found relative to ourselves. We find a tender little idyl of love and sorrow, and, yet more notably, a picture of country life and family life in Cauca, which is quite new in English literature, but which becomes at once familiar and home-like through the unerring touch of nature and the delicacy of Mr. Isaacs's art.

'Pactolus Prime,' like others of Judge Tourgée's books, is to be considered less as a novel than as the cry of one seeking justice. Here it is the bitter wail of the negro, reviewing the wrongs done him from the days of slavery to the present time, and denouncing the white man for his share in them—for worshipping in the name of Christianity a "White Christ"—for making white immorality the same as black religion, and for denying the negro, after nominally freeing him, the barest political and educational justice. Pactolus Prime makes the startling statement that if the slaves from the beginning of slavery down to the emancipation were to be paid for their labor at the rate of ten cents a day, the nation would now be in their debt for more than ten billions of dollars. He inveighs against the mode of distribution of funds proposed in the happily snuffed-out bill for national aid to education—the money being given by the Government proportionably to the illiteracy of the State, the State in turn conferring it per capita, so that the money falls to the more numerous whites, even though the blacks are the illiterates. These things may be found in the daily papers, but the hopeless agony in the lot of the black seeking to obtain among men the place of a man, this is what the book sets powerfully before us.

To any one who longs to steal away from the nineteenth century and steep himself in the atmosphere of a warlike and heroic past, there can be no better suggestion offered than to read Morris's 'House of the Wolfings.' We defy any one to rise from a perusal of its pages and not have to summon himself with an effort back into a distant to-day, far from the vivid present of the time of strife betwixt Goth and Roman; of mighty leaders in war; of doughty women leaving their looms to ride through tangled woods and bring tidings of the foe; of a little lad weeping because his warrior friend has gone to the war without fashioning for him the promised clay horse; of dwelling-halls hung with fine tapestries, and maidens tending the sacred lamp; of glades where the kindreds meet and hold council of war. Nay, further, even the Valkyr kissing the warrior and saving him from death that they may live and love, and the seeress daughter born to them, all are more present to us than the present itself. If there be ever a lapse into another day, it is only through what Pater, in writing of Morris's earlier works, calls "the charming anachronisms of a poet who, while he handles an ancient subject, never becomes an antiquarian." If he had not kept the subject "always close to himself" (to quote Pater once more), we should not find him saying of a warrior long spared to his house, that "it was neighborly done of the Father of the Slain to forbear his company so long"; nor (of a faint light in the woods), that "it might scarce be told whether that light were the memory of yesterday or the promise of to-morrow"; possibly not (of the same place), that "for all the darkness, no man could go there and not feel that the roof was green above him." An admirable estimate of the present book, by the *Athenæum*, appended to this edition, refers to Aristotle's assumption that invention and not singing is the indispensable basis of poetry. Who shall say whether Morris is the better inventor or singer in this beautiful work—in a song that is so laden with story, a story which, whether prose or verse, is such pure singing?

KOHUT'S FERDINAND LASSALLE.

Ferdinand Lassalle: sein Leben und Wirken. Auf Grund der besten und zuverlässigsten Quellen geschildert von Dr. Adolph Kohut. Leipzig: Otto Wigand. Pp. ix., 210.

ALTHOUGH Lassalle has been dead for more than a quarter of a century, he is to-day, in many respects, "the most live man" among German publicists and politicians. Parties representing the most adverse and antagonistic aims and tendencies, and public men of the most diverse types, from Bismarck to the Social-Democrat Bebel, appeal alike to him for the endorsement of their political opinions and programmes. Indeed, the recent rescripts of the German Emperor, which led to an international conference for the regulation of the labor question and the improvement of the condition of the laboring classes, were the fruit of the seed sown by Lassalle thirty years ago and the official recognition of one of his pet projects.

The inscription on his tombstone in the old Jewish cemetery at Breslau, which characterizes him as "Denker und Kämpfer," sums up succinctly his rare combination of moral and intellectual qualities. He was a remarkably clear and acute thinker and an extremely energetic and quite irrepressible agitator, a scholar of large grasp and endowed with fine metaphysical faculties, and yet no pedant, but an eminently practical man of the world. With all his love of books and profound knowledge of them, there was in him no taint of the German *Stubengelehrte*, and no stagnant smell of Dryasdust in his always elegant garments. As a student of seventeen he devoted himself with enthusiasm to the study of Hegel's system of philosophy, and it may be regarded, perhaps, as a mark of youthful ardor and assurance that he claimed to understand it. He was fond of playing at bandy with the toughest problems of Hegelian dialectics over his beer-mug, and showed a skill in solving them that excited the astonishment and admiration of his fellow-worshippers at the shrine of Gambrinus.

It may have been his real or imaginary success in comprehending Hegel that led him to tackle Heraclitus, whom his countrymen surnamed the Obscure on account of the unintelligibleness of his teachings. Lassalle was a thorough Hegelian, and found in his master's method not only a key to the oracular and sententious utterances of the Ephesian philosopher, but also a passe-partout to every system

of speculation and a pick-lock to all the mysteries of the universe. He regarded Heraclitus as an early predecessor and prototype of Hegel, and it must be confessed that there is a strong spiritual kinship between the ancient Greek and the modern German. Whatever may be said of Lassalle's point of view and of the correctness of his conceptions and interpretations, his book, 'Die Philosophie Herakleitos des Dunkeln von Ephesos,' was a brilliant intellectual achievement, which not only produced an immense sensation at the time of its publication, in 1858, but has remained to the present day a standard authority on the subject.

Lassalle was an exceedingly fascinating character, and seemed to cast a spell of enchantment over all who came within the sphere of his personal influence. He was on terms of intimate friendship with Alexander von Humboldt, the famous jurist Friedrich von Savigny, the distinguished Hellenist August Böckh, Varnhagen von Ense, Bismarck, Hans von Bülow, Heine, Freiligrath, Marx, Herwegh, Rodbertus, Wuttke, Garibaldi, Mazzini, and many other men of note. With most of these persons he carried on an active correspondence, the greater part of which has not yet been collected and published. The letters exchanged with Hans von Bülow appeared in 1885; but there must be a mass of unprinted material of this kind in existence which would be an invaluable contribution to contemporary history. He characterizes Von Bülow very justly as "a powder magazine always to be guarded against explosion," while Von Bülow speaks of him as the "Amphitryon of the future."

Lassalle foresaw with remarkable distinctness and definiteness the political drift and ultimate destiny of Germany. In 1859 he published a pamphlet, entitled 'The Italian War and the Mission of Prussia,' in which he urged Prussia to take advantage of the favorable circumstances to incorporate Schleswig-Holstein and to form a national union of the German States, with the exclusion of Austria, on a democratic basis of representation. He reverts to this plan repeatedly, as for example in his pamphlet, 'Fichte's Political Testament and the Most Recent Present' (1860), and in an address, 'The Philosophy of Fichte and the Significance of the German Popular Spirit,' delivered May 19, 1862, in which he declared "the constitution of a united Germany under the hegemony of Prussia" to be "the highest and most important mission of the time."

Bismarck held frequent political conferences with Lassalle, to whose opinions he evidently attached great weight, and it is impossible to determine with which of these men the measures now identified with the late Imperial Chancellor originated. It is certain that in the meagre records of their conversation which have been preserved, Lassalle appears as the leading spirit. But even admitting that the intellectual initiative rightly belongs to him, it is doubtful whether he would have had the iron energy and persistency necessary to carry these ideas into complete effect and embody them in permanent institutions. He was a brilliant, popular, and forensic orator, and would have made his mark in parliamentary debate, especially if he had had the good fortune to be in the Opposition; but it is questionable if he would ever have been a successful statesman. He was a friend of the working-classes and an honest advocate of social reform; but his aristocratic tastes and instincts, which he would not use the arts of the demagogue to conceal, often threw suspicion upon the sincerity of his democratic convictions. We may suspect that he would never have developed into a Socialist of the Liebknecht-Bebel type, and that, had he lived, he might have prevented this element from gaining its present ascendency.

Lassalle was both vain and foppish, priding himself immensely on his personal beauty, which he sought to render more effective by devotion to his wardrobe. Perhaps the greatest surprise of his life was that a plain Russian girl of nineteen, Sophie Soluzeff, should reject his suit and refuse his hand in marriage. Such conduct was utterly incomprehensible to him, and filled him with wonder like the sudden violation of a familiar law of nature. He was eloquent in his denunciations of duelling, but lacked the moral courage to put his own teachings on this subject into practice. As a boy of twelve he challenged to mortal combat one of his playmates, whom he regarded as a rival for the affections of a school-girl; and he lost his life in an affair of honor which grew out of his relations to Helene von Dönniges. He used to speak rather contemptuously of woman as a mere "episode"; but it was these episodes which made up the most stirring scenes in the drama of his life and turned it into tragedy.

Lassalle's enormous conceit crops out very comically at times, and in a manner utterly impossible to any one endowed in the slightest degree with a sense of humor. Thus, he says in a letter to Von Bülow: "I have written something that will make you almost die of laughter, although it is a mere trifle. I was just in the mood!" The reference is to his brochure against Julian Schmidt, a coarse diatribe which could only cause a judicious friend to grieve. Again, in his controversy with Schulze-Delitzsch, he exclaims: "I write every line that I write equipped with all the culture of my century"; and in another book he disposes of the same adversary in this style: "The moment I put this work to press, you may consider yourself dead; the moment it has found a few thousand readers, you may consider yourself buried."

Dr. Kohut's volume gives, in the main, a satisfactory sketch of Lassalle's brief and brilliant career, and a just estimate of his influence and achievements. It contains no new material, with the exception of half-a-dozen or more letters of the Countess Hatzfeldt, and unimportant communications from the Hungarian Gen. George Klapka and the Swiss Col. J. P. Becker, hitherto unprinted; but the old material has been woven together into a clear and consecutive narrative. The biographer professes to be "free from all partisanship and prepossession," and this is, for the most part, true. Nevertheless, his strong and pardonable prejudice against Helene von Dönninges prevents him from giving due consideration to her published account of her 'Relations to Ferdinand Lassalle.' This fatal "episode" deserves a fuller and fairer treatment than it has yet received, since, apart from the romantic interest of the tragic story, it brings out in bold relief the strong and weak points of Lassalle's character.

Le Morte Darthur. By Syr Thomas Malory, faithfully reprinted from the original edition (1485) of William Caxton. Edited by H. Oskar Sommer, Ph.D. Vol. II., Introduction. London: David Nutt.

THE first volume of Dr. Sommer's reprint of Caxton's 'Morte Darthur' was duly noticed by us and cordially welcomed. It is a faithful reprint of Caxton's text, page for page, line for line, 861 pages, on heavy white paper, with ample margins—a royal volume. The apparatus of a complete critical edition was to have been given in a second volume; but Dr. Sommer found that it enlarged in the working up, and he has divided it for two volumes. The second volume, now published by David Nutt, contains the bibliographic and the linguistic apparatus; discussions of the sources and of the style are reserved for a third volume.

Many interesting facts are presented in the bibliographical part. Nothing is known about Sir Thomas Mallory except the mention of him in the 'Morte Darthur.' Dr. Sommer cannot ground the later references to him as a Welshman, or the hypothesis that he was a priest. The single perfect copy of Caxton's edition, which had been in the library of the Earl of Jersey at Osterley Park, was sold in May, 1885, for £1,950. The British Museum bid £1,800. "It is very much to be regretted," says Dr. Sommer, "that the English nation lost this splendid specimen of Caxton's printing, containing, as it does, the traditional history of their King Arthur, a national epic." It became the property of Mrs. Abby E. Pope of Brooklyn, N. Y., who seems to have been just as ready to give Dr. Sommer access to it as Earl Spencer or the authorities of the British Museum would have been.

Dr. Sommer explains his title-page. Caxton followed the MSS., which had no title-pages. Wynkyn de Worde introduced them after the death of his master. Wynkyn de Worde's 'Morte Darthur' of 1529 is the first text ever printed with illustrations throughout. "They are very coarsely executed woodcuts." This is the edition from which the later reprints have been derived, with two exceptions. The last of the black-letter editions, Stansby's (1634), which has been copied in most of the modern reprints, is from East (1585), which is from Wynkyn de Worde (1529). The preface of Stansby informs the reader that the phraseology of the volume is corrected in many places, where King Arthur or some of his knights "swear prophane, and use superstitious speeches, all (or the most part) of which is either mended or quite left out"; "so that, as it is now, it may passe for a famous piece of antiquity, revived almost from the gulph of oblivion, and rescued for the pleasure and benefit of the present and future times." Many a good round oath from the mint of Shakspere has been lost for ever by King James's prohibition of profanity, but one can find Mallory's oaths intact in Dr. Sommer's Caxton. Dr. Sommer gives a few early references to 'Morte Darthur'; one, from Ascham's 'Schoolemaster' (1570), presents a Puritanic view of it, as one of the books "made in Monasteries by idle Monkes or wanton Chanons," the whole pleasure of which standeth "in open manslaughter and bold bawdrye." And after specifying deeds of Sir Launcelot, Sir Tristram, and Sir Lameracke, the 'Schoolemaster' goes on: "This is good stuffe for wise men to laughe at, or honest men to take pleasure at. Yet I know when God's Bible was banisht the Court, and Morte Arthure received into the Princes Chamber." One might pass this as *schulmeisterisch;* but if Dr. Sommer had made later collections, he would have given us very much the same tone from Ben Jonson. "He had no Arthurs," says Jonson of young Lord Beaufort,

> "Abortives of the fabulous dark cloister,
> Sent out to poison Courts, and infest manners;
> But great Achilles', Agamemnon's acts,
> Sage Nestor's counsels, and Ulysses' sleights,
> Tydides' fortitude, as Homer wrought them
> In his immortal fancy, for examples
> Of the heroic virtue."

And even Shakspere sets *Hotspur* railing about "the dreamer Merlin and his prophecies, . . . and such a deal of skimble-skamble

stuff." But perhaps Milton's favorite, "our sage, serious Spenser, whom I dare be known to think a better teacher than Scotus or Aquinas," will outweigh the whole theatre; and he knows no happier source than these romances to point a moral or adorn a tale.

On page 28 begin the notes on the language of 'Le Morte Darthur.' This book, composed in 1474, printed in 1485, belongs to the date of transition from Middle to Modern English. When examined by grammar rules drawn from Shakspere for Modern English, and Chaucer for Middle English, it seems to be very irregular and mixed. A grammar might be made from the 'Morte Darthur,' and taken as a standard, which would make the language of Chaucer or Shakspere irregular; but Dr. Sommer does not attempt that. He gives brief notes of the most characteristic examples of the orthography, phraseology, and syntax of his volume. The orthography he attributes to Caxton and his printers, believing that they did not follow Mallory's manuscript. The new printers were without standard. The manuscripts had variant spellings. Mastery of orthography seems to have been an ability to recognize, remember, and use all these different spellings. The more ways a man could spell a word the better speller he was. The modern English *means* is spelt *menes, meane, moyne, moyan, moyane; realm* is spelt *reame, royame, reaume, royalme, realme, royaume;* and so they go. The proper names exhibit greater variety than the common names, so that readers generally do not recognize their identity, but multiply the characters, making the scene swarm with heroes as the sky with stars; and the best of the editors heretofore often duplicates or triplicates the real characters. The different spellings of Gromere Gumorson furnish Sir Edward Strachey, editor of the Globe edition, with three heroes for one, those of Gratian three more, those of Pertilope or Pertolepe two more, and so on.

There are nine pages of notes on the phraseology and syntax. A note refers us to a forthcoming work by Dr. L. Kellner, in which there is an elaborate study of Caxton's syntax, "a most valuable contribution to the study of the English tongue." A list of various readings between Caxton's edition and Wynkyn de Worde's of 1529 is given, about 10,000 in number. Then comes a list of names and places, "the first complete and critical Index to 'Le Morte Darthur' ever compiled." There are nearly 1,000 names in the text. With each name references are given to the passages in which it occurs, and the gist of what is said in them, so that we have an authoritative biography of the person or facts about the place, very interesting and convenient for reference.

Next comes a glossary of 46 double-column pages, the first ever compiled to 'Le Morte Darthur.' Dr. Sommer is preparing a Caxton Dictionary for all the works printed by Caxton, and he uses his general material pretty freely in this glossary, so that it is in effect a small etymological dictionary. He gives the different spellings that occur in the text, and precise references. There are very few words that are wholly unknown to the general reader, but the various spellings and novel shades of meaning are very often enlightening for the history of the word, and make the glossary a treasury of facts such as the student of language delights in.

The third volume, to contain Dr. Sommer's discussion of the sources of Mallory's tale and a treatise on his style by Mr. Andrew Lang, is being actively pushed forward. It will be looked for with lively interest.

A Manual of Anatomy for senior students. By Edmund Owen, M.B., F.R.C.S. Longmans, Green & Co. 1890.

Mr. Owen has undertaken a difficult task—more difficult, perhaps, than he realized, notwithstanding his combined service as practising surgeon and anatomical teacher, viz., to furnish the senior student, emancipated from the dissecting-room, with a "volume which shall supply him with such anatomical information, free of wearying detail, as is essential for his successful and intelligent work in the medical and surgical wards and in the special departments of his hospital." To present within the compass of a volume of convenient size the "whole range of anatomy" in its medical and surgical relations, including a considerable number of operative procedures, would appear to most persons impossible, and we cannot but think the author would have done well to follow the example of Harrison Allen (whose comprehensive treatise he does not mention), since the indispensable brevity is commonly attained at the loss of adequate explicitness. For example, ligation of the innominate artery is well characterized as a "desperate operation," yet it is disposed of within half a page.

Owen's style is commonly direct and clear, although the occurrence of the following sentences in consecutive paragraphs is confusing, to say the least:

"Broca showed that the motor centres for speech are in the region of the left island of Reil." . . . "Broca showed that in aphasia [resulting from paralysis of the motor centres of speech] there is some serious disturbance with the third left frontal convolution near the island of Reil."

The prevailing gravity is relieved by occasional paragraphs like the following:

"When the central nervous system is upset, not only may digestion be impaired or lost, but jaundice may occur; as an example of this, reference may be made to the brief clinical report of the lady in 'Twelfth Night,' who, concealing her too great love, pined in thought, and was, in consequence, overcome by a 'green and yellow melancholy.'"

"One of the greatest living sculptors affirms that the two sides of the head and face are never symmetrical—unless in the case of professional beauties and of others of a like intellectual capacity."

The following deserves consideration from directors of college gymnasiums:

"The left ventricle is dilated and hypertrofied when, Sisyphus-like, it is struggling to force upwards its contents which are ever rolling backwards through an incompetent aortic valve; but these conditions sometimes occur independently of valvular disease, as in the case of athletes and others who are suddenly called upon for violent exertion."

The paragraph, beginning, rather startlingly, "*Cut-throat*," enumerates as liable to severance so many parts with formidable names that the would-be self-destroyer might well hesitate before doing violence to them:

"The man who draws a razor across his throat with suicidal intent, being probably right-handed, gashes the left side. If the brunt of the shock is received by the thyroid cartilage [projecting part of the "Adam's apple"], as often happens, no serious harm may ensue. But if he happen to hit off the thyro-hyoid space, there is little to hinder the progress of the blade. Thus, in addition to the skin, platysma, anterior jugular vein, cutaneous nerves, and deep fascia, the anterior part of the sterno-mastoid may be traversed, and, more deeply, the external carotid, or its superior thyroid or lingual branch, and the corresponding vein. The sterno-hyoid, omo-hyoid, and the thyro-hyoid muscle and membrane, and the superior laryngeal nerve might also be cut, and possibly the incision might pass into the pharynx, wounding also the epiglottis."

In a strictly medical review, the caution near the top of page 419 might well be transcribed for the benefit of some "brilliant" young operators, who would perhaps be encouraged to gentleness also by an occasional change of place with their patients.

There are about two hundred illustrations, unnumbered, frequently undescribed, and varying greatly in excellence. A few are credited to their sources (among them the preposterous representation of the cerebral convolutions that disfigures the later editions of "Gray"); there is no way of determining how many are original, although certain very inelegant diagrams may be presumed to be such. The introduction of the simple instruments on pp. 114, 393, and 414 is not easily explained. Many of the illustrations fail of their highest usefulness by reason of malposition with regard to each other. What architect would represent an "exterior" with the front of the house at the right, and a corresponding "interior" with the front at the left? What geographer would give an outline of the Isthmus of Panama as if the observer occupied the usual position at the south, and an enlargement of a small portion thereof as if the observer were at the north? Yet in the present volume on one page a skull faces to the right, and on the opposite page a brain faces to the left; the admirable figure on page 413 loses much of its value from the fact of its needless and almost fatuous reversal of position as compared with the more comprehensive view on page 385.

The terms employed are for the most part familiar and of moderate length; in several cases there is a commendable, though perhaps unconscious, reduction of polyonyms to mononyms, *e. g.*, of *pons Varolii* to *pons*, of *dura mater* to *dura*, and of *platysma myoides* to *platysma;* but there are also several examples of the common anatomical fault for which the term "pœcilonymy" has been proposed, viz., the employment of two or more names for one and the same part otherwise than expressly as synonyms; surely the student's apprehension is not facilitated by the indiscriminate use of *tract, column*, and *fasciculus*, of *vagus* and *pneumogastric*, of *brain* and *encephalon*, of *central fissure* and *fissure of Rolando*.

There is no table of contents or list of figures, but the index is quite complete; most, however, would look for *appendix* or *vermiform appendix* rather than for *vermiform process*, which alone occurs in the text as well as in the index.

History of New South Wales. Vol I. By G. B. Barton. London: Trübner & Co.

United Australia. Sydney: Government Printer.

In 1888 the colony of New South Wales completed the first hundred years of its existence, and the Government determined to commemorate the event by preparing a history of this period, based on the public records, and selected Mr. Barton to take charge of the work. He has begun his task in a creditable manner, and although, from the nature of the case, this first instalment is somewhat voluminous, it is nevertheless decidedly interesting.

The evidence as to the first discovery of the great continent, known in the sixteenth century as *Terra Australis*, is clouded with many a doubt, and will always remain so. The Dutch christened the land New Holland, after their usual custom in such cases, and the name Australia seems to have been first used by that geographical churchman Richard Hakluyt, in a memorandum published, with others of his posthumous papers, in Dr. Purchas's 'Pil-

grimes' in the year 1625. What is certain is, that very little was known about the country till towards the end of the last century, and even in Capt. Cook's day it was supposed that Van Diemen's Land was not separated from the mainland. It was in 1770 that Cook sailed into Botany Bay, and he brought back to England a favorable account of the apparent fertility of its shores, while his companion, Mr. (afterwards Sir Joseph) Banks, was even more strongly impressed, and for years thereafter incessantly urged the British Government to occupy the territory. In fact, it is largely to his sagacious persistency that England owes her Australian colonies.

Soon after peace had been declared with the United States in 1783, the loyalists who had abandoned or been driven from their homes, began to press upon Parliament their claims for damages, and a plan was drawn up by one James M. Matra, and approved by Sir Joseph Banks, for the establishment of some of these sufferers at Botany Bay. If his proposal had been adopted, the colony of New South Wales would have been a great gainer, and Canada would have lost a number of excellent colonists, whose descendants may be found to-day in almost every town and settlement of New Brunswick and Nova Scotia; but public opinion at the time was not favorable to colonizing experiments at Government expense. What finally turned the scale in Banks's favor was the crowded condition of the prisons, the unfortunate inmates of which could no longer be turned over to the tender mercies of Virginia planters, and it was owing to this state of things that in May, 1787, the "first fleet" set sail with some 750 convicts and a military escort, the whole under the command of Capt. Phillip, who was commissioned as the first Governor of New South Wales. This fleet arrived at Botany Bay in January, 1788, and shortly afterwards Phillip discovered the magnificent harbor of Port Jackson, a few miles to the northward, and the colonists were finally landed there and laid the foundations of the present city of Sydney.

More convicts followed this first batch almost every year until 1841, by which time the total number transported had reached 83,000; but in 1792 the British Government consented to send out free settlers, and allowed them to contract for the labor of the convicts as the Virginia planters had done, so that after that year there was a small leaven of presumably honest colonists. The convicts, however, formed a large majority, and it is encouraging to those who are dreading the effect of immigration on this country to learn that the descendants of these unpromising colonists are, in defiance of the doctrine of heredity, now held up to us as examples of law-abiding citizens and pure politicians. It should be remembered, however, that until 1827 there were in England more than 150 offences punishable by hanging or transportation, among them such heinous crimes as "destroying a tree, plant, or shrub in a garden," so that it may well be that the earlier convicts were superior to the criminal classes of to-day.

In spite of such discouragement as resulted from the character of the people under him, Gov. Phillip was an enthusiast in regard to the future of the colony, and he wrote in one of his earliest despatches: "Nor do I doubt that this country will prove the most valuable acquisition Great Britain ever made." The "most valuable acquisition" came very near slipping through his fingers, however, for the French, under La Pérouse, reached Botany Bay a few days after he had landed, and, finding the ground already occupied, sailed away, much to his satisfaction. Nowadays the occupation of any barren rock in the Pacific may endanger the peace of Europe, but at that time very little attention was paid to the new colony, and Mr. Barton states that the 'Annual Register' for 1789 devotes more space to the "much-talked-of fight between Perrins of Birmingham and Johnson of London" than to Phillip's despatches. One observer, indeed, there was who was deeply stirred by the news of the founding of the colony. Dr. Erasmus Darwin, the worthy grandfather of an illustrious grandson, wrote some verses on the occasion, entitled "Visit of Hope to Sydney Cove," in which he drew a prophetic picture of the great city that now covers the beautiful shores of Port Jackson. In this case, at least, he was not what Byron called him in the 'English Bards,' "a mighty master of unmeaning rhyme." In fact, he seems to have possessed the gift of prophecy in rare measure, for in the 'Botanic Garden,' published in 1791, he wrote the remarkable lines:

> "Soon shall thy arm, unconquered steam! afar
> Drag the slow barge or drive the rapid car."

For some years the young colony was in serious danger of starvation, owing to the non-arrival of supplies from England. Very few of the convicts happened to be farmers, and consequently their efforts at cultivation were not crowned with success, while the difficulty of penetrating the brush delayed the discovery of the splendid farming lands further in the interior. Most of the cattle which had been brought in the ships strayed away in 1788, and were supposed to have been killed and eaten by the natives, but they were found in 1795, when they had multiplied into a great herd, in the rich pastures along the Nepean River at a considerable distance from the coast. In Phillip's time the country a hundred miles from the coast was as little known as is the vast interior of the continent to-day; but he set a good example to later explorers, and, as the increasing population stimulates the demand for farming land, railways are being built into what was considered an uninhabitable wilderness, and irrigation is changing the face of nature.

It is a long step from Gov. Phillip's struggles to provide food for his people to Sir Henry Parke's despatch of October, 1889, in which he invites the Prime Minister of Victoria to join New South Wales in a scheme of Australian Federation. In a volume entitled 'United Australia,' the Government of New South Wales has collected the comments of the English press on the proposal. While the writers differ widely, the majority seem to regard this as the first step towards the "manifest destiny" of Australia—that is, a united government independent of the mother country in all but name. Not a few, however, still cling to the dream of Imperial Federation, and find in this proposal some encouragement of their hopes.

The Life of Carmen Sylva, Queen of Rumania. Translated from the German. By Baroness Deichmann. London: Kegan Paul, Trench, Trübner & Co. 1890.

THE literary talent of "Carmen Sylva," born the Princess Elizabeth of Wied in 1843, may fairly be reckoned a gift of inheritance. The family of Wied has been distinguished throughout this century by an intellectual and scientific strain. Prince Maximilian, the author of an extensive account of a journey in the United States, particularly among the Mandan and other Indian tribes, and the gatherer of the Prince Hermann of Wied collection now in this country, was her great-uncle. Her father, Prince Hermann, wrote some volumes of half-mystical, half-rationalistic philosophy on the nature of the soul, which sufficiently attest a real interest and concern in the higher phases of mental culture. The home in which the future Queen of Rumania grew up was thus one where literature was a tradition, and it possessed other advantages—a beautiful situation on the Rhine, the quiet solitude of the country, and the neighborhood of the villagers, with their sick and poor to be cared for by the benevolence of the castle. The narrative in this biography of the girlhood of the Princess is in certain ways the more attractive portion of the work. The child was brought up and educated under her mother's charge, instructed in the ancient and modern languages, and early developed a taste for original composition in prose and rhyme. She is described as having been passionate, reserved, and independent, and evidently led a life of much mental excitement; but she also learned early the lessons of sympathy and helpfulness to others, and formed the habit of conscientiousness which has made her life laborious and useful. The illness of her brother, Prince Otto, a year and a half her junior, who was born with a painful organic disorder, from which he suffered until his death in his seventeenth year, is a pathetic incident in the story; and between his mother's devotion and his own sweet and gentle nature, this experience must have counted for much in forming the character of so sensitive a person as Elizabeth. The glimpses of this domestic life, which are given in a few extracts from her father's and her own letters, afford the pleasantest impression of the members of the family and of the habits and character of their ordinary days. They lived usually at Neuwied and Monrepos, though from time to time they sojourned at Paris or other places for health or pleasure.

After the death of her brother Otto in 1862, Elizabeth was more especially taken charge of by the Grand Duchess Helen of Russia, a near relative, under whom in the following year she made acquaintance with the world of society at St. Petersburg, and with whom for five years she travelled, with intervals of returning home, in Russia, Austria, Italy, and in the usual resorts of fashion. Her father had died in 1864, when she was twenty-one, and now in 1868 she had shown no disposition to marry. With the sense of duty which characterized her, she wished to become a teacher. Her mother insisted that she should "follow a strict course of study and pass her examination as a teacher before her plan could be practically carried out." She meant to found a school, and apparently no discouragement other than this requirement had been put in her way. While these schemes occupied her mind, Prince Charles of Rumania asked her hand. She was intimately acquainted with his sisters, and the two families were old friends, but there is great naïveté in her sudden answer to her mother, who made the unexpected announcement and asked her if she did not wish time to consider. "No," she said, "he had better come at once; I know I shall love him much." It is to be said that she had had some hours' conversation with him that day during what she supposed was a chance encounter at Cologne. They were immediately married and went to Rumania.

Her life in Rumania is a story of benevolent and literary activity. A good deal of court ceremonial glitters in the pages, but this belongs mainly to great occasions, her welcome, the coronation of the two as King and Queen in 1877, the rejoicings over the return of the

army, and similar festivities. She led a working life, except for the illness which from time to time interrupted her labors. She threw herself with enthusiasm into her new sphere, learned the language with her usual facility in that sort of acquirement, and set to work founding societies, especially to help the poor and to encourage women's handicrafts. She took an orphanage already founded under her special protection, started schools of embroidery, associations to give rough sewing for poor women, which have proved very successful, and to encourage all branches of native industry, particularly weaving, a home for nursing sisters, soup-kitchens, and many other similar enterprises. She won the hearts of the people especially by her efforts to care for the wounded in the war, by providing hospitals, and constantly attended at the side of the sick soldiers. She followed these pursuits with more energy after the death of her only child, a daughter, in her fourth year, which was her most serious sorrow.

With all this she continued to cultivate her literary gifts, which latterly brought her fame as "Carmen Sylva." She always had the habit of writing verses, but it did not become a serious pursuit until after her mature life began and her faculties had been stimulated by studies in Rumanian literature, and encouraged by the intellectual and literary society which gathered about her at Bucharest and at Sinaia, her country retreat. Her works consist of original and translated verse in German, novels written partly in collaboration with another, a little collection of 'Pensées' in French, and some few poems in the latter language. The quantity of her production has been remarkable in view of the other occupations of her life. The routine of her day is described in a passage too long for quotation. She "rises at five" and works until eight, and only three hours are reserved for herself. Receptions began at ten and often lasted until seven, since she lived with open doors to any who wished to see her. Sometimes there was reading and often, apparently, work, as she "likes to be surrounded by many workers." To her husband she was always unoccupied: "he must never notice," she says, "that I am at work. When he calls or I hear his footsteps, pen and paint-brush are thrown away till he does not want me any more. . . . I think that I am first a wife, then the mother of my country, and then a poetess." This was at Bucharest in 1884. The same impression of constant employment and blending of duties with intellectual pleasures pervades the volume. Many pretty scenes could be chosen to give a taste of the variety and frequent picturesqueness of this life, but none more characteristic than the following little description of her visit to the Church of Curtea de Arges, for which she had illuminated a Book of the Twelve Gospels of the Passion, in memory of her child:

"When I went to fetch my Book of the Gospels I found the church full of the common people. The Bishop carried it out and placed himself before the door of the church with it. I turned over the pages for the people, who kissed my shoulders, arms, and hands, and, crossing themselves, blessed me and kissed the book. Women, children, and soldiers all crowded around us in the wonderful church-door. Add to this the sunset, which tinted the distant mountains violet and pink, the nearer hills golden."

The German purity of the opening chapters blends with the Rumanian color at the end, and there is, throughout, the charm of a high ideal of aristocratic life in the best sense. Passages of her poetry, which are most intimately expressive of her emotions in the different places and under the different trials of her life, add a certain natural and affecting element; and the whole story is presented with that effect, experienced in the biographies of poets below the first, which leads men to say of them that the true poem is the life.

Things Japanese: being notes on various subjects connected with Japan, by Basil Hall Chamberlain. London: Kegan Paul, Trench & Co.

THE value of a work like this, which is an encyclopædia of old and new Japan, depends upon the reputation of the compiler as an authority upon the subjects of which he treats. In this case the qualifications of the author—we may say, rather than compiler—are ample. Prof. Chamberlain is a kinsman (grand-nephew, we believe) of Capt. Basil Hall, who interested Englishmen, and Americans even more, by his writings on far Oriental travel and on American life and customs. Mr. Chamberlain spent most of his youth and early manhood in southern Europe, and soon learned how languages were made, dissected, and mastered. Coming to Japan, after Satow, Aston, and Hepburn had constructed the linguistic apparatus so time-saving to Europeans, Mr. Chamberlain became so thorough a master of Japanese that the native authorities of the University appointed him professor of Japanese and philology. Besides his various linguistic handbooks in both languages, he has shown his literary taste and capacity in his translation of the Kojiki, or oldest scriptures of Japan, his 'Classical Poetry of the Japanese,' and his comparison of the Aino and Japanese geographical nomenclature. His critical powers are of a high order, and he spares with his wit neither the ultra-sentimental admirer of things Japanese, nor the natives who wish to abolish their past by edict. He shows that "all the causes which produced the Old Japan of our dreams have vanished." It was "like an oyster, the opening of which killed it." "Feudalism is gone, isolation has gone, beliefs have been shattered, new idols have been set up, new and pressing needs have arisen. In the place of chivalry there is industrialism, in the place of a small coterie of aristocratic native connoisseurs there is a huge and hugely ignorant foreign public to satisfy. All the causes have changed, and yet it is expected that the effects will remain as heretofore."

Reckoning with the fact that Old Japan is dead, and considering that the only decent thing to do with the corpse is to bury it, Prof. Chamberlain sends forth his little book as an epitaph recording the many and extraordinary virtues of the deceased—his virtues, but also his frailties. For, quite contrary to the usual epitaphist, the author shows where the sinner as well as the saint is buried. With kindness and criticism that make true appreciation, he calls things by their right names and speaks his mind freely. He shows that in their language and literature the Japanese are without the spark of genius; that their intellectual debt to China is enormous; that even in their poetry, of which they are so proud, there is little thought that can be transferred to a foreign language and bear comparison with the world's best literature. Yet wherever there is an art, a custom, an idea, a product beautiful or worth perpetuating, the author points out its merits and pleads for its life. As yet, "the Japanese have no appreciation of our literature. They esteem us whimsical for attaching so much importance as we do to poetry, to music, to religion, to speculative disquisitions. Our material greatness has completely dazzled them, as well it might." Our wonder-world of irresistible genii and magicians in the arts and instruments of war and peace is as marvellous to the Japanese as Old Japan can ever be to us.

Beginning with a preface in which thirteen collaborators are named, a colored map, and a capital introductory chapter, the author gives us nearly four hundred pages of choicest information on the very subjects about which intelligent persons in or out of Japan desire to have knowledge. Almost all of the articles have been written by Prof. Chamberlain himself, and the smoothness and compact fulness of the text reveal to the student in the same field that repeated interviews, questions, and examinations must in divers instances have been necessary before the shapely sentences were wrought. With most of the articles are given lists of books recommended, or papers in periodicals which treat further of the themes. In addition to these bibliographical notes *passim*, there is an article of seven pages of books on Japan, in which Dr. Rein's are very properly put first, a certain American work second, and Hildreth's (though written in the Boston Athenæum Library nearly thirty-two years ago), is fifth on the list. As to the history of Japan, this student and searcher of native script and tradition and of all foreign writing can find nothing to recommend. Even the Germans, Kaempfer, Siebold, and Rein, he criticises for lack of critical faculty, and believes, what all students are coming slowly to believe, that all Japanese history must be reconstructed. The line of Mikados, "unbroken from ages eternal," may then be thankful if they can find standing-room for any known ancestors prior to the third century of our era.

We have only to name titles to show the value and comprehensiveness of the work. By a rough count we find about one hundred and forty articles, but by the cross-references of the excellent index we discover nearly eight hundred allusions or side lights upon these themes. The subjects most fully treated are Ainos, amusements, architecture, art, Buddhism, climate, demoniacal possession (by fox, badger, etc.), dress, education, esotericism, flowers, geography, history and mythology, interviewing Japanese people, lacquer, language, law, literature, marriage, missions, mourning, music, names, newspapers, poetry, porcelain and pottery (twenty pages), printing, proverbs, race, Shinto, tea, theatre, time, Tokyo, trade, woman, writing, zoölogy. In general the topics relating to Old Japan have the briefer treatment, while those which embrace both the new and old are set forth at greater length. The defects of the book are seen in the line of American contact with Japan. While to Perry are given two pages—with genuine British interpretation and comment—Townsend Harris is not mentioned, even in the index. In the chapters on railways and telegraphs, not a hint is given of the object-lesson on telegraphy and railroading given by Perry at Yokohoma in 1854, nor of the American railway equipment in Yezo.

The book is well printed, and the proof-reading has been so well done that slips of the pen and printer's errors are extremely rare. The work forms a welcome addition to the list of the author's fruits of scholarship which have already appeared in both English and Japanese.

BOOKS OF THE WEEK.

HENRY HOLT & CO., Publishers, New York.

DESCRIPTIVE LIST
OF
NOVELS AND TALES
DEALING WITH
American Country Life.

The object of this list (consisting of extracts from the *Atlantic, Critic, Nation*, and other critical journals) is to direct readers, such as would enjoy the kind of books here described, to a number of novels which, in many cases, have been forgotten within a year or two after publication. It is hoped that the publication of this and similar lists will lessen in some measure the disposition to read an inferior NEW book, when superior OLD books, equally fresh to most readers, are at hand.

Respecting the list, Mr. W. D. HOWELLS writes to the compiler thus:

"I am delighted with the notion of your list of Novels about Country Life in America, and I think you have most charmingly realized it. The book will be useful to every book-lover and critic and librarian. Now that it satisfies it, I know that I have always felt the need of just such a list."

52 double-column pages. Price, 50 cents (32 specimen pages, 10 cents). Address

W. M. GRISWOLD,
Cambridge, Mass.

"The Nation."
1865-1890.

In commemoration of the 25th anniversary of this journal, Mr. Kruell has engraved on wood, in the highest style of the art, after a recent photograph by G. C. Cox, a portrait of the founder and present editor of the *Nation*,

EDWIN LAWRENCE GODKIN.

The size of the block is 9x6 inches; the impression is on Japan paper, under the personal supervision of the artist, and is loosely mounted. *Only one hundred proofs* will be offered for sale, and each will be signed and numbered. Price, Ten Dollars, carriage prepaid. Address GUSTAV KRUELL, East Orange, N. J.

*** Mr. Kruell offers at the same price, and in the same style, proof portraits of CHARLES DARWIN (one in his prime, one in old age), ASA GRAY, WILLIAM LLOYD GARRISON, and WENDELL PHILLIPS. The edition in these cases is limited to 200 copies for all except Gray (100).

"*Certainly we may look in vain among other graphic arts for anything comparable with these portraits.*"—The Nation, January 23, 1890.

D. C. HEATH & CO. have published during the past year sixteen books for school use in French and fifteen in German. A half dozen others in each department are in press or in active preparation. Before deciding upon texts for the coming term, you should send for our Modern Language Catalogue, and write us for any texts that you wish for examination.

LEACH, SHEWELL & SANBORN,
NEW YORK, BOSTON, CHICAGO.

A Theological Curiosity.

Familiar to our Forefathers 1,500 years ago, but not now known to one man in 50,000.

The Apocryphal Books, being the Gospels and the Epistles thrown out of the New Testament by the Council of Nice, A.D. 325; translated from the original tongues with copious Notes, and Illustrations from ancient Missals and Miniatures.

Of this work, Dr. TALMAGE has recently said:

"*Christ is the joyous boy of the fields. We are not permitted to think that the shadows of Calvary darkened His pathway as a youth, and the Apocryphal Books of the New Testament show much of the early life of Christ not to be found in the four Evangelists.*"

Price, in large 8vo, cloth, $2.00. Sold only by subscription. Agents wanted in every county. Send for circulars.
GEBBIE & CO., Publishers, Philadelphia.

A FEW MORE OF THE

NOTEWORTHY TEXT-BOOKS

RECENTLY PUBLISHED BY

GINN & COMPANY.

The Annals of Tacitus, Books I–VI. Edited by the late William F. Allen, Professor in the University of Wisconsin. *Text and Note Edition*, 12mo, cloth, xlii+444 pp. Illustrated, $1.50. *Text Edition*, 12mo, paper, ii+238 pp. Price separate, 40 cents.

This follows the Satires and Epistles of Horace (Greenough) and the Brutus of Cicero (Kellogg) in the College series of Latin Authors.

"Certainly one of the very best and most serviceable editions of a classic author that I have ever seen."—*Professor Samuel Hart, Trinity College.*

A New System of Written Ac-CENTUATION, prescribed by the Royal Academy of Spain. By Lieutenant HENRY R. LEMLY, U. S. A. 12mo, paper, 15 pp., 10 cents.

The character of this little work and its value are sufficiently indicated by the title.

Reference Handbook of English HISTORY for Readers, Students, and Teachers. By E. H. GURNEY. 12mo, cloth, 114 pp., 75 cents.

Intended as a constant companion and assistant to the reader and student, affording him a rapid and easy method of placing his persons and dates before him in accurate relationship to each other.

"It will be found invaluable to those for whom it was originally and principally intended."—*Baltimore American.*

Elements of Structural and Sys-TEMATIC BOTANY. For High Schools and Elementary College Courses. By Douglas H. Campbell, Ph.D., Professor of Botany in the Indiana University. 12mo, cloth, x + 253pp. Fully illustrated. $1.12.

The special distinction of this Botany is that it begins at the beginning, that is, with the simplest forms. It is also believed to embody better than any other text-book the conclusions of the most recent and reliable investigators.

"It is the only work in English at all satisfactory for high school students."—*Charles W. Dodge, Teacher of Botany and Biology, High School, Detroit, Mich.*

Plant Organization. A Review of the Structure and Morphology of Plants by the Written Method. By R. HALSTED WARD, F.R.M.S., Professor of Botany in the Rensselaer Polytechnic Institute. Second Edition, revised. Small quarto, flexible boards, i–136 pp.+32 blank pages. Illustrated. 75 cents.

The plan is designed to encourage close observation, exact knowledge, and precise statement. The author believes it better to make a careful study of a few plants than a loose, incomplete survey of many. The use of the technical terms of Botany is made optional.

"Dr. Ward's plan for the study of plant organization is the best we have seen."—*N. C. Schaeffer, Principal of Keystone State Normal School, Pa.*

The Best Elizabethan Plays. Edited, with notes, by William R. Thayer. 12mo, cloth, ii+611 pp., $1.25.

This volume includes *The Jew of Malta*, by Marlowe; *The Alchemist*, by Ben Jonson; *Philaster*, by Beaumont and Fletcher; *The Two Noble Kinsmen*, by Fletcher and Shakespeare; and *The Duchess of Malfi*, by Webster. These plays are specially worthy of study, both on account of their own merits and as a help to the understanding and proper criticism of Shakespeare.

"The idea of the book is in every way commendable and the execution praiseworthy."—*I. N. Demmon, Professor of English Literature, University of Michigan.*

The Elements of Astronomy. A Text-book for use in High Schools and Academies. By Charles A. Young, Ph.D., Professor of Astronomy in the College of New Jersey, and author of "A General Astronomy." 12mo, half leather, x+472 pp. Fully illustrated. $1.40.

A book carefully adapted for the grades it aims to supply, by one of the most eminent scholars, most popular lecturers, and most successful teachers in the department of Astronomy. Its success in the classroom has been equal to its intrinsic merits as a scientific work.

"It is an ideal text-book."—*Prof. W. C. Peckham, Adelphi Academy, Brooklyn, N. Y.*

Young's Uranography. Bound with "The Elements of Astronomy," and also separately. 12mo, flexible leatherette covers, 42 pp., besides 4 double-page star maps, 30 cents.

This gives a brief description of the constellations visible in the United States, with star maps and lists of objects observable with a small telescope.

Elementary Mathematical Tables By ALEXANDER MACFARLANE, D.Sc., Professor of Physics in the University of Texas. 8vo, cloth, iv+106 pp., 75 cents.

These tables have been found to possess substantial advantages in point of arrangement, for example, over any previously published, and are recommended for the use of all who have occasion to use tables in practical work.

"A useful collection of tables, admirably arranged for convenience in use, and presented in very attractive typography."—*Prof. Dascom Greene, Rensselaer Polytechnic Institute.*

Copies sent to teachers, post-paid, on receipt of the introduction prices given above. Correspondence is invited.

GINN & COMPANY, Publishers.

Boston, New York, Chicago, and London.

"A volume which sheds a flood of light on the early history of Christianity."

The Story of the Jews Under ROMAN RULE. By the Rev. W. DOUGLAS MORRISON. Being the 29th volume in the "STORY OF THE NATIONS" Series. Large 12mo, with maps and 60 illustrations. Cloth extra, $1.50.

"This is the only English book which deals with this special subject, and it is therefore peculiarly fortunate that the author should have shown himself so thoroughly qualified for his task."—*N. Y. Sun.*

"The rich stores of accumulated knowledge have been carefully digested, and the results embodied in the narrative shed a flood of light on the times. From either the historical or the doctrinal point of view it must be conceded that this volume is an indispensable aid to the history of the period, and it will prove a valuable adjunct to Biblical instruction."—*Phila. Ledger.*

"It is a comparatively rare thing to meet with a book of so much general interest and yet at the same time containing so great an amount of genuine scholarship. . . . A living, breathing narrative, thoroughly interesting as well in the directly historical portions as in the descriptions of Jewish traditions, laws, and beliefs. . . . A delightful combination of instruction and interest."—*Manchester Examiner.*

"Presented with singular lucidity and with an admirable combination of brevity in style with completeness of matter. A worthy addition to an admirable series."—*Scotsman.*

In the Time of the Cherry View-ING. An Episode in Japan. By MARGARET PEALE. 16mo, paper, 25 cents.

"The story is told with striking truth to the far-Oriental background and environment."—*Nation.*

"The story is brisk, bright, and charmingly conceived. . . . Just the thing for a railway ride or an evening hour of refreshment."—*Critic.*

"A more charming and amusing piece of literary work has not lately appeared. . . . It is a book full of delicate wit and satire, graceful, original, modest, and altogether charming."—*New York Sun.*

"The story is unquestionably clever and amusing."—*Chicago Journal.*

"A charming little sketch, which would be quite idyllic did it not show traces of dealing with actual experiences. . . . It will prove that a journal of a journey in a far-away land may be written so as to be entertaining to those who read it."—*Boston Times.*

J. WOODBRIDGE DAVIS, Ph.D., Principal.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 11, 1890.

The Week.

THE result of the election in Maine on Monday is a great personal victory for Speaker Reed. Indeed, it is not too much to say that it is one of the greatest personal victories ever achieved by a politician in our history. Although the Republicans have only lost the Portland district once since the election of Abraham Lincoln, it has always been close. The highest majority which Mr. Reed has ever received since he was first made the Republican candidate was in the last Presidential year, when he had 2,433 more votes than his Democratic opponent, and this opponent was a rather weak candidate. On Monday he led the Democratic nominee by about 4,500 votes—almost twice his majority of two years ago. It was to be expected that he would be reëlected, as he has never been beaten when he ran before. It was also reasonable to expect that the local pride which a district always feels in seeing its Representative become a great partisan leader, would give the Speaker a good majority this year, especially when his own personal appeal for a vote of confidence was reinforced by earnest appeals from several other leading Republican Congressmen who took the stump in his behalf. Moreover, the Republicans had all the advantages of a good organization and plenty of money, while the Democratic campaign seems to have been left to run itself. Good judges have therefore anticipated a considerable majority for Mr. Reed, but neither friend nor foe expected so overwhelming a victory. It would be ridiculous to depreciate its importance or significance.

Through the remainder of this Congress Mr. Reed will absolutely control the action of the House. He will dictate the final form which the Tariff Bill shall take in the Conference Committee. If the Republicans elect the next House, he will be made Speaker without any opposition. If the Democrats secure a majority next November, he will be the leader of the minority on the floor. In either case he will be a candidate for the Presidency. Already the signs of his "boom" are visible in the work of a "literary bureau" which has begun sending out by the thousand a newspaper supplement of four pages containing a mass of matter eulogizing the Speaker, several copies of which have been received at this office from different parts of the country. The opponents of high tariffs and force bills and all the other materialistic and centralizing tendencies of the time in the Republican organization have no reason to be dissatisfied with the elevation of Mr. Reed to the leadership of his party. He represents that party as it exists to-day better than any other man, and it is always to be desired in a representative government that the head of a party should be its real leader. He typifies the Republican party of 1890, and furnishes the best possible test for passing national judgment upon that party. If the people of the United States, upon sober reflection, endorse that party, they will make him again Speaker of the House next year, and they should elect him President in 1892. It is needless to say that we do not anticipate any such result.

The most interesting feature of Mr. Reed's speech at Portland on Thursday evening was his slap at Mr. Blaine in return for the latter's recent snub of him. It will be remembered that in his Waterville speech Mr. Blaine did not so much as once mention the Speaker of the House, the great figure on the Republican side in the Maine canvass. At Portland Mr. Reed had his innings. "Since 1874," he said in his defence of the Force Bill, "*when the Republican party first faltered in its great duty* of preserving liberty and equality before the law for all citizens of the United States, a Republican House of Representatives has been rare." This is an allusion to the Force Bill which was pushed by Mr. Lodge's exemplar, Gen. Butler, in the session of 1874-75, and defeated through the opposition of Republicans. It is true that among these Republican opponents were also James A. Garfield, Joseph R. Hawley, and many other prominent men; but all their efforts would have been in vain had they not been supported by James G. Blaine, who as Speaker permitted and encouraged the filibustering tactics which killed the bill. Speaker Reed might as well have said, in so many words, "since 1874, when, under Mr. Blaine's leadership, the Republican party first faltered in its great duty."

The official returns of the Kentucky election last month come to hand just as the country is digesting the result of the Vermont election on Tuesday week, and they are equally significant of the drift of the tide in politics. Vermont is always carried by the Republicans, but their majority at the recent election was the smallest ever known, even in an off year. Kentucky is always carried by the Democrats, but their majority at the recent election was the largest ever known in an off year. The total Democratic vote was 161,712, which was never before exceeded except in Cleveland's record of 183,800 in 1888, while the Republican ticket received only 107,005, against 155,184 for Harrison two years ago. The Democratic majority in Kentucky has thus almost doubled, as compared with the last Presidential election, while the Republican majority in Vermont is cut down one-half, as compared with the same year.

It is amusing to read the comments of Republican organs upon the result in Vermont. Says the Boston *Journal:* "There were no general issues at stake, and in consequence the vote was a very light one. The apparent decrease, therefore, in the Republican majority has no political significance." In like manner the Philadelphia *Press* says: "There was no great national issue at stake which called upon the party to make a record in the election. There was nothing to arouse the voters to a sense of their duty when the result of the poll was only a question of the size of the majority." But what "general issues," as the *Journal* calls them, or "great national issue," as the *Press* puts it, were at stake in 1886, the last previous election in a non-Presidential year, or in 1882, or in 1878, or in 1874, or in 1870? Was there in any one of those off years a single national issue to compare in importance with either the McKinley Tariff Bill or the Lodge Force Bill? Yet in 1870 the Republican plurality in Vermont was 21,309; in 1874, 20,325; in 1878, 20,065; in 1882, 21,373; and in 1886, 20,522; while in 1890 it has sunk to only 14,000. In every one of these previous elections, when the issues at stake were far less important, Republican organs asserted that the large Republican majority was full of significance, and it is absurd to say now that it does not mean anything when the majority is unprecedentedly small. The truth is, as the Burlington *Free Press* lately remarked, that "the Republicans of the country at large have got into the habit of looking to the Vermont election as a significant indicator of the strength of parties and set of the political current among intelligent and thinking men throughout the Union"; and, having formed this habit, there is no reason in the world for not deeming the recent election as significant as any of its predecessors.

We have read with care the reports of the recent election in Arkansas published in the *State Register*, the Republican organ at Little Rock, on the following day, and we must say that they furnish no fair basis for the claim so industriously made by Republican organs at the North that the Democrats won by force and fraud. Despatches from a number of counties were printed, and most of them were of this tenor: "The election passed off quietly"; "the election here was peaceable"; "the election in this county passed off quietly"; "the election here passed off quietly"; "the election was the most quiet and peaceable we ever had." The only exceptions to this sort of reports are in the Third Ward of Little Rock, where the Republicans claim to have been cheated out of hundreds of votes; in Conway County, where the *Register's* correspondent says, "we have no hopes of a fair count"; and in Ouachita County, where a band of armed men warned the negroes in one township against trying to vote the Republican ticket, and drove from the polls some who disregarded the warning. On the other hand, we find in Democratic papers reports from

various counties that the Democrats gained largely, both among the negroes (members of that race having been nominated upon their local tickets in a number of cases) and among the white Republicans, one despatch mentioning as "a notable fact that some of the most conservative white Republicans have left their party on account of the pending Force Bill, and say that as long as that and similar enactments are held over the South they will stay out." On the whole, we can see no reason for any candid man to doubt that the Democrats carried Arkansas fairly by a large majority. Any other result would, indeed, have been most extraordinary. When the Republican majority even in Vermont is cut down one-half since the last election, it is inconceivable that Arkansas should show Republican gains

---

The intensely bitter attack which a Republican Congressman, Mr. Kennedy of Ohio, made upon Senator Quay on the floor of the House last week is the latest revelation to the country of the volcanic internal condition of the Republican party. Mr. Kennedy spoke from manuscript, and the circumstances attending the delivery of the speech all point strongly to the suspicion that he made his attack with the knowledge and approval of the Speaker, and of Mr. Burroughs, whom the Speaker had left to fill his place in the chair. The *Tribune's* Washington correspondent gives indirect sanction to this view by saying: "Whatever criticism may be passed upon Mr. Kennedy on the score of taste, or the lack of it, in choosing the present moment —after the Republican majority in the Senate has made pledges to proceed in December next to the consideration of the Elections Bill, and to dispose of it one way or other—in order to arraign Mr. Quay for the part he took in the disposal of that matter, there is no denying the fact that he represents a large, almost an overwhelming, majority of Republicans in the House in their judgment of Mr. Quay's course with reference to it." But Mr. Kennedy did not sit in judgment upon Mr. Quay's course towards the Elections Bill, but upon his record as a public thief. Does the *Tribune* mean to say that an "overwhelming majority of the Republicans of the House" are so enraged with Quay for defeating the Force Bill that they agree with Mr. Kennedy when he denounces Quay as a "branded criminal," whose "silence is a confession of guilt," and who stands "a convicted criminal before the bar of public opinion under such circumstances that he should be driven from the head of a party whose very life his presence imperils"?

The more mature feeling of the Republicans at Washington about Mr. Kennedy's attack on Quay is, according to the *Tribune's* correspondent, "one of hot and almost universal indignation, as well as profound regret." There has accordingly been "a long and earnest consultation" about it among the Pennsylvanians, who are "especially indignant." What does the reader suppose they have determined to do about it? Ask Kennedy to retract? Show him that his charges were false? Get Quay to bring suits against his slanderers? Get Senator Cameron and Wayne MacVeagh to clear him? Not by any means. What this "hot indignation" and "long and earnest consultation" have produced is "the draft of a resolution to expunge the speech from the *Record*." But expunging the speech from the *Record* does not recall the speech. It does not take out of the memory of the public the fact that a member of Congress in good standing, and a stanch Republican, is convinced that Quay is a man of very bad character, and so thoroughly convinced of it that he could not help giving public utterance to his belief. Therein lies the trouble of the occasion. The Pennsylvanians can expunge from the *Record* as much as they please, but they cannot pluck the rooted sorrow from Quay's brain. They cannot raise him in the estimation of a single human being who now considers him a scoundrel. They cannot undo his robbery of the State Treasury. They cannot make his past life clean or respectable. They cannot wipe out the disgrace to the State of ever having had such a sorry scamp as a political leader, and, fouler still, of having sent him to the United States Senate. They cannot give back to Don Cameron the money he advanced to save him from ruin or suicide. They cannot enable Wanamaker to get up and tell his Sunday-school that he paid over the campaign funds in 1888 to a man whom he knew to be honorable, just, and true in all his dealings. No, indignant Pennsylvanians, none of these comforts are within your reach. You can forgive or shelter your man, but you cannot rehabilitate him. You can doctor the *Record*, but you cannot doctor the culprit.

We observe that the *Tribune* continues to refrain from giving any opinion as to the fitness of Mr. Delamater for the Governorship of Pennsylvania, and from advising the Republicans of the State as to their obligation to support such a candidate after he has been forced upon the party by a man like Quay, and put upon a platform which would make his election an approval by the party of Quay's methods in public office and politics. These are matters which are seriously disturbing the minds of many loyal Republicans in Pennsylvania, as will be seen by any one who will read the address which eminent members of the party have just put forth in Philadelphia. Many of the men who have signed this document are not Mugwumps, but, as they take pains to say in its opening paragraph, "have been, since the birth of the party, earnest Republicans who have given its policy and plans their constant approval and support." Why they are unable to do so now they state as follows:

"No more serious, clear, or unavoidable issue than this could be presented to the people. Mr. Quay is the acknowledged, unblushing champion of political corruptionists. He is silent under a recent responsible and repeated charge of the embezzlement of public money; he selects Mr. Delamater as candidate for Governor, and a pliant convention ratifies his selection; the party platform endorses Mr. Quay, and Mr. Delamater stands on the party platform and on no other. The conclusion is irresistible that the election of Mr. Delamater will have as its main and most potent result the public approval of Mr. Quay, and his permanent intrenchment in the Republican party of the State as its acknowledged leader and counsellor, the representative of its principles and the exponent of its policy."

It is interesting to note that the Republican organ of Pennsylvania, the Philadelphia *Press*, does not call the signers of the address Mugwumps, but says they are "nearly all of high business or professional standing; and while all are novices in politics and totally misguided, the motives of some—however mistaken—are to them doubtless sincere enough." It goes on to say that these "novices in politics" have been misled into giving their countenance to an attack upon the protective tariff. "It will have no effect upon the leaders of this movement," says the *Press*, "to tell them they are aiding the destructive tariff policy of the Democratic party; that is what they want to do." Will it have any effect upon you, Mr. *Press*, to ask you what you were doing when you said in 1885 that Quay's nomination for State Treasurer "would take the lid from off the Treasury, and uncover secrets before which Republicans would stand dumb"? Were you "aiding the destructive tariff policy of the Democratic party" then, or what were you doing? Had the tariff any more to do with what you were saying then than it has with what these "novices in politics" are saying now? Would it not be much better for you if you were to stand dumb before the revelations which have come because the lid *has been* taken from the Treasury, than to talk what you and every one of your readers know to be nonsense?

The more Mr. Blaine and the *Tribune* discuss our commercial situation the more intricate, inscrutable, and, in fact, incomprehensible it becomes. The *Tribune* said on Friday that "in no year for the last quarter of a century have our exports in gold amounted to more than $64,000,000"; that is, exports from the United States to all parts of the world, we presume. Now, according to Mr. Blaine's recent showing, our losses in the trade with the West Indies, Central and South America, last year amounted to $143,000,000, which, as we understand him, we either paid in gold or have not paid at all. But suppose we did pay these $64,000,000, there still remains a balance of $79,000,000 unsettled. Now, it is quite certain that we got the goods which this amount represents: Mr. Blaine admits that the rascals unloaded them on us. If, therefore, we have not paid for them, is there not a balance of $79,000,000 in our favor—that is, have we not got $143,000,000 worth of produce for $64,000,000? It may be this calculation is not correct. The reciprocity plan, as Mr. Blaine and the *Tribune* set it forth, cannot be mastered at once by an ordinary intelligence, and it may be, therefore, that we have fallen into some error. If so, we shall be glad to be set right. The puzzle is increased by the fact that our total net exports of gold and silver in 1889 were only $68,346,042, totally

insufficient to settle our American balance. But besides this we had a balance of about $7,000,000 against us in Austria-Hungary, of about—we use round numbers—$12,000,000 in China, of about $20,000,000 in France, of about $20,000,000 in Germany, and of about $200,000,000 in Great Britain. How, in the name of Reciprocity and all the Protectionist gods, was all this settled? If not settled, how will it be settled? Has $259,000,000 of gold "left the country" in 1889? If it has, we shall never say a good word for gold again.

The Raum scandal has already become so intolerable that Republican newspapers are beginning to demand the removal of the Pension Commissioner. "With all the attempts made to gloss over Gen. Raum's administration of the Pension Office," says the Boston *Record*, "this much is clear: he is in the hands of the pension agents in Washington, and that is reason enough why we should have a new Commissioner, and not a soldier of fortune either. Raum went into it to enrich himself and take care of his relatives, while the only way to keep the Pension Bureau from scandal is to have an honest and stiff-backed man at the head of it." The demand for Gen. Raum's removal from the Pension Office in September, 1890, recalls the fact that it was in September, 1889, that Corporal Tanner was forced out of the same office, his letter to the President bearing date of the 12th of that month. At this rate there will be a chance for two more appointments and removals of commissioners like Tanner and Raum before the end of Mr. Harrison's term.

Mr. Andrew D. White read a paper before the Social Science Association at Saratoga on Thursday on the "Government of American Cities," in which he denounced very sensibly the theory that the city is a political body, to be governed as such, instead of a corporate body owning property to be managed as such. But he concluded that the last-named theory could not be acted on in this country. So he proposed "a compromise," in which there should be a Mayor and Common Council elected by the votes of all the citizens on a general ticket, to represent politics, and he would then have another body elected by property-owners to be called "the Board of Control," to represent property, and have a vote on all expenditures except those for education. As regards the first part of the plan we do not see how it would exclude politics from city administrations in the smallest degree; and as regards the second, Mr. White probably forgets that this very scheme, with this very name, was carefully propounded by Gov. Tilden's Commission in 1877 as a constitutional amendment, passed one Legislature, and was killed in the next by order of Mr. Conkling. There is much less chance of its passing now than then. Politics cannot be excluded from the administration of any American city under an elective system, except through what we may call a change of heart on the part of the intelligent classes of the community. In New York this class, under the name of Republicans, has encouraged in every possible way for over thirty years the notion that a city is a political body, and municipal elections political elections, and has actually subscribed money and paid lewd fellows of the baser sort for propagating this theory. Small blame to the poor ignorant foreigners for embracing the doctrine with eagerness, and rushing into the arms of Tammany. It is this state of mind we must change in order to have real and lasting municipal reform. We have in New York already as good a board of control as could be created, and we have more Common Council than we have any need of or than is good for us. What we want is a shame or sorrow among the well-to-do and intelligent over the condition of city affairs, and a strong determination that this great national disgrace shall cease from among us.

The probability of another famine, or, at all events, great scarcity and resulting suffering in Ireland, owing to the failure of the crops, is now acknowledged on all hands. The Tories themselves admit it, and admit that something must be done by the Government to make head against it. One of its first consequences will undoubtedly be a demand for a further reduction of the "judicial rents," and as this will probably be refused, there will be another crop of evictions and the now usual accompanying agitation and resistance and tumult both in England and Ireland. There is nothing new about this failure of crops and resulting inability to pay rent. It has been one of the usual episodes of Irish agricultural history for the last hundred and fifty years, owing in part to the uncertainty of the climate. Until Mr. Gladstone took the Irish question up, however, these things excited no attention in England, and [illegible] landlords had it all their own w[illegible] The fact is, however, that the soil of Ireland never has been able to maintain a landed gentry besides the actual cultivators of the soil, except by keeping the cultivators' standard of living down to the lowest point, and extracting the rent at the point of the bayonet. In other words, Irish farmers, taking one year with another, cannot pay an economical rent, and the English public is gradually having its eyes opened to this fact through the painful process of the home-rule agitation.

The outcome of the London dock strike has been and is very interesting. It drove the dock companies, most of which were on the verge of bankruptcy, into a compromise with the strikers, the main feature of which was a slight advance in wages, combined with regular instead of occasional employment. The system previously pursued had been to summon from the large crowd of "casuals" who hang round the gates, as many men as were needed for any particular job and pay them by the hour. For this was substituted regular wages paid to a certain number of men, whose condition was thereby undoubtedly improved, and the strike had probably the effect of improving the manners of the dock officials towards them. The result was treated as a great triumph in all labor circles, and Tom Mann, the agitator who managed the strike, became a personage of immense importance. The men employed by the companies were, however, naturally found much less manageable than they used to be, and the problem of keeping the shipping business in the port of London more difficult than ever. The dock companies cannot now guarantee to ship-owners the prompt loading or discharge of their cargoes, because Tom Mann may at any moment make some fresh exaction, or interpose some fresh objection to their way of doing business.

Some of the other consequences of the success of the strike are very instructive. The "casuals" were a heterogeneous mass of unskilled labor, composed partly of broken-down or characterless men who had lost their footing in regular callings, and partly of that drift, from the agricultural districts, of adventurers tired of farm and village life, over which all the lovers and admirers of the older England are now sending up such a loud lament. The dock companies dived into the crowd without discrimination, took the first comers, and, one way or another, diffused such wages as they had to offer through the whole body in the course of the year. Now, however, Tom Mann's men have announced their intention of closing their union—that is, limiting it to a certain number, and refusing admission to all new comers, who may, he says, if they cannot do anything else, go on the poor rates for subsistence, for all he cares.

The success of the London dockers' movement has done much to beget and diffuse all over the kingdom notions of the wildest character as to the possibilities of Socialistic legislation. The Trade-Union Conference held in Liverpool last week, undoubtedly under the influence of the dockers' strike, threw to the winds the old-fashioned conservatism and sober common sense which have hitherto distinguished English workmen from their brethren in France and Germany. The reforms there talked of would, in fact, involve a reorganization of society with "labor on top." Tom Mann, and John Burns the London Socialistic agitator, were the leading spirits of the gathering, and spouted more nonsense than we have ever heard from Powderly. Doubtless their threats will produce among many people in England the belief which the earlier deliverances of the Knights of Labor created here, that a great social revolution is imminent, in which the world will be ruled by Walking Delegates who hardly know how to read or write. Nothing of the kind is likely to happen. What will result from these great labor disturbances which we are witnessing all over the world, until the reaction comes, is simply a great increase of timidity among capitalists, much shifting of capital from one country to another, a considerable reduction in the average of profits, and a great aggravation of that difficulty of finding secure investments which already fills the lives of parents, trustees, and small annuitants with so much anxiety.

THE BLAINE EXPLOSION.

THERE is no doubt that Mr. Blaine's plan of "reciprocity" is rapidly taking hold of the minds of Republican voters, and has already borne fruit in the Aldrich amendment, which is simply a monstrous and unconstitutional way of putting it into execution, inasmuch as it proposes to commit the imposing and removing of taxes to the President alone. The reason why this monstrous and unconstitutional expedient has to be resorted to in order to get over the difficulties which lie in the way of securing reciprocity by treaty, is to be found in the extraordinary kind of instruction as to the nature of foreign trade which the Republican leaders have been supplying to the masses during the last twenty-five years. The protectionist gospel preached during that period has been indeed as wonderful a mass of absurdities as can be found in the history of the human mind. That the explosion of these absurdities should at last have begun, no matter from what quarter the impulse may come, must be a source of rejoicing to every lover of his kind or of his country.

Foremost among them was the doctrine, which Mr. Blaine actually preached so late as 1888, that foreign trade was a pernicious thing for the United States, even if it were attainable, and that Mr. Cleveland did wrong in suggesting it as a relief for some of our present financial troubles. But this doctrine, queer as it is to preach in a country whose sails in the first half of the century swarmed on every sea, was the natural sequence of the doctrine that foreign trade was a thing which individuals would or could carry on year after year at a loss unless the Government interfered to stop their folly. The success with which this ridiculous notion was spread through the country was due to two things—the complete absorption of Eastern capital and capitalists since the war in railroads and protected manufactures, and the growth in the West of an immense population which had no experience of foreign trade and knew nothing about "abroad," and which was absorbed in domestic trade and agriculture. If the farmer had been also the direct exporter of his produce to the European markets, the true nature of the situation would doubtless long ago have dawned on him. But he sells to middlemen, who find the foreign market for his goods.

As matters have stood, nobody of much popular weight and influence has had a direct interest in exploding the delusion that men, if let alone, would trade with foreigners in such a way as to ruin their own country, and that foreigners could come here and unload great quantities of goods on us against our will, for which they would take pay only in gold, and go off leaving us without a dollar of that metal in our pockets. Mr. Blaine's story the other day, about the loss of $143,000,000 in our West Indian and South and Central American trade in 1889, could only have been told to a nation which had for a quarter of a century sat in economical darkness, and which had completely lost familiarity with the machinery of foreign commerce. Of course, all the houses engaged in this trade in our great seaports saw the absurdity of it perfectly, and have been laughing in their sleeves over it for the last fortnight, as a droll illustration of the American politician's demagogy; but they are not in politics. They are in business, and they know they are a class whom the people have been taught to despise and hate as in some mysterious way enemies of the country. So they keep very still, and let the politicians' tongues wag. The other class which could expose this curious folly is the college professors, but the high-tariff men have managed, with great dexterity, to discredit them also since the war, as unpractical and visionary and theoretical, and as too ignorant of the art of making money to be worth attention. The newspapers have been easily quieted, by being either "owned" or "muzzled;" so the preachers of absurdity have had free course.

That the first rays of light should come from Mr. Blaine, as one of these preachers, and that the Home-Market Club of Boston should be willing to flash them around New England, is surely a most encouraging event. For this "reciprocity" plan, whatever its crudeness, has the great merit of teaching the voters, by the discussion it creates, that foreign trade is not necessarily an unprofitable or pernicious thing; that it consists in barter; that the foreigner who sells us goods does not insist on being paid in gold, and could not get the gold if he tried; that it is a wise thing to exchange with foreigners things in the production of which we have an advantage, for things in the production of which they have an advantage; that men are not such idiots as to pursue steadily a losing business unless they are restrained and directed by a tariff; and that imports, whatever they are, must always be paid for in American labor, and constitute, *per se*, an effectual demand for American labor.

That all this should be acknowledged even in the columns of the *Tribune*, is surely "the Lord's doing and it is marvellous in our eyes." That the friends of "reciprocity" should be sensitive about having this spoken of as "free trade" is natural enough, considering the way they have been talking about free trade and free-traders for the last twenty years. They have, as part of the policy of protection, invented and spread a lot of myths about the character and designs of free-traders, and about the nature of their doctrines, which were better fitted for use among Russian muzhiks than among the citizens of a free democracy. These myths have been a disgrace to American intelligence, and have for a long time made Americans hang their heads for shame when they found themselves in the society of educated men from other countries. If reciprocity puts a stop to them, it will do much for the credit both of the American press and platform.

POWDERLY'S GREAT CONSPIRACY.

MR. POWDERLY has furnished a complete vindication of the New York Central Railway for its course in the recent strike, by putting in evidence before the State Board of Arbitration copies of a remarkable correspondence between himself and Lee, the Knight who was the local leader of the strike. Why he should have revealed this correspondence is a mystery, for it convicts both himself and Lee of conspiring secretly to organize the employees of the Central Railway Company against the management, in order to make it possible to "tie up" not merely that road, but all other railways in the country, either in 1892, the Presidential election year, or in 1893, the year of the proposed World's Fair. Incidentally, Powderly's letters reveal a condition of affairs on the Reading Road previous to the last strike there which vindicates that company also for the course it took to crush out the "noble and holy order" from among its employees. In fact, the correspondence shows Powderly to be a pernicious meddler in the affairs of railway companies, devoting all his energies to encouraging the men to be false to their employers, and consequently unworthy of trust and unfit for employment in any position of responsibility.

The first letter in the published correspondence is dated at Scranton on February 3 last. It was addressed to Lee, and shows in every line that he was at that time engaged in organizing the Central's employees for a strike—six months before it was ordered. Powderly advises Lee "to go cautiously, feel your way carefully, and secure yourselves in your footholds firmly before stepping into unknown depths in order to secure more advantages." "Remember," he says, "that you are coping with one of the greatest corporations in America, and that can bring to its aid in a struggle millions of dollars where organized labor cannot bring as many cents." As an evidence of the folly of striking at an inopportune time, he gives this most instructive glimpse of the power of the Knights on the Reading Road previous to the strike there a few years ago:

> "The men on the Reading Railroad actually controlled the entire management, and had everything their own way. They grew restive, and allowed incendiary counsels to prevail. *It was no uncommon thing for them to stop a train on the main track and talk to an up-train in order to settle some little matter.* That sort of thing could not last, and when they finally struck it was at the wrong time for the men, and just the time to suit the company."

That is the ideal condition of a railway from the Powderly point of view—the men "controlling the entire management and having everything their own way," and stopping trains on the main track whenever they wish to "settle some little matter." This was the model he was holding up for Lee to attain on the Central. Lee replies that he will do his best, saying under date of February 10: "We will associate our efforts to the end that none but our coolest and wisest members shall be selected to carry out the work of our district organization, *men who will always work for the best interest of the order, and endeavor to hold the respect of the officers of the railroad company.*" Lee photographs his character perfectly in that passage. He stands revealed as a man who was working secretly

against the interests of his employers, yet endeavoring at the same time to retain their confidence. Powderly thoroughly approves of this kind of service, for in a letter to Lee, dated April 17, he says:

"This is your plan: Go on with the work of organization, do it as quietly as possible, work hereafter under secret orders, and divulge nothing to the outside world as to movements or work done. Put organizers to work on the West Shore Road and all along the entire Vanderbilt system. When you can induce a young man to quit the service of the company, do so. Have as many as think of going elsewhere this spring do so in a body, if they can be relied on to do it that way. Have them give as a reason, if asked, that they are offered better wages and inducements elsewhere."

Lee endeavored to the best of his ability to carry out these instructions, but he was so zealous for the order, and so negligent of his duties to the company, that he got into trouble, as his letter of July 31 shows:

"We are having a very serious time of it here. The New York Central corporation are crowding us very hard, laying off men right and left, and *the worst of it is, the men who have been promoting the best interest of the organization are the ones selected for dismissal.* It looks to me as if the company wants to have the men strike at this time in order to break up the organization, as it would be a very easy matter for them to defeat us now, as there is nothing doing on the road. I have received notice to-day that my services are no longer required by the company, and a few others who were at different times before the officers of the company while acting as representatives of the organization have been let go also."

The insolent and arrogant corporation had actually asserted its right to manage its own affairs, and had had the audacity to dispense with the services of Mr. Lee and other Knights who had "been promoting the best interests of their own organization" by attempting to put it in charge of the company's business. Powderly at once replied in a letter, dated August 2, which displays him as a strategist of no mean order. After advising Lee to avoid a strike at that time at all hazards, because the company was never so well prepared for it, he says:

"Caution your men to continue as before, make no noise, no stir, or show of strength, and, if possible, act on the following suggestion: You have in the order a number of young men who would just as lieve take Horace Greeley's advice and 'go West' as not; select a number of these who would be willing to take positions elsewhere; have them correspond with our brothers and sisters in the West and secure positions there; then have them go one by one to their superintendent and ask for higher wages, shorter hours, better conditions, or, in fact, anything that may be required by the employees of the road. Their demands will be refused, of course, and then let them state that they are unwilling to work for such a corporation when they can better themselves. When a number of good men quit in that manner it will cause the company to think that it will not do to trifle with them, and prevent the discharge of other men.

"*This you must do secretly, and by all means postpone and keep back all indications of trouble until the return of Mr. Depew from Europe. Remember that he is a possible candidate for the Presidency, and will go to any lengths, where his own personality is concerned, rather than have a strike on his road, for that would injure his chance irreparably.*"

Perhaps Mr. Depew will enjoy reading that closing passage when he arrives from Europe this week. It is not the first hint that has been made that the Knights had been using his Presidential aspirations as a basis for getting control of the affairs of the railway of which he is the President, undermining the discipline of its employees, and honeycombing its service with "politics" in its worst and most dangerous form.

But Powderly was unable to hold the strike back till Mr. Depew returned, though he made a final appeal to Lee on August 6, two days before the strike was ordered, and in it he let a very large cat out of the bag by saying:

"Brother Lee, it is madness for the men of the New York Central to think of striking. They cannot win, and you know it as well as I do. Only the enthusiastic who never count the cost will say that a strike on a system of railways can succeed in these days.

"The New York Central management know that if organization can be kept up among the men until the World's Fair, they will not be able to refuse the men any just concession. They desire to break your power before you have succeeded in organizing other roads, and with a defeat now they know that the chances for a reorganization before 1893 is an impossibility, and that the men will always be at their mercy.

"*The year 1892 will be Presidential year, 1893 the World's Fair, but the patience of the workingman will not hold out to remain organized quietly while doing his part to organize other parts so that they will be as one man when these years come.*"

It is very plain from this deliverance that the Central Railway, by its prompt and vigorous course, has suppressed not merely a conspiracy against its own management, but a far larger one against all the railways of the country for 1892 or 1893. In the same way that he was counting on Mr. Depew's Presidential aspirations for success on the Central, Powderly was counting on the political influences of a Presidential year, and on the greatly increased demands of travel for the World's Fair, for success in a great "tie-up" in 1892 or 1893. The country owes a vote of thanks to the Central management, and to Mr. Webb in particular, for the crushing defeat they have administered to this pernicious creature. They had the sagacity to discover the conspiracy in its inception, and the courage and shrewdness to fight it in the most deadly way. Lee's letters are ample proof of this, and ample justification. The company fortified itself at every point. It not only discharged the conspirators at the moment when their work was in its most critical state, but it secured protection in advance, which enabled it to overcome easily all attempts to carry through by violence what had failed by conspiracy. Mr. Webb's precaution in engaging in advance the services of Pinkerton men was one of the wisest as well as most justifiable steps taken. The company had the best of reasons for mistrusting the public spirit of the police authorities at Albany, and the event justified their mistrust. When they were called upon to protect the company's property, they failed, and it was then that the engaged Pinkerton force was used, and not till then. If they had not been secured in advance, the great advantage of a prompt display of force by the company would have been lost.

FEDERAL OWNERSHIP OF RAILWAYS.

THE recent strikes have revived some discussion of the question of Federal ownership of railways. Under this title, Prof. Ely, in the *Independent*, makes a severe criticism upon our present system. It is comparatively easy to do this, for our system, as we all know, is vulnerable at many points. But whether a change of ownership would not be for the worse is not to be decided merely by a statement of grievances, however ably done. Some of Prof. Ely's criticisms are applicable to all business: for example, that advertising and solicitation cause large and unnecessary expenditures each year. So it is often stated that travelling salesmen add greatly to the expenses of merchants; but if these and other outlays were abolished, would prices to consumers be any lower? All our experience answers, in the long run no. Competition must be our main reliance for price and quality in trade, and competition is yet active—too active—in transportation. When all our roads are combined in one huge system, it will be time enough to take up the new question; at present there is no prospect of it. The consolidations of which we hear so much are not of competitive roads or systems, but such as make existing systems more compact and, indeed, more competitive. To combine the Chicago and Atlantic with the Erie is one thing; to amalgamate that road with the Lake Shore or with the Pennsylvania would be quite another—a point too much lost sight of.

But more questions can be suggested in a column than can be discussed adequately in a book, and space forbids our following Prof. Ely into the general subject. One part of it deserves a word or two, and that is the relation of a railroad's earnings to its expenses. Prof. Ely very properly speaks of a large number of the deaths and injuries upon our American roads as unnecessary, and so in a sense they are, for money could remove the causes of most of them. "Appliances for the protection of employees are inexpensive, comparatively," says the Professor. It is to be regretted that our writers upon railroad matters are for the most part unfamiliar with the operating of railways as a business. We do not find these economists making general assertions about the conduct of blast-furnaces; why should not a study of details be as necessary in transportation? Now, there are in the United States in round numbers one million freight and work-cars without improved couplers and air-brakes. To put these improvements upon these million cars would cost about $80 each, a round total of eighty millions of dollars. This is a sum as large as all the dividends paid by all our roads in 1889. And this is only one item. "Accidents and deaths at railway crossings are entirely needless," continues the Professor. True enough; but how are these deaths to be prevented? Only by the abolition of such grade crossings, by carrying the railway under or over all common roads and streets. What this would cost it is impossible to state in exact figures; it is, however, an underestimate to put the sums required by all of Prof. Ely's conditions as equalling our present railroad capitalization. English railways have no gra[de] crossings, have an elaborate and exp[ensive] system of interlocking signals, and [are] but railways in America cost $[x] mile, and in England (partly

Parliamentary expenses) between three and four times as much. We can in the United States have every improvement for the safety of men and trains if we will pay for it.

Neither Government nor private owners can draw from a railroad's treasury more money than there is in it. These enormous expenditures—dismissed in a sentence or two in the *Independent* articles—if insisted upon, must be met otherwise than from present earnings, for present earnings are limited by the present rates imposed upon the traffic. In England the freedom from accidents at crossings is secured by the much larger capitalization; the returns upon this larger capital being obtained by freight charges on the average about three times higher than our own. Private owners cannot be expected to double the cost of their roads so long as rates will not pay interest on the increase, though improvements should be made as profits grow larger. If the Federal Government should be the owner, the same problem would confront it. The expenditures could not, under the conditions, be met from the present receipts, and the only result would be additional taxation. "Charges for traffic should be high enough to pay all expenses and make payments to sinking funds." If the experience of Germany, France, and England goes for anything, charges high enough to cover returns upon our increased capitalization (under the higher standard of construction called for) must be double those now collected. Will the Western corn-grower consent to this? And if not, shall we tax users and non-users of railroads alike for the deficiency? For at least, under our present plan, our railroads are supported by collecting tolls from each one in exact proportion to the services rendered; while under our cheaper construction of plant, these freight rates in the United States are the lowest in the world. Really it is a question of finance, whether under Federal or private ownership. We cannot eat our cake and have it.

It is stated in the articles referred to that the sentiment in favor of Government ownership is growing, because favored alike by Farmers' Alliances and Knights of Labor. True, but for directly contrary reasons. The Knights want higher pay, and the farmers lower freights. Who would make up the certain deficit? Suppose that both these classes succeeded, and that a combination of Congressmen from the wheat, corn, and cotton States with those from labor States, knowing that their political future depended upon it, compelled the payment of higher wages and at the same time the reduction of rates on these staples to reach the seaboard and foreign markets. How would the farmers east of the Mississippi like to see the values of their farms, already low, brought still lower by a reduction in rates on competitive products from the trans-Mississippi States, while at the same time taxes are laid upon them, directly or through the town-house, to make up for interest upon Government bonds issued for purchase of improvement, and perhaps also for excess of operating expenses over earnings? One of the writers in the *Independent* apparently has fallen into exactly this error. He says, speaking of Government operation of railways: "The nation has already done the thing proposed. The nation appoints a 'receiver.' In many instances such men are now carrying on railroads more successfully than their owners carried them on. They make both ends meet, as their owners could not." Usually receivers make both ends meet by not paying bond-interest and other debts which were obligations upon the owners; so in the case of Government ownership, an increase in the tax budget may not be counted in when considering the question of success, exactly as the increase of the budget in England is sometimes ignored in discussing Government telegraph in that country. The point involved in this discussion is simple—that, admitting the faults of our present system, the remedy is largely a problem of ways and means with which the question of Federal ownership is not necessarily connected.

AUSTRIAN PERPLEXITIES.

It is easy to speak of Austria in a despairing strain, and it has been so for centuries; yet perhaps never before in the history of her endless strifes of nationality with nationality has their hopeless character been so manifest as at the present time, when the "reconciliation" triumphantly effected last January is shown to be, as indeed it was predestined to be, a complete failure. That the task was attempted at all was due solely to the initiative of Francis Joseph, but even his imperial authority and great personal popularity could give force only for six months to the covenant entered into between the Germans and the Czechs—that is to say, between Count Taaffe, the Austrian Premier, whose boast it is that he is able to govern without the Germans; the Liberal Germans, who would, if they could, govern without the Czechs, and who hate Taaffe; and the conservative Old Czechs, who hate alike the Liberal Germans and the radical Young Czechs.

The septuagenarian leader of the Czechs, Dr. Rieger, has experienced the mortification of being disowned by a large class of his countrymen, in whose behalf he has labored so long, and in whose interest he offered the concessions to the German element of Bohemia, which alone made the January conferences possible. He has wearily resigned his leadership; but, as a last patriotic offering, he has undertaken a pilgrimage to Vienna, in order to induce Count Taaffe to undo the work of those conferences and begin anew the task of reconciliation between the Germans and the Czechs. In vain—thus he is said to have pleaded before the Austrian Premier—did the compact entered into six months ago provide for the equality of the German and Czech languages in Bohemia, one or the other of which had been made the official medium, according to the preponderance of the German or Czech element in the various districts. N[illegible] the exclusive reign of the Czech cial language of the subjects of the crown of St. Wenceslas, would definitively satisfy his countrymen. Count Taaffe, according to the usually well-informed Prague *Bohemia*, is said to have expressed his willingness to accede to this demand, provided the Czechs would guarantee that it should be their last, and that the Germans of Bohemia would consent to a reopening of negotiations. The obvious objections to this plan are that the Germans, having faithfully kept their part of the agreement, can see no reason for entering into a new one; and that even if they did, they could not be sure that the Czechs would remain satisfied for a longer period than another six months. The Young Czechs, moreover, utterly refuse to recognize Herr Rieger as their spokesman, and openly proclaim adhesion to "Bohemian State right," *i. e.*, complete autonomy similar to that of Hungary, as their programme. This condition of things is at last beginning to attract the serious attention of the Hungarians, who, as a rule, are rather indifferent to the internal quarrels of Cisleithania. The *Pester Lloyd* in particular, which, although printed in German, is thoroughly Magyar in its tendencies, admonishes the Government, in view of the faithlessness of the Czechs, to restore the Germans in Bohemia to the position from which they were "forcibly ousted."

The party wrangles which perplex the Austrian Government are naturally not without their bearing on the foreign relations of the empire. In a conversation with the editor of the *Correspondance Slave*, Herr Rieger is quoted as having traced the origin of the January conferences to the influence of Germany, who until recently had abstained from interfering in Austrian affairs, but is now beginning to consider the Slavic policy of Count Taaffe as in some measure a menace to her own interests. Some color was lent to this theory by the ostentatious manner in which the Emperor William, during his last visit at the Austrian Court, snubbed Count Taaffe, while bestowing marked attention on Herr von Tisza, the late Hungarian Premier; but whatever the truth of Herr Rieger's assumption, it is certain that the newspapers of Germany are commenting upon the turn of affairs in Bohemia in a tone of increasing interest and concern.

Quite recently, too, an incident occurred in the Tyrol which illustrates the difficulties the Austrian Government is encountering in dealing with its disaffected subjects. The new Governor of that province, Count Merveldt, signalized his accession to office by dissolving an educational organization of Italian-speaking Tyrolese known as "Pro Patria," which was in affiliation with the Roman association "Dante Alighieri," supposed to harbor anti-Austrian sentiments. This act of the Tyrolese Governor was seized upon by the opposition party in Italy as a pretext for making an anti-Austrian issue and a protest against the Triple Alliance. Ricciotti Garibaldi's resignation of his seat in the Chamber of Deputies afforded the opposition party an opportunity of carrying

while in Trieste, had come in conflict with the Austrian authorities, was chosen as their standard-bearer. The Government party opposed to him Count Antonelli, a nephew of the former Papal Secretary of State, and although, after a most exciting contest, Antonelli was elected, he received but 5,362 votes, against Barzilai's 4,519. So large a vote cast by Italians on an anti-Austrian issue was a most unpleasant reminder to the Austrian Government of the vitality of the Irredentist movement, and of the necessity of employing caution in dealing with its Italian-speaking subjects.

Where race antagonism is complicated with religious fanaticism, as in the struggle between the Liberal Germans and the Slovenish clergy of Carinthia and Carniola during the recent elections to the local diets, there is less excuse for want of decision on the part of the Government. Then the political agitation descends to incredible depths. The Vienna *Deutsche Allgemeine Zeitung* relates that during an altercation between a Liberal landed proprietor and the priest of Tainach, in Carinthia, the latter suddenly attacked his antagonist with a knife, and, when a peasant attempted to interfere, with the exclamation, "How dare you threaten with a knife! Is the one murder at Arnoldstein not sufficient for you?" the priest turned his fury against him. But such excesses are merely the logical outcome of the anti-Semitic agitation which disgraces the Reichsrath and the municipality of Vienna under the very eyes of the Imperial Government.

Austrian Liberals may well look with serious misgivings on the future, as they reflect that the time cannot be far distant when the conservative hand which for more than forty years has guided Austrian affairs will be no longer at the helm. Francis Joseph, who has passed his sixtieth year, has endeared himself to his subjects by his unaffected simplicity, his capacity for hard work, his dignified bearing in misfortune; and the late Crown Prince Rudolph, in spite of his vices, shared in his popularity. But little is known of the probable heir to the throne, the Archduke Franz Ferdinand, the son of the Emperor's brother, Karl Ludwig, who, it is understood, will not avail himself of the right of succession. The names of Franz and Ferdinand have an ominous sound in Liberal ears, and their bearer is popularly supposed to have inherited the bigotry of the late Duke of Modena together with his millions.

Nothing would be more fallacious than to conclude from this survey of Austrian affairs that the empire is tottering to its ruin. There is safety in the very multiplicity of its problems. Czechs, Germans, Poles, Ruthenians, Magyars, Slovaks, Serbs, Italians, and Slovens, Liberals, Feudalists, and Clericals may wrangle, but they cannot part company. The Slavic tribes still prefer German arrogance to Russian despotism, and Vienna, in spite of the enthusiastic welcome to the singers from the German fatherland, has no wish to become a provincial city of United Germany. Fortunately, the Austrians possess at bottom an inexhaustible fund of *Gemüthlichkeit*—a disinclination to borrow trouble, a capacity for living, politically as well as otherwise, from hand to mouth; and all, the Magyars excepted, are proud of their Kaiserstadt. And Vienna consoles itself for the gigantic growth of Berlin, the threatened commercial rivalry of Buda-Pesth, the unpatriotic refusal of the Vienna Vororte to be merged in the municipality of the metropolis, with its beautiful Ringstrasse, its unsurpassed Burgtheater, its brilliant newspapers, its splendid cafés, and its excellent eating. To-day, as when Schiller wrote his famous distich, and in days long before his, no matter what the political complexion of the empire, Vienna enjoys a "perennial Sunday."

THE BRITISH MUSEUM LIBRARY.

LONDON, August, 1890.

No library in the world offers better facilities to investigators than that of the British Museum. Foreigners who have worked there value its advantages even more than Englishmen themselves. During the past twelve years the Library has undergone many changes which have greatly increased its usefulness. The introduction of the electric light in 1879 extended the number of hours per day during which the reading-room (the chief working-room of the reading public) is open. In 1881 the printing of the great Catalogue was begun. This vast undertaking is rapidly progressing, most of the entries comprehended in the letters A—K and V—Z being now in print. A number of useful special catalogues have been published, notable among which are a Subject-Index of works received in the Library during the past five years (1885); a catalogue of about 18,000 books in the lower gallery of the reading-room, comprising works most frequently ordered by readers (1886); and a third edition of the List of Books of Reference in the Reading-Room (1889).

The preface of the last-mentioned work contains a good short history of the Library, together with some interesting statistics concerning the reading-room. It states that 103,971 persons used the Library in 1873; in 1888 the number had increased to 188,432, a rise in the daily average from 356 to 620. The opening of the newspaper-room in 1885 absorbed an average of 39 readers daily. The new manuscript-room also diverted many from the overcrowded reading-room. There has been an increase in the average number of books demanded by each reader; in 1873 the number was three, while at present it is four. The above-mentioned preface concludes as follows:

"By the introduction of electric light, the great extension of the working hours, and the increased facilities afforded both for ascertaining and for readily procuring the best books on every subject, it may fairly be claimed that the reading-room has not failed to keep pace with the growing requirements of the 188,000 readers who visited it in 1888."

This account of the progress of the reading-room has nothing to say concerning certain regulations made during the last five years, which seem to be decidedly out of harmony with the liberal spirit displayed by the authorities of the British Museum in former years. In 1886 or 1887 a regulation was made prohibiting the use of manuscripts in the reading-room, unless special permission was obtained for every manuscript or collection of manuscripts used. This innovation aimed either to secure the better preservation of the manuscripts, or to decrease the attendance in the overcrowded reading-room, perhaps both. The former end might have been secured either by reserving a table in the reading-room for the use of manuscripts, or by increasing the number of rare manuscripts inaccessible in the reading-room. As for the other presumable object of this new rule, it is doubtful whether the latter has diminished the attendance in the reading-room. If a person wishes to refer casually to a manuscript, he generally retains his seat in the reading-room while visiting the manuscript-room. If, on the other hand, a person uses manuscripts exclusively or largely, he prefers to be in the manuscript-room from the outset: no rule is needed to keep him out of the reading-room. The present arrangement apparently benefits no one, and it presses heavily upon the historical scholar who has to collate manuscripts with printed books, or who wishes to look up occasional references to manuscripts. Every time that he meets with such a reference he must either waste many precious minutes in visiting the manuscript-room, or he must appeal in writing to the head of the manuscript department for permission to consult the parchment in the reading-room.

Another rule of recent origin reads as follows: "Owing to the increasing numbers of readers, seats in the reading-room cannot be reserved. Should readers be absent for more than one hour from the seats which they have taken, such seats will be considered available for incoming readers." Readers are often necessarily absent from their seats more than an hour while in the reading-room itself consulting the catalogue and books of reference. Sometimes, in the course of his work in the reading-room, a reader finds it necessary to spend an hour in the newspaper-room, the manuscript-room, or the large room (reserved for rare books). It is very inconvenient for him to give up and then redraw all his books every time that he finds it expedient to make such transient investigations in other parts of the building. Moreover, it is very difficult to enforce such a rule, because the attendants cannot generally tell whether a seat has been vacant an hour or not. Conscientious readers who observe this rule are greatly inconvenienced, especially historical students using a wide range of sources; while literary triflers, tippling penny-a-liners, who spend a large part of the day in the neighboring Plough, or other public house, may break the rule with impunity.

I subjoin two more regulations of recent origin:

"Very great difficulty in supplying books from the Library is occasioned by an abuse of the privilege allowed to readers to have several volumes at one time. It is desired that order tickets placed in the baskets will be strictly limited to works required for immediate use."

"Readers cannot as a rule be supplied with novels written within five years of publication; and any reader requiring for special purposes to consult a recent novel, must state his reason in writing."

The first of these rules probably does neither harm nor good. The second may have become necessary, owing to the presence of certain readers (mainly ladies) who came to the Library merely to read the latest novels. But it is questionable whether they feel the new rule more than certain scholars who make legitimate literary use of recent works of fiction.

The trouble is that the reading-room and its corps of employees have become too small. The main purpose of the new regulations is to make more room for bona-fide scholars. It is doubtful whether this end has been secured. The new rules do more harm than good; they are more irksome to industrious investigators

than to the motley crowd of idlers and loungers that infests the reading-room. The general tendency of these regulations is to restrict the freedom of the best class of readers. The pre-eminent excellence of the British Museum over other libraries of Europe used to be (and perhaps still is) the very liberal spirit of its regulations, the great freedom allowed to readers, the admirable facilities afforded for investigation in every field of learning. It is to be regretted that the policy of the Library seems to be slowly drifting away from the old standard of unrestricted freedom. The overcrowding of the reading-room should, if possible, be remedied by other expedients. One of the principal officials of the British Museum* recently admitted that "it is perhaps only from the acquisition of additional space for building purposes that any relief can be looked for in the future."

VENICE AND LIBERTY.

LENDINARA, August, 1890.

IT is some years since I have spent sufficient time in Venice to note in detail the changes for the better effected, but this year I have been able to do so and with real satisfaction. The vital question of the "conservation of the Lagoon," which the Venetian republic treated as a question of life or death, has been successfully resolved by the united forces of the State, the province, and the municipal authorities. As the old "conservators" put it, the safety of the Lagoon depends (1) on the width and depth of the ports, *i. e.*, the spaces between the long dunes or Lidi which divide the Lagoon from the Adriatic Sea so that the tides can ebb and flow freely at their natural will; (2) on the depth and width of the internal canals. When the ports are neglected, no large ships or steamers can enter the canals; when these are obstructed by the introduction of the refuse of the city, the drifting of soil from the islands, or the sands of the sea, or the mud of the drains, the ships get stranded, the air fouled, and, sooner or later, the city would be no longer "ocean's nursling," but an inland town surrounded by mud and marsh, malaria and desolation. Without entering into the much vexed question of the immission of fresh water rivers into the Lagoon, it suffices that the necessity of their exclusion is now universally accepted. In 1880 the Italian Parliament voted 1,000,000 lire for the excavation of the Port of Lido. This proved to be insufficient, and another million was assigned; but this also was not sufficient for the dykes and counter dykes—the sea depth to be eight metres, that of the internal canal ten metres. The Naval Secretary, Benedetto Brin, affirmed that, anxious as he was to promote the prosperity of the arsenal, he could not conscientiously give commissions for ironclads to be constructed there until assured that the vessels, completed and armed, could pass through the grand canal of Malamocco, necessitating nine to ten metres minimum depth. So the provincial and communal authorities and the Chamber of Commerce united their energies to those of the State, and in the arsenal of Venice have been constructed and thence launched the splendid ironclads *Sicilia* and *Morosini*—the former the longest, the latter the second in length, of the first-class war ships of the Italian Navy. The port of Venice is classed in the first category with regard to the military defence and safety of the State. It is also one of the three great naval departments into which Italy is divided, Naples and Spezia forming the other two. And as in Leghorn is centred the academy for the education of naval officers (the royal naval schools of Genoa and Naples have been closed), so in Venice is centred the royal naval school for naval-machine officers and stokers.

The High School of Commerce, so called, though it serves chiefly for the education of consular agents, is flourishing in its splendid residence of Ca Foscari, whence I witnessed, at the invitation of the new "Liberal" syndic, a capital regatta, the rowers almost all new men, while the old prize-winners served as umpires and told, half sadly, of the days when they, too, were young and strong. The Society of the Bucentoro put in a splendid appearance, with their gayly decked galleys, splendidly manned and rowed, keeping order along all the Grand Canal from the railway station to the Public Gardens, and clearing the way quite as effectually, and certainly in politer fashion, than the firemen, who pumped water on the few unlucky gondoliers who ventured near the winning-posts.

The great cotton factory, founded with Italian capital, is a somewhat incongruous building for Venice; but as it is erected on the banchina of Santa Maria, it does not intrude itself on the eye. It is so far successful, and a proof that the Venetians have not lost their old zest for industry as well as art. The "art of glass" flourishes in its native home, Murano, where I revisited the old works of the Venetian Murano Company, to find, alas! but one old acquaintance among the masters. The good old Abate Zanette, who, as director of the Industrial Artistic Museum of Murano, did so much to procure specimens and promote the study of the lost methods of the art of glass, is dead, but his nephew, now director of the V. M. glass-works, seems to inherit his artistic sense and certainly his passion for the lovely art.

The repairs of the grand old cathedral San Donato are completed, and, joy of joys, so are the restorations of St. Mark's and those of the Ducal Palace. The eternal scaffoldings are removed; the repairs, skilfully executed, have not marred the old-world beauty of the columns and façades, though whether they will have Mr. Ruskin's approval, none can venture to say. He has already most severely abused the steamers, water omnibuses, and what they call "trams," which, quitting the bridge at the station every quarter of an hour, touch at every landing place, and put you down at the Public Gardens, all for one cent (ten centimes); but these modern conveyances not only increase the traffic of the city, but add health and strength to the people. For six cents another set of steamers take to and from the Lido the poor people of Venice, who frequent the popular baths in the open sea; bathing-dresses, sheds, and attendance all included. And they go in shoals, enjoy the sea and sandy shores and their frugal breakfast under the trees which have grown bravely near their baths. Once, with my party of two boys and two girls, who had passed their hard "exams" with full "prizes and gold medals," we went with "the people," and enjoyed the bath better than those at the grand establishment, where you have to wait and scramble often for more than an hour. Special omnibuses also convey the sick poor children, affected by scrofula, of Venice proper and other communes of the province to the baths, and, after a fortnight of sea-water, fresh air, and good food, the beneficial effects are visible. Not only for these "miserables" does the city take thought. The new laws on public health are strictly applied; the death-rate diminishes annually, and the reports show that the city stands third on the list of healthy cities in Italy. Cholera and smallpox have made their ravages, but the latter disease is being sturdily grappled with.

The energetic measures taken to combat the terrible scourge of northern Italy, the pellagra, are gradually but surely producing beneficent effects. With the exception of the city and district of Venetia proper, Chioggia and Cavarzere, the entire province was devastated. Among the agricultural populations entire families were afflicted. It is now generally admitted that the prime cause of the disease is the exclusive use of maize, eaten at morning, noon, and evening, plainly boiled with little or no salt, with no corrective of fish, fowl, flesh, eggs, or fruit, and often washed down with brackish, fetid water, the whole year through. The province of Venice, through its provincial council, nominated a commission to study the causes and possible remedies, insisting on the necessity of sub-commissions in all the communes. The report was highly lauded by the international jury of the Exposition held in Milan in 1887. The appalling misery of the agricultural population brought to light during the inquiry showed too clearly that the first cause was too universal to be attacked at its source, as to do this it would be necessary at least to feed all the children and young people on white bread and soup, and insure the purity of drinking-water. All that could be done was to enjoin on the districts most afflicted the establishment of temporary ambulances where those patients declared by the parish doctors to be tainted with pellagra could, by good diet for a certain time, be cured in the first stage. Once successfully battled with in this, the patients generally recover, though a return to their former misery in time leads to a relapse; but if only attacked in the second stage, the patients soon return to the temporary hospitals, and, after one more "outing," generally end in the madhouse. But of the fifty communes very few chose to go to the expense of the temporary hospital, although the department of the Minister of Agriculture and Commerce offered pecuniary assistance.

Now that the Chamber of Deputies and the Senate have agreed on the disputed points of the grand "reform bill of charitable institutions" which became law on the 15th of last July, enormous sums as well as large adaptable edifices and land will become the property of the respective communes and provinces. To what more beneficent use can these lapsed gifts of the pious testators be put than to the formation of temporary ambulances for the cure and prevention of this, one of the most terrible maladies to which northern Italian flesh is heir? Side-helps must come from better houses for the poor, drying-grounds for maize, economical baking-ovens, economical kitchens, shorter hours (seeing that every agricultural laborer works from sunrise to sunset, men, women, and children, the whole year, Sundays and holidays excepted), and higher wages when King Taxgatherer shall deign to render this possible; but meanwhile cure of the actual sufferers is the necessity of the moment, and the Venetian authorities, provincial and communal, are most praiseworthy for their efforts. The infant schools, of which there are seven in the city, where the very poorest children are received, housed, and fed during the day, are capital preventive aids in the case; everywhere these are gaining ground even as asylums for children whose mothers cannot suckle them, and for children being weaned. An attempt is also being made to improve the dwellings of the poor, while the improvements made in the interior of the city

* George Bullen, in List of Books of Reference in the Reading-Room, p. xxiv.

are too numerous even to be indexed. Wide, well-paved streets, such as the "22 Marzo," the "Via Vittorio Emanuele," and the splendid esplanade leading from the Riva degli Schiavoni to the Public Gardens, have, without damaging a single artistic monument, added to the health and ease of traffic. Filth and bad smells have decreased, owing to the dredging and cleaning of the waterways and the constant work of the scavengers in carrying away the refuse of the city. And, despite the enormous sums spent for thus cleaning, lighting, and improving the city, the communal exchequer is by no means in the impecunious state of that of Rome, Naples, and other large cities of the peninsula. At the present moment, however, there is a general protest against the Minister of Finance, who demands an additional 150,000 lire for the dazio-consumo—the tax on food, etc., entering the city. The new Mayor and other authorities have left Venice for Rome, to implore the Government to desist from imposing fresh burdens on the population.

As I was concluding this letter, a hail-storm such as "the oldest inhabitant" cannot remember, came suddenly rattling over our heads, crashing the tiles and windows, ruining the not too-promising prospects of the vintage and the maize crop, just ready for plucking; but, to balance the disaster, the Bishop of Adria has organized a pilgrimage to the shrine of the famous miracle-working Madonna of Lendinara, around which wine-venders and fruit-sellers are plying a thriving trade. Taking advantage of a clause in the new law on public security, the clergy are everywhere organizing these pilgrimages to "holy shrines"; the bishops and priests preach, the chiefs of Catholic clubs "hold conferences," enjoining on the faithful fresh sacrifices for the "altar and the hearth." If at the next general elections the famous veto, "Neither electors nor elected," be revoked by Leo XIII., we shall see fresh results of "freedom wed with law." Yet I hold that none the less will all classes have cause to cry, *Viva la Libertà!* J. W. M.

THE TUSCAN MAREMME.—II.

Nocera di Umbria, August 15.

The most striking difference in the emotions excited by the great fields of archæological interest in Greece and in Italy is, to me, that in the former we have the tradition continuous and the national life interrupted, while in the latter the life seems to have gone on in a more or less normal evolution, but with breaks of many centuries each in the traditions of national existence. We know the races that came into Greece from the Pelasgi down to the Slav, and archæologically we can reconstruct the map of ancient Greece, though our knowledge of the national life is very shadowy from a period a little later than Hadrian down, and until the modern revival of interest through classical study began to produce the neo-Hellenic movement; but when we come into Italy, we find ourselves in the presence of the proofs of a great and early civilization, probably centuries earlier than that of the Achaian epoch, and many times greater, of which we have not the slightest hint in tradition. The earliest legends tell us that the Siculi were the inhabitants of the peninsula when tradition began to form, and that the Pelasgi and Umbri, united, drove them out, so that they became thereafter only known as inhabitants of Sicily, where the great Greek immigration found them; but of what happened to the Pelasgi and Umbri afterwards legend does not inform us until the Raseni came in, about 1,000 B. C. The interval must have been one of many centuries, for the early Italic civilization which preceded the Etruscan, and which is shown in the massive and enormous city walls and the extensive cemeteries from the valley of the Arno down to the most southerly provinces of Italy, cannot have been the evolution of a few generations. A short residence in any Eastern country or in the most secluded regions of Italy will satisfy any observer that the rate of progress away from the great routes of commerce and travel is infinitesimally slow, and that, when not driven by foreign competition, the acquisition of a new art or the change of the form of a customary implement is the work of a century. I have seen the plough of Hesiod in use in the hills from which the Sabine founders of Rome migrated twenty-six centuries ago, and the axe of the Umbrian woodsman is only the steel copy of the bronze found in the necropolis by the archæological excavator. It is impossible to form any estimate of the lapse of time indicated by the evolution of an art in prehistoric times, and in lands out of the main lines of development, without studying a little the rates of progress in those which are similarly situated to-day; and that the great region of central Italy in which the Italic civilization was developed was utterly isolated from the civilization of the East, Mesopotamia, and Egypt, is made clear by the fact that not a trace of anything like letters, ideograms, etc., has ever been discovered, nor is there any positive evidence of commerce with the East till the arrival of the Raseni, or, as we commonly call them, Etruscans.

This was, according to both Helbig, who holds that they came from the north, and the Italian archæologists, who consider that they came (according to the classical tradition) from the coasts of Asia Minor, about 900 B. C., *i. e.*, between 800 and 1000. What was the Italic civilization prior to that? The walls of more than four hundred Pelasgic cities, most of which are out of the range of Etruscan domination, tell us something of it, and the recent finds in the Italian cemeteries are making new disclosures every day. In the Maremme and central Etruria, where both Pelasgian and Etruscan held high state, we see the work of the latter overlying that of the former as clearly as we see a secondary formation overlying a primary in geology, in the walls of those cities which they inhabited; as we find in Volterra and Fiesole, where the Etruscan alone has left his sign manual, and in Alatri, Arpino, and south, where only Pelasgic masonry is found, evidence of their utterly distinct existence. From Grosseto, the present capital of the Maremme (a mediæval town which took the place of Rusellæ, a city first Pelasgic, then Etruscan, then Roman, and which was finally destroyed by the Saracens), we may visit by an easy drive any one of a score, more or less, of sites where once were great cities, all of which were once Pelasgic, and most of which were also Etruscan, and whose aggregate points to a state of prosperity and populousness in this part of the peninsula such as nothing in history gives us any conception of. Yet of all these cities nothing is known until the Roman legend opens. The entire empire to which they first belonged has not even a tradition to mark its course and fall. The race to which we must attribute them has even become for generations a by-word and a perplexity, so that the philologists have declared them an illusion of mythology. But not one of the ancient authors omits them from the colonizing races of Greece and Italy, and we have their signatures in these indestructible walls from Tuscany to Asia Minor, and one who has studied this handwriting is as certain in its identification as an expert in chirography.

What their origin was is becoming tolerably clear from the collation of traditions and the comparison of the remains; what their end, if they had an end and not merely a change of name, is a profound mystery, as well as their relation to the Raseni, their probable successors. In his study, soon to be published, on the religion of the Etruscans, on which he has been engaged for more than twenty years, Professor Milani, the Director of the Etruscan Museum at Florence, puts forward the theory that the Pelasgi and the Raseni were allied peoples, branches of the same Asiatic race, originally coming from Lycia; the former migrating by land around the Gulf of Venice, which of course implies an immense ethnical movement, the latter by sea at a long subsequent period. This theory not only agrees with all that has been said with any precision by the ancient authors as to the migrations, but it accounts for what would be otherwise an inexplicable fact, viz., the apparent expulsion of the Pelasgi from so important a part of their old realm by the Raseni, without a trace of the revolution getting into the traditions which have recorded for us the immigration of both races; and it accords with the deductions to be drawn from the ruins of the cities and the results of the excavations recently made and going on. What is made as certain as anything of the kind can be, by these excavations, is, that the Italic world as it was before 1000 B. C., and leaving out of consideration Magna Græcia, was, not far from that time, invaded by two distinct colonizations, a Greek in what has since been known as the Latin country, and a Rasenic in the Etruscan. One of your correspondents last year described the Papa Giulio Museum at Rome, somewhat cursorily, but he missed the important lesson to be drawn from it, viz., that it proves the advent in the basin of the Tiber, about the period alluded to, of a Greek colony, which had its central seat at Falerii, and controlled, more or less, the character of the Italic development over the whole of the region tributary to the Tiber, its arts being recognizable as far as Alatri, and at distinctly Latin localities such as Antemnæ and Lanuvium, but never extending far to the north of Falerii. Here it was never interfered with by the Etruscans, whose work is scarcely and only incidentally to be found in that region. The earliest importations found there are archaic Attic, and the latest are pure Hellenic, the entire local art being founded on Greek traditions. This agrees with the early traditions, which relate that the city was founded by a colony from Argos, and that they built a copy of the Heræum in honor of the patroness of their native city.

I hope to recur to this collection when it is complete, and shall not discuss it further now; but I call attention to the fact that while this region was devoted to Greek influences, that lying to the north, which has as its approximate centre Chiusi, and to which Orvieto (Volsinii Urbs Vetus, the sacred city of the Etruscans, and their religious centre) also belongs, has an art which, though its roots, like those of all Etrurian art, are Greek, has the distinct and dominant Etruscan character. In fact, the more we examine the Etruscans through their work, the more it resolves itself into a compound of the Italic and the Greek. All their art of design was Greek by origin, and all their primitive civilization melts imperceptibly into the Italic, confirming what I have long felt to be the inevitable conclusion as to

the Raseni, that they never constituted the mass of what are now considered the Etruscan nation, but that they were simply a dominant caste, few in numbers, as must have been the case with a sea-borne emigration, and imposing themselves on the Italic population by a superior knowledge of technical matters, and probably by the possession of certain religious mysteries, as we know that these in all ancient times conferred an immense prestige on newcomers in any land. The ready acquiescence of the Italic population (which must in the dominant elements have been the Pelasgo-Umbrian stock) in this political and religious pontificate of the new race, which was, after all, a kindred one, is thus accounted for. On Prof. Milani's theory this is what we might have expected to take place.

Among the cities which crown the heights that half encircle the plain of Grosseto, all of which belonged to this sphere of the Raseni and in which the influence of the Pelasgi only appears modified into what we have come to recognize as Etruscan, the chief, so far as its archæological revelations are concerned, is Vetulonia, whose site has recently been discovered on the hill of Colonna by Sig. Falchi, one of the scientific explorers of the Ministry of Public Instruction. Already two rooms in the Museum of Florence have been filled with the finds in the cemeteries which, if I may believe the account of one of the principal owners of the land on which they lie, extend for miles in every direction around the isolated and not easily accessible hill on the summit of which there may still be seen a remnant of the citadel; and, according to the same authority, there is work for generations in excavating them. Vetulonia seems from the ancient traditions to have been the most important of these cities in the period in which Rome came under the influence of the Etruscans, and from it the Romans derived some of their most important ceremonies, the fasces, the curule chair, etc. Its later history is a mystery, and it is not known how or when it fell; but in all probability it was before the power of Rome could have menaced it, and from gradual decay, as, if the subject of disaster by war, it must have entered into the legend of Rome in some way. The site is an impregnable one in the ancient system of warfare, and it took our carriage nearly an hour to climb the zigzag road that leads up to it. I forgot to take my aneroid, and so can only guess at the height, but I believe it must be between 1,500 and 2,000 feet to the summit. It is not, like most of the Pelasgic cities, built on a rugged peak of the flinty limestone of the Apennines, but on a terraced hill of a sandstone of varying hardness, and the point on which the city stood is only the highest of an assemblage of spurs on each of which, extending down to the valley beneath, is a cemetery. In the valley towards the sea, my informant said, there was a tumulus that had not been yet opened (unless in ancient times, which does not seem probable, as the evidences of ancient robbing do not appear), but which was so large that a farmhouse had been built on it, and it was estimated by the engineers that the expense of heaping it up in our day would be not less than $100,000.

We had hoped to find Falchi at work, but it was in the latter part of June, and he had finished work for the season. We visited the excavations in part, and certainly the abundance of graves was amazing. Some are of the Etruscan type—tumulus enclosed by a wall with a chamber built of hewn stone in the centre; but the greatest number by far are of the Italic type—well tombs—and had only contained hut-urns or vases of the form, approximately, of the hydria, with one handle, containing the bones in the small fragments made by thorough incremation, and covered with a peculiarly shaped dish of the same earthenware, with a handle which seems to have been fastened to that of the vase, and possibly sealed originally so as to prevent the opening of it without breaking the fastening. But the hut-urns are also very abundant—more so, apparently, than in any necropolis yet discovered; and the predominance of them over the Etruscan type shows that the city was great and populous long before the Italic civilization gave way to the innovations of the Raseni. The finds correspond with those of the Latin graves and those of the Basilicata, proving more clearly than ever before the uniformity of culture and technique of the Italic epoch to have been such as never obtained during the Etruscan. In some portions the earth was crowded as closely with the little graves as any country churchyard in England, the soil only covering the vase a foot or so.

But the contents of two or three of the tombs of the Etruscan epoch, now in the Museum at Florence, show that the wealth of the city must then have been great. The peasants of the locality had long ago found that there was treasure concealed under the surface of their fields, and, indeed, some of the tombs were beyond recognition by an inexperienced eye, so that there has been for a long time a system of contraband excavation by which some of the people had accumulated little fortunes unsuspected by the proprietors or authorities. Of course in this kind of search the more easily recognizable and the most sought for were the richer Etruscan tombs; the humbler and poor graves of the Italic period, the most interesting to the prehistoric archæologist, being passed by as of no account. It must be said, in passing, that the type of the grave does not necessarily imply greater antiquity, for it is almost certain that the original stock, of the poorer classes especially, would be so conservative as to retain the traditional form of burial for generations after the Etruscan was introduced, so that we shall have contemporary graves of both types. This was shown conclusively to be the case at Orvieto, where, after the conquest of the city by the Romans and the subjection of the higher and previously governing class to the servile population, probably the older, the form of interment immediately recurs to the earliest form known in the necropolis. This is shown by the objects found in the tombs, including Roman coins.

The disclosures at Vetulonia have, we may hope, only begun, and in the enormous extent of ground to be gone over we may get some precious find in the earlier field which to me is that of greatest interest. Nothing has yet been found in the well-tombs of this site which is to be compared for artistic interest to some of those found at Corneto, but the most of the well-tombs at Vetulonia are of slight depth, while those of Corneto are, the guardian of the cemetery there informed me, four or five metres deep in some cases, and had been covered over by subsequent interments of a different character. Some pieces of bronze work (weapons especially) are, however, of the most delicate workmanship yet discovered, and a dagger in the Museum of Grosseto is one of the most beautiful I have ever seen. Definite conclusions as to the prehistoric position of Vetulonia must be postponed till a later date, when the cemeteries have been much more thoroughly explored, but even now the site is the most important for the elucidation of the prehistoric problem of all that have been examined in Italy. The contrast between the Faliscan collection at the Papa Giulio Museum and the Vetulonian rooms at Florence will show at a glance the distinct character of the colonization of the two regions to which I have above alluded—the Italic basis in both cases, with in one the Greek superstructure, and in the other the Etruscan; so that it becomes clear that for all that the Italians, Raseni or Italo-Pelasgi acquired of art proper subsequent to the eighth or ninth century B. C., they were indebted to Greece. If, as I believe, the Pelasgic civilization began in Italy and flowed over to Greece and into the Greek Islands, Crete, etc., the reflex wave centuries later brought a new and higher form, resulting in part from contact with the East and in part from the finer artistic insight of the Greek nature. Etruscan art, so far as distinctly an art, is only a realistic degradation of Greek ideals, and in most cases is only poor imitation of Greek work.

But all conclusions on this subject must be taken with great reserve. The moment we get beyond the reach of epigraphy, all evidence assumes a new character, and the philologist generally abandons it in despair or derision. It demands new canons and is in effect a new science, for the determination of its facts depends on a class of evidence of which nothing has been made precise. Every new fact has, then, an importance for confirmation or modification of our conclusions which makes extreme caution imperative. But the evidence exists and is coming to cognizance, and I hope that in time the nature, sources, and origin of Italic civilization and its relation to Greek and Oriental will be as clear to us as are now some of those philological problems which were equally obscure half a century ago.

Correspondence.

THE ART-TARIFF JUGGLE.

To the Editor of The Nation:

Sir: Why doesn't your correspondent "G. B.," so ingenious in the finding of illustrations for his pet doctrine, take for a text the tariff on works of art?

We all know how it was enacted by a juggle in conference committee, and how, in spite of protests from artists and recommendations from Presidents, it has remained on the statute-book. Now one party has absolute control of both houses of Congress and of the Executive. The President recommends the abolition of this tax. What happens? The Ways and Means Committee votes first against free art, and then for it. The Tariff Bill passes the House with art on the free list. Then the Finance Committee of the Senate votes against free art, and art comes off the free list again. Now Mr. Sherman is reported as saying that the Finance Committee will "probably" change its mind. Nobody knows how it will go, and whether art is to be taxed or free, nobody will ever know who did it and nobody will be held responsible.

Surely "G. B." has "lost the opportunity of his life"! Yours truly, Casey.

TWO VIEWS OF BENTHAM.

To the Editor of The Nation:

Sir: Every student of jurisprudence who has had the good fortune to see the annual address delivered at the last meeting of the

American Bar Association by Mr. James C. Carter of the New York bar, on the "Origin and Growth of Law," will have been interested in it as furnishing the most recent, and by no means the least vigorous, attempt to overthrow Austin's analysis of law. It may be doubted whether Mr. Carter's criticisms, able and ingenious as they unquestionably are, have not been anticipated and answered in Austin's own work and that of his followers. But, Austin apart, can it be said that the speaker was wise in characterizing Bentham as he did in an address aimed to encourage among lawyers an enlarged interest in the science of jurisprudence? Bentham, according to Mr. Carter, is to be "most accurately described by the vulgar designation of *crank*—a man who cherishes his pet theories in the solitude of his own contemplation, and disdains both the observation of the present and the study of the past." "We need look no further," he continues, "for the reason why his schemes have never recommended themselves to wise and practical legislators."

In view of so damaging an estimate from so eminent an authority, it may be well to recall some opinions at variance therewith. John Stuart Mill spoke of Bentham (Art. Bentham, 'Dissertations and Discussions') as "one of the two"— the other being Coleridge—"great seminal minds of England in their age," and of Bentham himself as "one of the great teachers and permanent intellectual ornaments of the race." Prof. Thomas Erskine Holland (Art. Bentham, 'Enc. Brit.') considers that Bentham's writings "have been and remain a storehouse of instruction for statesmen, an armory for legal reformers." "To trace," Prof. Holland continues, "the results of his teaching in England alone, would be to write a history of the legislation of half a century." Sir Henry Sumner Maine, who was certainly not partial to the analytical school, in discussing their work with special reference to Hobbes, Bentham, and Austin, says ('Early History of Institutions'), "No conception of law and society has ever removed such a mass of undoubted delusion." Sir James Fitzjames Stephen in one place ('Dig. Ev.') compares some of Bentham's books to exploded shells buried under the ruins they have made; and in another ('History of the Criminal Law of England') holds that Bentham's "theories upon legal subjects have had a degree of practical influence upon the legislation of his own and various other countries comparable only to those of Adam Smith and his successors." There is an impressive supplement to this last expression of opinion in Prof. Marshall's 'Principles of Economics,' where Bentham is rated as "the most influential successor of Adam Smith in the field of economics."

Yours truly, THOMAS H. CLARK.

MONTGOMERY, ALA., Sept. 1, 1890.

THE STACCATO CHEER.

TO THE EDITOR OF THE NATION:

SIR: I am curious to fix the date of the invention or discovery of the now current *staccato* cheer as distinguished from the orthodox *hurrah* thrice repeated, of former days. I am credibly informed that it was in use at Harvard prior to 1858. To my personal knowledge it was unknown at Yale as late as 1860. Shortly after the Civil War I heard it for the first time at some intercollegiate contest, and since then, as everybody knows, it has become common property. Possibly some Harvard graduate of 1858 or thereabouts may be able to fix the date and possibly name the inventor of this unique characteristic American cheer. —Respectfully yours,

CHAS. LEDYARD NORTON.

UNIVERSITY CLUB, NEW YORK, September 4, 1890.

SIR THOMAS WYATT.

TO THE EDITOR OF THE NATION:

SIR: May I ask through your columns whether the sonnet of Sir Thomas Wyatt opening with the line "Like unto these unmeasurable mountains" has been identified with any Italian original? Puttenham ascribed it to Petrarch, but Nott thought it belonged to Tibaldeo or Accolti. Also, for the original two *strambotti* of Serafino from which was imitated Wyatt's poem commencing "My heart I gave thee, not to do it pain." Also, whether any of the following are known to be translations, viz.:

(1.) Unstable dream, according to the place.

(2.) Each man tells me I change of my devise.

(3.) Was never file yet half so well y filed.

(4.) Ye that in love find luck and sweet abundance.

(5.) My love to scorn, my service to retain.

(6.) Such is the course that nature's kind hath wrought.

(7.) The flaming sighs that boil within my breast.

(8.) Farewell, Love! and all thy laws for ever.

(9.) Whoso list to hunt? I know where is an hind.

(10.) Divers doth use, as I have heard and known.

(11.) I abide and abide, and better abide.

(12.) Though I myself be bridled of my mind.

(13.) To rail or jest, ye know I use it not.

(14.) But you that of such like have had your part.

I may mention for any whom it may interest, that the sonnet commencing "Avising the bright beams of those fair eyes" is a translation of Petrarch's "Mirando 'l Sol de begli occhi sereno." I do not know that this has been before identified. If so, it is certainly not generally known, for Dr. W. E. Simonds of Cornell University, in his 'Essay on Sir Thomas Wyatt and his Poems' (Boston, 1889), writes as follows: "*Avising the bright beams* is probably a translation, the first word in the sonnet being used evidently in the sense of the Italian *avvissare*, 'to look at attentively.' It seems likely that the word was suggested to the poet by the presence of the Italian word in the original of what we here conjecture to be a translation merely." Dr. Simonds's conjecture proves to be correct as regards the sonnet being a translation; but not as to the presence in the Italian original of the word "avising," though the meaning is nearly that suggested.

It is almost certain that more of Wyatt's sonnets are translations or imitations than the fifteen which have been identified, and, as they represent the first English sonnets, it would be as well to sift the matter as far as possible. Except Nott and Bell, no one seems to have gone far into the matter, and I beg to commend it to students of Elizabethan poetry, in the hope of obtaining further information than has been accessible to your obedient servant,

E. B. BROWNLOW.

No. 6 HUTCHISON ST., MONTREAL.

WORTH A CENT.

TO THE EDITOR OF THE NATION:

SIR: In your remarks in last week's *Nation* on Émile Faguet, you speak of a *Western* expression: so and so "did not scare worth a cent." To my personal knowledge *worth a cent* in this and numerous other combinations has been current in this and other parts of the South for twenty-five or thirty years. I presume it would be difficult to trace the expression to any particular part of our country, if indeed it is an Americanism at all. In the same connection you express surprise at M. Faguet's using *obole* in very much the same way: "Voltaire n'a pas été artiste pour une obole." This use of *obole* is somewhat familiar, but is perfectly natural—smacks of French soil, so to speak, as it has six or eight centuries of history behind it. From the earliest period down to the present time, the names of small coins have figured very largely, both in North and South French literature, to set a low estimate upon any person or thing. In 'Huon de Bordeaux,' the hero says to the "amiral":

"Je ne sui mie en vostre deu créans,
Ne pris Mahon le monte d'un besant."

And, a little further on, the amiral makes a similar remark:

". . . je n'en ferai noiant,
Ne pris vo deu un denier valissant."

The last line may be rendered: Nor do I prize or care for your god worth a cent. And so in 'Girard de Roussillon': "No quier de raenz o valhan dinier." One is continually coming upon this expression both in Trouvère and Troubadour literature, and while there may not be any direct historical connection between it and M. Faguet's expression, it is evident that the idea has been in the social atmosphere of France all along, and might be expected to crop out at any time.

A curious and entertaining study might be made of the manner in which various peoples work up to the same idea, and frequently use exact verbal equivalents for its expression. For instance, the German says: "Ich gäbe keinen rothen Heller dafür," and in America we in the same spirit say: "I would not give a red (cent) for it." And so *unterschlagen*, to embezzle, finds its literal translation in our slang, 'to knock down'; *e. g.*, he gets ten dollars a week, to say nothing of what he *knocks down* from the drawer.

SAMUEL GARNER.

ANNAPOLIS, MD., August 31, 1890.

SOME CORRECTIONS.

TO THE EDITOR OF THE NATION:

SIR: Permit a reader to call attention to two lapses from accuracy observed in No. 1309, July 31, of the *Nation*. The writer of the letter on Madame, mother of the Regent, confounds generations. It was not her father (then an infant) who suffered defeat at the battle of the White Mountain (1620), but her grandfather, Frederick V., who died in 1632. It was *his* son, Charles Louis, that was reinstated by the Peace of Westphalia, 1648.

On page 92, in a casual allusion to a *French* king, superior to the niceties of his own language, had not the writer in mind Sigismund of Bohemia, who declared himself "super Grammaticam"—in Latin construction, however? An anecdote, repeated only by hearsay, is told of French nobles of the *ancien régime*, chosen members of the French Academy, who took pains to misspell their signatures in a variety of ways to show that they were not subject to rules of petty scholarship. R. T.

PURDY'S, N. Y., September 2, 1890.

THE OLD TESTAMENT IN THE SUNDAY-SCHOOL.

TO THE EDITOR OF THE NATION:

SIR: It is, I believe, undeniable that few of those who have accepted the positions com-

monly classed under the vague head of the Higher Criticism, realize the radical modifications which such opinions ought to render inevitable in the manner of teaching children the earlier historical—or, rather, unhistorical—books of the Old Testament. Of course, many persons—notably advanced Unitarians and others who have no deep personal sympathy with any of the phases religion has assumed—are not here alluded to. They have solved the problem, and, indeed, not always in the best way. My reference is only to those who are clinging—perhaps with hardly more than the nerveless grasp of regret—to New England Congregationalism and its ideas. These individuals gladly accept the light which Kuenen, Wellhausen, and others have thrown upon the growth of the Old Testament writings. They feel a delicious sense of relief in being rid for ever of the piteous problems about Abraham's bloody sacrifice and Pharaoh's hardened heart. They have even gone so far that they wonder a little when they hear the Hebrews spoken of as practically the authorized reporters of God's thoughts and acts. And yet not a few of these same persons go into an ordinary Sunday-school and teach the so-called "International" lesson of the day without any dangerous qualms of conscience. The particular passage may, of course, contain topics which make easy the pointing of useful morals. These the teacher will anxiously confine his attention to. He must skilfully control the questioning, else his youthful listeners may unconsciously ask him questions it would be hard to answer without directly assuming the historical character of the passage, and this his conscience, such as it is, will not allow him to do, though he is in effect doing it indirectly all the time. His undiscriminating little audience never suspects that the exact amount he teaches is all he wishes them to believe. Their impression is scarcely different from what it would be did he teach every bit of the story, doubtful statements and all, and he is responsible, whether his conscience blinks the fact or not. The credulity of the child is grossly abused by such a teacher.

Not a few of the children taught in this disingenuous way are attacked by serious doubts as they grow older. How many are wise enough to discern what is true when everything seems to them to be brought into question! To some this time of disillusionment may prove fatal, so far as all real religious faith is concerned; and it is bewildering to even the steadiest mind to make the discovery that what one has always thought to be true, and what one fears to disbelieve, is, to say the least, very uncertain. But why need there be any disillusionment? Why may not children be so taught that their intellectual growth on its religious side will be rarely in danger of becoming a series of upheavals? Probably the whole trouble would in a large measure be obviated if teachers were earnestly careful, first, never to teach, or *seem* to teach, what they do not heartily and voluntarily believe; and, second, to give the children correct impressions of the Scriptural narratives. But how can this last be done? Certainly not by reading the boys and girls lectures on the Higher Criticism. On the contrary, it may be accomplished by taking intelligent advantage of the psychological principle of association of ideas.

No boy or girl is seriously disturbed when the heroes of fairy tale, legend, and myth turn out to be hardly more than pretty pictures. It follows, therefore, that the Hebrew stories should be treated as you treat the Greek, Roman, and Scandinavian. Tell them in such a way that the child will never grow to feel that the question of the actuality or non-actuality of their occurrence is a *religious* question, on which sides ought to be taken. Constantly relate similar tales from other literatures so that the child will feel towards all such stories in a similar way. Then, when the fairy tales, the myths, and the legends cease to seem to the children descriptions of real events and actual persons, the Hebrew stories will undergo a similar transformation. Having never been led to feel that those who believe in God must also believe in the Mosaic authorship of the Pentateuch, they will not be tempted to doubt the existence of God because they hear the existence of Abraham, and the patriarchs in general, treated as a very open question. To conclude the whole matter, why shall we not have the courage of our convictions and act intelligently about them?

B. E. H.

Notes.

THE Messrs. Longman have in press 'Letters and Correspondence of John Henry Newman during his Life in the English Church,' with a brief autobiographical memoir, edited by J. B. Mozley, D.D.

Macmillan & Co. will publish next month 'The Fossil Insects of North America,' by Samuel H. Scudder, in two quarto volumes freely illustrated, the edition being limited to one hundred copies. They have nearly ready 'The Myology of the Raven, a Guide to the Muscular System of Birds,' by Dr. R. W. Shufeldt; and an English translation, by Dr. Geo. McGowan, of Prof. Ernst von Meyer's 'History of Chemistry.'

A new and original work on 'Evolution,' by David Syme of Melbourne, is promised by Kegan Paul & Co. London.

A. C. McClurg & Co., Chicago, announce a volume of essays by Bishop Spalding of Peoria.

Thomas Whittaker will publish 'The Writers of Genesis, and Related Topics,' by the author of 'God in Creation,' etc.

'Eastward, or a Buddhist Lover,' a novel, will have the imprint of the J. G. Cupples Co., Boston.

Jules Verne has made America the scene of his latest impossible romance, 'Cæsar Cascabel,' which the Cassell Publishing Co. are to bring out during the present season. The hero is a travelling showman.

'House and Pet Dogs: Their Selection, Care, and Training,' and 'The Spaniel and Its Training,' will be issued immediately by the *Forest and Stream* Publishing Co.

Dr. David F. Lincoln's 'Hygienic Physiology for the Use of Grammar and Common Schools,' which is set down for publication this month by Ginn & Co., Boston, has to recommend it, besides the reputation of the author, the arrangement of topics, hygiene preceding the anatomy and physiology. This is the natural order of presentation for young minds.

D. C. Heath & Co. will add to their Modern Language Series 'Selections for German Composition,' by Prof. Charles Harris of Oberlin.

Joel Munsell's Sons, Albany, N. Y., are about to bring out the work we have already announced, 'My Journey Over the Mountains,' edited by J. M. Toner, M.D. This is Washington's Journal of 1747, which will now be printed entire for the first time, and literally, with explanatory notes.

The revised edition of Dr. Japp's 'Life of De Quincey' (London: James Hogg), previously issued under the pseudonym "H. A. Page," professes to be "almost a new book," with new letters, reminiscences, etc. There is really less new matter than might be expected from such a statement. Very considerable portions of the former biography have been cut out, consisting mainly of extracts from the autobiographical papers of De Quincey or from his comments on men he had known, which are to be found in his works. The author's critical survey also is much shortened, largely by similar omissions of illustrative passages. In this compression nothing has been lost. The new letters are very few in number and unimportant in matter, and the new reminiscences are partly gathered from other books or may be found there in substance; nevertheless, great care has been taken to collect in this volume all the notices of De Quincey by those who met with him, whether hitherto printed or not. These recollections serve only to fill out characteristics already sufficiently known, and make the biography more ample and in some cases more exact, but without affecting in any sensible way De Quincey's reputation. The most important matter, which alone calls for notice, is the frank admission that De Quincey took sanctuary in Holyrood through fear of creditors, and lived there some two years; but it is maintained that he was never in real poverty or bankruptcy, but only deficient in the ability to manage business affairs. New portraits of De Quincey, Prof. Wilson, and Sir W. Hamilton, and a view of Greenhays Hall, are given. The edition is in one volume, too closely printed and insecurely bound; but it is a great improvement upon the former biography, and may, we suppose, be regarded as final.

'Short Studies of Shakespeare's Plots,' by Prof. Cyril Ransome (Macmillan), is published in the interest of a more direct and enlightened study of Shakspere in schools. The author protests against a textual study of the plays after the fashion that obtains in classical teaching, and writes in favor of treating them merely as literature. He thinks it of the first consequence to disclose the course of the plot and the superficially obvious development of the characters in their actions and words, and to this end he analyzes "Hamlet," "Julius Cæsar," "Macbeth," "Lear," "Richard II.," "Othello," "Coriolanus," and "The Tempest," and tells the story of each. The method is excellent, but primary; it fails especially in those plays in which the course of events is the least part of the drama (the interest being in the conduct of the characters), such as "Lear" and "The Tempest"; and more than once absorption in the action causes the author to undervalue a character, such as *Hamlet* or *Richard II.*, which does not submit to be measured by the accidents of a career. The volume is happily free from over-speculation, intricacy, and subtlety; it is not at all "profound"; and for these reasons it should be useful to young students, or to older students who are beginning to read the plays reflectively.

Mr. Edward McPherson's 'Handbook of Politics for 1890' (Washington: James J. Chapman) reminds us that since the appearance of the last volume six new States have been admitted to the Union, and that while there has been much Congressional legislation "about and about," the sum of achievement has been small in comparison with the measures still left hanging between the two houses. The present volume retains those features which have made the series indispensable to the student of politics, and adds a chapter of decided novelty and importance, with a wider retrospect than two years. The legislative history of the Coinage Act of 1873 (Forty-first and Forty-second Congresses) has been carefully

drawn out, and placed after the record of resolutions, bills, and votes on the silver question in the Fifty-first Congress. "Within these twenty-six pages will be found," says Mr. McPherson, "as sharp a contrast of political opinion and action as the public life of our country has afforded." The Mills Bill is another landmark in the volume before us, the Force Bill a third, the McKinley Tariff Bill a fourth. It is evident that the 'Handbook' for 1890 will be at least as often consulted as its predecessors. Even the demise of the Blair Bill will prove a subject of reference, and we therefore will call Mr. McPherson's attention to two errors in his record of the Senate vote on p. 194. In the list of pairs, Ransom (pro) and Casey (con) should change places (see the *Congressional Record* for March 22, 1890, p. 2523), and this compels an alteration in the table below, so that 10 Western Senators shall be shown to have voted for, and 11 against the measure. Also, 3 Middle State Senators (not 2) voted yea, viz., Messrs. Evarts, Quay, and Higgins, and 2 (not 3) nay, viz., Messrs. Hiscock and Cameron. These errors neutralize each other, and leave Mr. McPherson's footings undisturbed.

There is no truth in the pretence that the volume called 'Abraham Lincoln's Pen and Voice,' for which Col. G. M. Van Buren is responsible (Cincinnati: Robert Clarke & Co.), is "a complete compilation" of Mr. Lincoln's "letters, civil, political, and military." No such collection can be made or will probably ever be attempted. The moderate size of this book and its coarse type show at a glance that completeness is impossible if only the letters are taken into the account; but the compiler has added sundry public addresses, messages to Congress, inaugurals, etc. All we can say is, since the arrangement is chronological, that the collection is convenient. We doubt if it will, again to quote the title-page, prove Lincoln to have been "the greatest constitutional student of the age, and the noblest pattern for future generations America has ever known." It does, however, reveal his growth in anti-slavery principle, and show him more to be revered at the end than at the beginning of his administration—a phenomenon not common among our Presidents.

In the *American Journal of Archæology* for March-June, M. Eugène Müntz continues his discussion of the "Lost Mosaics of Rome of the IV. to the IX. Century." Mr. A. L. Frothingham, jr., furnishes the longest paper, on the "Introduction of Gothic Architecture into Italy," with the aid of some very interesting plates of the Cistercian monastery of Fossanova, which has been declared a public monument. Mr. Frothingham sees in the French Cistercians in Italy the transplanters of French Gothic, whom the Dominicans and Franciscans copied. Happily their work is extremely well preserved, better than the corresponding structures of the order in France. Mr. Frothingham writes from extensive personal research. Other noticeable papers are "Reminiscences of Egypt in Doric Architecture," by Allan Marquand; and "Greek Sculptured Crowns and Crown Inscriptions," by George B. Hussey of the American School at Athens. Mr. Hussey concludes that the pendent crown or wreath represents the better periods of Greek art; the erect the later (time of Trajan or Hadrian).

The United States Potters' Association is considering a proposition from the Pennsylvania Museum and School of Industrial Art to conduct a Pottery School if the potters will do their part towards defraying the expense. The scheme looks also to the establishment of a ceramic museum embracing every kind of pottery produced to-day. The Association's committees highly favor the project.

Mr. John Edmands, librarian of the Mercantile Library of Philadelphia, begins in his July Bulletin a noteworthy Junius bibliography, in two divisions: Editions of the letters; Publications about Junius. In both these classes, says Mr. Edmands, the Mercantile Library's collection is the largest in the country; but his indications are also for other American libraries and for the British Museum.

From Mr. George Watson Cole of the Newberry Library, Chicago, we receive his ingenious "Cataloguer's Size Card," by means of which, with the least trouble and delay, the size of books can be determined in accordance with the scale recommended by the American Library Association; or the actual measurements in centimetres can be read off. This card is for sale at the Library Bureau, Boston.

Dr. Knipping of Tokio announces an interesting result of his studies of the Japanese daily weather maps that are prepared under his direction. It appears that one of his stations on the northwestern side of the greater island, at the foot of high volcanic ridges, sometimes reports higher temperature and lower humidity than the surrounding stations. On collecting a number of cases of this kind, it was found that they were all accompanied by low pressures on the Japan Sea, and hence by a southeast wind, whose source must have been beyond the volcanic ridges, down from which it was drawn to the northwestern coast. Dr. Knipping therefore places this Japanese wind with the Foehn of the Alps and the Chinook of our Rocky Mountains, as belonging to a species of air-current whose temperature is raised and whose humidity is lowered by the compression that it suffers as it is drawn down a mountain range of considerable height on its way to a cyclonic centre of low pressure.

The International Congress of Geographic Science will be held next year in Berne, at the beginning of August, under the auspices of the local Geographical Society.

—An eleventh volume now closes the laborious enterprise of Mr. Stedman and Miss Hutchinson, 'A Library of American Literature from the Earliest Settlement to the Present Time' (Chas L. Webster & Co.). Miss Murfree opens and Miss Dora Read Goodale concludes the part which is the proper extension and termination of the scheme, and Miss Goodale's birth year, 1866 (she is not, like some of her sex here represented, old enough to conceal her age), gives us the extreme date at which the Library puts up its shutters and locks the door against all literary aspirants. But the present volume is also used to repair omissions and supply additional selections, to exhibit short biographies (by Arthur Stedman) of all the authors exemplified, and to provide a general index. The new portraits are of F. Marion Crawford, Miss Murfree, Geo. P. Lathrop, J. B. McMaster, Brander Matthews, Thos. Nelson Page, James Whitcomb Riley, Harry S. Edwards, Edith M. Thomas, and H. C. Bunner—names all, with one exception, well known as lights or leaders of the literary generation which was born in the sixth and seventh decades of the century. Quite as many writers of equal or but little subordinate fame or talent on the list might also have been pictured, and belong to the future, so that the outlook is not discouraging, and least of all, perhaps, on the side of poetry. The strength of the collection as a whole is, as we have from time to time pointed out and as the index shows conspicuously, historical and biographical, including in the latter term the index division called "Personal Characterizations." This would have been much impaired by the neglect of Henry Adams, Hay and Nicolay, and James Schouler, in restoring whom the supplementary volume has served a useful purpose. The Oratorical selections, "Correspondence," "Politics, Government, etc.," and "Slavery," form other marked groups akin to the foregoing. Poetry is very conveniently displayed by titles or by first lines, and fills nine pages of the index. The "Noted Sayings" have been greatly increased in the final volume, and these have sometimes an etymological value, as in the case of the term Mugwump. President Cleveland's household words and Bishop Potter's are here recorded; so is Flanaghan's frank inquiry, "What are we here for?" at the Republican National Convention of 1880; but the editors leave it a riddle for those who forget the answer supplied by the Texan himself—"The offices." We part company with a serious and in the main successful endeavor to furnish a readable and profitable conspectus of American literary production. It will, we are sure, be a missionary for good wherever it is owned and read. It is truly a library, as it takes the place of many books, and it rightly errs on the side of fulness and catholicity.

— The ever-swelling tide of American philosophic literature has just been enriched by a new book about Hegel, of which it is fair to say that the production would have been impossible a dozen years ago. We refer to the handsomely printed volume by Dr. J. McBride Sterrett, entitled 'Studies in Hegel's Philosophy of Religion' (Appleton). With the aid of recent English and American commentators, such as Green, the Cairds, Harris, Morris, Seth, and others, the author goes valiantly to work to lubricate the uncouth original for our deglutition, with a success which will probably be found considerable, so far as the divinity schools of the land are concerned. Hegel's principle that all differences can be reconciled if one will only ascend to the higher point of view, his doctrine that untruth is partial truth, and his perfect optimism, all harmonize singularly well both with the optimistic and conciliatory spirit which animates the liberal theology of our day, with its far stronger interest in human progress than in Adam's fall. The only obstacles to the reception of the Hegelian philosophy by our theologians, apart from the intolerable style of it, have been its preposterous show of deducing things by the dialectical method, and the ambiguous sound which it gives forth about God's personality and man's immortality. Dr. Sterrett practically ignores the dialectical method, and insists (rather darkly, it is true) that Hegelism is sound on the immortality question. Of course his book seems full of vagueness and evasion to readers trained on empiricism, who, when they fall to reasoning, like "the rigor of the game." But there is an appearance of logical procedure about it, its spirit is sanguine, its results are cheerful, while its method of constantly striving towards the widest and most reconciling point of view is, after all, the eternally best one; so it is safe to predict for its author a certain success. In an appendix he discusses in an interesting way the problem of union among our churches.

—The annual reports of the Chief Signal Officer have for several years past contained among their appendices certain papers of high scientific value from two of the leading civilian members of the service. Ferrel's 'Recent Advances of Meteorology' was the first of these;

Abbe's 'Treatise on Meteorological Instruments' was the second; and the latter author now contributes to the report for 1889 an essay of a hundred and sixty-five pages, entitled "Preparatory Studies for Deductive Methods in Storm and Weather Predictions." The chief interest in this work comes from its being the well-matured expression of Prof. Abbe's views on this difficult branch of meteorology in which he has had so long a practice; to those who are familiar with modern physical meteorology, it will furnish extremely suggestive reading, and on many other matters than weather prediction alone. The leading idea of the studies is the convectional motion of the atmosphere, as determined locally by heating at the ground, or in a broader way by the presence of large masses of warm and moist air. It is a matter of regret that other and earlier publications of this nature have not appeared from the Signal Office. There have been extended climatic studies as to mean temperature, average rainfall, and other subjects of importance, and there have been a number of "professional papers" of scientific value; but the immediate problem which the Weather Bureau has to solve — namely, "What will to-morrow's weather be?"—has received little attention in print. A number of army lieutenants have attacked this problem in the discharge of their duty as predicting officers, but we have practically no record of their experience. It is as if their results had never been mentally formulated, or, when formulated, as if they had been regarded as private property, and not material for appendices to the annual reports. Every schoolboy may learn that weather changes generally move eastward over our country; but the numerous exceptions to this rule must be mastered before to-morrow's weather can be properly predicted. A full statement of these exceptions might have been expected from the Signal Service, but it has not been forthcoming.

—The latest anthology from Heine for the school-room, Prof. Horatio S. White's 'Selections from Heine's Poems,' in Heath's "Modern Language Series," deserves the highest praise, both for the principle which guided the selection, and the accurate scholarship displayed in the editing. We have not discovered a single misprint either in the text or in the notes, which are concerned with the linguistic and metrical characteristics of Heine's poetry rather than with the grammatical difficulties that beset the path of the ordinary student of German. The classification of Heine's verse into "faulty, dialectic, and curious rimes" is somewhat arbitrary. Considering the lack of recognized standards of pure rhymes in German poetry, to which, indeed, Prof. White himself refers, it will hardly serve a useful purpose to append a list of such "irregular" rhymes as *Blätter, Städter; Gelächter, Töchter; einher, leer*, etc. With the sole exception of the pedantic Platen, German poetry is full of impure rhymes, and unavoidably so. We recall at random *Knapp, hinab; Höh', See; keck, weg* in Schiller ("Der Taucher"); *Gwinnst, Dienst*, in Schiller ("Der Graf von Habsburg") and Goethe ("Der Gott und die Bajadere"); *verehrt, unerhört; quäle, Seele* in Goethe ("Die Braut von Corinth"), etc. The "curious" rhymes, however, are amply worth pointing out, even if it were only to contrast Heine's skill in this respect, his *Klopstock, Haubenkopfstock; Romantik, Uhland, Tieck; Loh ist, Mirabeau bist*, etc., with Byron's *Portugal, Da Stäel; Trecentisti, this t'ye*, and other halting *tours de force*. Among the "antiquated, obsolescent, or unusual words or forms" we notice *gestunken*, which is unobjectionable from any point of view except the æsthetic. *Weiland* is the official term which German newspapers of the present day prefix to the titles of defunct princely celebrities, and *sputet euch* also hardly falls under any of the above categories. *Träumen seligen Traum* and *denk' ich alter Geschichten* are "grammatical irregularities" only in the sense in which any poetic expression differs from ordinary speech. The critical estimate of Heine in the preface is, for its compass, one of the justest and most comprehensive with which we are familiar; but we fear the alleged deathbed conversion of the poet had in it even less of the element of sincerity than Prof. White is disposed to accord to it. "If Heine's last days," he says, "are to be considered as a retribution, he may be said to have expiated his offences." We have the authority of Gustav Karpeles, one of the best informed of Heine's biographers, for the statement that when, three or four days before his death, he was asked by an anxious friend what his relations to his God were, the poet replied, rather irreverently for a dying man: "Dieu me pardonnera, c'est son métier."

—In May last M. Salomon Reinach delivered a discourse which may be called a monograph on the Arch of Titus, before the Paris Société des Études Juives. As now published in a handsome brochure ('L'Arc de Titus et les Dépouilles du Temple,' Paris: A. Durlacher), it will be found a highly interesting summary of all that is known about one of the most venerable monuments of Rome. The address begins with an historical sketch of the revolt of the Jews that led to the triumph commemorated by the arch, pictures the appearance and traces the route of the triumphal procession, and then in detail tells of the building of the arch, its dimensions, material, dilapidation in the Middle Ages, and wise restoration by Pius VII. in the first quarter of the present century. Every tourist in Rome will be thankful for these particulars. But M. Reinach, in the pursuit of his main object, enters into artistic considerations, judging and interpreting the sculptured ornament, which wholly relates to the triumphal procession. To be noted here, among less obvious features, are the symbolic figure of the River Jordan in the battered line of figures on the architrave of the arch; and the several planes of relief and perspective in the famous panel within the arch on which we see the spoils of the Temple—the seven-branched candle-stick in the only representation that has come down to us, etc. M. Reinach inquires what became of these precious objects, whose successive transfers until they were restored to Jerusalem are recorded. Finally, he examines the tradition that no Jew was allowed to pass through the Arch of Titus, and that the inhabitants of the Ghetto, in going from the Coliseum to the Capitol, wore a path between the monument and the Palatine. He suggests a different explanation by reference to the orthodox Jews' abhorrence of images, such as surmounted every Roman arch, to say nothing of the dolorous feelings evoked by the sculpture of the Arch of Titus; and he concludes with a proud reflection on the monotheistic triumph of Judaism that dates precisely from the dispersion consequent upon the defeat and humiliation commemorated, and was indeed the result of the downfall of Jerusalem.

—M. H. Vuibert's 'Annuaire de la Jeunesse pour l'année 1890' (Paris: Nony & Cie.) does not compete with M. Jost's smaller official 'Annuaire de l'Enseignement Primaire,' to which one must still turn for the personnel of directors, inspectors, instructors, and school committees as well as for the text of the pertinent laws and decrees relating to primary education. M. Vuibert aims to place in the hands of parents a complete general view of the means of education open to their children in all grades, both in the institutions, primary and superior, maintained gratuitously by the Government, and in the secondary and private institutions, with indication of programmes, prizes, and scholarships. He is the good adviser in the choice of a career or a profession, and, by the motto of his book (taken from Franklin) and his opening remarks, is shown to be an ardent advocate of the spread of national intelligence. He also incidentally makes it clear that the ruin of the Second Empire was the dawn of a brighter day for the schoolmaster in France. In 1873, Jules Simon, then Minister of Public Instruction, was ashamed to show to foreigners the miserably equipped Sorbonne and School of Medicine. Since 1875 the number of chairs and of students in the higher education has nearly doubled. In 1881 primary education was made gratuitous in all public schools; in 1882 attendance up to the age of thirteen was made obligatory, and the system was wrought over almost *de novo*. The result has been a diminution by three-fourths of schools for illiterate adults. In 1880 a great lift was given to the manual schools of apprenticeship. In 1878 took place the first effective organization of university libraries. The very newest movement, looking towards physical education by open-air exercise and games in the English fashion, began in 1888, and already counts two societies of active propagandism, several athletic unions, and a growing "literature," in which M. Vuibert cites the latest work, that of M. Pierre Coubertin—fruit of his recent travel in this country—'Universités Transatlantiques.' A large block of the volume before us, which fills some 900 pages and has maps and a certain number of illustrations, is, of course, devoted to Paris. The appendix includes a number of statutes of 1886-1890 on nationality, recruiting for the army, the protection of children, etc. This is followed by calendars, census tables, and practical directions about travelling, in which we remark how the numbering of the railway carriages facilitates receiving a telegram *en route*, and that if trains do not stop long enough to enable one to send a despatch, the railroad's agents must attend to the service.

THE EARLY DIARY OF FRANCES BURNEY.—II.

The Early Diary of Frances Burney. 1768-1778. Edited by Annie Raine Ellis. 2 vols. London: George Bell & Sons.

Let us look for a moment at Miss Burney's diary as a picture of her times. A mere glance tells us that the England which she painted was very different from the England of to-day. Yet a good deal of thought is needed to see wherein the difference consists. There are few, if any, single passages from Miss Burney's letters or journals which might not conceivably be written by a clever young lady in 1890; yet whoever reads her diaries as a whole is conscious of a tone, an atmosphere, a coloring—one hardly knows the right word in which to convey one's meaning—which betrays a vital distinction, not only between the habits, but, what is of far more consequence, between the sentiment of 1768 or 1778 and the customs and feelings of 1890.

The life of Miss Burney and her sisters has in it an amount of color, of gayety, and of merriment which you will hardly find to-day in

the lives of English ladies belonging to the same class as the Burneys. Modern Englishwomen see "a great deal more of the world," in one sense of those words, than did their grandmothers. There are few of them who have not travelled, or had the opportunity of travelling, to places quite inaccessible to Miss Burney and her friends. A visit to Lynn or to Teignmouth was a more difficult undertaking in 1768 than is now a journey to Paris. It may also be fairly assumed that clever educated girls have now open to them a much wider field of literature than had the authoress of 'Evelina.' But if Englishwomen have now a wider horizon open to their view than had their grandmothers, it can hardly be contested that society was in some ways more interesting, and life more lively, in 1768 than at present. There were still marked differences between the society of different places; there were still local centres for social intercourse. Frances Burney would, in any civilized state of society, have found characters to portray wherever she went. Dulness itself became interesting when she painted it. But we very much doubt whether a young lady with her talents would find half as much to tell her correspondents about society at Teignmouth or at Worcester as Fanny Burney had to tell Mr. Crisp and her sisters.

One cause of this was that the English people were still sociable. During the middle of the eighteenth century it was possible at any rate to understand why the country should have been called "merry" England. Merriment is exactly the impression left upon one's mind by the picture of Barborne Lodge and its inhabitants. There is a touch of something like vulgarity in the jocosity which amused Mr. and Mrs. Wall. It is more than possible that an account of life in Worcestershire given by a writer of less refinement than Miss Burney might to modern ears have had a touch of coarseness. This may be so. Still, this does not take away from the impression that the Walls and their acquaintance really and genuinely amused themselves with a vigor not displayed by their descendants. There are theatres and assemblies and balls hardly to be met with in an English country town of to-day. The mere prominence of the theatre is a note of the eighteenth century; it filled the place now occupied by novels, and the theatre was, in Miss Burney's youth, represented by Garrick. He was one of the Burneys' intimate friends; he appears again and again in the diaries, and always appears as bright, charming, and lovable. The Burneys, it may be said, belonged to a theatrical set. This is true, but Garrick was the friend of Dr. Johnson and of Hannah More. English morality had not at the middle of the last century passed any condemnation on the theatre, and theatrical entertainments, not only in London but in the country, played a great part in the social life of England.

The color to be found in the society of the eighteenth century is heightened by the absence of a great deal of the dissatisfaction and self-searching which have grown up since the time when the world was delighted by 'Evelina.' It would be ridiculous to suppose that the habit of talking or writing about social, moral, or religious difficulties is in reality a cause to the mass of the world of any profound misery. People who are conventionally supposed in modern times to be wholly occupied with the problems of society or of religion often pass a very comfortable existence, though they have neither cut through nor untied the Gordian knots with which they have played. There is no ground whatever for supposing that ninety-nine out of every hundred persons who read 'Robert Elsmere,' whether with approval or disapprobation, are made permanently, if at all, miserable by the gravity of the issues suggested by Mrs. Ward's novel or tract, and by a score more of books which lie, or have lain, upon every drawing-room table. Still, when we come to compare one age with another, it is impossible not to feel that Miss Burney and her friends were utterly free from the burden, be it heavy or light, of the sort of questioning which has grown up during the period of more than a century which has elapsed since the writing of Miss Burney's early diary. She was a good and religious woman; she was, moreover, very impressionable and morbidly sensitive. Yet of religious and still more of social questions, her diary contains hardly a trace. Of the clergy and of their influence one learns from her pages next to nothing. There is not the least sign of ill-will to the Church, or of anything whatever which could be called scepticism; but, for all the show clergymen make in the records of Miss Burney's life, the Church might be non-existent. Mr. Hurrel, it is true, is a clergyman. This is the description of him:

"Mr. Hurrel is quite a poet's priest: he is as fat as *Falstaff*, unable to use exercise and eke unwilling; his love of ease is surpassed by nothing but his love of good living, which equals whatever detraction has hitherto devised for a parson's gluttony."

We all know that the Church of England possessed in Miss Burney's time, as at all other periods, priests very different from Mr. Hurrel. Still, it is characteristic of the period in which she wrote that Mr. Hurrel should have seemed to her a typical parson. Religion was to her and her contemporaries represented by Dr. Johnson, and Johnsonian morality had no tendency to excite a spirit of questioning or disquiet. We can hardly doubt that the happiness of the society in which Miss Burney lived, its mirth and its joyfulness, which to a modern reader seem rather foreign than English, were promoted by the freedom from the doubts which constantly occupy and occasionally harass the minds and feelings of the Englishwomen of to-day. Happiness, at any rate, consists, to a great extent, in the harmony between persons' actual lives and their ideals, and if the ideal of the eighteenth century was in some respects a lower one than that of the nineteenth, it was, in the case of women such as Miss Burney, far more nearly satisfied than are the ideals expressed or hinted at by the lady novelists who in later days have succeeded her. At the particular date when Miss Burney's diaries were written, the wave of religious feeling or conviction which is known as the Evangelical movement had not widely affected the well-to-do classes of Englishmen. There is not a trace in Miss Burney's early diary of her having felt any scruple at amusements, such as balls and playgoing, condemned with more or less decision by the "religious world" which was the creation of Evangelical teaching. But though this is so, there are one or two passages in her diaries which explain how it happened that the religious revival made the rapid progress it did in England towards the end of the eighteenth century.

Take, for example, this criticism on some of the views expressed by Goldsmith in the 'Vicar of Wakefield':

"He advances many very bold and singular opinions: for example, he avers that murder is the sole crime for which death ought to be the punishment, and ventures to affirm that our laws in regard to penalties and punishments are *all* too severe. This doctrine might be contradicted from the very essence of our religion—Scripture—for in the Bible, in Exodus particularly, death is commanded by God himself for many crimes besides murder."

The point to be noted for our present purpose is, that the writer of these sentences clearly lived in a world unaffected by either the humanitarianism or the scepticism of the eighteenth century. A humane young lady does not understand the objection to the profuse infliction of capital punishment, and an intelligent woman draws deductions from Scripture which nowadays would seem absurd to the dullest of Englishwomen. The truth is, that even persons who are completely free from what would ordinarily be called scepticism, have come unconsciously to look upon the Bible in a light utterly different from the light in which it was regarded by Miss Burney and her contemporaries. There is a curious passage to be found in the pages of 'Clarissa Harlowe,' where it is intimated that though the strength of Lovelace's passions made him a libertine, the force of his intellect kept him from being a freethinker, and that he believed intellectually in the eternity of punishments which he in practice ran the risk of incurring.

There existed, then, in England, towards the latter part of the eighteenth century, exactly the condition of opinion favorable for the occurrence of a religious revival. Puritan beliefs still exerted far greater influence than was visible to superficial observation; and though many of the clergy resembled Mr. Hurrel, there were still many men and women throughout the country who inherited the traditions and the piety of the High Churchmen of the seventeenth century. The mass of the English people were, moreover, then, as at all times, naturally disposed towards serious views of life. The dogmas which had moved the men of the seventeenth century were still tacitly accepted as true by the majority of Englishmen. The influence both of the Anglican clergy and of dissenting ministers had declined; there was a good deal of superficial scepticism current in fashionable and intellectual society. But the influence of Johnson, no less than of Burke, is a sufficient proof that the flow of English opinion did not in the main set towards scepticism or free-thinking. Preachers, therefore, who, like the Wesleyans or early Evangelicals, fervently believed in the religious doctrines which they preached, possessed one immense advantage. Their audiences tacitly admitted the truth of the dogmas on which the teaching, say, of Wesley, or later of Simeon, depended. The leaders of the religious movement did not need to establish the truth of the doctrines which they preached. Their task was the difficult, yet very different, one of insisting that their hearers should act in conformity with beliefs which their hearers themselves admitted to be well founded. The very dulness and moral torpor which deprived parsons like Mr. Hurrel of influence was enough, among a nation of Englishmen, to produce a reaction in favor of the teaching of men who, whatever their defects, were full of zeal and energy, and called upon their disciples to turn towards a nobler and higher life than could even be conceived of by such a "poet's priest" as Miss Burney's parson.

The change that passed over the English world between the time when Miss Burney's early diaries were written and the end of the eighteenth century, was exactly one of those changes of feeling which no one really predicted, but which, to a thinker who looks back philosophically on a past age, appear so natural a result of the circumstances of the time

as to have been predictable. Oddly enough, one of the most striking figures among the circle of Miss Burney's friends affords in his life a curious example of the alteration in religious feeling undergone by English society. Arthur Young is known to English readers as the author of the celebrated 'Travels in France,' and as the leading scientific agriculturist of his time. There is not a word in his 'Travels,' and there is not an anecdote of him in Miss Burney's early diary, which suggests the idea that he was as a young man interested in religion or theology. The tone of his 'Travels in France' rather suggests that he shared the scepticism of his French friends, yet he ended his life as a man of profound and somewhat gloomy religious convictions. In 1798 he writes: "In London I am alone, and therefore at peace. I rise at four or five, and go to bed at nine or ten. I go to no amusements, and read some Scripture every day. I never lay aside my good books but for business." In 1814 he is spending his time in teaching Sunday-schools, and in preaching in a kind of chapel of his own. An unsympathetic biographer describes him as "mastered and unmanned" by sorrow. That he had his sorrows is certain, and there is something rather startling to those who know Arthur Young solely as the observer of French life on the eve of the great Revolution, in the picture of him as a conductor of Sunday services, "a second Wesley, a wonderful stirrer up of men's consciences, an unrivalled expounder of the Gospel." But it is well worth notice that the change in the religious sentiments of Young is merely one example of the alteration which took place in the sentiment or the convictions of the generation to which Young belonged. We are all of us apt to forget that the spirit of a time means nothing but the opinions and feelings of men and women living at a particular date, and that the progress of a religious movement means that religious convictions are developed in the minds and shown in the lives of definite persons. Young, in his gayety and in his seriousness, was the representative of his age. The close of his life is quite in harmony with the changed condition of English society; the spirit of the country had gained in depth and seriousness, but it had lost the innocent merriment and gayety which gives a singular charm to the society painted in the 'Early Diary of Frances Burney.'

CONWAY'S HAWTHORNE.

Life of Nathaniel Hawthorne. [Great Writers Series.] By Moncure D. Conway. New York: A. Lovell & Co. and Scribner & Welford.

THE difficulties in the way of a biographer of Hawthorne are considerable. It may be true, as Mr. Conway remarks in his preface, that "there are few authors with whom the world is more intimate than the one supposed to have most shunned its intimacy." The confessions of the Note-books, the revelations made by his son and his son-in-law, and the not inconsiderable mass of reminiscences in other volumes, may lead one to this broad statement; but on finishing Mr. Conway's compressed account gathered from this material, one still finds Hawthorne's actual life remote, and is not a whit nearer to any real knowledge of that genius which, even in his solitary life, seemed to make a new solitude of its own. The fresh material included by Mr. Conway is unimportant, with the exception of the letters, recently published in the *Athenæum*, upon his dismissal from the Custom-house at Salem and upon the loan of money then made by his friends, which were noted in these columns at the time. The exact nature of his escapades at college in gaming and drinking is more fully disclosed by a stray letter, Miss Peabody contributes an account of his early manhood in Salem, some particulars are added to the history of his friends' office-seeking on his behalf—this is practically all, and is all in the region of that personal detail which has come to be of such prodigious disproportion in modern biography. Mr. Conway's book, however, is an effective brief view of the author's career, well proportioned and readable, and contains some interesting observations upon the more marked phases of Hawthorne's life.

The story is in itself most depressing, mainly because of the circumstances which it records. Hawthorne appears to have been sensible that his infelicity had its beginnings in the period of his seclusion at Salem. It does not strike us that in boyhood or youth he was unsociable or eccentric; the absence of companions, however, after he left college, the increasing habit of a naturally brooding genius, the sense that he was making no impression on the world as year by year passed by, must have developed in him (perhaps without his taking notice of it at once) the reticence and withdrawal into self which were traits of his Puritan and seafaring blood. Dr. Loring's account of the neglect of him by Salem people (for the city was a place of some intellectual culture) is very much to the point. He was not known as an author, and he was not of the sort that makes friends. There was nothing extraordinary in his being "let alone." The same thing would happen to-day in any community. Hawthorne's isolation proceeded from himself. Nor does it appear that his "shyness" was merely the attribute of peculiar genius. Self-consciousness and pride, as well as temperament, went to its making. How much he prized success as a proof of manliness is clear from that letter to Hillard in which he accepts his friend's assistance, but calls it "bitter," and adds that "ill-success in life is really and justly a matter of shame." The sense of failure, as something by no means remotely possible in his case, was as present to him as his shadow for years. His withdrawal from literary men in particular is noticeable. On the other hand, the ease with which he met men of a rougher mould, the ordinary people of the common sort, and the pleasure he plainly took in the contact with them, are not less significant. He had no need to remember that he was "the obscurest literary man in America" in the presence of men to whom all literary men were perhaps equally obscure. He felt, doubtless, also in their company that relief from the "bodiless creation" which occupied his mind when by himself; but the point of interest is, that we do not observe any "shyness" in his intercourse with these companions. The lack of recognition of his genius, and a manly spirit offended by its lack of seeming efficiency, certainly aggravated unfortunate tendencies in his disposition.

The extent to which society is responsible for its sins of omission in the way of not at once knowing and encouraging its men of literary genius, is a question too often discussed only from the point of view of the poor author. There is a tendency just at present to ascribe the difficulties of our literary men in the past, as well as the present, to the lack of an international copyright. Mr. Conway gives unlimited influence to this fact in discussing the trials of Hawthorne. It may fairly be questioned, we think, whether the unknown writer of short stories under various signatures, in various periodicals, would have greatly benefited in his early days by the best of copyright regulations between England and America. As it was, he had the kindest assistance in getting before the world, so far as friends could give any. Horatio Bridge privately assumed the financial responsibility for his first collected volume of tales, and, so far as criticism could be helpful, he had Longfellow and Hillard to plead his cause with all the warmth of friendship, in addition to the weight of their criticism. At a later time Fields was the most stimulating and generous of publishers. Apart from literature, also, Hawthorne's friends endeavored repeatedly to obtain office for him, and succeeded in giving him custom-house appointments in Boston and Salem; and when the latter was cancelled, they gave him money in the most unassuming and considerate way. Finally he received the Liverpool Consulate from his friend President Pierce.

It is true that there is much meanness of a political color in his holding of these offices, which were in themselves little fitted for him, and also that they killed literature in him while he held them. Mr. Conway thinks there was something ignoble in the price paid for the Consulate, namely, the campaign biography of Pierce, and Hawthorne clearly thought it an unwelcome task; but for our part we see no inherent impropriety in a man of letters writing a fitting life of his friend who happens to be a candidate for the Presidency. It may be presumed that if he regards him sufficiently to own him as a friend, he can find enough to praise without compromising his own integrity; and if at the same time he serves a political cause in which he believes, so much the more reason for his doing his part as friend and citizen. It is unpleasing to us to know that Hawthorne's opinions upon slavery were wrong, but not to know that he expressed them; and we cannot help thinking that it is the character of Pierce, and not the act of Hawthorne, which makes this incident so unpalatable to Mr. Conway. Had the story been the life of Lincoln, our feelings with regard to it would probably be of a different sort. Hawthorne was reluctant to write the book, and he was quite as reluctant, we cannot but believe, to apply for office, or for retention in office, by the customary channels. His political servitude for bread must have always been repugnant; but Government did the best it could for him under the spoils system, his friends were active and interested always, and his publishers and editors seem to have paid him all just dues. To complain that the nation did not provide proper place or pension for Hawthorne, when it provides them for no literary man, or that society did not buy his books in sufficient quantities to support him before he became famous, seems to us beside the point. Literature is not with us a matter of national concern or of social patronage; it stands on its own bottom, like any other craft, and, under American ideas, is likely to do so.

The fact is, that the notion that the country suffers some disgrace in consequence of the domestic hardships and modest purse of Hawthorne and others in the pursuit of literature, is a relic of the paternal tradition of aristocratic society, which made men of letters a favored class, and gave them charity much in the same spirit as those who would exempt soldiers from the civil-service examinations. Hawthorne received the same treatment as every other citizen. Mr. Conway's assumption, therefore, that the country was in some way responsible for Hawthorne's troubles, and should have "protected" him from them, seems to us a fundamental error. He suffered

the not unusual consequences of choosing a precarious and ill-paid career, the fruits of which are reaped rather by posterity than by the author, but this latter fact is one of the greatest inducements to it, under the form of fame or of social service. Hawthorne suffered poverty, but not injustice; he achieved a unique success, and honor with it, at the end, and he receives from his country all that he is entitled to—immortal memory.

The criticism of Mr. Conway upon the development of Hawthorne's genius, while it is sympathetic, and as penetrative as could be wished from one not himself shaped by Puritan tradition and New England habits, contributes little original to the general criticism of Hawthorne. He succeeds as little as the rest in laying open the secret of the creative process in Hawthorne, or even so tangible a thing as the growth of his style or of his mind. It is worth observing, perhaps, that he combats Col. Higginson's suggestion that Mr. William Austin, in "Peter Rugg the Missing Man," and other tales, was a "precursor" of Hawthorne, though the latter refined on the story named in 'Wakefield,' and gave a meaning to what in Mr. Austin's hands was only the stuff of superstition of a Dutch kind. Mr. Conway, however, fails to trace any obligation of the great romance-writer to the Godwin-bred moral fables of Mr. Austin, so far as style and treatment are concerned. The fact remains that Hawthorne's genius is one of the least derivative, the most purely original, of any in literature.

In the portion of Hawthorne's work that deals with the Puritan material directly, we find nothing specially to note in Mr. Conway; but with respect to the 'Marble Faun,' the comments of the biographer are extremely interesting, inasmuch as he attempts to penetrate the influence of Rome upon Hawthorne. This is a promising field, because here we do seem to come upon a change in the mind of the man, as if he were slowly but perceptibly appropriating the novel influences of Italian art and history. Hawthorne's opinions upon art are singular from the point of view of a competent judge, but they have the merit of being true to his own perceptions at the time, and the gradual growth of his taste and opening of his nature to the effects of art make a most interesting study. The inaccuracy of his memory, and sometimes of his eye, have lately been illustrated in these columns in the letters of the late Mr. Schuyler upon Hawthorne's use of Italian materials; but that some of this modification was conscious is not unlikely. Rome made a profound impression on him, as he himself says, but Mr. Conway attempts to define this as, in part at least, a religious impression, and speculates as to the extent of it under this aspect. Hawthorne was not a religious man, as that phrase is understood, but certain new aspects of Christian feeling seem to have been revealed to him with some power by the artists. This change in the point of view in such a matter, taking place late in life, makes an effective contrast, and its influence may be clearly perceived, both in the romance of Monte Beni and in the Italian Note-books. The subject of Hawthorne's religion, in view of the spirituality of his imagination and his profound moral interest, is a capital point in the criticism of him, and has never been thoroughly treated. Mr. Conway's paragraphs are no more than an episode, but they are suggestive and strike out some new lines. He notes in another place Hawthorne's indifference to philanthropy, conspicuously shown in the matter of slavery, but does not offer to throw light upon it. This latter trait is the more singular because of his kindness to individuals, and in general his responsiveness to any call for benevolent action when it came near him, as, for example, in his effort to improve the condition of sailors during his Consulate and in his attentions to Delia Bacon, of which Mr. Conway might well have made more prominent use. Philanthropy was, perhaps, somewhat discredited in his eyes by the Brook Farm episode, and by that procession of oracle-consulters at Emerson's gate which he looked upon. These subjects are removed from the particular inquiry into his genius, which is the more immediate object of criticism, but they illustrate the extent to which Hawthorne remains, notwithstanding Mr. Conway's opening assertion, little better known to us in his personality than in his genius, although so much detail has been gathered about his private affairs. In conclusion, we can cordially recommend this book to those who desire a general view of Hawthorne's days and works.

Madagascar; or, Robert Drury's Journal during fifteen years' captivity on that island. And a further description of Madagascar by the Abbé Alexis Rochon. Edited, with an introduction and notes, by Capt. P. Oliver. Illustrated. London: T. Fisher Unwin; New York: Macmillan & Co. 1890. 8vo, 398 pp.

THE hero of these adventures was an English lad who, in 1702, was wrecked on the south-eastern coast of Madagascar. On account of his youth his life was spared in the general massacre of the ship's company by the islanders, and he was made the slave of one of their chiefs. In this condition he remained for fifteen years, suffering many hardships, until at length he was ransomed by an English captain. On his return to England he wrote out his story, and gave it to some "transcriber" to "put it in a more agreeable Method." This unknown editor did the work so ably that he is believed by many to have been the author of 'Robinson Crusoe.' The grounds for this supposition are alleged similarity of style and the fact that Defoe laid some of the scenes of 'Capt. Singleton' and 'Capt. Avery' in Madagascar. The first edition, of which the present is a reprint, appeared in 1729, and the work immediately became popular, reaching its fourth edition within twenty years.

Until recently the veracity of Drury's narrative has not been impeached, and he has been quoted as an authority by nearly all who have written upon the island since his time. Of late the book has been regarded by some, including the present editor, as a romance founded on fact, for of the reality of the sailor-boy Robert Drury there can be no reasonable doubt. The arguments urged by Capt. Oliver against its authenticity, however, do not convince us. On the contrary, the supposition that a writer, using the few books then in existence upon Madagascar, could have invented the incidents and characters of the narrative and described the customs and language of the natives with an accuracy testified to by "the missionaries of all sects," seems to us to make far greater demands upon the credulity than the belief that the story is a true one. It may be added that the writer of the article on Robert Drury in the 'Dictionary of National Biography,' Mr. Richard Garnett of the British Museum, regards the book as authentic.

The story is told with great simplicity, the editor's work apparently being mainly to supply occasional historical and literary references and moral and didactic remarks. The boy's principal occupation was that of a herdsman, in which he was often exposed to danger from the frequent cattle raids in which all the tribes engage. His adventures are numerous, though so similar in character as to become somewhat monotonous. But the account of his escape from his tyrannical master, and solitary journey through the mountainous region separating the territory of his captors from the Sakalavas, thoroughly revives the reader's interest. The different chiefs with whom he has to do are portrayed with a distinctness and individuality rare in accounts of savages. Equally good are his descriptions of the daily life of the people. His first entry into a village, as a slave, was marked by a peculiar scene.

"One of the negroes carried a large shell, which, as soon as he blowed, sounded like a post-boy's horn. This brought the women to a great house in the middle of the town, about twelve foot high, which I soon found to be my master's. He had scarce seated himself at his door when his wife came out, crawling on her hands and knees till she came to him, and then licked his feet; when she had done, his mother did the same; and all the women in the town saluted their husbands in the same manner."

Drury at first obstinately refused to conform to this revolting custom, but a kindly brother of his master "told me the danger of not doing it, and that in submitting to it I did no more than what many great princes were forced to do when taken prisoners. I found, at length, it was best to comply, so I went in and asked pardon, and performed the ceremony as others had done."

There is an amusing passage in which Drury attempts to explain the Mosaic account of the creation, and especially that "of the woman's being made out of a rib," to one of the most intelligent of the chiefs. This was received with derisive laughter, and on Drury's insisting "that a man had one rib less on one side than on the other," the natural *argumentum ad hominem* was urged. "We had two women with us; one was very lean, whom they called and told her ribs, finding them equal; and then a man, and found the same." Naturally, this did not increase Deean Murnanzack's confidence in his teacher. The latter's missionary work appears to have ended when, after an account of the Deluge, the astute Malagasy asked: "'If none but Noah, with his sons and daughters, were saved, pray, was Noah a white man or a black man?' To which I answered, 'Sir, I perceive you give no credit to what I say of this nature.'" It is difficult to understand why the editor should have thought that an abridged version of the Abbé Rochon's dull description of Madagascar was worthy of being reprinted. It adds somewhat to the bulk, but little to the interest or the value of this entertaining volume.

What's the Matter? or, Our Tariff and its Taxes. By N. H. Chamberlain. Boston: De Wolfe, Fiske & Co.

THE strong feeling that animates this book is an indication that the abuses against which it is directed are beginning to be properly estimated. Not long ago most people refused to be interested in tariff discussion, regarding the whole matter as too technical for common apprehension, and being satisfied to leave it to be dealt with by Congress. But now the policy of protection is being considered on its merits by all sorts and conditions of men, and the injustice of the principle upon which it is founded is becoming widely recognized. The reform movement, therefore, is ready for the infusion of the dynamic element—moral earnestness; and it is the merit of Mr. Chamberlain that he discerns the signs of the times and throws

himself into the work of conversion with the ardor of the true missionary.

As it is impossible in such an enterprise to avoid dealing with figures, Mr. Chamberlain gives them a sugar-coating by casting his argument in the form of a narrative. The chief spokesman is a manufacturer who has been obliged to close his works, owing to the taxes upon the materials that he employs, and the listeners and interlocutors are many of them his employees. The disguise is rather thin, but is perhaps sufficient to secure an interest at the start, which the vigorous style of the book will sustain. The fallacies of protectionism are exposed, one after the other, in a manner well adapted for popular comprehension, and the positions of the author are fortified by an admirable collection of notes. He has evidently made an extremely careful study of what has been published on the subject, and has selected the most telling and conclusive statements. The array is certainly formidable, and not the least effective part of it is the summary of the opinions of Republican leaders upon the necessity of tariff-revision. Altogether, the book is adapted to our present wants and deserves an extensive circulation. Those who wish to read for themselves, or to put in the hands of others, a vigorous onslaught on protectionism, well sustained by facts and figures, can hardly do better than procure this book.

A Theological Curiosity.

Familiar to our Forefathers 1,500 years ago, but not now known to one man in 50,000.

The Apocryphal Books, being the Gospels and the Epistles thrown out of the New Testament by the Council of Nice, A.D. 325; translated from the original tongues with copious Notes, and Illustrations from ancient Missals and Miniatures.

Of this work, Dr. TALMAGE has recently said:

"Christ is the joyous boy of the fields. We are not permitted to think that the shadows of Calvary darkened His pathway as a youth, and the Apocryphal Books of the New Testament show much of the early life of Christ not to be found in the four Evangelists."

Price, in large 8vo, cloth, $2.00. Sold only by subscription. Agents wanted in every county. Send for circulars.

GEBBIE & CO., Publishers, Philadelphia.

DESCRIPTIVE LIST
OF
NOVELS AND TALES
DEALING WITH
American Country Life.

The object of this list (consisting of extracts from the *Atlantic, Critic, Nation*, and other critical journals) is to direct readers, such as would enjoy the kind of books here described, to a number of novels which, in many cases, have been forgotten within a year or two after publication. It is hoped that the publication of this and similar lists will lessen in some measure the disposition to read an inferior NEW book, when superior OLD books, equally fresh to most readers, are at hand.

Respecting the list, Mr. W. D. HOWELLS writes to the compiler thus:

"I am delighted with the notion of your list of Novels about Country Life in America, and I think you have most charmingly realized it. The book will be useful to every book-lover and critic and librarian. Now that it satisfies it, I know that I have always felt the need of just such a list."

52 double-column pages. Price, 50 cents (32 specimen pages, 10 cents). Address

DR. SAUVEUR'S EDUCATIONAL WORKS.

PETITES CAUSERIES. NEW EDITION just out. Exercises with TRANSLATIONS FROM ENGLISH INTO FRENCH have been added to the book. Also a complete conjugation of French verbs. A pamphlet containing these exercises has been printed separately for those schools which already have the former edition of 'Petites Causeries.'

A copy of the pamphlet and the key to it will be sent free to teachers, with the circulars of Dr. Sauveur's Works. Address
Dr. L. SAUVEUR, Copley Terrace, Roxbury, Boston, Mass.

TWILIGHT PARK,
IN THE CATSKILLS.

In response to an advertisement in the NATION, I recently sold a $1,000 site to a Poughkeepsie lawyer, and his example has led to further sales, amounting to some $4,000, in the same part of the Park, near new Ledge End. Our total sales this season already exceed $20,000. The Club-House has been overflowing—one hundred guests besides servants most of the time —making one hundred and fifty by actual count August 24, and fifty others taking their meals at home. Three new cottages have been built this summer and seven others projected, besides a third addition to the Club-House and a handsome Recreation Hall. There are now twice as many cottages, and double the population as last year, and the end is not yet.

I write this advertisement chiefly to say that the Club-House will be open through October, and that no one who can make the trip should miss the chance to see the mountains in their full Indian-summer glory. We have been turning away applicants all summer, but after September 15 we can accommodate a few, and by October 1 there will be ample room. Address

KRUELL'S CONTEMPORARY PORTRAIT-GALLERY.

"The Nation."
1865-1890.

In commemoration of the 25th anniversary of this journal, Mr. Kruell has engraved on wood, in the highest style of the art, after a recent photograph by G. C. Cox, a portrait of the founder and present editor of the *Nation*,
EDWIN LAWRENCE GODKIN.
The size of the block is 9x6 inches; the impression is on Japan paper, under the personal supervision of the artist, and is loosely mounted. *Only one hundred proofs* will be offered for sale, and each will be signed and numbered. Price, Ten Dollars, carriage prepaid. Address GUSTAV KRUELL, East Orange, N. J.
*** Mr. Kruell offers at the same price, and in the same style, proof portraits of CHARLES DARWIN (one in his prime, one in old age), ASA GRAY, WILLIAM LLOYD GARRISON, and WENDELL PHILLIPS. The edition in these cases is limited to 200 copies for all except Gray (100).
"*Certainly we may look in vain among other graphic arts for anything comparable with these portraits.*"—The Nation, January 23, 1890.

"I advise all parents to have their boys and girls taught short-hand writing and typewriting. A stenographer who can typewrite his notes would be safer from poverty than a great Greek scholar."—*Charles Reade on "The Coming Man."*

Remington Standard Typewriter.

For Fifteen Years the Standard, and to-day the most perfect development of the writing machine, embodying the latest and highest achievements of inventive and mechanical skill. We add to the Remington every improvement that study and capital can secure.

G. P. Putnam's Sons,

27 and 29 West 23d St., N. Y.,

PUBLISH THIS WEEK:

Holland and Its People. By EDMONDO DE AMICIS. Translated from the Italian by Caroline Tilton. New, revised edition, printed from new plates. With 84 Illustrations. Pp. vi+484, gilt top, $2.25.

"Whoever," says De Amicis, "looks for the first time at a large map of Holland, wonders that a country so constituted can continue to exist. It is the land of transformation," but, accustomed as they may be to one metamorphosis or another, the staid, sober-minded Hollanders of to-day may well rub their eyes with astonishment in having placed before them the brilliant and glowing pictures of their country which have been produced by the imaginative and poetic Italian traveller.

"A charming book. . . . the story of a land rich, fertile, and prosperous, which has been reclaimed from the barren sea."—*N. Y. Tribune.*

Among the Moths and Butterflies.

A revised and enlarged edition of 'Insect Lives.' By JULIA P. BALLARD, author of 'Building Stories,' 'Seven Years from To-Night,' etc. Small 8vo, cloth, $1.50.

A beautifully illustrated volume, prepared by a thoroughly competent authority, and written in the clearest and simplest language for young people.

"'Insect Lives' is an exquisite little work on butterflies and moths—just the thing for amateur scientists. It gives illustrations of the larva, chrysalis, and imago states of our most common species, and adds a fascinating description of each, with practical hints about how to raise them."—*Mary B. Dennis. M.S., Director Chautauqua Walking Science Club.*

Prehistoric America. By the Marquis DE NADAILLAC. Translated by N. D'ANVERS, author of 'A History of Art.' Edited, with Notes, by W. H. DALL. Large 8vo, with 219 Illustrations. Pp. vii+566. New, popular edition, $2.25.

CHIEF CONTENTS: Man and the Mastodon—The Kjokkenmöddings and Cave Relics—Mound-Builders—Pottery—Weapons and Ornaments of the Mound-Builders—Cliff-Dwellers and Inhabitants of the Pueblos—People of Central America—Central American Ruins—Peru—Early Races—Origin of the American Aborigines, etc., etc.

"The best book on this subject that has yet been published, . . . for the reason that, as a record of facts, it is unusually full, and because it is the first comprehensive work in which, discarding all the old and worn-out nostrums about the existence on this continent of an extinct civilization, we are brought face to face with conclusions that are based upon a careful comparison of architectural and other prehistoric remains with the arts and industries, the manners and customs of the only people, except the whites, who, so far as we know, have ever held the regions in which these remains are found."—*Nation.*

Dust and Its Dangers. By T. M. PRUDDEN, M.D. Uniform with 'The Story of the Bacteria.' Illustrated, 75 cents.

"This little book has been written with the purpose of informing people, in simple language, what the real danger is of acquiring serious disease, especially consumption, by means of dust-laden air, and how this danger may be avoided."—*Extract from Author's Preface.*

*** List of publications for the fall season and Illustrated Prospectus of the "Story of the Nations" and of the "Heroes of the Nations" sent on application.

PRIVATE SCHOOLS

are particularly invited by

GINN & COMPANY

to examine their publications in

ELEMENTARY ENGLISH:

Stickney's Readers. Best in idea and plan, best in matter and make, best in interest and results.

Classics for Children. Choice literature, judicious notes, large type, good paper, firm binding, low prices. Over 30 vols. ready.

Elementary Lessons in English. The Whitney and Knox Series. "The brightest, most original, and most practical of books.

HIGHER ENGLISH:

Lockwood's Lessons in English. The most successful book yet published for an academic course in language, composition, rhetoric, and introductory work in literature.

Hudson's School Shakespeare. Convenient, reasonable in price, and edited by Hudson. Also Hudson's Pamphlet Selections.

Minto's Manual of English Prose LITERATURE and Minto's English Poets.

LATIN:

The Allen and Greenough Series: The New Grammar (rapidly superseding all others) and new illustrated editions of Cæsar, Cicero, Virgil, and Ovid, with notes and vocabularies.

Collar and Daniell's Beginner's LATIN BOOK.

Leighton's and Tetlow's Lessons.

Collar's and Allen's Composition. "An unrivalled Latin Series."

GREEK:

Goodwin's Grammar and Syntax of the Moods and Tenses.

Leighton's and White's Lessons.

Goodwin & White's Anabasis and Vocabulary.

Seymour's Iliad and Illustrated Vocabulary. Standard and popular with the best preparatory schools.

MATHEMATICS:

Wentworth's Primary and Grammar SCHOOL ARITHMETICS, at once the most interesting, most attractive, most philosophical, and most practical of all Arithmetics; Wentworth & Hill's High School Arithmetic; Wentworth's Algebras, Geometries, Trigonometries, etc. "The most successful text-books of the past decade."

Hill's Lessons in Geometry.

NATURAL SCIENCE:

Gage's Physics and Physical SCIENCE.

Williams's Chemistry and Laboratory Manual.

Young's Elements of Astronomy and Lessons in Astronomy.

Campbell's Botany and Ward's Plant Organization.
All these are new and progressive books.

HISTORY:

Leading Facts of History Series: American History (just published and already adopted by Chicago and many other important cities), English History, and French History.

Myers's General History, Rome, Eastern Nations, and Greece, Ancient History, Mediæval and Modern History.

Allen's Short History of the Roman People.

Myers's and Allen's Ancient History.

Washington and His Country (Irving's Life of Washington, abridged and supplemented with an introduction and a continuation by JOHN FISKE, making it in effect a history of the United States). These new and highly commended works form an unequalled series.

MODERN LANGUAGES:

Doriot's Beginner's Books in French and in German.

Collar's Eysenbach's German LESSONS; Stein's German Exercises; Dumas; Saint-Simon; Dictionaries.

Knapp's Spanish Course; Spanish Idioms.

Please note that the above are only a few of our successful text-books. If you have not our Catalogue at hand for reference, please write for another. The three latest issues of the *Nation* have contained advertisements of new and forthcoming publications. Please consult these lists. Favorable terms for introduction given on application. Correspondence is invited.

FREDERICK WARNE & CO., 3 Cooper Union, New York.

DESCRIPTIVE LIST

OF

NOVELS AND TALES

DEALING WITH

American Country Life.

The object of this list (consisting of extracts from the *Atlantic*, *Critic*, *Nation*, and other critical journals) is to direct readers, such as would enjoy the kind of books here described, to a number of novels which, in many cases, have been forgotten within a year or two after publication. It is hoped that the publication of this and similar lists will lessen in some measure the disposition to read an inferior NEW book, when superior OLD books, equally fresh to most readers, are at hand.

Respecting the list, Mr. W. D. HOWELLS writes to the compiler thus:

"I am delighted with the notion of your list of Novels about Country Life in America, and I think you have most charmingly realized it. The book will be useful to every book-lover and critic and librarian. Now that it satisfies it, I know that I have always felt the need of just such a list."

52 double-column pages. Price, 50 cents (32 specimen pages, 10 cents). Address

W. M. GRISWOLD,
Cambridge, Mass.

E. W. NASH, 80 NASSAU ST., NEW York, has just issued a new Catalogue relating to America, Local History, Genealogy, etc. Sent to any address on application.

W. BAKER & CO.'S

Breakfast Cocoa

Is absolutely pure and it is soluble.

No Chemicals

are used in its preparation. It has *more than three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup.* It is delicious, nourishing, strengthening, EASILY DIGESTED, and admirably adapted for invalids as well as persons in health.

Sold by Grocers everywhere.

W. BAKER & CO., Dorchester, Mass.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 18, 1890.

The Week.

"THE normal condition of a deliberative assembly is one of free and untrammelled debate," said Mr. Reed on the 12th of February, 1885, in the House of Representatives. On the 15th of September, 1890, there came before the House of Representatives a tariff bill which its champions say is to remain the law of the land for a number of years. The Senate had made a number of important amendments, changing radically the sugar schedule from the form in which it passed the House, establishing a permanent Tariff Commission, and giving the President, through a provision for reciprocity, the exclusive power of keeping off or putting on taxes upon sugar, molasses, coffee, tea, and hides. This last is the most important action regarding the taxing power which it has ever been proposed that Congress should take, and demands the most careful consideration. It was opposed in the Senate by one of the ablest lawyers on the Republican side as unconstitutional, and members of the House were entitled to hear the arguments for and against it before casting their votes. Yet Speaker Reed allowed only two hours for debate of the whole tariff question on Monday, and would not permit a separate vote on the reciprocity amendment or any other of the changes in the bill made by the Senate. The only motion allowed was one to non-concur in all the Senate amendments and send the bill to a conference committee, which was of course carried by a party vote. When that committee reports it back, the only motion that can be made will be to accept or reject its work as a whole. In other words, the House is denied all opportunity to express its opinion upon reciprocity, the changes in the sugar schedule, or any other Senate amendment, and everything is to be settled in secret by a conference committee, which in turn will simply ratify the decisions of the Speaker.

Really, it seems hardly worth while to keep up the forms of a House of Representatives. Practically the will of the Speaker is the action of the House. Why keep the other 329 members in Washington? To be sure, the Constitution provides that "the House of Representatives shall be composed of members chosen every second year by the people of the several States"; but so, also, it provides that "the Congress shall have power to lay and collect taxes, duties, imposts, and excises." It is now proposed by act of Congress to transfer the power of laying taxes to the President. Why not also, by act of Congress, transfer the power of legislation, so far as the House of Representatives is concerned, from the whole body of members to the Speaker? This would be only a formal recognition of the existing situation. It may be objected that it would be unconstitutional. But so, also, is the reciprocity provision.

Before the final vote was taken in the Senate on the Aldrich reciprocity amendment to the Tariff Bill, Mr. Evarts proposed to change it so as to bring it into conformity with the Constitution of the United States. Instead of giving the President authority at his caprice to put on or take off duties—in other words, to exercise the taxing power which the Constitution commits to Congress—the New York Senator proposed to provide that, whenever the President should consider the action of other nations regarding our products reciprocally unequal and unreasonable, he should "communicate to Congress the facts which he shall have ascertained, to the end that such duties may be imposed upon the above-recited articles and exempted from duty by this act as Congress, in view of the failure of reciprocal action on the part of any foreign nation or nations, shall determine." Unfortunately, only two Republican Senators joined Mr. Evarts, and both of them men of the third rank (Dolph of Oregon and Sanders of Montana), even Mr. Edmunds voting in the negative, so that the constitutional method of dealing with the subject was rejected by a vote of 30 yeas to 34 nays.

When one reads the McKinley Bill and considers it as the summer's occupation of the Legislature of the richest and most prosperous country in the world, composed of men of mature age and presumably more than average gravity of mind and character, it is impossible to avoid treating some portions of it as comic literature. Take for instance that very mild, and harmless, and very cheap beverage known as "ginger ale." One would think this would escape notice in an assembly of this kind. It bore a duty of 20 per cent., for some reason to us unknown, before Maj. McKinley took it up. He appears to have discovered that to let it in at 20 per cent. in any kind of bottle would work some sort of mischief to the community. So he has provided "that if imported in plain green, or colored moulded or pressed-glass bottles containing each not more than three-fourths of a pint," it is to bear, in addition to the 20 per cent. ad valorem, "10 cents per dozen." Should, however, some importer conceive the diabolical idea of importing it in bottles "containing more than three-fourths of a pint each or not more than one and a half pints," his attack on the national interests is to be met by a duty of "twenty cents per dozen." But should some more than ordinarily depraved trader try to introduce it "otherwise than in plain green or colored moulded or pressed-glass bottles, or in such bottles containing more than one and a half pints each," this particular variety of iniquity is to be repressed by a duty of "fifty cents per gallon," besides a duty on the bottles "at the rates which would be chargeable thereto if imported empty." What prompted this bit of infantile folly? Probably a visit from some little manufacturer of poor ginger beer in New York or Philadelphia, who got a little bottleman to go with him, and represent that with more protection he would be relieved from the necessity of improving his own coarse and sweet stuff, and be able to force it on some people who now drink the light and wholesome foreign product instead.

There is great complaint among the importers about the date at which the McKinley Bill is to go into operation (October 1), and over the announcement that goods in bonded warehouses will be liable to duty under the act unless removed before November 1. They say that never before in this or any other civilized country has an increase of duties been clapped on goods shipped from foreign countries before the increase was made, or clapped retroactively on goods already landed, and that many a merchant whose goods are now on the ocean may be ruined or suffer serious loss from the change in the law. We agree with all this, of course, but we must explain to the aggrieved parties that the reason of it is that the majority in Congress have adopted and deliberately hold the theory that the importation of foreign goods is an immoral business, somewhat in the nature of piracy; that the persons engaged in it are therefore not entitled to any consideration at the hands of the Legislature; that it is true that in times past they have received due notice of any change in the rate of customs duties, but that this was an indulgence which ought never to have been extended to a semi-criminal class, and it is, therefore, ridiculous of them to complain of its withdrawal. This view naturally sounds very droll to all intelligent persons, and it might easily be refuted, but we can assure the importers that there is not the smallest use in arguing against it. The Republican majority has contracted for cash with the manufacturers to look at importers in this light, and cannot be dislodged from its position except by a larger payment. The only remedy for foreign traders that we know of is to put up in 1892 more money than the domestic-industry people, for the campaign chest. See Quay beforehand, and he will make it all right.

The Republicans are naturally in a quandary what to do about their leader, Mr. Quay. Mr. Clarkson, the late Assistant Postmaster-General, who is one of the shrewdest of the managers, when consulted the other day about what had better be done, said: "Mr. Quay would not be permitted to resign by the National Committee if he wished to do so. He talked about resigning the week after election, but the members would not hear of it. He has expressed himself to the same effect several times since, but the members hold the same

feeling about it now as then." Clarkson is right and "the members" are right. They cannot let him resign. Resignation would be confession, and they must carry him along. If he should win the coming election in Pennsylvania, they will claim it as a "vindication"—a term which means not that a man has not committed the offences with which he is charged, but that they are not likely to interfere with his political career, and this is what Quay most cares for. If people vote for him, he recks little what they think about his character. The whole situation is most interesting and instructive.

In spite of the persistent efforts of the Congressional Committee which is investigating the Pension Bureau scandal, to prevent the inquiry from revealing anything unfavorable to the Commissioner, Mr. Raum, damaging disclosures continue to be made from time to time. At Monday's session Raum himself was forced to make the admission that his private secretary was both a stockholder in and the Secretary of the Refrigerator Company whose stock Raum is accused of distributing among the employees of the Bureau. It has been charged that employees buying this stock were given to understand that they would have better chances of promotion than their fellows who did not buy it, and it now appears that Raum's secretary was promoted after he took a share, though Raum says he never paid anything for it. The Committee used all its power to keep this evidence out, and it was only the sharp and unexpected questions asked by Mr. Cooper, the Congressman who is conducting what Raum's friends call the "prosecution," that goaded Raum into revealing it. Raum's explanation of why his private secretary was not required to pay for his stock is of itself a revelation: "Mr. Tanner was not expected to pay for his stock, and the same is true of half-a-dozen prominent Washington business men. We wanted to identify them with the enterprise, and we gave them stock for the use of their names, as is usual in the organization of such companies." When it is remembered that Raum has repeatedly denied that any employee in the Bureau held the stock in question, and that the company has been shown to be a swindle, this remarkable confession indicates that his administration of the Pension Bureau needs a thorough exposure.

Superintendent Porter's defence of his census is the most extraordinary thing yet developed in this national muddle and disgrace. He says that a prominent Washington editor called at the Census Office to complain that his family had not been enumerated, whereupon the Superintendent had the sheets from the district in question brought to his desk, and found that not only the editor, but every member of his family had been counted. "The information," says Mr Porter, "had probably been given out by a servant in his family, who neglected to mention it." The Superintendent says further: "I have had several similar cases, and in each instance the party complaining that he had been overlooked was found to be down all right; so I believe it is safe to say that in the majority of instances the people who do not think they have been counted in the census are mistaken." So we have a census made up in a considerable measure of the replies to a long list of questions regarding members of a family given by ignorant servant-girls! And the Superintendent of the Census actually claims that this sort of a census is all right!

The full returns in Speaker Reed's district show that he was chiefly indebted to Democratic apathy for his great majority. In Portland he ran 84 votes ahead of the Republican candidate for Governor, but as his Democratic rival also led the State ticket of his party by 39 votes, the Speaker's net gain was but trifling. In a few other places Mr. Reed led Gov. Burleigh slightly, but in some cases also he fell behind the State ticket, so that there is no material difference in the whole district between his total for Congress and Burleigh's for Governor. What gave Mr. Reed his great majority was the fact that the Republicans got out a much larger proportion of their whole vote than the Democrats. It was by no means a full vote, for the Speaker received only 16,812 ballots, while in the last election of a non-Presidential year (1886) he polled within 1,187 of his record last Monday, and in 1888 exceeded it by no fewer than 1,476; but the Democratic canvass was so utterly neglected that the party turned out only 11,959 voters, whereas in 1886 14,299 appeared at the polls, and in 1888 15,855. This showing will not avail to break the moral force of Mr. Reed's unprecedented majority, which stands at 4,853 this year, against only 2,433 in 1888 and 1,326 in 1886; but it makes it plain that the result was due rather to Democratic lifelessness than to Republican gains.

There is danger that the Republicans will overestimate the importance of their victory in Maine, forgetting that they won an equally decisive victory in September, 1874, while two months later the Democrats swept the country. It is well enough to dig out of newspaper files the exuberant despatch which James G. Blaine sent to President Grant on the evening of election day:

> "The result of our election is in all respects satisfactory. We have carried every Congressional district, have a majority, I think, in every county in the State, have chosen twenty-nine or thirty Senators to one by the Democrats, have elected three-fourths of the popular branch of the Legislature, and have given Gov. Dingley a majority, according to present appearances, of between 11,000 and 12,000, which is a handsome gain on last year's vote."

This was on the 14th of September, 1874. In October the Democrats carried Ohio for State officers by 17,000 majority, and Indiana by almost exactly the same majority, while in November they elected their candidate Governor of Massachusetts, gave Tilden 50,000 majority in New York, and secured almost two-thirds of the House of Representatives. The enthusiastic Republicans who are treating Speaker Reed's recent victory in Maine as the verdict of the nation, should consider these reminiscences.

The noisy attack which Congressman Boutelle, the howling dervish of Maine politics, has made upon Mr. Blaine through the columns of the Bangor *Whig*, is merely public announcement that Boutelle looks upon the Maine election as marking the end of Mr. Blaine's power in politics. Boutelle, the creature of Blaine, has come to the conclusion that Blaine is a "back number," and that Reed is the man for him to follow hereafter. In speaking of this change of leadership the *Times* says that Mr. Blaine has ceased to be the Man from Maine, Mr. Reed now occupying that position, and has become only a man from Maine. We should say, rather, that the two should be spoken of as the Man from Maine and the Second Man from Maine. The type remains unchanged, as do the political methods and morals of the leadership. Boutelle and his kind turn to Reed because they hope to get, through his power, what they formerly got through Blaine's, that is, offices for themselves and a share in the distribution of the spoils. Boutelle, in fact, serves notice upon the President that the Maine election gives him no excuse for further refusal to hand over the control of the Maine patronage to the Second Man from Maine. It will be interesting to see what answer the President will make. The chances are that he, as well as the great bulk of his party, will take Boutelle's view.

The *Evening Post* prints a letter from Mr. David A. Wells defining his position on the tariff question in answer to some criticisms of the Hartford *Times*. His position is that of all rational tariff-reformers. The furious free-trader who wants to abolish all duties instanter, is a creature of the protectionist imagination. If he exists in this country, or in any other, he exists in only very small numbers and only in the remoter mountain ranges of public economy. The reciprocity men have this sort of free-trader undoubtedly in mind when they are frightened and run away on being called free-traders themselves. But they will become more sensible by and by. Every man is a free-trader who acknowledges that commercial intercourse with foreign nations is a rational, profitable, and innocent thing. Absolute free trade, without let or hindrance in the shape of revenue duties, is almost as difficult in this world as perfect holiness. A reciprocity man is simply a man who recognizes the sinfulness and folly of some of his ways, and sincerely resolves to abandon them and strive after a better life. His condition, in fact, is somewhat like that of an African chief who has just been converted to Christianity, and is considering how best, without disregarding the claims of natural justice, to dispose of nine of his ten wives in accordance with the requirements of his new faith. Mr. Wells, we believe, has come to no determination as to accepting a nomination for Congress, and will not "work" for it. It must be offered him, if offered at all, with substan

tial unanimity; that is to say, he must be left untrammelled if he is to accept it at all.

Senator Saxton states in the *Tribune* of Monday that the features of the new ballot law for this State which are likely to cause most annoyance, and may lead to complications in practice, were added by Gov. Hill. These are the separate tickets and the consecutive numbering of the ballots, both of which had to be added before the Governor would approve the bill. The separate-ticket requirement was added in the supposed interest of Tammany Hall, but it is Tammany which is most alarmed about it now, for its leaders are afraid that the confusing number of ballots which each voter will receive at the polls, and from which he must select unaided those which he is to vote, will be the cause of Tammany losing from 10,000 to 30,000 votes. They fear that great numbers of their ignorant followers will either not go to the polls at all, or will not be able to vote as they wish when they get there. They must not blame the ballot-reformers for this situation, but the Governor and themselves. If they had been willing to take the Australian system in the simple form in which its advocates presented it in the Saxton bill, they would have had a much easier one to work than they have now.

There have now been put on record, from unimpeachable Republican sources, four emphatic protests against a straight Republican ticket in the approaching municipal election. Three of these protests are made by men who as practical politicians have no superiors in the Republican County organization, namely, Messrs. Van Cott, the Postmaster, Jacob M. Patterson, ex-Police Justice, and William H. Townley, the Republican leader of the Fourth Assembly District. The fourth protest, which is slightly less emphatic and more cautious, comes from Chauncey M. Depew, who, if not so practical as the three leaders above mentioned, is as uncompromising a party man as any one of them. The utterances of the four men are so comprehensive, and throw so far-reaching a light upon the relations of Republican politics and municipal government in this city, that it is well worth while to cite them in the order of their publication. Mr. Van Cott said, in an interview published by the *Evening Post* on August 13: "The impossibility of electing a Republican to the Mayoralty on a straight Republican ticket is so palpable that I do not see how any one could regard the nomination of such a ticket as anything but the purest folly. There is not an iota of doubt that with three tickets in the field Tammany would have a comfortable majority." Mr. Townley said in an interview published by the same paper on September 1: "In nominating a straight ticket we should be doing just exactly what Tammany Hall wants us to do, and there is no doubt that, if we were to do it, we could get lots of good offices from Tammany in return for the action." Mr. Patterson said, in an interview published in the *World* on September 13, when asked if he had declared himself as opposed to a straight ticket: "I certainly did say that it was foolish for any Republican who knows anything about politics in this city to hope for victory here next November by running a straight ticket. Just so sure as there are three tickets in the field, just so sure is Tammany of victory." Mr. Depew's views were set forth in an interview published by the *Evening Post* on Saturday.

The Wyoming election of Thursday was notable not only as the first in a new State of the Union, but also for the fact that women participated in the choice of State officials and, indirectly, of United States Senators. The Territory has been reliably Republican for years past—or else it would not have been made a State by a Republican Congress; and that party has now carried it again, as was expected. But what an outrage it is that these few people in Wyoming—the total vote at the last election (women included) was only about 18,000—should be given as much power in the Senate of the United States as the million voters of Pennsylvania or the million and a third of New York!

The education of the British public in the matter of strikes is going on rapidly and will soon be completed. We presume the finishing touches are being given by the Southampton riots. The British public are very much in the position in which the American public were five years ago. Indeed, they are in a worse one, because no such folly as the London Dock strike and its concomitants had then taken place in this country. The misery of the situation is, that no large corporation can discuss a labor question with a trades-union on its merits, or can afford to make any concession worth mention without putting their whole business in peril. The Reading Road tried concession, and in a short time the management of the road had passed, as Powderly has admitted, out of the hands of its officers, and the men actually often stopped the trains when they met in order to converse on labor topics. The explanation of this is that, as a rule, the unions are composed of rather ignorant and hot-headed men, and are managed by very ordinary self-seeking men of the Lee and Powderly type, who are naturally desirous of increasing their own authority and magnifying their own usefulness by every means within their reach. If a corporation employing a large amount of labor yields to them, it virtually admits to participation in the control of the property a body of persons who, in controlling it, enjoy power without responsibility. Nobody in any other field, no matter what his talents or character, is deemed fit for power without responsibility over anything except over his own private property. The dangers of such power to character and temper are one of the commonplaces of politics and moral philosophy. Why, then, should the leaders of trades-unions be supposed to be fit for it? Why should Lee and Powderly be supposed fit to manage the New York Central, or John Burns and Tom Mann the London and Southampton Docks, neither of them having a dollar of the stock, and owing no account to anybody for any action he may take with regard to it?

The insurrection in the Swiss canton of Ticino was due to the same causes which, during the last fifty years, have made that canton the scene of frequent conflicts between the two political classes who are roughly designated as the Clerical *Sopraceneri*, the inhabitants north of the mountain pass of Ceneri, and the Radical *Sottoceneri*, those south of it. The Ultramontanes have for fifteen years had a majority in the Grand Council, and have carried things with a high hand, ousting officials suspected of Liberal leanings and replacing them by priests, reopening and multiplying convents, and making common cause with demagogues who preyed on the poor and ignorant populace. There was a bloody conflict between the parties in 1876, which led to the interference of the Federal authorities; and in 1878 one of the causes of contention, the rivalry between the cities of Lugano, Locarno, and Bellinzona, each of which had been by turns the capital of the canton, was thought to be removed by the definitive selection of Bellinzona. In 1883 the canton adopted the *referendum*, by which any laws made by its Government may, on the demand of a certain number of inhabitants, be submitted to popular vote for approval—a democratic safeguard of which, either in its obligatory or optional form, all the Swiss cantons, with the exception of Freiburg, have availed themselves, and which, according to cable report, was put into operation immediately after the suppression of the late revolt. When it is remembered that the preceding conflict between the Clericals and the Radicals, which was likewise put an end to by the Federal authorities, occurred as recently as March, 1889, it will be seen what little hope of permanency there is in the peace just now brought about.

The recently formed "Peasant Party" in eastern Switzerland, an agrarian association resembling somewhat our Farmers' Alliance, has perhaps added to the discord in the Ticino, whose Radical population is naturally open to revolutionary influences of all kinds. That organization may be destined to become an important factor in the politics of Switzerland, if one is to judge from the tempting overtures made it alike by thoroughly reactionary papers, like the *Berner Volkszeitung*, and radical labor organs, like the *Schweizer Socialdemokrat*. It is a curious fact, by the way, that the internal strifes of the canton of Ticino have not essentially disturbed the formerly sorely tried loyalty of its inhabitants, who are completely Italian in their language and characteristics. In 1798 the people—whose territory had been acquired by the Swiss League in the fifteenth and sixteenth centuries—chose to be included in the Helvetic Republic rather than in Bonaparte's "Cisalpine Republic," and the canton remained faithful to the Federal Government in the war of the Sonderbund in 1847.

ONE LAW OF POLITICS.

In spite of all exhortation and temptation, Mr. Kennedy, the Ohio Congressman who made the savage attack on Quay week before last, has printed his remarks in the *Record*, without any serious modification. The most important passage appears in the *Record* as follows:

"He has failed to justify himself, and, though opportunity and ample time has been given him, he remains silent. His silence under such circumstances is simply a confession of guilt. An honorable man does not long dally when his honor is assailed. He has delayed too long to justify the belief in his innocence. He stands convicted already before the bar of public opinion. Under such circumstances he should be driven from the head of a party whose life his presence imperils. Lafayette, standing in the French Chamber of Deputies at a critical hour of the nation, said: 'France has done enough for Napoleon.' So I say the Republican party has done enough for this pretended leader; let him be relegated to the rear."

Now what we wish to observe to Mr. Kennedy and all other good Americans, in and out of Congress, is, that as long as Congress is engaged in its present occupation of trying to put money into the pockets of certain classes of the community by a series of interferences with the ordinary operations of trade and commerce, there is no use in "relegating Quay to the rear," because his place will speedily be taken by another "leader" of the same kind. Quay is the logical and inevitable product of the activity of his party during the past twenty years. The road on which he has travelled to the chief place in the party councils is broad and well graded, and is crowded with aspirants of the same kidney. When a government undertakes to make money for the people, instead of letting the people make money for themselves, money naturally becomes the chief interest of all men actively engaged in politics, and the man who can promise most money, and collect most money, and is most skilful in getting money somehow, inevitably becomes the chief statesman.

The rule which has given us Quay is as old as civilization. If a government devotes itself to war, the soldier becomes the chief man in the community; if it devotes itself to the promotion of commerce, the merchant and financier takes the highest place. If it undertakes, however, to promote public happiness by legislating cash out of some men's pockets into other men's pockets, by enabling the unsuccessful or the knavish or the incompetent to levy toll on their neighbors, to force their goods on people who do not want them, and to enter in their books the exact amount they can make by getting a tax put on or taken off, the jobber and gambler looms up as the political leader just as certainly as a wet dunghill steams in the morning sun. His appearance is simply a question of time. The catena of corrupt or tainted Speakers of the House, beginning with Colfax and ending with Reed, with which the Republican party has furnished American history, were unmistakable signs of the times. They began twenty years ago to show the party in what direction it was travelling. They were followed or accompanied by other signs not less portentous—the gradual filling of the Senate with millionaires of dubious antecedents, the gradual exclusion from public life of intellectual men of every calling, the application of the money standard to every problem of society and government, the taxation of pictures and books, and the consignment of all the thinkers of the country, whether ministers, professors, or authors, to contemptible insignificance as theorists, or "littery fellers," whose opinions ought not to have any weight because their powers of making money were so small.

The meaning of all these things was unmistakable. They meant that before the end of the century the Presidency and seats in the Cabinet would be sold for cash, and that the broker who managed the bargain would become the head of the party, the Chairman of the National Committee, and Senator from one of the largest, oldest, and richest States in the Union. That in addition to all this, and before all this, he should have been a known thief and a gambler, a man of infamous life, is nothing wonderful. He is where he is because he knows more than any man about the business in which the United States Government is engaged—the business of peddling out the taxing power to individuals for their private benefit.

If any one thinks this language extravagant, let him consider for a moment the chief result of the labors of the present Congress during the past session, the longest but one in our parliamentary annals. It now lies before us in the shape of the McKinley bill. This bill has occupied the attention of the National Legislature almost exclusively for six months. It fills fourteen columns of the large blanket sheet of the *Journal of Commerce*, and it consists simply and solely of a series of minute interferences with trade and industry for the benefit of individuals, firms, and corporations. Nothing is too petty for its notice. No man or woman in the United States can touch, taste, or handle anything from morning till night which our legislators have not meditated on as a possible subject of taxation for somebody's profit. One cannot glance over the list without being impressed, first of all, by the amount of human labor it represents, and then by the wonderful opportunities for jobbery it affords. No party capable of such an effort of perverted ingenuity can help producing a Quay; and when a Quay appears, it cannot relegate him to the rear. He is in his right place. He knows too much about the business in hand to be sent to the rear. France sent Napoleon to the rear, as Lafayette said, when she got tired of warring; but as long as her whole attention was given to the equipping of armies and the conduct of campaigns, she had to keep him in the forefront, monster though he was. A money-making government is, in fact, inevitably a corrupt government. The function of government is to give to legitimate human activity security and freedom. When it undertakes to show people how to increase their incomes, it can only do so by abusing the power of taxation; and when the power of taxation begins to be abused, the hour of the speculator, and briber, and gambler, and lobbyist, and thief has come.

"WHAT IS RECIPROCITY?"

Such is the Yankee-like answer which Speaker Reed is reported to have made last week to an inquiry as to what he thought the House would do with the Senate amendment on the reciprocity question. It is the only sort of answer which any one can make.

The Senate amendment provides "that the exemptions from duty of sugar, molasses, coffee, tea, and hides, provided for in this act, are made with a view to secure reciprocal trade with countries producing these articles; and for this purpose, on and after the first day of July, 1891, *whenever and so often as the President shall be satisfied that the Government of any country producing and exporting sugars, molasses, coffee, tea, and hides, raw and uncured, or any of such articles, imposes duties or other exactions upon the agricultural or other products of the United States, which, in view of the free introduction of such sugar, molasses, coffee, tea, and hides into the United States, he may deem to be reciprocally unequal and unreasonable*, he shall have the power and it shall be his duty to suspend, by proclamation to that effect, the provisions of this act relating to the free introduction of such sugar, molasses, coffee, tea, and hides, the production of such country, for such time as he shall deem just; and in such case and during such suspension duties shall be levied, collected, and paid upon sugar, molasses, coffee, tea, and hides, the product of or exported from such designated country as follows," (the rates being then given).

If the House accepts this amendment, well may Speaker Reed, or any other man, say, "What is reciprocity?" What, indeed, would it be? Nothing more nor less than the caprice of the man who happened to fill the Presidency—be he a Benjamin Harrison, an Abraham Lincoln, or an Andrew Johnson.

The *Tribune* very properly lays stress on the argument which Senator Spooner made for the constitutionality of the Senate amendment. The Wisconsin Senator is an able lawyer, and he undoubtedly made the best case that was possible for the side which he championed. But it is altogether too much to say that it constitutes "a most convincing reply to Democratic sophistries and to the objections raised by Senator Evarts." Mr. Evarts challenged the Senators who defended the amendment to "offer an argument that, under our Constitution, this demission by Congress and this vesting it in the President is not placing in him the power to make a treaty, or a quasi-treaty, or an arrangement in that nature, without the Senate; or to raise revenue or remit it without the action of the House of Representatives, with which that power under the Constitution must originate." Mr. Spooner claims that "it is not a delegation of legislative power," and says: "The act passes from Congress a completed act. The provision that upon the happening of a certain contingency, to be ascertained and declared by

proclamation of the President, he shall have power to suspend the provisions of the law placing certain articles named upon the free list, and that thereafter, during the suspension of the law as to those articles, certain duties shall be levied, is entirely in harmony with numerous precedents, and is justified by high authority." In support of his position he cites the decision of the Supreme Court in a case which arose under the non-intercourse acts of 1809 and 1810, and the President's proclamation of November 2, 1810, that "the Legislature may make the revival of an act depend upon a future event, and direct that event to be made known by proclamation."

Of course Congress may pass a law and make its enforcement or suspension "depend upon a future event." Ordinarily Congress enacts that a law shall take effect at a certain date. It may instead provide that the law shall take effect at a certain date unless a specified event happens in the meantime, directing the President to make that event known by proclamation. For example, it may enact that no duty shall be imposed upon coffee imported into this country from Brazil unless Brazil imposes a duty upon agricultural products of the United States sent to Brazil; or that a certain duty shall be imposed upon coffee imported from Brazil so long as Brazil imposes duties upon our agricultural products; and in either case leave it to the President to proclaim the happening of the contingency thus provided for. This would be perfectly plain, and everybody in each country would understand exactly what it meant. The President's only prerogative in the matter would be to ascertain officially and promulgate a fact well known to every business man in both countries, that Brazil does or does not impose any duties upon agricultural products of the United States. In like manner it might be provided by Congress that a duty of three cents per pound should be imposed upon coffee imported from Brazil if Brazil imposed duties exceeding a certain standard—say 10 per cent.—upon agricultural products of the United States. In this case, again, all that the President would have to do would be to ascertain officially and promulgate a fact already well known to the whole business world. In the same way it might be provided by Congress that coffee from Brazil should come in free so long as Brazil should admit free our agricultural products, but that a duty of three cents per pound should be imposed in case Brazil should impose any duties, or duties exceeding 10 per cent., upon our agricultural products. Here, too, the President's only prerogative would be that of executing a plain act of Congress "upon the happening of a certain contingency," to use Senator Spooner's words, or "upon a future event," in the words of the Supreme Court—the contingency or event being a matter of universal notoriety.

But this is not at all what the Aldrich amendment proposes. It does not provide that the President shall suspend the free admission of coffee from Brazil upon Brazil's imposing any duties, or certain specified duties, upon our agricultural products after a certain date. Everybody concedes that Congress might constitutionally pass such an act, and every business man would know exactly what it meant, and be able to govern all his ventures accordingly. But the amendment provides that the President shall exercise the power of suspending the free admission not only of coffee from Brazil, but of sugar, molasses, coffee, tea, and hides from any other country, and of imposing certain duties upon such articles, "whenever and so often as the President shall be satisfied" that the duties imposed by such country upon our agricultural products are such as "he may deem to be reciprocally unequal and unreasonable."

The Supreme Court decision which Senator Spooner cites says that Congress may make the operation of an act "depend upon a future event." What is an event? Webster says: "That which comes, arrives, or happens; that which falls out; any incident, good or bad." The action of Brazil in imposing any duties upon our agricultural products, or imposing duties higher than 10 per cent., or repealing certain existing duties—that would be an event, upon which Congress might make the operation of a law depend. But the action of Brazil in imposing certain duties which the President of the United States—be he a Benjamin Harrison, an Abraham Lincoln, or an Andrew Johnson—"shall be satisfied" are such as "he may deem to be reciprocally unequal and unreasonable"—that would not be an event: it would be an exercise of judgment, or of mere caprice, which nobody else in either the United States or Brazil could count upon beforehand. Public sentiment in the United States might be almost unanimous that the duties imposed by Brazil were not "reciprocally unequal and unreasonable," but that would not prevent the President from deeming them to be so and exercising the taxing power. The President might thus exercise this taxing power, and Brazil might then make such changes in its duties upon our agricultural products as satisfied the entire business community in this country that the taxes which he had imposed upon imports from Brazil should be remitted, and still he could keep them on as long as he should "be satisfied" that they ought to be retained.

The truth is, that the Aldrich amendment places the power of imposing certain taxes upon sugar, molasses, coffee, tea, and hides imported from other countries entirely in the President's hands, and leaves him to exercise it absolutely at his own discretion. If it becomes a law, the only man in the world who will know whether sugar, molasses, coffee, tea, and hides are to come in free from any country during the last six months of the year 1891 will be Benjamin Harrison; the only man who will know whether, such articles having come in free from a certain country during 1891, they are to be admitted in the same manner during 1892, will be Benjamin Harrison. If Benjamin Harrison "shall be satisfied" that hides should come in free from one country and pay a duty of "1½ cents per pound" from another country, so it will be; and if he "shall be satisfied," after three months' trial of this arrangement, that he has made a mistake, and that the conditions as to those two countries should be reversed, so it will be.

If Congress can give the President such power as this, there is no reason why it should not give him all power. It is past belief that a Supreme Court which annulled the Civil-Rights Bill as unconstitutional would not also say of such an act as this: "We are of opinion that no countenance of authority for the passage of the law in question can be found in the Constitution, and it must necessarily be declared void."

THE CENSUS MUDDLE.

The census taken by the Federal Government every ten years is a work of the greatest importance to every State in the Union. Upon the enumeration of the inhabitants thus made is based the apportionment of Representatives in Congress, and by consequence the number of members of the Electoral College for the choice of President allotted to each State. As this enumeration is made only once in every ten years, any blunder in this respect is irreparable for a period covering five Congresses.

But the census long since outgrew a mere enumeration of the inhabitants. Their division between the sexes and among the races, their ages, their occupations, the number of families and dwellings, the degree of illiteracy, the condition of agriculture, manufacturing, mining, and all the other means of subsistence—these and many more hardly less important details now come within the scope of the census. Its reports make a long series of great volumes, and are full of information of the highest value to all students of modern civilization. To say that so important, vast, and delicate a work should of course be committed to the charge of a man specially and peculiarly qualified for the responsibility would be, one would suppose, to state only a truism. It would appear obvious that the Superintendent of the Census should be a man fitted, by careful training, for his duties, and, above all, a man of such unblemished character that his absolute impartiality should be as much assured as that of a just judge upon the bench. Reckless partisanship should of itself constitute as insurmountable a bar to appointment as Census Superintendent as to appointment upon the bench.

The census of 1870 and that of 1880 were taken by such a man. Gen. Francis A. Walker received a good education before he left the law office for service in the Union Army, and returned to his studies four years later. In 1869 he became Chief of the Bureau of Statistics in the Treasury Department at Washington, and in 1870 he was made Superintendent of the Census. The collection of statistics in that year was attended with the greatest difficulties in the South, owing to the disorganized condition of society in many of the States; but General Walker did the best that was possible under the circumstances. So successful was his management that he was naturally sought for the same place ten years later, and he dis-

charged its duties with the added wisdom gained in his position during the interval as Professor of Political Economy and History in the Sheffield Scientific School of Yale. He enjoyed the respect of the entire community without distinction of party, and nobody would have ventured to hint that he was capable of distorting the statistics which he collected in behalf of any party or interest.

We presume that it would have been impossible to secure the services of General Walker as Superintendent of the present census, for he became President of the Massachusetts Institute of Technology several years ago, and would probably have found it impracticable to leave his post. But it would have been possible to secure a Superintendent of the Walker type: a man of the highest character and the most approved qualifications; a man who would have made fitness the test of appointment, and who would gladly have availed himself of the opportunity to bring his office under the Civil-Service Law; a man whose work would have commanded the respect of the whole country.

Instead of such a man, what did the President give the country? A Superintendent whose reputation was that of a self-seeker, unhampered by nice scruples in his quest of office; who was appointed because he had been the editor of a subservient party organ; who began operations by proclaiming his contempt for civil-service reform; who is believed—and especially by those who know him best—to be entirely capable of any degree of "fooling" with the figures that was likely to escape detection. From Francis A. Walker we made the abrupt descent to Robert P. Porter. A sample of Porter's methods is afforded by the system adopted to take the census of this city. Here is the metropolis of the nation, a vast aggregation of people from all parts of the world, speaking all sorts of languages, living in all kinds of crowded buildings. The task of taking the census in New York was beset by the utmost difficulties, and required the services of the very highest type of enumerators that could be secured. What type did we have? The method adopted by Mr. Porter's representative in this city was to send out to the "Jakes" and "Barneys" and "Mikes" who "run the machine" in the various districts this circular:

> DEAR SIR: You will please forward to this office the list of applicants that the Republican organization of your district desires to have named as census-enumerators. This list must be sent here on or before April 1. Yours,
> C. H. MURRAY.

Comment upon such a performance would be a waste of space. Is it any wonder that the count of New York returned by enumerators thus selected by the Republican Machine falls fully 100,000 short of the number to which the city is entitled by every test that has applied to all previous censuses? Is it any wonder that similar complaints of the grossest inaccuracy come from all parts of the country? Is it any wonder that the total population falls fully a million short of what every careful student of the problem, basing his estimates upon the results of previous censuses, has considered the minimum figure? Is it any wonder that even a Republican organ like the New York *Tribune* is driven to the conclusion that something is wrong, and that another Republican organ, the St. Louis *Globe-Democrat*, declares that "the conclusion seems to be inevitable that the stories of inadequate enumeration which come from many sections of the country must contain a considerable element of truth, and that hundreds of thousands of persons have been missed by the census-takers"?

What a spectacle it is for a civilized nation, which has just celebrated the one hundredth anniversary of its establishment, to present—committing the most delicate and important sort of work to a lot of spoilsmen, and then finding, as might have been expected, that nobody can place any confidence in the result, although everybody must for ten years be governed by it!

CAMPAIGN METHODS.

IT is to be hoped that the leaders of the Democratic party will take to heart the sound admonition which they are receiving from many sources on account of their ineffective canvass, or rather lack of canvass, for the recent Maine election. The figures of the result, as we have already pointed out, simply show that the Republican success was due entirely to the fact that a full Republican vote was polled. The increase in Mr. Reed's plurality was not due to an increase in the number of Republicans voting for him, but to the great falling off in the number of Democrats voting against him. That is to say, the managers of the Democratic campaign either made an unsuccessful effort, or no effort at all, to get their voters to the polls. They made no open effort to arouse voters to the importance of the public questions which entered into the election, circulated no documents, and held no public meetings. They made no attempt to enlighten the voters upon the merits of the Tariff and Force Bills for which Mr. Reed and his party were contending, or to refute the statements of the Republican campaign orators concerning those and other measures and doings of the present Congress. They declared that they had something far better than all these things to rely on for success, namely, a "still hunt," but it is doubtful, in view of the outcome, if they had even this.

Why were not the Democratic leaders as well able as the Republican leaders were to realize what an excellent opportunity they had for making party capital in this Maine election? They have been asking themselves that question during the past few days, and have been making other inquiries which ought to result in showing them where the trouble lies. They have asked, among other things, who is the chairman of the Democratic Congressional Campaign Committee, and have discovered that his name is Roswell Pettibone Flower, and that if he took an active interest in the Maine election, nobody ever caught any outward signs of it. We trust that they will follow up this line of inquiry, and seek to discover Mr. Flower's qualifications for the position he occupies and the reasons which prompted his election to it. Our word for it, fearless inquiry on this line will go straight to the root of one of the most serious defects in Democratic campaign methods for the past ten or twelve years.

The inquiry will not need to be either long or acute. Mr. Flower was chosen simply and only because he is a very rich man. He had no other qualification for the place than his ability to make a handsome contribution from his own pocket to the campaign funds, and his supposed ability to get similar contributions from the pockets of other rich men. In selecting him to take the direction of their Congressional campaigns, the Democratic leaders were actuated by the same motive as they were when they chose Calvin S. Brice to take the direction of their national campaigns. In both instances they were possessed with the idea that they must have a rich man because the Republican party had so many rich men in its councils, and it would be necessary to meet Republican money with Democratic money in the campaigns. No thought was given to the other aspects of party direction, such as experience and skill in organizing and conducting campaigns, or ability to comprehend the great questions at issue, and to devise methods for disseminating sound information in regard to them among the voters. These and kindred attributes were set aside as of secondary importance. Money was the thing to be got, and the man who had that was the "born leader" simply because of its possession.

The origin of this rich-chairman idea dates from the Tilden campaigns of 1876 and preceding years. In his State and national campaigns, Mr. Tilden was his own manager, and he was from the outset dubbed the manager with a "barrel of money." Yet it is generally conceded now that he was very parsimonious in the use of money, and that his great success as a campaign manager lay in his perseverance and skill as an organizer. He was a disciple of the "still hunt," but a "still hunt" under his direction was a very different thing from what it seems to have been in Maine. As he executed it, it was identical with the modern Republican canvass as it is planned and carried forward by such leaders as Platt in this State, Chandler in New Hampshire, and Manley in Maine. It consists chiefly in the careful and complete polling of the voters in every district of the State in advance of an election, in keeping them aroused to an interest in the canvass, and in getting them to the polls on election day. That was the direction in which Mr. Tilden spent his money and in which he spent what was of far more value, his great abilities as an organizer.

The trouble with the modern imitations of Mr. Tilden is that there is nothing in them except the money aspect. No one will contend that either Mr. Brice or Mr. Flower would have been thought of for his chairmanship if he had not been a rich man. Their choice confined the campaigns which they were to direct largely to the money basis of operation. It is scarcely necessary to say that for the Democratic party to attempt to beat the Republican party at

this game is to court disaster. The Republicans can raise a thousand dollars for every ten that the Democrats can muster, and they have raised it many times over without an effort. They will do the same thing again just as often as the issue is joined, for they have the wealth of the country at their backs at a time when that wealth was never more arrogant, and never more unscrupulous in the use of means whereby to increase and perpetuate itself. Could there be worse "politics," to say nothing of the morals of the case, than for the Democrats to continue this hopeless style of warfare?

No party ever had a finer opportunity and few a higher mission than the Democratic party confronts to-day. All its leaders need is the courage of their convictions and faith in their triumph. They had the way pointed out to them by President Cleveland in his famous tariff message, and if they could not see it clearly then, they have no excuse for failing to see it clearly now. Their work lies in educating the people concerning the iniquities and burdens of the Republican tariff system as intensified and aggravated in the legislation of this Congress. The people are ready and eager to hear them, as the interest shown in the county-fair discussions in this State bears ample evidence, and as the tone of the Republican press of the Western and New England States conclusively shows. From this time forward the Democrats ought to devote all their energies to the spreading of light among the people, by means both of documents and speeches. They ought to confine the rich men of the party and their money-bags to the important and suitable work of defraying the necessary expenses of this educational crusade, and to rely for success at the polls on the intelligence and conscience of the American people. On that path they can win both success and honor; on the one they have hitherto followed they can win neither.

Correspondence.

BAD POLITICAL ARITHMETIC.

To the Editor of The Nation:

Sir: The scholar in politics is evidently not well up in political arithmetic. Mr. Lodge, in his *North American* defence of the Federal Elections Bill, accounts for the Democratic resistance to that measure on the sole ground that, under its workings, the Republican party would carry the House of Representatives nine times out of ten. He ascribes the fear of such a result to the Democrats, and he hopes for it as a consummation devoutly to be wished.

Considering that the free vote and fair count in Congressional elections is only a means to an end, which the New York *Tribune*, with brutal frankness, declares to be "a hundred tariff bills," Mr. Lodge's object is in the main neither more nor less than to fasten upon the country a most oppressive set of customs laws, by the free choice of colored growers of cotton and corn, who, above all dwellers on American soil, are interested in free trade, and would, if possessed of any political insight, be the most thorough-paced free-traders. But I am not concerned now with his ethics; I am after his arithmetic.

He reasons thus: In the States other than South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Arkansas, and Texas, the Republican party is sure of at least 155 members; now, if by a "free vote and fair count" we can get fifteen Representatives out of these eight States, we shall always have 170 members on the roll, and that is a majority. Now, in the arithmetic of the schools, 155+15=170; but this equation does not hold good in politics. In the present House of Representatives, before any contestants were seated, there were sixteen Republican members holding certificates from the States of Maryland, Virginia, North Carolina, Kentucky, Tennessee, and Missouri, and one from the city of New Orleans. Without the aid of these men Reed would not now be Speaker. If five out of these seventeen Republicans had been beaten by Democrats, Carlisle would now sit in the Speaker's chair. A measure, therefore, which is highly unpopular in Maryland, Virginia, North Carolina, Kentucky, Tennessee, and Missouri, and in the city of New Orleans, and is likely to change five districts in those six States and in that city, is not a measure to insure Republican majorities in the next House.

That it is unpopular there, has been clearly shown by this time—first, by the adverse votes and abstention of Representatives Ewart, Coleman, and Frank; next, by the refusal of the Republican Convention in Tennessee to approve the "Force Bill" in its platform, and of the North Carolina Convention to approve it at all; and, what is most significant, by the rise of the Democratic majority in Kentucky from 28,666 in November, 1888, to over 55,000 in August, 1890. Mr. Lodge appears to us in the light of the dog in Æsop's fable, who lost the piece of meat which he carried in his jaws while snatching at its image reflected in the brook. And I will tell him two little facts about the Kentucky election, from which he may learn how much of a shadow he is grasping at when he thinks every black district in the cotton States is worth a Republican Representative.

The "white" counties in Kentucky are mostly Republican by heavy majorities. These have stood up pretty well even in the disastrous rout of August, 1890. The heaviest losses were seen in Louisville and in Christian County. In Louisville, where the white politicians thought the contest hopeless, and were unwilling to spend money or work upon "organizing" the black forces, the negroes did not vote at all, and thus the 11,500 votes for Harrison dwindled down to less than 4,000. Christian County, where the blacks form the greater part of what used to be a steady Republican majority, was captured in this wise: The Legislature last winter enacted a law for that county under which every voter got his written certificate of registration which he must show at the polls. Every negro in the county registered unmolested, for the shot-gun argument is unknown in Kentucky; but when the first Monday in August came round, it turned out that half of the colored Christian County men had *sold* their certificates, as common rumor says, at the rate of two dollars apiece, thus disabling themselves from voting. The farm laborers in the tobacco fields of Christian County who sold their birthright so cheap, stand many degrees higher in self-respect and in material well-being than the cotton-field hands of the Gulf Coast. What was done at Hopkinsville can be done more easily at Vicksburg or Mobile. By frying some fat out of the cotton-brokers and importers, a fund can readily be raised to buy off one-half of the Southern field-hands effectually between the days of registration and election.

In short, Mr. Lodge should understand by this time that he cannot make a silk purse out of a sow's ear; neither can he make a reliable political factor out of a poor, ignorant negro, devoid of self-respect and unsupported by his white neighbors.—Respectfully, L. N. D.

Louisville, Ky., September 7, 1890.

THE REQUIREMENT OF DEMOCRACY.

To the Editor of The Nation:

Sir: I am much obliged to Mr. Casey for coming to my support, even with a tinge of sarcasm. The duty on works of art is indeed the extreme type of the whole tariff as a product, not of any honest theories of protection or free trade, but of anarchy, of lobby rule, of the prevalence of private over public interest, of the absence of leadership in Congress, and of any guiding national authority to control private and local factions, of the tyranny of party under the usurped despotism of the Speaker, of the want of personal responsibility anywhere—in short, of the necessity of the presence of the Cabinet officers in both houses. Think what it means to snap a tariff bill on the country within thirty days of its passage, forcing the duties on bonded goods to be paid by October 1, involving the chance, nay, almost the certainty, of a panic in the money market, with losses by millions and ruin to thousands.

To-day, however, what Mr. Casey is pleased to call my ingenuity takes a different direction. It is difficult to contemplate the speeches and the electoral campaign of Mr. Speaker Reed without a keen sense of a danger which it would be folly to ignore. So far from apologizing for his course at Washington as a necessity of the case, he glories in it:

"If we have broken the precedents of a hundred years, we have set the precedents of another hundred years, nobler than the last."

Could the impudence of egotism go further? All the jobbery of the session, Tariff Bill and Silver Bill and Force Bill, though I seem to notice a marked silence about the Pension Bill, is paraded in triumph:

"Government by the people is the noblest institution of earth, and there is no place where government by the people has reached so great a degree of perfection as in the United States of America."

If there has been anything which could be called government in Washington this winter, it has been the government of the Speaker, and the Speaker, so far from representing the "people," only represents a single district in Maine, and secondarily a majority of the private and party interests in the House which have elected him to his position—a position very different in theory from what he has made it in practice. No doubt his action and his success in Maine have attracted a certain amount of public attention, and the schemers are already at work to boom him for the next Presidency. That may or may not succeed; but if it does, we have no right to blame the people, but should look to the political arrangements which defeat and counteract the wish of the people. Mr. Reed is only another illustration of the perennial fact that the world always has been and always will be governed by personality. Our people, like all other peoples, demand a leader, a Gladstone, a Bismarck, a Lincoln, a Grant, while all our politics are carefully adjusted so that everything shall be done by majorities and minorities, by committees and commissions; that no one man shall do more than a fraction of anything, or can by possibility win any credit or just blame. The men of principle conform to law

and keep themselves in the background. The men without principle jump through the meshes of law, and present themselves to the audience with a bow and a "Here I am!"

Mr. Cleveland issues a tariff message full of sound and lofty sentiments, and leaves it to fail completely flat and his followers demoralized and disheartened. Mr. Reed bullies the minority, counts a majority to suit himself, will recognize no speakers but those of his own party, forces through legislation by such means, and then poses before the country as a man of action, while his followers throw up their caps, and the mass of the people, almost, but not quite, as easily led wrong as right, begin to rub their eyes and ask, "Is this, then, a Man?" We escaped from Mr. Blaine in 1884 only by almost positive proof of pecuniary abuse of official power, and within six years comes another pretender, if not personally yet politically quite as dishonest. The game is too dangerous.

Political reform, of whatever kind, in this country, to be effective, has got to take as its basis the giving at least an equal chance of distinction to honest and able men with that now given to men who are able, perhaps, but dishonest. That is the principle of what Mr. Casey calls my pet doctrine of putting the Cabinet officers into Congress; but it is just as applicable to every State and every city in the Union. The old cry of 'Measures, not men,' was as ruinous as it was false to human nature. Measures *through* men is what, if we are to stop our downward progress, will have to be the watchword of the future. G. B.

BOSTON, September 13, 1890.

THE ARCHITECTURE AT HARVARD.

TO THE EDITOR OF THE NATION:

SIR: I venture to call your attention to the following passage in Mr. Norton's interesting paper in *Harper's Monthly* for September on the condition, functions, and prospects of Harvard University:

"The value of the influence of noble architecture, simple as it may be, at a great seat of education, especially in our country, is hardly to be overestimated; and yet it has been either absolutely disregarded at Harvard, or, if recognized, the attempt to secure buildings that should exert this influence has been little short of total failure. If some great benefactor of the University should arise, ready to do a work that should hand down his name in ever-increasing honor with posterity, he might require the destruction of all the buildings erected in the last half-century, and their reconstruction with simple and beautiful design, in mutually helpful, harmonious, and effective relation to each other, so that the outward aspect of the University should better consist with its object as a place for the best education of the youth of the nation."

The object of this communication is less to question the justice of the very severe animadversions of the Professor of Fine Arts regarding those buildings erected for the service of the University during the last fifty years, than to ask whether the drastic remedy which he would apply—admitting for the moment that it is possible—would be consistent with the highest duties of the University towards its students.

In your notice of this paper (September 4), you summarize it as presenting "less a description of the University as it is than a general view of its lines of development in the last twenty years in connection with the collateral development of the nation." Now, if the older halls of the University, such as Massachusetts, Harvard, Stoughton, Hollis, and Holworthy, and Holden Chapel, which, as they are excluded from Mr. Norton's censure, may be supposed (in some degree, at least) to meet with his approval, represent without affectation or pretence the modest condition of art and civilization in the last century, and for this reason deserve our respect and veneration, do not the later buildings also emanate from the spirit of the times in which they were built? Are not they also records of contemporary history? Do they not present to the physical eye a general view of the lines of development of architecture, parallel with those of the University itself during the last twenty years "in connection with the collateral development of the nation"? And are they not for this reason deserving of a measure of respect as monuments?

Memorial Hall, the Hemenway Gymnasium, Sever and Hastings Halls, the Law School, the museums, and the other modern buildings of the University, not including Appleton Chapel, could not have existed in their present forms but for the exacting nature of certain practical requirements, for the condition of building materials and methods, and for the dominance of certain theories and fashions of design, at the times when respectively they were built. Some of these theories and fashions have been more or less superseded in the rapid and wholesome progress of the art by newer methods, which at present seem better adapted to prepare the way for the architecture of the future. It results, therefore, that the later modern buildings are better than the earlier; but all of them are the work of conscientious and loyal graduates of Harvard, over whose minds, it may be presumed, the vagaries of personal caprice and invention have had less influence than with many contemporary builders less fortunate in their opportunities for general and special training. It may fairly be assumed that these architects have presented in the later monuments of Harvard unusually just architectural expressions of the civilization of their times. Certainly, as regards practical construction and adaptation to the more complex uses and the more exacting conditions in the life of the modern university, these modern buildings are immeasurably in advance of all which preceded them.

Modern methods and conveniences are in continual warfare with the conservative instincts of architecture, but modern architects are compelled to adjust their methods of construction and design to these methods and conveniences, hoping and expecting that out of those adjustments there will be presently developed an adequate architecture for the close of the century. It is true that those modern buildings of the University are, from the point of view of art, merely a succession of hazardous experiments—so, indeed, were the temples of the Greeks and the cathedrals of the thirteenth century; but the accumulation and organization of precedents have in modern times imposed upon the architects a certain self-consciousness which has rendered the lines of progress in their art less consistent and regular than was the case with the ancients. Our advance is tumultuous, many-colored, and disorderly, but *it is an advance*, although none of us seem able to secure a point of vantage whence the scene may be viewed in just perspective, and the accidents and incidents of this progress may take each its proper place. May we not assume that to posterity these accidents and incidents of the art of today may become as venerable and significant as those of the last century are to us as we walk through the college yard? It would not have been difficult in the modern buildings to affect a spurious relationship with the older buildings by masquerading in "the colonial style," thus securing a uniformity which would be agreeable to the taste of many. But is there not a better lesson for the youth of the University in the honester method which has been adopted? May they not more clearly discern the character of the civilization of these latter years of the century by such methods, even if those methods have rendered it impossible to avoid incongruity in the styles of neighboring buildings?

Five years of the latter quarter of this century are more prolific of healthful change in all the arts than fifty years of the eighteenth century, and architecture, now at last, we hope, in sympathy with this material advance, is subjected to a series of quick transitions. The building of 1880 is different in style from the building of 1870 for the same reason that the build ng of the year 1250 is different from one of the year 1350. If in some of the later examples of those incongruities of style in the college yard we may not see, as some of us think we see, a hopeful sign that the true line of consistent and direct progress has been in them discovered, our children, at least, when they look upon Sever Hall and the Law School will recognize that among all the sons of Harvard none have done more distinguished honor to their *alma mater* than the lamented Richardson. The destruction of these monuments would obliterate one of the brightest pages in the history of her achievement.

How are we to be assured that the substitution which Mr. Norton proposes will be an improvement? Who is to judge in what style the new buildings, "of simple and beautiful design," are to be built? What pilot is to guide the new composition of art safely between the Scylla and Charybdis of mere archæological correctness, ideal academic conformity, and safe scholastic purity on the one side, and on the other picturesqueness, romanticism, and an undue infusion of personal habit and taste? Who shall decide what is best suited to the age and most in harmony with its spirit? Is there not a danger that the harmony thus obtained would be merely the expression of an individual taste, and not that of an age of artistic and intellectual progress? Would it not be far less interesting and significant as a matter of history than even the juxtaposition of modernized Gothic, Old English Renaissance, Southern Romanesque, and what not, which at present so offends the eye of the critic, but so fairly represents the irregularity and indecision of the lines upon which the art of our time has been working its way to some sort of triumphant finality? It is our fate to live in the midst of a period of transition and eager development. If architecture contented itself with falling back upon fixed and approved academic types of form, it would be immediately placed out of reach of the sympathy of the public, without which there can be no true architecture for our time. If the critics will be patient with the experiments through which the architects are trying to keep step with the material progress of the times; if, better still, they will give us specific criticisms instead of Rhadamanthine judgments, which condemn or approve and give no reason; if the new architecture, as it is produced, should awake a clamor of intelligent discussion instead of being received in dead silence, the elimination of the unfruitful or merely exotic elements and the growth of those which have in them the seeds of life would be much more promptly secured.

HENRY VAN BRUNT.

MANITOU, COLORADO, September 9, 1890.

THE HARVARD THREE-YEAR COURSE.

TO THE EDITOR OF THE NATION:

SIR: Until this year Harvard has steadily advanced her requirements, and all the time

has been attracting students. There does not seem to be a call for the change on account of lack of numbers; we must look for other reasons for it. It is more than likely that her desire to become a great university may be the real reason. Perhaps she expects to detain many of these A.B. graduates for higher courses. May these hopes be fully realized: she is well equipped for the work, and it is a laudable ambition. The question that naturally arises is: "Would it not be better to leave the old four-year course as it is, and let the University course grow gradually?" Many of the professors now having but few students might do more work in the lower college classes. Is not too much work done by tutors? Would not Harvard very much increase her usefulness by letting her best men be felt more generally in the lower classes? We very often hear the remark: "I want my son to come in contact with the leading professors earlier in the course, so I shall send him to one of the smaller colleges." If Harvard can teach several hundred more in the regular courses, would it not be better for her to do her best work on those rather than on a limited number in the University course?

I am afraid that this three-year course is a concession to the too much hurried spirit of the times. Inside the college walls we have felt tolerably quiet, and have not been seriously jostled by the pushing outside. We thought it was making inroads when the elective system reached the stage at which a lad of twelve could decide what he would study in college. This seemed to us rather young to exercise a safe judgment in such matters. I should prefer that my boy at that age should be relieved of such exercise of judgment by a wise body of men. I do not want him to think of his future work until he graduates from college, or, indeed, until he gets his university degree. The greatest danger to broad scholarship lies just in this concession to the spirit of the times.

The application of steam and electric power to manufactures and locomotion has multiplied wealth a thousand fold, enabling a man to accomplish in a week what it took months to do a hundred years ago. This permits us to surround ourselves with the luxuries of every climate in the world, to build fine houses, wear fine clothes, buy many books which we may not find time to read, make extended trips abroad, etc. At forty we possess more wealth than our fathers could at seventy-five. Everything, though, is done at fever heat. Our wants increase as rapidly as our money, and we have to devote our energies more closely to business to keep pace with them. At fifty we have accumulated a fortune, but have also the white hairs and worn-out nerves of men of seventy. We are all trying to "get there," and the majority are succeeding remarkably well—we are breaking all previous records. A good many have retired to the palace at Danvers.

Would it not be just as well to keep this insane rush outside the college walls? Let the time-honored four years be kept for quiet intellectual growth. If there are a few who can do more than others, it will not hurt them to use the libraries freely, reading good books. One or two years saved at the beginning may mean five or ten lost at the end and a life marred by immature preparation for work. So far as my experience goes, we have had too much wit-sharpening and too little judgment-training in the schools. It would have been a great advantage to me to have had an extended historical and literary course, running parallel through the whole four years. Not only would it have been as valuable in the line of mental training as much that I did have at Tufts College, but at the same time it would have proved of great value in forming tastes that might not have been developed by accident in after life. The bright men will hurry through the sixteen courses in three years, and the dull ones will shorten the four years as much as possible. The very worst element that scholarship has to contend against—the haste to plunge into the strife of life—will be at a premium. Would it not be far better to require the full time and let students all do their best work while they stay, without this eternal pressing forward? Let us not teach them to consider the college course an unfortunate barrier which must be jumped as soon as possible. It will not hurt the bright man to have an extra hour for general reading and study outside of his regular work, and the great majority will find all they can do well to prepare themselves for the regular daily lessons. When they have been in the hot battle of life twenty-five years, they will begin to appreciate the calm seed-time they once had, and they will not be anxious for their children to commence the "rush" within the college walls.

I am afraid the three-year course will not result in sending many more men to higher honors or attracting more to the College. I would suggest the propriety of selecting a hundred leading men in the various walks of life and asking them whether, from their experience, they would advise the change for their own children. The opinion of the college professor and the recent graduate is good for their end of the line—the theoretical; but it will do no harm to supplement it with what those may advise who have had large experience and know what qualities success in life demands.

EDWIN GINN.

GRACE AT WASHINGTON'S TABLE.

TO THE EDITOR OF THE NATION:

SIR: In Mr. Moncure D. Conway's letter to the *Nation*, published in the number for June 5, 1890, on the "Source of Washington's 'Rules of Civility,'" it is stated that the first twelve of the 'Maximes de la Gentillesse,' etc., "are entirely omitted from Washington's 'Rules,' as indeed are others of a religious character occurring elsewhere in the book, even including one advising attention to grace before meat (it is known that grace was never said at Washington's table)."

No authority for the statement in the parenthesis is given by Mr. Conway, and it would be obviously difficult to prove a negative of this sort. But an assertion directly contrary to it may be found in Watson's 'Annals of Philadelphia,' vol. i, p. 580, of the edition of 1870, published by Messrs. J. B. Lippincott & Co., where an account is given of General Washington's mode of life in Philadelphia when President.

"His dinner-parties," it is there stated, "were given every Thursday at four o'clock precisely. . . . The President himself sat half-way from the head to the foot of the table. . . . He always asked a blessing at his own table, and in a standing posture. If a clergyman was present, he asked him to do it."

The whole account from which this extract is taken is of interest, and in its details it shows the observation of an eye-witness.

Respectfully yours, S. C. C.

BALTIMORE, September 12, 1890.

THE NEW TESTAMENT IN THE SUNDAY-SCHOOL.

TO THE EDITOR OF THE NATION:

SIR: I have just read the suggestive and sensible letter of "B. E. H." in the *Nation* for September 11. The question at once arises, however, why is the Old Testament to be treated freely and held amenable to the higher criticism, and not the New Testament? Are the Hebrew stories to be "treated as you treat the Greek, Roman, and Scandinavian," and the Gospel stories given to the children of our Sunday-schools as veritable history? This is exactly what the Unitarians were trying to do thirty or forty years ago, and which earlier than this roused the whole denomination against Emerson and Parker, not seeing the logical fallacy of it. Andrews Norton, John G. Palfrey, and George R. Noyes of the Harvard Divinity School were ready enough to discount the myths and miracles of the Old Testament or to doubt the commonly received authorship of its books; but when they came to the New Testament, another style of criticism set in.

Yet the time has come when the "higher criticism" of the New Testament, which can be read all through the 'Encyclopædia Britannica,' to say nothing of single treatises on the subject, makes the authorship of the Gospels as uncertain as the authorship of the Pentateuch, and the miraculous stories of the life of Jesus as questionable as the Mosaic myths. "To conclude the whole matter, why shall we not have the courage of our convictions and act intelligently about them?"

J. C. L.

SEPTEMBER 13, 1890.

WORTH A CENT.

TO THE EDITOR OF THE NATION:

SIR: May I add to the examples mentioned by yourself and Mr. Samuel Garner of the use of the names of small coins to express contempt, the once familiar "not worth a picayune"—the Southern equivalent of the Northern "not worth a cent"? Other every-day expressions in use among us are "not worth a pin"—"a button." Chaucer has "not worth a bene," "not worth an oistre."

Noticing "R. T."'s allusion to the intentional bad spelling of the members of the French Academy, I am reminded of *Hamlet's*

"—— wrote it fair.
I once did hold it, as our statists do,
A baseness to write fair."

C. C.

SEPTEMBER 12, 1890.

A NEW PUNCTUATION-MARK.

TO THE EDITOR OF THE NATION:

SIR: In consulting dictionaries and other works of reference, one is often at a loss to know whether a compound word, a proper name, or the like is intended to be written with a hyphen or as a solid word. When such a word comes at the end of a line, so that it must be divided and part carried forward to the next line, the nature of the hyphen is ambiguous. Furthermore, the doubtful hyphen at the end of a line may leave the type-setter or proof-reader in perplexity when such a word is "overrun" to another line.

For instance, a careful writer is anxious to write uniformly "armorbearer" and "Beersheba," but the twofold use of the hyphen leads to an occasional "armor-bearer" and "Beersheba" to vex the soul of the author.

Why should we not adopt the German double hyphen [=] and use it to connect the parts of a compound word, reserving the single hyphen to indicate a break caused by the alignment? By some writers, I think, this usage is observed in autograph "copy," while others prefer to follow Longfellow's rule of never dividing a word, however long, at the end of a line, but carrying it all forward to the next line. In

print, however, are we not really in need of an open-hearted hyphen that will bear no ambiguity or treachery in its bosom? F. L. P.

CHICOPEE, MASS., September 11, 1890.

Notes.

THE Smithsonian Institution furnishes an example of the deadening effect on public spirit of State ownership. It is but a few years since we read in one of its annual reports the surprised announcement of the first addition to its endowment from a private source. The sum was small but significant beyond its amount. We are now permitted to make known the fact of two more additions to the funds of the Institution. The late Dr. Jerome Henry Kidder, a graduate of Harvard College in the class of 1862, left a legacy of $5,000, which has recently been paid over; and, Prof. A. Graham Bell having made a personal gift of $5,000 to the Superintendent, to be applied by him in any way he thought fit, Prof. Langley has assigned this sum also to the Smithsonian fund. Such examples will, we are sure, not be lost on those who have the means to imitate them, and who can appreciate the singular work of the Institution as an international disseminator of scientific knowledge.

G. P. Putnam's Sons will publish during the present season 'The Venetian Printing-Press,' an historical study based upon documents, for the most part unpublished, by Horatio F. Brown, with 22 wood-block illustrations; 'A Literary Manual of Foreign Quotations,' on a new plan, by John Devoe Belton; 'English Prose: its Elements, History, and Usage,' by Prof. John Earle of Oxford; 'The Life and Work of Charles Darwin,' by Charles F. Holder, introducing the series called "Leaders of Science"; 'The History of the 19th Army Corps,' by Lieut.-Col. Richard B. Irwin; and 'Fra Lippo Lippi,' a romance of Florence, by Margaret Vere Farrington.

'The Slaves of Sabinus: Jew and Gentile,' by Miss Yonge, and 'The Hidden Treasure,' by Lucy Ellen Guernsey, are in the press of Thomas Whittaker.

A. C. McClurg & Co., Chicago, have nearly ready 'Martha Corey,' a tale of the Salem witchcraft, by Miss Constance Goddard Du-Bois.

Ginn & Co., Boston, publish directly 'Handbook of Historic Schools of Painting,' by Miss Deristhe I. Hoyt, and new and revised editions of Myers's 'History of Rome' and 'Outlines of Ancient History.'

Rousseau "und kein Ende." The house of G. J. Göschen in Stuttgart will bring out a work of original research by Dr. R. Fester of Karlsruhe, entitled 'Rousseau und die Deutsche Geschichtsphilosophie.'

Rousseau is the subject of one of the best-known and most brilliant and elaborately condensed of the Literary Essays of James Russell Lowell which come to us in two volumes of the promised Riverside Edition of Mr. Lowell's Writings (Boston: Houghton, Mifflin & Co.). There will be ten volumes in this series for the public that does not indulge in large-paper copies. Handy duodecimos they are, with large type in a page of agreeable proportions; the covers in wine-colored cloth very simply and tastefully stamped. A familiar steel portrait serves as frontispiece to vol. i. It would be superfluous to touch upon the contents beyond the names of the Essays—a term which includes the Moosehead Journal, the Italian Journal, "Cambridge Thirty Years Ago," and "New England Two Centuries Ago," as well as a "Library of Old Authors," Emerson, Thoreau, Percival, Josiah Quincy, Carlyle, Swinburne, Lessing, Rousseau, Witchcraft. These are the product of nearly forty years of thinking, lecturing, and reviewing, and the unchanged product, for, in Mr. Lowell's badinage, which is both wit and wisdom, "I have refrained from modifying what was written by one—I know not whether to say so much older or so much younger than I—but at any rate different in some important respects; and this partly from deference to him, partly from distrust of myself."

"Popular Edition" is truthfully printed on the front of the volume comprising Emerson's 'Representative Men,' 'Nature,' 'Addresses and Lectures' (Boston: Houghton, Mifflin & Co.). This is, in fact, the union, on thinner paper, from the same plates, of the first and fourth volumes of the Riverside Edition, having all the qualities of the best, therefore, except the needlessly fine apparel, yet remaining a handsome and presentable volume. It is surprisingly cheap, and it ought to do much to promote a wider reading of an author whose prose has hardly less distinction than his verse; witness the opening of the "Lecture on the Times."

Style, Rhetoric, Language, Conversation, Literature, and Authorship, with "A Brief Appraisal of the Greek Literature in its Foremost Pretensions" and much other Greek matter, give unity of "Literary Theory and Criticism" to vol. x. of Prof. Masson's Collected Writings of De Quincey (Macmillan). The depreciatory "Appraisal" has been recovered from *Tait's Edinburgh Magazine* of 1838-'39, and is here reprinted for the first time. It may even yet assist in the warfare against the classics.

The seventh volume of Mr. Worthington C. Ford's edition of the Writings of Washington (Putnams) covers the period from May 1, 1778, to July 29, 1779, with the emergence from Valley Forge into the French alliance, the Commission on the part of England to make terms for a dependent *modus vivendi*, the evacuation of Philadelphia by the British, the battle of Monmouth, the arrival and futile demonstrations of the French fleet, the plan of attack on Canada, the retaking of Stony Point, etc. To this generally bright complexion of affairs stands in marked contrast the growth of mercenariness and speculation in connection with the supplies of the army, the inefficient co-operation of the States with Congress, the withholding from that body of the best citizens in the interest of State affairs, the disaffection among the troops, etc. These occasioned very gloomy reflections in Washington's correspondence, throughout which his patriotism, generalship, and statesmanship shine preeminently. When Laurens proposed the arming of the blacks to expel the British from Georgia, Washington hesitated for fear the enemy would imitate; and, assuming that enlistment would be equivalent to freedom, he also feared "a comparison . . . productive of much discontent in those who are held in servitude." But he had given little thought to the subject, he added.

A second edition of the late James Macfarlane's 'American Geological Railway Guide' has been prepared by his son, James R. Macfarlane of Pittsburgh (Appletons). It is greatly enlarged over the first edition, and we can readily credit the statement that it has cost a great amount of work. It is certainly a valuable hand-book for the observant traveller as well as for the professional geologist, and especially for the student of geology. It contains a list of all the railroads of the country, with their stations and the geological formations occurring at each one. The roads are arranged by States, every State being prepared by or under the direction of the State Geologist or some other local expert of acknowledged experience. Numerous foot-notes call attention to matters of particular interest. Occasional references to geological papers on local subjects add to the value of the work, although the need of compression has prevented the mention of many that would have been of service. The double-column pages of railroad stations extend to page 420, and a six-page index of railroads closes the volume.

Prof. H. A. Hazen of the Signal Service has lately contributed to *Science* a series of papers on the Tornado, now published in book form by N. D. C. Hodges. Prof. Hazen objects to many or perhaps to most of the prevailing theories on the origin of tornadoes, and his book has therefore something of a controversial nature, at times verging on the style of a challenge. He rejects the generally accepted physical ideas concerning the effects of latent heat liberated in ascending, expanding currents of air; he even goes so far as to question the whirling of tornadoes as an essential characteristic of such storms. His own theory to account for them seems to be by electrical action in some ill-defined manner. His list of destructive tornadoes is shorter than has been given by other authors, and some good should come of the care with which Professor Hazen makes estimates of damage caused by these storms, although his scepticism may cause surprise in some respects. His assertion that an ordinary cellar is a sufficient protection from tornadoes is not borne out by some of the photographs of houses destroyed by them.

Cowperthwaite & Co. of Philadelphia publish a new edition of 'Warren's Physical Geography,' by Prof. William H. Brewer of Yale. The book has always been highly regarded by teachers, and will remain so in its new form. The maps are clear, and the illustrations as a rule are new and accurate. The general statement of the subject is simple and sufficient, and but little matter is introduced that the scholar will not comprehend from the context or from what has gone before. It appears to us, however, that the introductory definition—"Physical geography considers the surface of the earth in its relation to nature and natural laws"—is not well supported in the succeeding sentence: "It considers the earth as God made it, and the natural changes that are still going on." A scholar would certainly infer from the latter statement that there were two divisions of the science; but it does not seem improper to say that physical geography recognizes no such divisions. Natural changes are all that it is concerned with, these being synonymous with the theological statement of the first clause. The necessity for some geological knowledge in undertaking this study is recognized, but the application of this principle is not carried far enough. The Alps can hardly be regarded as mountains formed by fracture in contrast to the Appalachians, formed by folding with or without fracture. The Colorado cañon is mentioned as the most remarkable example of erosion, and plateaus are said to be "eventually" carved into "mountain-ranges" and valleys; but nothing is said of the much greater and truly eventual work of erosion by which the relief of land masses is ultimately obliterated. It is probably by reason of the need of compression that there is any ground for these criticisms—it is certainly difficult to say where space for an expansion of the geological statement could be gained; but the need of such expansion is appa-

rent here as well as in all our present text-books on this subject. The last division of the book, on organic life, contains two sections that are particularly well treated, viz., the distribution of life with reference to abundance, and the distribution of life with reference to kind.

Remarkably compact and convenient is 'The Pocket Directory of Newspapers and Periodicals' issued by Lord & Thomas, Chicago. All essential information is given in the least compass and in very clear typography. We may mention here also the second annual issue of the 'Manual of American Water-Works' (New York: Engineering News Publishing Company), which became a standard work on its first appearance; and 'Poor's Hand-book of Investment Securities' (H. V. & H. W. Poor), a supplement to the 'Manual of Railroads,' showing the range of stock and bond values, 1878–1890; stocks and bonds listed on the New York Stock Exchange, 1879–1890; railroad dividends for eight years; bond-coupons payable each month in the year, with the place where; location of railroad general and transfer offices, etc., etc. As will be seen this hand-book possesses some indispensable features.

The Trustees of the British Museum have published in facsimile the magnificent papyrus of the Egyptian Book of the Dead obtained for the Museum in 1888 by Mr. Budge. The papyrus bears the name of one Ani, a "royal scribe" and "scribe of the sacred revenues of Thebes." It was probably written in the fourteenth century B. C. The colored vignettes accompanying this papyrus are among the most beautiful and most interesting of the kind known, and the accuracy of the reproduction is marvellous. The work is furnished with an introduction by P. Le Page Renouf, Keeper of Oriental Antiquities in the British Museum.

Ireland, the East Indies, and the North Pole have been reached by Part 24 of the new edition of 'Stieler's Hand-Atlas' (Westermann), now three-quarters completed.

Heligoland supplies a topic, with the best illustrations we have yet seen, to the current number of *Vom Fels zum Meer* (New York: F. W. Christern).

Mr. Edmund R. Spearman's short paper on the "Identification of Criminals in France" is the most curious of any in the *English Illustrated Magazine* for September. The engravings from photographs show how imperfect an instrument of detection the Rogue's Gallery is, at least in the case of men, whose growth of hair may make so much difference in their appearance.

Those who wish still another corrective of Mr. James C. Carter's view of Bentham will find it in *The Law* (Chicago) for September, which reprints an abstract of Judge Dillon's address on this reformer before the Ohio Law Association on July 17.

The National Civil-Service Reform League will hold its annual meeting in Boston on October 1 and 2.

— As an appendix to the 'Washington Astronomical Observations for 1885,' not yet ready for publication, will be printed Lieut. Winterhalter's report on the Astrophotographic Congress convened at Paris in 1887, to which he was a delegate on behalf of the American Government. This appendix is already issued separately, and forms the most generally interesting contribution from the United States Naval Observatory within recent years. The discussions and conclusions of the Congress are already sufficiently known, while the notes on those astronomical institutions of Europe visited by Lieut. Winterhalter after the Congress are full of useful information, and abundantly illustrated. It is to be hoped that the data of this report were not received too late for guidance in the construction of the new National Observatory at Washington. Though a photographer rather than astronomer, Lieut. Winterhalter has embodied in his report here and there a suggestion which the management of the Observatory ought not to feel above taking. The most important of these has been made over and over again—that the Observatory and its work should be under the general direction of a Board of Visitors. Without this as an initial step, it is hopeless to expect that any better work will be done in the new buildings than is now going on in the old. Apparently the institution does not possess within itself the power of getting out of ruts of its own making. Lieut. Winterhalter reports upon nearly all the important astronomical observatories of Europe, as well as some of other foreign countries, and amply sets forth their present condition and equipment. As an aid in the construction of new observatories throughout our country, and in modernizing the equipment of such institutions already existing, the report is invaluable. Few astronomers could have done better. Appendix ii, on Saturn and its Ring, 1875–1889, by Prof. A. Hall, is instructive as showing how an eye trained in a single department of astronomical work may be quite inferior in another. An observer's micrometric measurements may be beyond question; but negative statements and featureless drawings, far from proving the non-existence of certain well-recognized details of the Saturnian system, will only certify his inability to see them. Prof. Hall's conclusion, that the diametral dimensions of the ring-system are not subject to change, will meet with general acceptance.

—A work which many Americans might read with profit at the present time has been recently published by Georg Schanz, and is entitled 'Die Steuern der Schweiz in ihrer Entwickelung seit Beginn des 19. Jahrhunderts' (Stuttgart: Cotta). The author holds a professorship in the University of Würzburg, and is one of the ablest of living political economists. His book 'Zur Geschichte der deutschen Gesellenverbände' appeared in 1877, when he was only twenty-four years of age. Of more general interest is his prize dissertation, 'Englische Handelspolitik gegen Ende des Mittelalters,' which was printed in two volumes in 1881. Since then he has written a number of treatises on financial and economical topics, all of which are distinguished for thoroughness of research, clearness of conception and statement, and scientific soundness of view. His history of taxation in Switzerland and its development from the beginning of the present century is in five volumes, and comprises in all more than 2,000 octavo pages. It might seem, at first sight, as though the amount of space devoted to the treatment of the subject were out of proper proportion to its intrinsic importance. But such is by no means the case. Although Switzerland is a small country, with less than three million inhabitants, it offers a greater variety of peculiarities arising out of its geographical position, ethnological character, political constitution, and historical growth than are to be found in any of the larger European States. The fact that the population of the Confederation consists of three distinct nationalities, without taking into account the survivals of the old Romanic stock in the Rhætian Alps; the relations of the Federal Government externally to the European Powers, and internally to the several cantons; the remarkable disparity between the cantons themselves in political organization, economical development, and intellectual culture, and the manifold forms in which the democratic idea is constitutionally embodied and practically applied, suggest problems the solution of which can hardly fail to be interesting and instructive to all who regard politics as a profound science, and not merely a periodical scramble for spoils.

—The first volume discusses fully the general question of State and communal taxation; the second, third, and fourth volumes describe the diverse systems of taxation prevailing in the several cantons; the fifth volume contains the texts of the cantonal laws and regulations on this subject, and is the only complete collection of them ever made. In view of the fact that the Swiss Government is supposed to be the simplest and most economical in Europe, and that democracies are reputed to be exceedingly vigilant in keeping watch over the public treasury, it is rather startling to learn that during the past thirty years the increase of taxation in proportion to the increase of population has been quite as great in Switzerland as in Prussia. In 1856 Swiss taxes amounted to 7.9 francs, and in 1886 to 37.3 francs per head. In 1851 Prussian taxes amounted to 10.76 marks, and in 1884 to 30.12 marks per head. This result is all the more remarkable because, the neutrality of the Helvetian Republic being guaranteed by the great Powers, her military budget is relatively small; and, owing to her geographical position, she has no expenses for the creation and support of a navy. The notion that a republic is a cheaper form of government than a constitutional monarchy, and imposes less heavy burdens upon the people, does not seem to be sustained by these statistics. In the Middle Ages and in early modern times the burden of taxation was made to bear most heavily on the poorer classes. In Bâle, for example, as late as 1729, an income of 50 florins paid ten pro mille, while an income of 10,000 florins paid only two pro mille. In the present century the tendency has been to reverse this ratio and to relieve the smaller at the expense of the larger incomes, so that in Bâle to-day a net income of 1,000 francs pays 2.6 per cent., and a net income of 200,000 francs pays 9.8 per cent. A curious phenomenon is the vast inequality of taxation in different cantons. Thus, a citizen of the Swiss Republic worth 1,000,000 francs and with an annual income of 40,000 francs had to pay in 1880 in Solothurn 2,000 francs taxes, but in Lausanne his taxes would have been 2,720 francs, in Bâle 3,025 francs, in Zurich 8,169 francs, in Berne 8,350 francs, and in Horgen 9,769 francs. During the past ten years an effort has been made to remedy this state of things by substituting a general and uniform Federal taxation for the special cantonal taxes, but with only partial success, owing to the popular fear and distrust of centralization and governmental monopoly. The alarming increase in the use of spirituous liquors induced the cantons in 1886 to put the whole control of the sale of alcohol into the hands of the Federal Government. This measure was a step in the right direction, and has been attended by excellent results from an economical as well as from a moral point of view. Our limited space permits us merely to hint at the variety of interesting topics growing out of taxation and intimately connected with the vital social questions of the day, which Prof. Schanz discusses in his exceedingly valuable work.

—Eduard von Bauernfeld, who died a few weeks ago at Vienna in his eighty-ninth year, was probably the most gifted German writer of comedies this century has produced, and he had, indeed, but few superiors, in his special field, in all German literature. While not as prolific as the now almost forgotten Kotzebue, or the rather coarse-grained Benedix, Bauernfeld obtained, as a delineator of the *bourgeois* class, as well as of the higher strata, of German society, a popularity which in the case of his "Bürgerlich und Romantisch," "Leichtsinn aus Liebe," "Die Bekenntnisse," etc., remains undiminished after a lapse of more than fifty years. To be appreciated at their full value, his comedies must be seen at the Vienna Burgtheater, for which they were all written, and with which his associations through life were of the closest character. In this respect, as well as in their literary quality, his comedies resemble the society dramas of the modern French stage, which derive from the acting of the best Paris theatres a perfume quite unattainable elsewhere, and essential to their full dramatic success. Bauernfeld's plays, however, possess neither the depth and classic polish of Augier's best work, nor the sparkle and dramatic interest of Sardou's, nor the peculiar moral flavor of Feuillet's. The texture of his plots is frequently of the thinnest, but his characters are well sketched, and the dialogue ripples on in a steady flow of pleasant wit and sally, which contrasts delightfully with the labored humor of other German comedies, the overrated "Journalisten" of Gustav Freytag included.

— Bauernfeld's early career was that of so many Austrian poets, of Grillparzer, Anzengruber, and others who pursued the thorny path of literature while in the service of the Government. He became a *Beamter* in 1826, rose by slow promotion, found his excursions into dramatic fields frowned upon by his superiors, and finally left the Government service in disgust. The success of his plays rendered him financially independent, and he became a social favorite even in circles which looked askance at the caustic and irreverent epigrams which he launched from time to time in the Vienna papers against the foibles of society. He shared Grillparzer's pessimistic view of life and morose ways, but he was a *bon vivant* for all that, and shone in his day in the gay assemblies of the "Grüne Insel," that famous gathering of Vienna authors, artists, and wits, whose intellectual tourneys, rollicking tomfoolery, and gastronomic pleasures were never more keenly enjoyed than when Vienna's political horizon was darkest. Like Holtei, Bauernfeld was a most fascinating reader of his own works. He retained his mental vigor to the end, and on his death-bed dictated to his nurse, who had been his faithful companion for many years, the last scenes of a new play. Owing to her influence, Bauernfeld, who all his life had been a free-thinker, sent for a priest during his last weeks, and showed contrition for the error of his ways. Such, at least, was the gleeful announcement of the Ultramontane *Vaterland*. Although markedly devoted to the fair sex, Bauernfeld never married.

THE EDINBURGH ART CONGRESS.

Transactions of the National Association for the Advancement of Art and Its Application to Industry. Edinburgh Meeting, 1889. London: 23 Albemarle Street. 1890.

THE first English Art Congress met in Liverpool on December 3, 1888. The second met in Edinburgh on October 28, 1889. In the meantime had been developed a full-blown National Association on the British model, with "The Most Noble the Marquis of Lorne, K. T.," for President, with fourteen vice-presidents, most of them earls or right honorables, a central council, five sections with their presidents and "honorable secretaries," local committees, etc., etc. The "Transactions" of the Congress, nobly printed by the Edinburgh University Press, fill a tall octavo volume of nearly 500 close-packed pages. All these noblemen, and privy councillors, and secretaries of state are associated "for the advancement of art and its application to industry." Apparently it is not, as with us, a few artists only that consider art of some importance to the state! In England legislators, hereditary and elected, have come to look upon the "advancement of art" as something worth effort. And this for other reasons than the general ones that art is "to be ranked along with science and religion as regards beneficent tendency," as the Rev. Dr. Flint put it in his opening sermon; or, as another speaker said, that it is "not an exotic supplement to life, but *as inseparable from it as hygiene.*" First hear what the Marquis of Lorne says in his Presidential address:

"The main purpose of our meeting is to show how *beauty pays.* . . . We desire among a practical people to show that it is that people's interest to make their work good in form as in stability, to clothe with the best combination of colors or patterns . . . the sturdy handiwork in which they excel all others, so that grace and force shall go hand in hand, helping each other *to attract customers in the world's mart.*"

And again, speaking of art instruction in Germany:

"It is certain that the influence of this teaching upon all forms of industry has been very marked, and that articles are now manufactured *which pay* because they are good and captivating in design." "He who pushes ugly wares into the market," he continues, "will now find that his defter antagonist can beat him by aid of design, and the form that takes captive the eye of the purchaser, . . . and every object that exhibits some new form of taste will have its *money value.*"

Hear, also, another speaker, J. E. Hodgson, R.A., who said: "I have been informed that . . . the infusion of a little more art into our products *would increase the income of the country by fifty millions.*"

Money value—that is the thing that interests a "practical people" in art. It is "the great sums that go to France" for artistic manufactures—it is the possible £50,000,000 a year that might be added to England's wealth—that makes such an association seem worth while to them. It would seem that we in America, who for thirty years have taxed the importation of pictures, and resisted by a tariff the "infusion of art," might learn something still from the mother country.

If, however, we might learn from England something of the importance of art to a country, can we learn anything from this Association as to the methods best adapted for its advancement? Would the calling of an art congress in this country be a wise step? Does the meeting of such a congress tend to any practical end? We hardly think so. The field of such an association is too wide, its object too vague and undefined, its membership too large and too miscellaneous, for fruitful work. Such a congress loses itself, almost necessarily, in more or less unprofitable talk. When too much ground is to be covered it is covered thinly, and the good actually accomplished by the Edinburgh Art Congress of 1889 we take to have been little. One or two resolutions were passed which were practical in tendency, but we do not know whether their passage effected anything. For the rest, the notable feature of the 'Transactions' is, that nothing was transacted. There were *papers read.* One of the radical troubles with such meetings is, that it is difficult to get men of real standing to attend them. In the section of Painting at the Edinburgh Congress, only two of the papers read were by artists of anything approaching to international reputation, viz.: those by Mr. Watts and Mr. Briton Riviere. Another trouble is, that it is quite possible that a man of genius in the arts shall be unable to write three lines of good English, and shall be quite devoid of any ideas worth consideration for practical purposes. Nay, while all the cranks in the profession are not good artists, many good artists are hopeless cranks, and such an occasion for limitless talk as is given by an art congress brings out inevitably the whole army of cranks, artistic and inartistic. The result is a great mass of chaff in which diligent search may find a few grains of wheat. Few people have patience for the search, and the wheat is practically buried in the chaff-heap. The few papers in this great mass of paper that we are considering, that were ever worth the writing, are hardly likely to be read. If these few had been written for some magazine or journal, they would have reached a hundred-fold greater audience and might have done some good. Where they are they are lost.

Let us take up the proceedings of the Section of Painting seriatim as a fair specimen of the whole. After a rather meaningless and inconclusive address by the President, Mr. Briton Riviere, comes a confused and inarticulate growl on the "National Position of Art," which shows Mr. Watts in the light of the artist who either has nothing to say or who does not know how to say it. Then Mr. Hodgson, R.A., falls foul of South Kensington because it has "opened a career to men of limited means which in former days required a considerable outlay of time and money"—in other words, because it is making too many artists and crowding the profession—and he is followed by another R.A., Mr. Horsley, who is also afraid of too much competition, and who has a hobby of his own in the demoralizing effect of the study of the nude, and proceeds to trot it out and prance madly on it before his brother artists and so much of the world as can be induced to look on. After them Mr. William Hole, R.S.A., known in this country for his illustrations of 'The Master of Ballantrae,' repeats, in a very fair imitation of Whistler's style, Whistler's dictum that the trouble with modern art is that art is too popular; and Mr. W. F. Yeames, R.A., mourns over the effects of "Competitions and Exhibitions," which have ruined French art and bid fair to ruin English art also. Mr. W. D. M'Kay, R.S.A., regrets the departure from "Traditional Methods in Oil Painting," and the loss of the "brown tree"; while Mr. W. B. Richmond, A.R.A., who considers these methods "slovenly," is as sad as his *confrère* over the fact that young Englishmen will go to France to study painting, and laments, in a style worthy of Sir Boyle Roche, that "Impressionism is in the air, a solid fact based upon the quicksands of fashion"! His remedy is to open a school himself, where, we suppose, students will "be taught to grind colors and to sweep out the studio," as he says they should be. Finally, Mr. J. Lawton Wingate, R.S.A., joins direct issue with Hodgson and Horsley, and maintains that the trouble with British art schools is that they give too little rather than too much attention to what he calls "picture-making."

What earthly good can come of all this talk—chaff, chaff, nearly all of it? The other sections are nearly as bad. Some of the architects read technical papers which are well enough, and in the section of Applied Art there is a good paper on "The Decorative Uses of Enamel," and another on "The Picturesque Treatment of Interiors," which reads as if its author had something to say if only he could manage to say it. A third is a very elementary scientific treatise on "The Colours of Nature." But in the same section Mr. Morris and Mr. Crane mix up a kind of Ruskinian socialism with abuse of Japanese art and American magazines; and so it goes.

It is strange how many of these men are bitten by the modern madness of trying to accomplish everything by legislation. An architect wants a "court of taste," with power to prevent the erection of ugly buildings; a sculptor asks for a Minister of Fine Arts elected by "a majority of the votes of the artists of the United Kingdom"; while Mr. Horsley will be satisfied with nothing less than "the formation of a National Art Party in the House of Commons"! No, gentlemen, this is not the way! Listen to Prof. Patrick Geddes, whose paper contains more sense than all the others here printed together. He says:

"The advocates of national and municipal encouragement of art, particularly among artists, very often speak . . . as if all that were needed were the voting of abundant subsidies from the central and local governments for art teaching or for the employment of artists; that is to say, they are, in this matter at least—although, of course, frequently, like M. Jourdain, without knowing it—State Socialists of the most distinct sort."

He seems to have had a not unreasonable fear that this Congress would "leave nothing behind it but popped corks and sandwich papers," and gives this advice: "Let members of the association . . . *individually* try to get something done, it matters little at first where they begin."

That is the gist of the whole subject. Ministers of the fine arts and national art parties can do no good. Government can hinder the progress of art (by 30 per cent. taxes and the like), but can do little to help it. "Encouragement of art needs to be the outcome of a *general leavening* of the community; it cannot be called into existence by a single act of authority." Try individually to get something done; art congresses are not the way. If you are a painter, paint as well as you know how. If you are an architect, build as beautifully as you are able. If you are a trustee of a school, try to introduce sensible art-training in that school. If you are a millionaire, found a public museum. What is needed is the "general leavening of the community," and every little helps. Societies and associations to be useful must have definite aims, or they will lose themselves in talk. In America, for instance, an art students' league, or a national academy, or a free art league may do good; an art congress would do little but harm. But individual effort in the work next to the hand will do more than all.

GERMAN EXPLORATION IN ASIA MINOR.

Reisen in Kleinasien und Nordsyrien aufgeführt im Auftrage der kgl. preussischen Akademie der Wissenschaften. Beschrieben von Karl Humann und Otto Puchstein. Berlin: Dietrich Reimer. 1890.

THIS book contains an account of three journeys and a description in detail of the monuments of Antiochos I. on Nimrud-Dagh in Commagene. The first journey was made in 1882 by Humann and Domaszewski on behalf of the Prussian Academy of Sciences, and is now described by Humann. Mommsen had already published his 'Res Gestae Divi Augusti,' etc., having based the book upon the faulty copies of the Monumentum Ancyranum et Apolloniense. This publication left much in an uncertain condition, and an accurate historian could not but wish to have an exact copy of the Monumentum Ancyranum, at least, upon which to base an account of the 'Res Gestae Augusti.' Years ago Mommsen caused Mordtmann to be sent by the Academy to Orcistus in order to obtain an accurate copy of the great edict of Orcistus.* And so now this journey was undertaken by Humann and Domaszewski primarily in order to obtain for him an exact copy of the Monumentum Ancyranum. Humann, the engineer who has gained fame for himself by the excavation of Pergamon, was charged with the leadership of the expedition. It was his duty to obtain a plaster cast of the Latin and Greek inscriptions of the monument, and to make an accurate survey of the country traversed by the party. It was the duty of Domaszewski, the professional epigraphist (whose expenses, by the way, were paid by the *Austrian* Government), to make a careful study of the stone with the best results obtained from the copies of former travellers constantly in his hands.

In addition to this, the chief object of the expedition, they were instructed by the authorities of the Berlin Museum to obtain plaster casts of the most characteristic of the rock-sculptures of Boghaz-kieui (Pteria), in northwestern Cappadocia. The usual route from Constantinople to Angora is by way of Ismid (Nicomedia), whereas our travellers chose Mudania-Brussa as the starting-point of their land journey. Those who have travelled much in the interior would scarcely risk a long journey in a Tartar or Circassian wagon, at least not if they valued their own comfort and freedom from care. The vast majority of the so-called roads in Turkey are mere bridle-paths, but still there are a number over which a four-wheeled vehicle may be forced without serious danger to limb or life. The Turks themselves divide their roads into four classes: (1.) The Vapor-yol (railroad); (2) the Araba-yol (wagon-road); (3) the Haïvan-yol (horse-road); (4) the Haïvan-gitmes-yol. The name of the fourth class we make to order. Haïvan gitmes (a horse doesn't go), or Haïvan gidemes (a horse can't go), say the Turks when speaking of a road over which no animals can travel save only men and goats. This is of course the lowest order of road, but is met with or heard of oftener than one might suppose. The Vapor-yol, though called a "railway," is merely what might have been a macadamized road one day had it not been left in a wholly incomplete condition. The common people are much in favor of railways, although they have not the faintest idea as to what constitutes a railway, so dense is their ignorance. Now, as is well known, there is a periodical change of provincial governors (Vali-pashalar), and each new governor illustrates the proverb about the new broom by an energetic, though short-lived, attempt at road-building. He has no money with which to build roads, but has full power to force the inhabitants of his Vilayet to work on his roads for nothing. The peasants object strongly to this forced labor, but the Vali-Pasha sweetens the bitter pill by representing to them that his road is really to be a *genuine* railway. The roads radiating from the provincial capital are begun and pushed forward with fiery energy, and they succeed in building a very good highway for about five miles out, but then the energy flags, the peasants see that they have been duped again, and work on the road ceases until a new governor comes along. This is the usual tale, though we have seen a few roads carried out for much longer distances. We have also seen very good natural roads rendered all but impassable for long stretches by these fitful and ill-starred improvements.

The Araba-yol is the great commercial artery, and is found only between important cities. Even it is often nearly impassable in places, and that, too, in the immediate neighborhood of large and rich towns. The traveller who does not yet understand the secret springs of the Turkish mind is apt to wonder why this or that rich town does not mend the wretched roads that lead to it in the interest of its own commerce. The real secret of the happy-go-lucky "methods" of the Turks is to be sought for in that boundless selfishness which dominates all classes and races in the Orient. The Oriental feels that to expend money in any way by which persons other than himself might possibly be benefited is the very height of stupidity and folly. In like manner the hidden reason why the Provincial Government does not succeed in its fitful attempts at road-making is because, as Humann points out, there is in strict reality no such thing as provincial *government*, but only a series of corrupt officials, who trade posts at irregular intervals, and regard their country as a cow which by good fortune they are allowed to milk—others may feed and care for the cow, but as for them, their business is merely to milk her.

We have been led into these remarks about Turkish roads because of our surprise that Humann should have chosen wagons as his means of transportation for the entire journey from Brussa via Sivri Hissar (Pessinus), Angora, Boghaz-kieui (Pteria), to Samsun on the Black Sea. Any one who has intersected Humann's route at numerous points would at the first blush be inclined to doubt the possibility of making the whole journey in wagons, and in reading the account of the journey we have been amused at the recital of ever-recurring woes caused by the wagons. Wagons were not chosen in order to carry gypsum to Angora, because Galatia is one vast bed of gypsum; nor were they chosen in order to transport the plaster negatives to the seaboard, because the plates of the Monumentum Ancyranum were sent on *packhorses* to Ismid—Constantinople. The case was different in regard to the sculptures of Boghaz-kieui, for it was thought necessary to take a supply of gypsum from Angora in the wagons, which were then used for conveying the negative plates to Samsun. The journey was carried to a successful issue in spite of the many lions in the way, thanks to Humann's constant watchfulness and to several drubbings artistically administered to recalcitrant drivers. We can readily understand that the whole party drew a long sigh of relief when their eyes caught sight of the sea from the top of the mountain southwest of Samsun; from Humann's description we see that they greeted the Euxine with much the same joy as did the Ten Thousand when they saw the same sea from a mountain-top further east.

At Samsun our travellers found a full-fledged steamer Trust, that charges more for the short haul from Samsun to Constantinople

* Mordtmann failed to find the stone. Ramsay and Sterrett found it in 1885, but it was covered with a thick incrustation deposited by water which had trickled over it for many years. It could not be copied at that time, but in 1886 Ramsay returned to Orcistus armed with instructions and the tools necessary for removing the incrustations, and secured an exact copy for Mommsen.

than for the long haul from Samsun to Trieste. Another trouble of an unexpected nature awaited the party at Samsun: the Custom-house officials were inclined to regard the negative plates as antiquities, and were disposed to confiscate them at Samsun, or at best to forward them to the authorities at Constantinople. But the experienced know how to set at ease the disturbed conscience of a Turkish official, and so it became possible to send the twenty-three boxes direct to Berlin without any overhauling by the greedy officials of Constantinople. At Constantinople the other twenty boxes containing the forms of the Monumentum Ancyranum were put aboard the ship along with their fellows from Boghaz-kieui. The boxes and all the negative plates reached Berlin in perfect condition, and later on the plates furnished satisfactory casts, so that now the world may study exact copies of the Monumentum Ancyranum and of the sculptures at Boghaz-kieui at its ease without even a suspicion of the great trouble, toil, and care it cost devoted men to put them in the Museum at Berlin.

Humann was no less successful in his route survey than he was in securing those valuable plaster casts for the Museum. He has given his beautiful route map to the world now for the first time, but, thanks to the abundant and never-failing kindness of Heinrich Kiepert, special maps embodying the geographical results of Humann's journey have been in the hands of persons deeply interested in Asia Minor for the past seven years. As we have already said, Humann was remarkably successful with this map, which he plotted on single sheets from day to day while en route. After he got home and had put the single sheets together in one continuous map, it was found that reckoning from Mudania on the Sea of Marmora, he could locate Samsun on the Black Sea within three kilometres of the point fixed by the survey for the British Admiralty Chart. This insignificant error was distributed.

Humann's account of his journey covers ninety-four pages of the present volume, whose size is characterized by the publishers as "high quarto." The contents are varied. The account is perhaps most valuable from a geographical and topographical point of view. A pleasing feature is the translation of many names of villages, mountains, and rivers into German. We only wish that this had been done consistently, since Humann, by reason of his life-long work among the Turks, has acquired a thorough knowledge of the language. Turkish geographical names are generally appropriate from the Turkish point of view, and describe a character of the landscape or designate an event in Turkish history. Sometimes the natives themselves have forgotten the origin of the name, and in that case the travelling archæologist, if he be learned in Turkish history, may enlighten them, and save from utter oblivion some important fact of history. An interesting example of this is the village name Sultan-önü. The name means "before the Sultan," that is, the Sultan's bulwark, or Sultan's *march* or border, and hence the Sultan's margravate. Now, in the year 1225 Ertoghrul, the chieftain of the hordes of nomadic shepherds that had swooped down on Asia Minor from their ancestral homes in Turkistan, gained a decisive victory over the Byzantines in a battle fought near Dorylæum (now Eski-Shehir). In return for this victory gained, Aladdin made Ertoghrul the Margrave, that is, the defender of this frontier against the Byzantines. Ertoghrul soon extended his fief up to the very walls of Brussa, while his son Osman increased the domain inherited from his father to such an extent that Aladdin, feeling his own end near, sent the insignia of the Caliphate to the victorious son of Margrave Ertoghrul. Osman became Caliph and Sultan, and proved himself so great a man that the whole nation assumed his name, and down to the present day know themselves solely as Osmanli (plur. Osmanlilar), the word from which comes our Ottoman. Thus the village Sultan-önü is the very cradle of the Turkish empire, and yet probably not a Turk of them all knows the important fact.

When one sees the bald, naked, inhospitable wastes of Galatia, the question comes unsummoned to one's mind: Can it be possible that those Gauls, after conquering Asia Minor, should deliberately choose for their own portion the most inhospitable part of it? Or, rather, must we not assume that they, being mere mercenary troops, were *assigned* to those inhospitable quarters by their masters, and were not their wars in reality efforts to break loose from this bondage and to conquer for themselves better homes? These questions are weighty, and historians should answer them fully.

What became of those old Gauls of Galatia anyway? They have been called the Frenchmen of Asia Minor; one French traveller says that they are there yet, having merely changed their language and their religion; and he avers that among the present Mohammedan inhabitants of Galatia, he saw the hair and eyes of Frenchmen. Our traveller had good eyes and some fancy into the bargain. Humann has a different theory in regard to them, a theory well worth calling to the notice of the learned world. The Kizilbash (plur. Kizilbashlar=Red Heads) is a religious sect scattered here and there throughout the empire. Humann found them in unusual numbers on his journey from Boghaz-kieui to Samsun. The term was originally applied to the heterodox Persians, and was afterwards transferred to the people of whom we are speaking, who call themselves "Alevi." They claim to be Mohammedans, and deny the allegation of Redheadism in toto. But, despite their denial, the Kizilbash villages are well known to the Turks, who pursue them with intense hatred and untold detestation. The Turks everywhere will tell you that the Kizilbash men and women come together at night into a secret chamber, extinguish the lights, and then celebrate nameless orgies. Perrot does not believe this tale, but still quotes the words used by his cavass in regard to the nocturnal meetings. These people mourn for their dead, a thing the Mohammedans must not do; they adorn the coffin with flowers, thus reminding one of Christian customs; they give wine to a newly married couple, a thing forbidden to the Turks. All these are customs which they could have only from Christians, and where did they get them if they are not themselves the descendants of the people whom the invading Turks found inhabiting the land? Their history would be somewhat as follows: In the hour of their need and their fear, they embraced Islam, dropping it when the first danger was passed. As time went on, they forgot their Christianity also, retaining only certain formal observances of the Christians. The assemblages of the Kizilbashlar take place always on a Thursday evening, when a pot of wine makes the round of all present. Now, Thursday evening is sacred to the Eucharist, and it is not impossible that this drinking of wine in solemn assembly may be a remembrance of the Lord's Supper.

The Kizilbashlar have a well-ordered family life and many children, which latter, at all events, cannot be said of the Turks. In addition to all this, their homes are clean and their fields are well tilled, characteristics which point to a race different from the Turks. It is certain, then, that they have been in the country longer than the Turks have; and, in short, are not these despised Kizilbash the descendants of the ancient Christianized Galatians? It would be interesting indeed to find that they are in reality Christians, fallen, degraded Christians, but still Christians. If so, then there opens up a new field for the activity of the American missionaries who are stationed all over Turkey. At any rate, we should like to call the attention of our missionaries to the Kizilbash, with the suggestion that they study this strange people and tell the world something more about them. Their very name *Alevi* may be a corruption of *Galati*.

One of the most interesting sites visited by Humann is Pessinus, the home of Cybele, the great mother of the gods, whose worship was introduced into Rome with much pomp and circumstance during the second Punic war. Texier visited the site in 1839 and came home with a grand yarn about temples and porticoes existing there in abundance. Hamilton, who visited Pessinus shortly after Texier, did not actually deny Texier's florid account, but made the following confession: "Such is their state of devastation that they are more interesting to the geographer than to the antiquary." Scholars therefore looked, and were justified in looking, to Pessinus as the site of important and instructive ruins. But when in 1861 Perrot and Guillaume visited Pessinus, great was their amazement and disappointment to find that Texier's plan of the city was wholly imaginary, and Perrot exposes Texier's untrustworthiness and calls his plan "a genuine archæological romance." Texier was guilty of more than one. Moreover, as a sensationalist, he even craved such notoriety as is gained by writing his name in public places. One of the royal tombs in the city of Midas was discovered by Texier. A narrow strip of trees conceals the tomb from view from the road, and hence its existence was not suspected until Texier found it, for which due credit should be given him. But we well remember our disgust when, as we were breaking through the undergrowth, eager to stand before the royal tomb, the first thing to meet our gaze was TEXIER in letters a foot high. It is no mere ephemeral scratch, either, but a lasting disfigurement of the tomb. The work was done deliberately and skilfully with the help of an iron tool, so that a thousand years from now the world will know that Texier was the first European to lay eyes on this tomb.

In the year 190 B. C., the Roman Consul Manlius, coming with his army from Synnada, threw a bridge, says Livy, over the Sangarius in the neighborhood of Pessinus, whose delegates and priests of Cybele called upon him at the bridge. The next day the army of Manlius encamped at Gordium, the city that had become proverbial from a certain feat of Alexander the Great. The site of Gordium has always puzzled geographers, and puzzles them still. Several questions must be answered before we can even begin to hunt for it: (1.) Did Manlius take his army across the Sangarius bridge and then march one day's journey on the left bank of the river to Gordium? Or (2) after receiving the submission of Pessinus, through her delegates and priests, did he recross the bridge and march on one day's journey on the right bank of the river to Gordium? (3.) Did he go up or down the river? (4.) In speaking of the Sangarius, which fork does

Livy have in mind? Humann thinks that the left fork must be meant, since otherwise Livy could not say that the bridge was in the neighborhood of Pessinus; he furthermore believes that Manlius crossed the bridge and marched down its left bank to Gordium. Now, there is no ancient site within a day's journey in this direction. But near Tchakmak, Humann found ruins of uncertain age, and so, with much doubt and hesitation, he suggests them as the site of Gordium. Ramsay and Sterrett visited all this region two years after Humann, and spent fully a week in a continuous search for Gordium, but failed to find any trace of the city below Pessinus. Accordingly they were inclined to suspect that Gordium lay somewhere west of Pessinus, and not south or east. But the site is, in our opinion, still to be found.

The world knows well what relics of antiquity are still to be seen at Angora, Boghaz-kieui, and Euyuk, but the plates which accompany the volume before us give some new illustrations of the rock-sculptures of the two latter places. In gazing upon those sculptures we naturally ask, Who chiselled them, who built the palaces? They have been called Hittites, Syro-Cappadocians, Anatolians. But their name is forgotten, their very nationality is not known, and yet they are immortal, those men who carved on the rocks of Boghaz-kieui the praises of kings and of gods no less mortal than themselves, for the kings and their gods are gone, while the spirit of the people who could produce those sculptures in the infancy of the human race lives on for ever.

If we have dwelt at length upon some matters suggested by Humann's account of his journey through Asia Minor, we can dismiss Puchstein's account of the first journey to Nimrud-Dagh in a few words. Puchstein, while on a "Studienreise" to Alexandria, was commissioned by the Prussian Academy of Sciences to call upon the engineer Charles Sester and get from him details concerning the monument reported by him to be on the top of Nimrud-Dagh, a mountain on the right bank of the upper Euphrates, near the frontier of Melitene and Commagene. Thereupon he was requested by the Academy to visit Nimrud-Dagh in company with Sester, and report results to that body. Puchstein's preliminary report on the journey and on the important and surprising ruins of Nimrud-Dagh, was published by the Academy in 1883, and the present account is merely a transcription of his meagre day-book, which contains matter valuable for professional geographers, but scarcely readable by others. Puchstein did not improve, as he should have done, his opportunities for adding to our knowledge of the geography of the country traversed by him, but he confesses this himself with modesty and humility, and, indeed, agreed to publish his day-book only when urged thereto by H. Kiepert. We forgive his shortcomings all the more willingly because of his description of the monuments on Nimrud-Dagh. The valuable result of Puchstein's first journey is the fact that it led to a second with Humann as a travelling companion. But we have already overstepped the limits allotted to us, and can give no summary of Puchstein's masterful account of the tumulus of Antiochos I. of Commagene on Nimrud-Dagh.

THE ROUSSEAU REVIVAL.

Jean-Jacques Rousseau. Leben, Geistesentwickelung und Hauptwerke. Von Richard Mahrenholtz. Leipzig: Gebhardt & Wilisch; New York: Westermann. 8vo, pp. 176.

J.-J. Rousseau jugé par les Français d'aujourd'hui. Paris: Perrin & Cie.; New York: Christern. 12mo, pp. 575.

A DOZEN years have elapsed since the centenary of the deaths of Voltaire and Rousseau, when the friends and foes of both swarmed into print with tracts and permanent works which attested the vitality of these great forces of the eighteenth century. Meanwhile, in 1883, has been held the Rousseau exhibition in Paris, under the initiative of M. John Grand-Carteret, editor of the second work recorded above; in 1886 a bust of the Genevan surmounting a fountain was set up at Asnières; in 1889 a full-length standing statue was erected at Paris in the Place du Panthéon, with solemn dedicatory services in the temple from which his remains had been ejected by the post-Revolutionary reaction. The Rousseau bibliography of the decade 1879–1889, not too minutely compiled, fills ten pages of M. Grand-Carteret's book, which owes its inception to a corresponding Genevan work of 1878, 'Rousseau jugé par les Genevois d'aujourd'hui,' and to the centenary of the French Revolution, which Rousseau precipitated, and, through his misguided disciples, directed.

We owe to the same anniversary Dr. Mahrenholtz's masterly essay, which, even in passing through the press, has been overtaken by publications that throw fresh light on the particulars of Rousseau's life, and call for petty corrections. If this author does not attempt to focus the contemporary German judgment of Rousseau, he aims to make a true character delineation in broad strokes, to hold the balance even between worshippers and detractors, and to summarize the most recent researches. His treatment is, therefore, episodical, but orderly as regards time, and sufficiently detailed. The several abodes of the wanderer and his leading works furnish separate sections, and in the case of the writings great care is taken to point out the sources to which they are traceable, and their several effects on contemporaries and on posterity. At the end Rousseau's historical significance is considered, and an appendix gives much convenient chronological and bibliographical information.

The first question which arises, as to the authority of the 'Confessions,' Mahrenholtz answers by dividing them into two parts: in the earlier the autobiographical intention dominates, and had this been persevered in, we might have had a work surpassing Goethe's 'Dichtung und Wahrheit'; the later is consciously apologetic and defensive. In the one, Rousseau's reliance was mainly upon his memory, and his narrative is open to rectifications which have not as yet impugned his veracity. In the other, the documents were at hand and were used, sometimes verbatim. Here there is naturally a general accuracy as to events, but the author's views of individuals are tinged with misconception and exaggeration. As regards the famous difference with Mme. d'Épinay, Mahrenholtz, in default of disinterested evidence, suspends judgment on the capital point of the cause of the Marchioness's journey to Geneva; but he so far discredits Grimm as to declare that he alone of the philosophers can safely be judged from his portrait in the 'Confessions.' Readers of M. Grand-Carteret's volume will learn that it is the present conviction of Frenchmen that Grimm was the cause of Mme. d'Épinay's journey, and that she suffered a miscarriage by the way. Moreover, the editor says that any one can satisfy himself from the manuscript at the Archives that Mme. d'Épinay's memoirs often undergo a change of hand when Rousseau is in question; that pages have been cut out and replaced for the same reason.

The breach with the philosophers is dispassionately treated by Mahrenholtz, with sympathy for Diderot and D'Alembert, with justice to Voltaire, whose double-dealing and active hostility nevertheless are not extenuated. The more or less formal parallel with Voltaire is weighty, and of course runs through the work as it must in any estimate of Rousseau. The absolute consistency between the latter's private correspondence and his public utterances, while the reverse was true of Voltaire, is duly pointed out; and we may be sure that the Genevan's essential truthfulness has insured the steady growth of respect for his character, noticeable in the clerical counter-demonstrations of 1878 being mainly directed against the memory of Voltaire. The philosopher of Ferney, it is further remarked, was an aristocratic innovator, addressing himself to the élite, caring nothing for the populace, and believing in the reform of the establishment from above. Rousseau was his exact opposite in these respects—another ground for the prolongation of posterity's affection for him. Voltaire, Diderot, and D'Alembert, again, judged solely as Frenchmen, and were never quite emancipated from that Jesuit teaching which it was the mission of the 'Émile' to abolish. Rousseau was the one cosmopolite among the philosophers, yet truly patriotic, if in the sequel a man without a country. Voltaire, finally, plied his pen to the very last, while Rousseau's epoch-making activity was compressed into the period 1761–1765, but "to the Genevan more than to Voltaire belonged the future." Together their lives went out, their ashes were honored and dishonored. Houdon made the statues of both. Rousseau lived to contribute to the monument of the rival to whose genius, in his bitterest feeling of just or mistaken resentment, he never failed to do homage; and to defend Diderot against aspersion. No doubt he could have been as magnanimous towards Hume, whose course, in their lamentable quarrel, Mahrenholtz finds relatively blameless.

Of the 'Contrat Social' and its working on Robespierre and the Convention, Mahrenholtz observes that it produced an opposite effect from that which was intended. "Rousseau wished to protect the people from the arbitrariness of Church and State, while the Constitution of 1793, based upon his teachings, gave the upper hand to the meanest of all arbitrary despotisms—that of the mob." But the proper correction is applied in the observation that only Rousseau's high ideals could have led up to practical issues, and that in the cases where he was called in as a law-maker (by the Poles and the Corsicans) he evinced sound political insight. There might, in the same connection, have been cited the passages in Rousseau's correspondence where he smiles at those who seek to educate their children on the model of Émile. "Rousseau," says our German critic, "has been too exclusively regarded as an idealist and fantast; but however much the peculiarity and privacy (*Abgeschlossenheit*) of his thought led him into far-reaching plans for the future too little consonant with the tendency of his time, he had sharply and truly separated the practical from the purely theoretical." It is, however, the common fate of the idealist to be looked back upon as insane by those who see only that his speculations have formally come to naught, while they profit ungratefully by the larger liberty which he wrought for them by leavening the thought of the age. In Rousseau's case, it is true, his passion for seclusion, his suspicion of benefactors as well as of enemies, his ever-present sense of persecution seemed to bespeak a disordered mind.

But Mahrenholtz refuses to stamp as insanity a mania which grew out of very substantial facts in Rousseau's experience at the hands of Church and State, of Jesuits and Calvinists, and even of the philosophers.

We touch this question again when we ask whether Rousseau's end was suicidal. The evidence on this point is very satisfactorily discussed by one of M. Grand-Carteret's co-laborers, Dr. J. Roussel, who reaches the negative conclusion which is now the accepted one. Dr. Roussel considers Rousseau's general pathologic condition, and expresses the opinion of Mahrenholtz exactly when he says, "Quoique Rousseau n'ait nullement été fou, quoique la persécution n'ait pas été chez lui un pur délire imaginatif, puisqu'il a eu à lutter contre des ennemis très réels," etc. But he admits "un cerveau mal équilibré," and makes Rousseau a prey to hereditary hallucinations, and even goes so far as to theorize that the author of 'Émile' imagined children which he never begot and was physically incapable of begetting, and consequently never put in a foundling asylum—with the plausible alternative that there *were* children whom Thérèse persuaded him to believe his own. In the former case Rousseau's humanity is saved and his own account in the 'Confessions' discredited; in the latter, he did the unnatural deed, but at the expense of other people's offspring.

M. Grand-Carteret opens his "symposium" with a defence of Rousseau against his calumniators, written in a tone so warm as to imply a very strong and persistent antipathy. In fact, several well-known writers declined to contribute to the present enterprise, though they were not committed to mere eulogy. Maria Deraismes more sensibly improves the opportunity to express her reprobation of Rousseau for his narrow views of woman, apropos of the education of girls. There is a rather ineffectual attempt, by Hippolyte Buffenoir, to set forth the difference in the feelings of women towards Rousseau in his own and in our century: the most pertinent remark is that women nowadays do not form their judgment of him by reading his works. But the same thing must certainly be said of men, ignorant (rather than forgetful) what sources of intellectual stimulus and delight exist in the works of the most eloquent writer of modern times, apart from his political speculations or his voluntary revelations of his own weaknesses and vices. His dominating musical gift, candidly treated in one of the best chapters of M. Grand-Carteret's volume by M. Arthur Pougin, gives not only his Musical Dictionary to browse in, but the immortal Letter on French Music. His passion for pedestrianism and herborising introduces us to endless excursions in unmatched description of natural scenery and outdoor life. His 'Émile' is still the *point de repère* for every student of education. His letters are a mine of suggestion as well as models of style. Through all his works, the 'Confessions' not excepted, there runs the accent of sincerity. In the most offensive portions we acquit him of any corrupting purpose, as we cannot the realists of the present day. The more thorough one's familiarity with his works, the more impossible it appears to us to disagree with Mr. Lowell's conclusions that "in nearly all he wrote his leading object was the good of his kind," and that "the inmost core of his being was religious. Had he remained in the Catholic Church, he might have been a saint. Had he come earlier, he might have founded an order."

Be this as it may, the two works we have bracketed in this review are well calculated to revive an interest in the most interesting of the forerunners of the triumph of democracy; and, by their bibliographical apparatus, to direct the student to the proper sources.

Elements of Logic as a Science of Propositions. By E. E. Constance Jones, Lecturer in Moral Sciences, Girton College. Edinburgh: T. & T. Clark. 1890. Pp. 208.

Prof. Schroeder, in the preface to his important work on 'Die Algebra der Logik,' the first volume of which has recently appeared, says that the chief advance which has been made in late years in exact Logic is due to the labors of the American, Charles S. Peirce, and his school. The inmost secret of this advance, the luminous guiding principle to which it is due, is the fact that attention is concentrated upon thought-relations, and not upon the *words* in which they may happen to be expressed. The meaning of this may be made clear by an example. The older logicians said that in every proposition the copula is *is* (or *are*), and that it can be nothing else. The newer school looks upon this series of affirmations—

All men are mortal,
Every man is mortal,
Any man is mortal,
Being a man implies being mortal,
If any one is a man, he is mortal,

That one is a man implies that he is mortal—as indicative one and all of the same state of things, as expressive one and all of the same kind of relation, and hence as properly subject one and all to exactly the same formal treatment. In other words, it is concerned, to use again the language of Prof. Schroeder, with the *canon* of logical thought, and not with an analysis of the psychological processes of actual thinking. The above unification alone, for instance, makes it possible to do away with the distinction between categorical and hypothetical propositions, and also with the distinction between the application and the signification (or extent and intent) of words; in any proposition the terms may be taken in either sense at pleasure without necessitating the slightest change in the *formal* method of procedure.

The last four of the above affirmations do not contain any very strong implication that there are any such things as men; hence, for the sake of unity, it is desirable to assume that the statement "All *a* is *b*" may still be taken as true when it is not known whether there are any *a*'s or not. When it is said that there may not be any *a*'s, it is not meant that the term *a* is logically inconceivable, but that it is perhaps not contained in an (understood) limited field of thought (what De Morgan has called the universe of discourse). How large the field of thought is at any moment may be gathered from the application which we attribute to our negative terms; if, in denying that a thing is a virtue, we intend to call it a vice, then our universe is moral qualities; if it may perhaps be an intuition, then our universe is probably all mental qualities; if we take into account the possibility of its being a tadpole or a musical note, then our universe probably is the whole real world.

The connected questions of the existence of terms and of a limited universe are hence intimately connected with a marked simplification of logical procedure, and are therefore of more importance than it would seem at first sight. Recent English writers on logic are in the habit of discussing them from a narrower point of view; and in the handsome volume which Miss Constance Jones has just given to the logical world she does not rise above this narrow point of view. She says, for instance, on the question of existence: It seems to me, in making the assertion, "All albinos have pink eyes," not only that one would not be naturally conscious of a doubt as to there being any albinos living at the present moment, but also that the presence of the doubt in the mind is not even apparent on reflection. This sentence betrays a twofold misapprehension of the position of her opponents on the part of Miss Jones. In the first place, it does not follow, from saying that universal propositions do not, by their form, *necessarily* imply the existence of the subject, that one must be in actual doubt of its existence in every particular case. In the second place, Miss Jones forgets that her opponents have a ready means of expressing the fact when it is known that the subject exists—they have merely to say that it exists. Their position is simply this: They ask that when they say, *e. g.*, "Who breaks, pays; and there are some who break," they shall not be considered to have said over again in the second part of the sentence what they had already said once in the first; and they ask this for the weighty reason, among others, that it enables them to assimilate the treatment of compound propositions to that of simple ones.

Miss Jones has very acute reasoning powers, a great deal of boldness and originality, and untiring patience in tracking out minute distinctions in terms and in propositions. It is a pity that she has not taken a less mechanical, a larger and more common-sense, view of a number of debatable questions. She makes, for instance, too much of the distinction between adjectives and nouns. All names are abstractions. The difference between adjectives and nouns, as far as logic is concerned, is simply that adjectives are more abstract than nouns, and that on account of their having hardly any attributes predicable of them, they have little occasion to stand as subjects of propositions. Miss Jones is in error in saying that Mill distinguishes between attributes and subjects of attributes. Mill says plainly that Logic, at least, has no concern to postulate any substratum for attributes to be attached to; that, for Logic, attributes are not only all we know, but all we need to know. It is true that language is not sufficiently elastic to enable him always to speak strictly in the terms of this theory; but when he uses the word *thing*, he means nothing different from a congeries of attributes. Substance-names are constantly being coined out of adjectives when demand arises; as in "The outs were in ill-humor," "Blue and green are cold colors."

Nor does Miss Jones make out a good case against Mill's view of the nature of induction. The difficulties which she feels have been well set forth and met by Venn in his recent book on 'Empirical Logic.' They are difficulties of a kind not altogether dissimilar to that of the old Greek quibble—that a thing cannot move where it is, and cannot move where it is not, and hence that it cannot move at all.

Although Miss Jones seems to us not to have made her case good in a great many of the questions which she discusses, her book is nevertheless a noteworthy contribution to Deductive Logic.

The French Revolution. By Justin H. McCarthy, M.P. Vol. I. Harper & Bros.

Mr. McCarthy can hardly be said to have made the French Revolution more intelligible, but he has produced an entertaining book. Perhaps he had no further ambition; his rather airy comments upon the impossibility

of assigning definite causes for such a phenomenon indicate that he has not aspired to the study of the philosophy of history. Nor can we blame him for this, since the epoch of which he writes has been so thoroughly studied that no one could expect to produce another proper history of it without a lifetime of preparatory labor, while its picturesque aspects are inexhaustible. For a littérateur there could be no hesitation in making choice of methods, were it not for such mighty predecessors as Taine and Carlyle. Taine, to be sure, may be regarded as not writing for English readers; but Carlyle! —the colors of his lurid picture are too strong, one would suppose, for any later artist willingly to place his canvas within the range of their deadening influence.

But Mr. McCarthy is so far from dreading this comparison that he positively invites it. His very captions would be thought by one who had read Carlyle to be borrowed from him. We have chapters entitled "The Diamond Necklace," "Count Cagliostro," "Sowing the Wind," "Brienne is Blown Out," "States-General at Last," "The Play Begins," "The Man from Arras," "Slow and Sure," "On and On," "Drifting," and others of like style, of which the suggestion can have come from but one quarter. Nor is there any lack of curiously close resemblances in the descriptions and characterizations, nor even in the construction of sentences. Conjunctions and articles are omitted, words and phrases are repeated, epithets are accumulated, absolute constructions abound, incessant resort is had to the historical present and to the prophetical future, and the author apostrophizes the persons and places and times and seasons and events with which he has to do after a fashion that will be for ever associated with Carlyle. This sort of thing is all very well for once: we must have variety in literary styles. But it is a mistake to regard such mannerisms as of the essence of the writer and not as mere accidents. Carlyle was a great man, and what he said and thought was of enough consequence to make his spluttering and fuming and raving and cursing relatively unimportant. Mr. McCarthy is an extremely facile writer. He knows the tricks of the trade thoroughly, and can do them so cleverly that the audience must be quick to catch him. But he is not a great man, and the serious manner in which he occasionally pronounces judgment upon historical events and causes, is not impressive, but amusing. He reminds one of the old comparison of the blue-bottle fly brushing his wings upon the pulpit Bible.

Yet it would be a mistake to ignore the usefulness of such books as these. Coleridge spoke of history that was not only popularized but plebificated, and although it would be too harsh to apply his remark to Mr. McCarthy's book, yet it is clear that if knowledge is to be communicated to the general, it must be put in shape to be assimilated. Carlyle is too strong for most stomachs; but Carlyle-and-water might be not too much for the tenderest infant. The French Revolution was a very interesting episode, and if people want to read about it, there is no reason why they should not get all the entertainment out of their reading that is possible. Mr. McCarthy will whisk them along with the slightest of effort on their part, and they need not be really disquieted by the solemn head-shakings with which he records many trifling occurrences. These events were, after all, not so potent as his mysterious winks and nudges would suggest, and he himself, if one watches him closely, will be seen to be quite cool about them.

It is said that easy writing makes hard reading, but it is not true of this book. It is very easy reading, and a great deal of it is good enough reading for any one, while the method of construction is of the simplest order. Prepare a great number of personal sketches spiced with as many allusions as possible, mingle them with a fair allowance of descriptions of places and public gatherings, unite the whole with a thread of narrative, and you have a history. We do not say that it is easy to get the knack of this, but, after the knack is gained, history can be manufactured in any quantity that the market will absorb. Nor would we deny that Mr. McCarthy has read most industriously in preparation for his work. Judging by his allusions, his industry has been enormous. Only let the reader bear in mind that pleasure rather than profit is to be derived from this book, and he may skim delightfully along through the last century in France in an atmosphere of piquant gossip, seeing much of what was seen and hearing what was heard by the people who lived then, and feeling at the end, like them, that this world is full of inexplicable vicissitudes. Perhaps the second volume may show more substantial qualities than this one.

La Confédération Suisse, par Sir F. O. Adams et C. D. Cunningham. Édition française avec notes et additions par H. G. Loumeyer. Basle: H. Georg. 8vo, pp. 319.

The original edition of this book received notice in our columns at the time of its appearance in 1889. It may suffice, therefore, to say here that the translation is practically identical with the English text, but contains substantial additions in the form of footnotes. A commendatory preface by a member of the Federal Cabinet serves as a new introduction. The editor has really bettered the original, and the frequent notes bearing the initials "H. L." show excellent understanding of the subject. An instance of improvement may be seen in the chapter on the Referendum. The authors had given a list of the Federal laws which had been submitted to popular vote, with the results for and against. Now a proper study of the Veto is impossible without taking into consideration the number of measures which have been allowed to go into effect without demanding a popular vote. If we were to judge by the number of laws rejected out of the total submitted, it would seem as though the plébiscite were chiefly a machine for the baffling of legislators; but when we observe that, out of the whole number enacted, the measures rejected by the people are a small minority, and that frequently a vetoed law is adopted at a future and less complicated juncture, the tendency of the institution appears in a far different light. An admirable statement of the attitude of the Government towards Socialists and Anarchists, and the international position and policy of Switzerland in respect to these and other questions, is quoted from a late pamphlet by Prof. Hilty of Bern.

Reflections on the Motive Power of Heat. From the French of N. L. S. Carnot. Edited by R. H. Thurston. John Wiley & Sons. 12mo. 1890.

This work consists of a translation of Sadi Carnot's celebrated paper, a notice of his work by the editor, a life of Carnot by his brother Henri, an account of Carnot's theory by Sir Wm. Thomson, and an Appendix containing some extracts from his hitherto unpublished writings. The original memoir is now familiar to all scientific men. It remained long unnoticed, and may be said to have been discovered by Sir Wm. Thomson, who remodelled it in accordance with the fundamental conception of the equivalence of heat and work, which does not appear in Carnot's memoir, but which is clearly expressed in manuscript notes published recently by his brother. These notes form perhaps the most interesting part of the whole book. They show clearly enough the gradual development in Carnot's mind of clearer ideas of the nature of heat, in part at least from the study of the work of Count Rumford on the production of heat by friction. They contain perhaps the first perfectly clear statement of the equivalence of heat and work and of their mutual convertibility. The life of Carnot by his brother, and many extracts from notes not scientific in their character, bring out a picture of an interesting personality; and while we do not agree with Prof. Thurston in his estimate of the author as perhaps the greatest genius whom this century has produced, we must assign to him a position among those who have done most for the science of heat, and who have achieved an imperishable fame. The work before us brings together much valuable material in an accessible form for reference, and is an acceptable contribution to the early history of thermo-dynamics.

BOOKS OF THE WEEK.

The Latest Works of

ALGERNON SIDNEY LOGAN, author of 'Saul,' 'A Feather from the World's Wing,' etc.

Jesus in Modern Life.

12mo, cloth, $1.25.

"Mr. Logan's views are interesting, and many of his thoughts are bright and suggestive."—*Hartford Courant.*

"He treats his subject with reverence, and believes that the teachings of Jesus have an elevating influence on mankind. The book is written in a bright and engaging spirit,"—*Boston Gazette.*

"It is full of clear thought, vigorous reasoning, and genuine erudition."—*Indianapolis Sentinel.*

Messalina.

A Tragedy in Five Acts. 12mo, cloth, $1.00.

"There are fine lines in the poem, but its most remarkable features are its dramatic force and its entire lack of obscure phrase and meaning."—*N. Y. Sun.*

"The action of the tragedy is rapid, and it is replete with gorgeous and picturesque descriptions, for which there is abundant material in the history of the court life of Messalina and Claudius. The characters of the Emperor and Messalina are powerfully drawn, and the others are presented with strong effect. As a dramatic poem the work is of high merit."—*Boston Home Journal.*

New Books by

SIMON N. PATTEN, Ph.D. (Halle), Professor of Political Economy in the University of Pennsylvania.

The Economic Basis of Protection.

12mo, cloth, $1.00.

"A temperate, thoughtful little book."—*Atlantic Monthly.*

"A very clear and exhaustive argument in favor of the protective tariff principle. It shows up the fallacies of the free-traders, and reveals the solid foundation upon which the protectionist stands."—*Evening Wisconsin, Milwaukee.*

"The style is simple and easily understood, and altogether it is a book decidedly worthy the attention of the student of social and economic problems."—*N. Y. Epoch.*

"It is a valuable addition to the argument for protection, and against the system that would barter the advantages of this great country for less even than the mess of pottage."—*Harrisburgh Telegraph.*

The Premises of Political Economy.

By SIMON N. PATTEN, Ph.D. (Halle), Professor of Political Economy in the University of Pennsylvania. 12mo, cloth, $1.50.

"A modest but powerful treatise. In its line, it is one of the marked books of the season, and to the student of deep and vital questions of economics it must be highly valuable."—*Chicago Inter-Ocean.*

HEAVEN AND HELL.

416 pages, paper.

DIVINE LOVE AND WISDOM

383 pages, paper, by EMANUEL SWEDENBORG. Mailed prepaid for 14 cents each (or both for 25 cents) by the American Swedenborg P. and P. Society, 20 Cooper Union, New York.

Houghton, Mifflin & Co.'s Saturday Books.

Come Forth.

A Novel by ELIZABETH STUART PHELPS and HERBERT D. WARD, authors of 'The Master of the Magicians.' $1.25.

This is a story of the time of Christ. Lazarus is the hero, several other New Testament characters are introduced; and the story, while true in spirit to the life and thought of the time and place, and entirely reverent, is a striking love-story, likely to be widely popular.

The Life of Dorothea Lynde Dix.

By FRANCIS TIFFANY. With a Steel Portrait. Crown 8vo, $1.50.

As the founder of vast and enduring institutions of mercy in America and in Europe, Miss Dix has no peer in the history of Protestantism. Mr. Tiffany tells her remarkable story with excellent judgment and skill.

A Theological Curiosity.

Familiar to our Forefathers 1,500 years ago, but not now known to one man in 50,000.

The Apocryphal Books, being the Gospels and the Epistles thrown out of the New Testament by the Council of Nice, A.D. 325; translated from the original tongues with copious Notes, and Illustrations from ancient Missals and Miniatures.

Of this work, Dr. TALMAGE has recently said:

"Christ in the joyous boy of the fields. We are not permitted to think that the shadows of Calvary darkened His pathway as a youth, and the Apocryphal Books of the New Testament show much of the early life of Christ not to be found in the four Evangelists."

Price, in large 8vo, cloth, $2.00. Sold only by subscription. Agents wanted in every county. Send for circulars.

GEBBIE & CO., Publishers, Philadelphia.

HARVARD GATE

An etching of the new gate at Harvard has just been completed by CHARLES H. WOODBURY, and is now issued in one state only, viz.: Artist's proof on imperial Japan; price, Ten Dollars. Size of plate 12x17½ inches.

Sent, post prepaid, by the Publisher,

J. EASTMAN CHASE,

7 Hamilton Place, Boston.

EUROPEAN WINTER AND SUMMER Resort, University town of Innsbruck, Tirol, Austria; 1,900 feet above the sea, with dry, bracing climate. Hotel Tirol, open all the year. Carl Landsee, Proprietor. Large, airy, sunny rooms, well furnished. Elevator. Superior cuisine (table d'hôte or à la carte). Reduced rates in winter. Carriages and sledges at low rates. Charming excursions made from the hotel at all seasons. Unusual advantages for securing teachers of the languages, history, science, art, music, etc., at very moderate terms. MONEY

TWILIGHT PARK,

IN THE CATSKILLS.

In response to an advertisement in the NATION, I recently sold a $1,000 site to a Poughkeepsie lawyer, and his example has led to further sales, amounting to some $4,000, in the same part of the Park, near new Ledge End. Our total sales this season already exceed $20,000. The Club-House has been overflowing—one hundred guests besides servants most of the time—making one hundred and fifty by actual count August 24, and fifty others taking their meals at home. Three new cottages have been built this summer and seven others projected, besides a third addition to the Club-House and a handsome Recreation Hall. There are now twice as many cottages, and double the population as last year, and the end is not yet.

I write this advertisement chiefly to say that the Club-House will be open through October, and that no one who can make the trip should miss the chance to see the mountains in their full Indian-summer glory. We have been turning away applicants all summer, but after September 15 we can accommodate a few, and by October 1 there will be ample room. Address

CHARLES F. WINGATE,

NEW BOOKS.

OUTLINES OF GENERAL CHEMISTRY.

By WILHELM OSTWALD, Professor of Chemistry in the University of Leipzig. Translated, with the author's sanction, by JAMES WALKER, D.Sc., Ph.D. $3.50.

"This book has been written mainly to supply a want felt in my own teaching experience. It is designed to meet the requirements of the student who, while not intending to devote himself to the detailed study of General Chemistry, still wishes to follow intelligently the progress recently made in this important branch of science. "I have abstained as far as possible from the use of mathematical formulæ, and have always striven after clearness of exposition."—*From the Author's Preface.*

THE THEORY OF LIGHT.

By THOMAS PRESTON, Lecturer in Mathematics and Mathematical Physics, University College, Dublin. 8vo, pp. xvi, 465. With Illustrations. Cloth, $3.25.

ENGLISH MIRACLE PLAYS.

MORALITIES AND INTERLUDES. Specimens of the Pre-Elizabethan Drama. Edited, with an Introduction, Notes, and Glossary, by ALFRED W. POLLARD, M.A., St. John's College, Oxford. 12mo, $1.90.

SHORT STUDIES OF SHAKESPEARE'S PLOTS.

By CYRIL RANSOME, M.A. 8vo, cloth, $1.

"The method is excellent. The volume is happily free from over-speculation, intricacy, and subtlety; it is not at all 'profound,' and for these reasons it should be useful to young students or to older students who are beginning to read the plays reflectively."—*Nation.*

ANALYSIS OF ENGLISH HISTORY.

BASED ON GREEN'S SHORT HISTORY OF THE ENGLISH PEOPLE. By C. W. A. TAIT, M.A. 12mo, cloth, $1.10.

THE CONFLICTS OF CAPITAL AND LABOR.

HISTORICALLY AND ECONOMICALLY CONSIDERED. Being a History and Review of the Trade-Unions of Great Britain, showing their origin, progress, constitution and objects in their varied political, social, economical, and industrial aspects. By GEORGE HOWELL, M.P., author of the 'Handy Book of the Labor Laws,' etc. 12mo, $2.50.

Prof. Alfred Marshall's New Book.

PRINCIPLES of ECONOMICS.

By ALFRED MARSHALL, M.A., Professor of Political Economy in the University of Cambridge, Fellow of St. John's College, Cambridge. Vol. I., 8vo, $4.00.

"The present work abundantly justifies the high reputation of its author. . . . It exhibits a profound and extensive acquaintance with the general course of economic speculation, not only in England, but in Europe and the United States."—*Times.*

CAPITAL AND INTEREST.

A Critical History of Economical Theory. By EUGEN V. BÖHM-BAWERK, Professor of Political Economy in the University of Innsbruck. Translated, with a Preface and Analysis, by WILLIAM SMART, Lecturer on Political Economy in Queen Margaret College, Glasgow. 8vo, $4.00.

"The discussion is masterly. . . . Of the two subjects which the double title covers, the nature of capitalization in general, and the determination of interest in the *régime* of competition, it is difficult to say of which the treatment is more original and profound."—*Academy.*

"An admirable guide to both teachers and pupils in the tangled period of which it treats."—*Professor Fisher, Yale College.*

And many other valuable Historical Books.

GINN & COMPANY,

PUBLISHERS,

Boston, New York, Chicago, and London.

PRACTICAL WORKS

On the Tariff and in Economic and Political Science.

ATKINSON (Edward). The Industrial Progress of the Nation.

Consumption Limited; Production Unlimited. 8vo, $2.50.

—— The Distribution of Products;

OR, THE MECHANISM AND THE METAPHYSICS OF EXCHANGE. Three Essays. What Makes the Rate of Wages? What is a Bank? The Railway, the Farmer, and the Public. Second Edition, revised and enlarged, with new statistical material. 8vo, $1.50.

"The problems presented are treated with skill and force, and will interest even those who do not agree with the conclusions reached by the author."—*N. Y. Journal of Commerce.*

COSSA (Luigi). Taxation: Its Principles and Methods.

A translation from 'The Science of Finance,' together with a compilation of the State Tax Systems of New York and Pennsylvania. Edited, with 100 Notes, by HORACE WHITE. 16mo, $1.00.

"Prof. Cossa's style has two admirable qualities, brevity and comprehensiveness. . . . Every student of political economy, and every public man who wishes to speak intelligently, ought to read this book and keep it by him for frequent reference."—*Boston Post.*

ELLIOTT (J. R.). American Farms,

their Condition and Future. ("Questions of the Day" Series, No. 62.) 8vo, $1.25.

"It is a timely book, and will do something to throw light on the burning question of the day."—*Nebraska State Journal.*

O'NEILL (Charles A.). The American Electoral System.

An Analysis of Its Character and Its History. 12mo, $1.50.

"The author's plans and compilations will be found valuable, and the book is well worth having and studying."—*Ohio State Journal.*

ROGERS (J. E. Thorold). The Economic Interpretation of History.

Being the Substance of Lectures Delivered in Worcester Hall, Oxford University (1887–8). 8vo, $3.00.

". . . It is needless to say that in enforcing this lesson the author brings to bear on the subjects with which he deals his unrivalled knowledge of early English history. . . . To the historian and the economist Prof. Rogers has performed a useful service in drawing their attention to a field hitherto unworked except by himself."—*Manchester Guardian.*

SCHOENHOF (J.). The Destructive Influence of the Tariff upon Manufacture and Commerce,

and the Facts and Figures Relating Thereto. 8vo, cloth, 75 cts.; paper, 40 cts.

"An able presentation of the subject by a practical man, which should have a wide circulation."—*Louisville Courier-Journal.*

WELLS (David A.). Practical Economics.

A Collection of Essays respecting certain of the Economic Experiences of the United States. $1.50.

"In my clear opinion, it is the most comprehensive, conclusive, and powerful statement of the truth respecting freedom of exchange, as to theory and as to practice, that exists in any language or literature."—*Manton Marble.*

Teachers, etc.

A LADY TEACHER, WHO WILL spend next winter in Europe, desires to chaperone a young lady, or accompany a lady going alone. Highest references. Address EUROPE, 111 Summer Street, Boston.

A CERTIFICATED TEACHER HAV- ing four years' experience in England and Canada, desires a position to teach Elementary or Advanced Drawing. WALTER SCOTT, 727 Pine Street, Philadelphia, Pa.

A HARVARD GRADUATE (1890), honors in Physics, desires a position as electrician or as teacher of Physics, Mathematics, and Chemistry. Experienced tutor. C. N., Box 766, Natick, Mass.

AN ENGLISHWOMAN DESIRES A reëngagement as matron in a school or institution, or housekeeper in a private family. L. E. V., Matapan, Boston, Mass.

AN EXPERIENCED TEACHER (WO- man), who is a doctor of medicine and who has studied abroad, desires a position to teach chemistry, physics, and physiology. N. H., care of *Nation.*

HOLMES HINKLEY, A.M., 11 EVE- rett St., Cambridge, Mass., will prepare boys for the fall examinations, and make tutoring engagements for the winter.

MYRON A LOCHMAN, A.M., WILL prepare boys for the Harvard examination and make tutoring engagements for the winter. Address 62 Saint James t., Newton, until Sept. 22.

MR. LEON H. VINCENT, BIOGRA- phical and Critical Lectures on English and American Authors. For dates and terms, address Lock Box 911, Philadelphia, Penna.

CHARLES W. STONE, Tutor for Har- vard, 68 Chestnut Street, Boston.

Teachers, etc.

WANTED—TWO BOYS DEFICIENT in preparation for College, to fit for examination next year. Highest references.
CLERGYMAN, Sandy Hook, Conn.

SOCIAL UNIVERSITY MONOGRAPHS.—I. The Plan of a Social University. By Morrison I. Swift. Price, 20 cents. Address C. H. GALLUP, Ashtabula, Ohio.

TEACHERS SHOULD EXAMINE The Reformed Primer and First Reader. Price, 30 cents. BABYHOOD PUB. CO., New York.

FOR SALE—POSTAGE-STAMP COLLECTION.—18,000 varieties. Value $15,000. Address "Foreign," P. O. Box 1342. New York City.

School Agencies.

AMERICAN AND FOREIGN TEACHERS' Agency supplies Professors, Teachers, Tutors, Governesses, etc., to Colleges, Schools, and Families. Apply to
MRS. M. J. YOUNG-FULTON,
23 Union Square, New York.

THE FISK TEACHERS' AGENCIES, 7 Tremont Place, Boston, Mass., 6 Clinton Place, N. Y., 106 Wabash Ave., Chicago, Ill., and 120½ South Spring Street, Los Angeles, Cal. 100-paged Agency Manual free. EVERETT O. FISK & Co.

AMERICAN AND FOREIGN Professors, tutors, governesses, teachers, etc., supplied to colleges, schools, and families. French, German, and Spanish spoken. MIRIAM COYRIERE, 150 6th Av., cor. 20th St.

SCHERMERHORN'S TEACHERS' Agency. Oldest and best known in U. S. Established 1855. 3 East 14th St., N. Y.

Schools.

COWLES *New Studio Building,* 145 Dartmouth St., Boston.
ART SCHOOL
INSTRUCTORS,
ERNEST L. MAJOR, HENRY H. KITSON,
ABBOTT GRAVES, MERCY A. BAILEY,
ANNIE E. RIDDELL.
The eighth year of this well-established school opens October 1. Superior in equipment and in arrangement for convenience and comfort; modelled after the Parisian Schools. Full Courses in Drawing and Painting, including still Life and Water Colors. Special attention to Life Studies, Portraiture, and Illustrating. Class in Modelling and Interior Decoration. Begin at any time. For circulars address as above.
F. M. COWLES.

The Pennsylvania Museum and School of Industrial Art.
CLASS-ROOMS:
1336 Spring Garden Street, Philadelphia.
Thorough instruction in Drawing, Painting, and Modelling, with especial reference to the application of artistic training to practical industrial aims; to Textiles, Pottery, Carving, Moulding.
For circulars and all particulars, address
L. W. MULLER, Principal, at the School.

University of the City of New York
LAW SCHOOL.
The thirty-second session begins October 1, 1890.
For Catalogues, etc., apply to
Prof. I. F. RUSSELL,
Equitable Building, 120 Broadway, New York.

Lake Erie Seminary, *Painesville, O.* —Location pleasant and healthful. Course of study liberal and thorough. Thirty second year begins September 10, 1890.
MISS MARY EVANS, PRINCIPAL.

WOODBRIDGE SCHOOL.
32 East 45th Street. Reopens October 1.
J. WOODBRIDGE DAVIS, Ph.D., Principal.

EUROPEAN WINTER AND SUMMER Resort, University town of Innsbruck, Tirol Austria; 1,900 feet above the sea, with dry, bracing climate. Hotel Tirol, open all the year, Carl Landsee, Proprietor. Large, airy, sunny rooms, well furnished. Elevator. Superior cuisine (table d'hôte or à la carte). Reduced rates in winter. Carriages and sleighs at low rates. Charming excursions made from the hotel at all seasons. Unusual advantages for securing teachers of the languages, history, science, art, music, etc., at very moderate terms. Eminent medical care and skilled nurses if desired. Best English and American references. Illustrated pamphlets sent on application.

THE NATION.—A BOUND SET, also an unbound set, various vols., both bound and unbound; 25,000 odd numbers. Will buy, sell, or exchange. A. S. CLARK, 34 Park Row, N. Y. City.

E. W. NASH, 80 NASSAU ST., NEW York, has just issued a new Catalogue relating to America, Local History, Genealogy, etc. Sent to any address on application.

Charles Scribner's Sons'
NEW BOOKS.

Famous Women of the French Court.
From the French of IMBERT DE SAINT-AMAND. By T. S. PERRY. Each, volume, 12mo, with Portrait, $1.25.

Citizeness Bonaparte.

This volume sketches the career of Josephine from her marriage with Napoleon to the period described in *The Wife of the First Consul*—the most romantic portion of her life and the days of Bonaparte's greatest devotion.

ALREADY ISSUED.
THE WIFE OF THE FIRST CONSUL.
THE HAPPY DAYS OF THE EMPRESS MARIE LOUISE.
MARIE ANTOINETTE AND THE END OF THE OLD RÉGIME.
"Full of charm and interest, brilliant description, and strong, clear historical sketches."—*N. Y. Tribune.*

CAMEO EDITION.
Old Creole Days.
By G. W. CABLE. With Etching by PERCY MORAN. 16mo, $1.25.

In Ole Virginia.
By T. N. PAGE. With Etching by W. L. SHEPPARD. 16mo, $1.25.
The popularity of the first two volumes issued in the Cameo Edition last fall, Donald G. Mitchell's 'Reveries' and 'Dream Life,' lends interest to the publication in the same dainty form of these well-known volumes. They are printed from new plates, on fine paper, with wide margins.

Belief in God.
Its Origin, Nature, and Basis. By J. G. SCHURMAN, Professor of Philosophy at Cornell. 12mo, $1.25.
Contents.—I. Agnosticism, or the Impossibility of Belief in God. II. The Logical Character of Belief in God. III. The Origin and Development of Belief in God. IV. Belief in God as Cause or Ground of the World. V. Belief in God as Realizing Purpose in the World. VI. Belief in God as Father of Spirits.

Introduction to Philosophy:
An Inquiry after a rational System of Scientific Principles in their relation to Ultimate Reality. By Prof. GEORGE T. LADD, D.D. 8vo, $3.00.
This work covers the whole field of Philosophy, and is addressed to the laity as well as to advanced students.

American Boy's Handy Book.
Or, What to Do and How to Do It. By DANIEL C. BEARD. With over 350 Illustrations. Enlarged Edition. Square 8vo, $2.00.
Mr. Beard has added sixty new drawings to his popular book, to illustrate the many new games, sports, and mechanical contrivances which he has incorporated in this latest edition.

American Girl's Handy Book.
Or, How to Amuse Yourself and Others. By LINA and ADELIA B. BEARD. With over 500 Illustrations. New and Cheaper Edition. Square 8vo, $2.00.
This, a companion volume to the foregoing, is issued in a new edition at a reduced price, that will bring it within the reach of thousands of new readers.

*** *Sold by all booksellers, or sent, postpaid, by*
CHARLES SCRIBNER'S SONS
743-745 Broadway, New York.

J. & R. LAMB,
59 Carmine St., New York.

CHANCEL FURNITURE.
The question is often asked, for what can you supply simple solid wood furniture for a small chancel? Here are a few prices for OAK, simple designs, best workmanship:

Altar and retable,	$75 00
Reredos,	50 00
Credence,	10 00
Bishop's chair,	30 00
Priest's chair,	25 00
Altar-rail standards in brass, each	10 00
Top rail, per foot.	1 00
Clergy stall,	20 00
Clergy desk,	20 00
Lectern,	20 00
Pulpit,	45 00

These are not extravagant prices, but you secure good material and correct designs in either light or dark wood.
For designs and other estimates send for handbook on CHANCELS.
Kindly remember, we do ALL work needed for the church interior.
Stained Glass, Decoration,
Metal Work, Mosaic, etc.
Send for illustrated handbook of any department, or call and see work at 59 Carmine Street.
Carmine Street is a continuation of Sixth Avenue south, and the Sixth Avenue cars pass the door of No. 59.

15 VOLUMES NOW READY.
FOR FULL PARTICULARS, ADDRESS
D. APPLETON & CO., Publishers,
1, 3, & 5 Bond St., NEW YORK.

Third door west of City Hall Park.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 25, 1890.

The Week.

SPEAKER REED has concluded to let the reciprocity provision go through, and the House conferees on the Tariff Bill agreed to it on Thursday. When talking with his friends, Mr. Reed makes no effort to conceal his contempt for this proposition to trade with a lot of "Dagoes," as he calls them; but, as a number of Republican State conventions in the West have endorsed the idea, he concludes that it is best to humor the advocates of the policy. The Aldrich amendment is therefore to play the part of "a good enough Morgan until after election" next November, as it cannot become operative in any contingency until July, 1891, and it is not expected by the party managers that the President will ever make any attempt to exercise the unconstitutional power with which it professes to invest him.

Mr. Blaine has again, as so often before in his career, fallen into an error as to a matter of fact. "Finally," he says, in his latest letter about reciprocity, "there is one fact that should have great weight, especially with protectionists. Every free-trader in the Senate voted against the reciprocity provision." This is what comes of a man's trying to comment upon legislation at Washington while he is down at Bar Harbor in Maine, cut off from access to the *Congressional Record*, and dependent upon the incomplete and consequently often misleading reports published in such local sheets as Boutelle's *Whig and Courier*. The scanty abstract of proceedings printed in the Bangor paper showed that every Democrat in the Senate (which is what is presumptively meant by Mr. Blaine's expression "every free-trader in the Senate") voted with such Republicans as Senator Evarts of New York and Senator Edmunds of Vermont against the Aldrich amendment, on the ground of its obvious and gross unconstitutionality. But if Mr. Blaine had had the *Congressional Record* sent to him during his vacation—which, of course, is not to be expected of a shrewd pleasure-seeker—he would have learned from the issue for September 10 (page 10,782) that every Democrat, or, as he would say, "every free-trader," in the Senate voted in favor of this thorough-going reciprocity amendment introduced by Mr. Gray of Delaware:

"And the President of the United States is hereby directed, without further legislation, to declare the ports of the United States free and open to all the products of any country of the American hemisphere upon which no export duties are imposed, whenever and so long as the Government of such country shall admit to the ports of such country free of all national, provincial (State), municipal, and other taxes, flour, corn-meal, and other breadstuffs, preserved meats, fish, vegetables and fruits, cotton-seed oil, rice, and other provisions, including all articles of food, lumber, furniture, and all other articles of wood, agricultural implements and machinery, mining and mechanical machinery, vessels or boats of iron, steel, or wood, structural steel and iron, steel rails, locomotives, railway cars and supplies, street-cars, refined petroleum, or such other products of the United States as may be agreed upon."

If Mr. Blaine had received the *Congressional Record* of September 10, and seen this amendment, he would have recognized at a glance that it was precisely the same amendment which his next friend, Mr. Eugene Hale, as his personal representative in the Senate, introduced on the 19th of June, to carry out the Secretary's policy of reciprocity, as outlined in his letter to the President which was sent to Congress on that day.

A decision rendered by the New York Court of Appeals in 1853 is of interest now because it involved the same question of the delegation of power by a legislative body which is at issue in the Senate's reciprocity amendment to the Tariff Bill. The Legislature had passed an act in the spring of 1849 establishing free schools throughout the State, but the law was only to be valid in case a majority of the voters should approve it by ballot the following November. The constitutionality of this procedure was brought before the Court of Appeals in 1853, and it held that the act was invalid, on the ground that the Legislature could not thus divest itself of the responsibility for legislation. The Court conceded that the Legislature might pass a valid statute which should take effect only upon the happening of some future event, but held that "the event or change of circumstances on which a law may be made to take effect must be such as, in the judgment of the Legislature, affects the question of the expediency of the law. They appeal to no other man or men to judge for them in relation to its present or future expediency." The Court held that the Legislature had "no more authority to refer such a question to the whole people than to an individual," and, in "further illustration" of its position, said:

"Let us suppose that the act of 1849 had directed the Attorney-General, or the Archbishop of the Catholic Church, or the Common Council of the city of New York to certify, on the next general election day, whether in his or their opinion that act ought to become a law; and had further provided that the act should or should not take effect, according to such certificate: it cannot be pretended that the statute would have become operative upon the making of the certificate in its favor. The Constitution does not authorize the power of legislation to be so delegated."

The Constitution of the United States no more authorizes Congress to delegate the power of legislation to the President than does the Constitution of this State authorize the Legislature to delegate such power to the Governor, the Attorney-General, or any other man. The reciprocity amendment to the Tariff Bill proposes to give the President the power of imposing or removing taxes upon sugar, molasses, coffee, tea, and hides, not upon the happening of an event like the imposition of certain duties upon our agricultural products by a foreign country, but "whenever and so often as the President shall be satisfied" that the duties imposed by such foreign country are such as (not Congress, but) "he may deem to be reciprocally unequal and unreasonable." There can be no reasonable doubt that the Supreme Court would make as short work of the reciprocity amendment of 1890 as the New York Court of Appeals made of the shuffling school act passed by the New York Legislature in 1849; the principles which apply to the two cases being identical and of universal application.

An equally significant decision by the Supreme Court of Delaware will be found in the case of Rice against Foster. "The powers of government," said the Court, "are trusts of the highest importance, on the faithful and proper exercise of which depend the welfare and happiness of society. These trusts must be exercised in strict conformity with the spirit and intent of the Constitution—*by those with whom they are deposited; and in no case whatever can they be transferred or delegated to any other body or persons*—not even to the whole people of the State, and still less to the people of a county. . . . The making of laws is the highest act of sovereignty that can be performed in a free nation, and therefore the legislative power may truly be said to be the supreme power of a State. If the legislative power can be transferred to the people, so can the executive or judicial power."

Says the *Tribune*:

"The protests made by American diplomats against the prohibition of certain imports by France or Germany are based solely on the false reasons for that step. If either of these nations sees fit to put a heavy duty on American hog products, no representative of this country has a right to object."

This is a sad error, esteemed contemporary, for which we fear you will get a stinging rebuke from one of our "American diplomats." Is it possible you have not perused with reverence the remonstrance addressed by our Minister to France to M. Ribot on the 3d of July last, and containing the following sentiments, in which we heartily concur?—

"And above all, you have deprived your people, particularly the poor laboring classes, of a cheap and highly prized article of food, which they used largely, and for which you have been able to furnish no adequate substitute. Statistics of your importations, and the regular quotations of your domestic prices, show that what you shut out from us you have not supplied from other sources. Surely, an abundant and cheap supply of healthful food for the laboring classes is one of the most important essentials for the happiness of a people, the growth of its productive energies in competition with neighboring and rival countries, and the development of the national prosperity."

You will see from this at a glance that it makes very little difference whether the reasons the French give for excluding "American hog products" are "false" or not. You will see that, even if they admitted that American pork was a wholesome article of

diet, but put a high duty on it so as to exclude it on protectionist grounds, they would still be guilty of "depriving their people, particularly the poor laboring classes, of a cheap and highly prized article of food," or, on the other hand, depriving them, to use Mr. Reid's stirring language, "of one of the most important essentials for the happiness of a people." What does it matter whether this is done by lying or by a 50 per cent. duty? Are you not a little ashamed to have missed this little lesson in *ex cathedrâ* political economy emanating from a source which is, doubtless, august in your eyes?

The Western farmers who are demanding free binder-twine are giving the Republican leaders in Congress a great deal of pain. Between their demands and that for free sugar, the Tariff-Bill conferees, if the *Tribune's* Washington correspondent represents their feelings accurately, are almost at the limit of their endurance. What is it that is so "unruly" and so "palpably out of harmony with all the principles of protection" in the demand for free binder-twine? The case, as stated by a Republican Senator, Davis of Minnesota, is that the business of manufacturing twine is in the hands of a Trust, which controls absolutely the raw material in the places where it is grown, and which limits its product and fixes its prices to suit itself. That is what makes it an "isolated industry." As Mr. Davis said of the members of this Trust in the Senate a few weeks ago: "They are as far above legislative control as the clouds that float above the Capitol. They are in need of no protection. They are amply able to protect themselves and to spoliate the world." He showed that their profits were 40 per cent. on an aggregate annual output of $10,000,000, or $4,000,000 a year, and that the farmers of Minnesota alone were forced to pay unjustly nearly a million dollars of this amount. Yet the Trust has appeared before the Ways and Means Committee and demanded additional protection of one and three-fourths cents a pound, saying if it were not granted its members would be forced to close their mills. There is no doubt whatever that the Trust is one of the most oppressive upon the farmers of all those in existence. To grant its demands is to give the most conclusive proof of the justice of Mr. Blaine's charge that the McKinley Tariff Bill benefits the East as against the West.

The appearance of a savage attack upon Mr. Blaine in a campaign paper which Mr. Clarkson is publishing to help forward his work as director of the Republican Congressional Committee, adds to the interest of the situation inside the Republican party. Mr. Clarkson arraigns Mr. Blaine as a "brilliant and dashing letter-writer," who "is the one man in the modern politics of America who has written letters to his own cost and to the cost of his party." That is an allusion to the Mulligan episode which is plain enough to be understood by anybody, and which is certainly not made in a friendly spirit. Mr. Blaine's latest fault as a letter-writer, according to Mr. Clarkson, is in characterizing the McKinley Tariff Bill "as a benefit to the East as against the West." Mr. Clarkson says this "is not good for the Republican party," and declares that "the insidious cry that the Republican party in any way favors Eastern against Western interests should be stamped out at once." But how is it going to be stamped out? The conferees on the McKinley Bill have not stamped it out by restoring the duties on binding-twine in the interest of the Eastern Trust which controls that industry, have they? The demand for free binding-twine was one of the strongest which the Western farmers made, and it would have been granted had not the Eastern interests objected. Denouncing Mr. Blaine as a letter-writer whose productions are not "good for the Republican party" will not explain away this performance. Neither will it refute this comprehensive statement of Mr. Blaine's concerning the McKinley Bill as a whole: "There is not a section or a line in the entire bill that will open the market for another bushel of wheat or another barrel of pork." The question is not so much whether Mr. Blaine was a useful Republican in saying this and other damaging things, but whether he was telling the truth. Mr. Clarkson seems to fear that he was telling the truth, and to have a curious idea that if he had kept still, Western Republicans would never have suspected the true condition of affairs.

The Speaker showed signs of wavering on Friday which are very surprising in a Czar of his "nerve." He was trying his utmost to count a quorum, but the persistence of Democratic members in remaining away from their seats—going "on strike," as the indignant *Tribune* calls it—prevented his doing so to the satisfaction of his critics. When the correctness of his count was questioned and tellers were called for, he showed that he anticipated defeat by saying that the "doorkeeper informed him that there were a dozen Democrats in the lobby." A really Strong Man in the Speaker's chair would have ruled that, from "counting a quorum" as it appeared under his own eye to counting one with the assistance of the doorkeeper's eye in the lobby, was an easy and logical step, and would have taken it without flinching. But, for some inexplicable reason, Mr. Reed failed to take it. When a Democratic member remarked that "there was no provision in the rules by which doorkeepers were permitted to count a quorum," the Speaker did not even "sass him back" according to his usual custom, but submitted as meekly as an ordinary man in the chair would have done. This pusillanimous conduct in a Speaker who had intimated during the same debate that there was the same necessity for unprecedented decisions by the Chair now as there was in war time, will be apt to injure his prestige.

The forthcoming report of the Special Committee which Speaker Reed appointed to investigate Mr. Raum's conduct of the Pension Bureau, ought to be read in the House in conjunction with the *Tribune's* Washington despatch of Monday morning, in which the statement is made that the Committee "appears to have conducted the important inquiry with blue glasses on and its ears carefully wadded with cotton." The Committee might retort to this truthful characterization of its methods by saying that it has simply done what was expected of it and what it was carefully selected by the Speaker, at Mr. Raum's bidding, to do. It was not appointed to find out the truth, but to conceal it, and it did its utmost to that end. That it has not deceived anybody is not its fault, but chiefly the fault of the honorable plain-speaking of the *Tribune*, which, more far-seeing and sagacious than the Speaker and Raum's other defenders, is able to foresee that nothing but harm to the Republican Administration can be the result of attempting to shield such a disreputable public official as Raum has shown himself to be by his own admissions upon the witness stand.

We cannot speak too highly of the force and pungency of the address adopted at the ministers' meeting in Hardman Hall on Monday night. Every word of it tells on the existing situation. Let us add that every word that is said against the propriety or utility of a movement like this on the part of the clergy is really an argument in its favor. The very hostility which it calls forth shows the need of it and the duty of it. We say the duty of it because these ministers are, we believe, with one exception, ministers of Protestant denominations, and it is on the Protestants of this city that, paradoxical as it seems, the guilt and shame of our present plight chiefly fall. It is they who, for the most part, have the money, the intelligence, the moral and social influence of the city in their hands. They are the chief employers of labor, the chief supporters of philanthropic and educational enterprises, the chief subscribers to campaign funds, and the chief inheritors among our city population of American political traditions. The poor of the city, of whom a large proportion are foreigners, are the victims of our present condition, not its authors. They are the dumb and helpless multitude who in all ages and all countries have been the chief sufferers from bad government; and a worse government than the rich and powerful of this city have given them in return for their taxes—for they bear the chief burden of the taxes—we say, weighing our words, there does not exist in the civilized world. In no civilized city does the poor man get so small a return for the contributions he makes out of his scanty earnings to the municipal exchequer. In no such city does he get such poor justice, such poor police, so little cleanliness, such dear lighting, such poor pavements, such inferior transportation. In none is he abandoned so completely, in all ways, to the tender mercies of corrupt and vicious politicians,

the very dregs of modern civilization—for this is what the Tammany politicians are. All that the congregations of these Protestant ministers have offered him during the past thirty years of municipal waste and disgrace has been a few free chapels, a few cheap coffee-houses, and an opportunity of selling his vote to Republican "district leaders."

Never before since the disgrace of the city began has the prospect for persuasion been so bright. The new ballot law has done much, we sincerely believe, to restore to the tongue and the pen the influence they once had in American politics. The old system of distributing ballots took all the heart out of public discussion, because, after you had talked a man over to your way of thinking about a public question, you could not guarantee him the full expression of his opinion at the polls. The chances were ten to one that arrangements for cheating him had already been made by the people who did the "work" on election day, and who arranged among themselves who was to have the majority in any particular district. Unless we are greatly mistaken, all this is now at an end. When you convert a man, you can assure him that he can make his new view felt beyond any peradventure; that he can get the ballot he wants, and vote it in absolute security.

The confessions of the wretched Knights who wrecked the Montreal express are horrid reading. The consideration that the destruction of the train might involve the loss of innocent lives and the injury of innocent people seems never to have occurred to them, or, if it did occur to them, seems never to have given them the slightest trouble. All they wanted was "to get even with the road." Characteristically enough, they prepared for the work by the purchase of a pint of whiskey, and spent their leisure moments after the deed was done in sundry liquor-saloons—a poor way of seeking "the educational and legislative advantages" for the promotion of which Powderly says "the noble and holy order" exists. There are two features in the case which merit, and we trust will receive, the special attention of Mr. Webb and the other managers of the New York Central. One is, that all these conspirators agree that Master-Workman Lee, the head of the District Assembly which got up the strike, stood behind them in this matter, and, if he was not an accessory before the fact, was an accessory after the fact, and furnished them with money to escape the punishment due to their crime. Now, the kind of man this Lee is must have been long known to officers of the road. The Powderly correspondence shows that he (Lee) had been plotting and planning for a strike for months. He must be a noisy, gaseous sort of person, whose unfitness for service in an organized force must have been evident months ago. Why was he not discharged before his plans had time to ripen? He cannot have been during all this period a useful and efficient employee. In any such service as that of railroads, just as much as in the army or navy, a gabby, "sea-lawyer" sort of man ought to be got rid of as soon as he is found out. The second consideration is, that we trust Mr. Webb, in the light of these events, will revise his rule of not discharging men simply because they are Knights. We hold that it is his solemn duty to the people who travel by his road to see, as far as he can, that there is no man among his employees who belongs to any "order" or society which claims control over such employee's manner of doing his official duty or over his relations to his employers. There is here no room for private or personal likes or dislikes, kindliness or indulgence. Mr. Webb ought to make a peremptory rule that no Knight or unionist of any description shall be allowed in the service of the company. No corporation charged with a quasi-public service is at liberty to employ such persons. Private corporations or firms may, if they like, but no person who is intrusted with the lives or property of third parties has any right to do so, or will have any excuse for doing so after the warning conveyed by this remarkable conspiracy.

From a circular sent out by Funk & Wagnalls to those subscribers to their pirated edition of the Encyclopædia Britannica who have not yet sent in their $38, it would appear that a certain number of them are holding back for some reason or other, and the firm, thinking it may be, in some cases, from conscientious scruples about receiving stolen goods, got from Dr. Crosby a remarkable certificate of honest dealing. We would, however, now earnestly urge those subscribers who have not yet drawn their copies, not to do so. It is never too late to back out of an immoral bargain, and an agreement to purchase stolen goods is necessarily immoral. The courts will not enforce it, and, according to Dr. Funk himself, nothing is property for which there is no legal protection. Therefore, on his own showing, not only may the subscribers legitimately refuse to take his Encyclopædia, but they may legitimately get it if they can and keep it without paying for it. On Dr. Crosby's showing, this would at most be an act of simple "discourtesy." As no man can have "property in published ideas," Funk cannot have property in his 'Britannica' any more than the Blacks had, and we advise any one who can get hold of one or more copies of it to take them and "use" them, as Dr. Crosby says they may legitimately do. If Dr. Funk complains, serve on him a copy of the letter of Dr. Crosby, "whose keen, delicate sense of propriety and honor" Dr. Funk will, in this case at least, be the last to "challenge."

The latest news from Ireland shows that the politics of the potato failure has already begun to show itself. The Nationalist leaders have begun, as every one knew they would, to advise the tenants not to pay rent because of the approaching scarcity, and Mr. Balfour has begun to arrest them and lock them up for so doing, on the assumption that this will somehow mend the situation. We believe it is generally conceded that not one of these arrests and imprisonments during the past three years has in the smallest degree improved the condition of Irish society. "The plan of campaign" is less heard of because nearly all the landlords attacked by it have succumbed to it. Boycotting is less rife than it was, because the terror it inspired has made fewer and fewer people ready to commit the acts in the way of "landgrabbing" and the like which led to it. In the meantime, the Parnellite leaders are more powerful and popular than ever, and the huge military garrison is as necessary as ever—that is, Ireland is no nearer being pacified than she was three years ago. There is an Austrian stupidity about the Unionist policy which is very curious. Its main object seems to be not to settle the Irish problem, but to show what a determined fellow Mr. Balfour is.

The exposures which one of the Boulangists named Mermeix has been making in the *Figaro* of the inner workings of the Boulangist movement, under the title of the "Coulisses du Boulangisme," or "Behind the Scenes with the Boulangists," as it may be freely translated, describe one of the most disgraceful and discouraging episodes in French history. There is nothing very new in the revelations made about the band of adventurers who formed Boulanger's immediate surroundings. They were in most respects of the same order as those who surrounded the Third Napoleon when he made his Coup d'État, and it appears they were ready on a certain night to attempt the same thing, but their hero's heart failed him, and the hour of action slipped by. What is new in the story, and what makes it so discreditable, is the exposure it makes of the extreme cheapness and tawdriness, as a political charlatan, of Boulanger himself. He appears not only to have had no ideas, but no nerve, and when once it became unsafe for him to parade on his black horse, he was lost. He utterly disconcerted his followers by his flight to Brussels, and hastened the dénouement, which was sure to come in the end. He took money from everybody, and much seems to have come from women. None are left by the disclosures in such a sorry plight, however, as the Monarchists. They all, from the Comte de Paris down, the Rochefoucaulds, the Luynes, the D'Uzes, appear to have helped this sorry adventurer with large funds, and encouraged him to overthrow the Government if he could, not caring what the result to the country in the way of disorder might be, if only it offered them a chance of setting up a throne on the ruins. No wonder one Monarchist writer says, in the bitterness of his soul: "Years and years will pass before this stain is removed from the Royalist brow—an ineffaceable stain like *Macbeth's*. In ten years, in twenty years, whenever Royalists talk of loyalty or honor, people will say, 'Go along, and find your Boulanger!'"

THE ISSUE IN THE HOUSE.

THE controversy which came over from last week in the House of Representatives is one which involves questions so important that the point at issue should be clearly stated.

At the Congressional election of 1888 in the Fourth District of Virginia, there were polled, according to the returns of the officers in charge, 13,299 votes for Edward C. Venable, a Democrat, 12,657 for John M. Langston (colored), a Republican, and 3,207 for R. W. Arnold, also a Republican. The Governor accordingly awarded the certificate of election to Mr. Venable, and he was sworn in as a member when the House met last December.

Mr. Langston contested Mr. Venable's right to the seat, on the ground that there had been fraud in the election, and that a fair count of the ballots actually cast had given him a comfortable plurality over the Democratic candidate. The case went to the Committee on Elections, and the Republican members, constituting a majority, brought in a report that Mr. Venable was not legally elected, and that Mr. Langston was entitled to the seat.

The case was called up last week, and the Republican managers attempted to carry through the scheme of unseating Mr. Venable and substituting Mr. Langston. The Democrats sought to save their fellow-member from being turned out, and insisted that he should not be displaced unless and until the Republicans could show a majority of all the members of the House present and voting in favor of the Republican claimant.

Under the system which existed during the first fifty Congresses, all that it would have been necessary for the minority to do in such a case would have been to sit silent in their seats when the resolution was put to vote. They would simply have insisted that a quorum of the dominant party must be present and voting in the affirmative, and it would have made no difference whether members of the minority were present in the chamber and not answering to the roll call, or were absent from the Capitol. The old custom was for the members of the minority in such a case to suit their own convenience as to being inside or outside of the chamber, inasmuch as it was not their visible presence, but their votes, which constituted the essential thing. No better statement of this ancient system has ever been made than the concise definition of the Hon. Thomas B. Reed, in a speech which he delivered in the House on the 28th of January, 1880, when opposing a proposition then pending to change that system and give the Speaker the power of counting a quorum. "The constitutional idea of a quorum," he said, "is not the presence of a majority of the members of the House, but a majority of the members present and participating in the business of the House. It is not the visible presence of members, but their judgments and their votes, that the Constitution calls for."

This ancient position was sustained with equal emphasis during the same discussion by Gen. Garfield and Gen. Hawley, and the innovation was defeated, enough of the Democratic majority joining the Republicans to reject the change in the rules suggested by a Democratic Committee. It is this ancient position, sustained by Reed, Garfield, and Hawley in 1880, upon which the Democrats stand in 1890. They simply say, "If you Republicans are going to turn out a member who has the certificate of the Governor of his State that he was elected, and put in his place another man, you must have a quorum of all the members of the House 'present and participating in the business of the House' by the exercise of 'their judgments and their votes'—which Mr. Reed ten years ago defined to be 'the constitutional idea of a quorum.'"

On the other hand, the contention of the Republicans under the leadership of Mr. Reed in 1890 is, that, in order to pass any measure, it is only necessary that the Speaker shall see a quorum of the members in the chamber, and that a majority of that quorum shall vote in the affirmative. The objections to this system are two fold, and were stated in an unanswerable manner by Gen. Garfield and Gen. Hawley ten years ago. In the first place, there is the danger of a false count, or, at the very least, an incorrect count, by the Speaker. In opposing the idea that the question whether or not a quorum is present should be determined by "ocular demonstration" on the Speaker's part, Gen. Garfield said: "Who is to control his seeing? How do we know but that he may see forty members more for his own purposes than there are here in the House? I think my friend from Virginia will see that he lets in the one-man power in a far more dangerous way than ever has occurred before in any legislative assembly of which he and I have any knowledge."

The second objection was forcibly put by Gen. Hawley. "I think it very decidedly wrong," he said, "in the first place, that a Speaker should be at liberty to recognize or declare a quorum without a formal count, *and, in the next place, that, by any sort of combination of rules, there should be a law put on the statute-book and declared in force which can show perhaps only a quarter or 10 per cent. of the members in favor of it.*" That is precisely what it is now claimed may be done. The House consists of 330 members. A quorum, therefore, is 166. Mr. Reed's present contention is, that, if he can see 166 members within the chamber—say, 84 Republicans and 82 Democrats—when the roll is called, and the 84 Republicans answer in the affirmative, while the Democrats either vote nay or are silent, those 84 affirmative votes may pass a measure. In the pending case, he claims that, if there are 84 votes to turn out Mr. Venable and turn in Mr. Langston, the act may be done, provided enough other members are within his sight to constitute the quorum of 166.

We believe that every candid man holds now, as Gen. Hawley held ten years ago, that it is "very decidedly wrong" that only one more than a quarter of the membership of the House should suffice to take such action as this. It is so wrong that the minority are justified in opposing this proposition to the last extremity. Under the old system, as Gen. Hawley said, "We of the minority claim a right, by sitting silent, to prevent less than a majority of the members elected from passing a bill. The worst that can be done by a factious minority, if that be the term applied to it, is to fight until the actual majority of the members elected shall pass the bill. When they are present, that friendly majority constitute a quorum of themselves; they do not require the assistance of the minority; they run the House themselves and pass their bills." Under the Reed régime, the minority are denied the right of bringing about this result by "sitting silent," as the Speaker will count them towards a quorum, and therefore the only thing they can do is to absent themselves from the chamber until the Republicans produce a quorum of their own. They ought to have such a quorum present every day, and, whenever they have it, they can pass any proposition.

It is sometimes objected that such action by the minority is "factious" and against the public interest, but the broader view is that which was so well expressed by Mr. Reed himself in closing his forcible speech of January 28, 1880:

> "This privilege, which the [Republican] minority of the House at the last session availed itself of, is a privilege which every minority has availed itself of since the foundation of this Government. What is the practical upshot of the present practice? It is that the members of the minority of this House, upon great occasions, demand that every bill which is passed shall receive the absolute vote of a majority of the members elected. They do this in the face and eyes of the country. If they demand upon any frivolous occasion that there shall be such an extraordinary vote as that, they do it subject to the censure of the people of this land.
>
> "*It is a valuable privilege for the country that the minority shall have the right by this extraordinary mode of proceeding to call the attention of the country to measures which a party in a moment of madness and of party feeling is endeavoring to enforce upon the citizens of this land. And it works equally well with regard to all parties, for all parties have their times when they need to be checked, so that they may receive the opinions of the people who are their constituents, and who are interested in the results of their legislation.*"

THE SUPPRESSION OF KENNEDY.

THE Judiciary Committee of the House of Representatives has decided to report a resolution directing the Government Printer to omit from the permanent edition of the *Congressional Record* the speech in which Mr. Kennedy of Ohio denounced Senator Quay as a "branded criminal," a "Judas Iscariot," and as a Republican leader who "should be driven from the head of a party whose life his presence imperils." It is thought that the adoption of this resolution by the House will be satisfactory to Mr. Quay. If this be so, it must be that he has neglected to follow closely the successive steps in the amusing and childlike proceedings which his friends have taken to suppress the speech. These are well worth reviewing in chronological order.

The speech was delivered in the House on September 3. A full report of it, taken

from the speaker's manuscript, was sent out over the country by the Associated Press, and was printed in all the leading newspapers of the land on the following day. Of its reception in the House so high a Republican authority as the New York *Tribune's* Washington correspondent said, that "whatever criticism may be passed upon Mr. Kennedy on the score of taste, or the lack of it, in choosing the present moment in order to arraign Mr. Quay" for the part he took in defeating the Force Bill, "there is no denying the fact that he represents a large, almost an overwhelming, majority of Republicans in the House in their judgment of Mr. Quay's course with reference to it." It was strongly suspected, even, that Mr. Kennedy had made the speech with the connivance of the Speaker *pro tem.*, Mr. Burrows, as well as with the approval of the Republican majority. The publication of the speech caused a great revulsion of Republican sentiment, and on the second day after its delivery the *Tribune's* correspondent reported that the more mature feeling of Republicans was "one of hot and almost universal indignation, as well as profound regret," and that a "long and earnest consultation" about it had been held among the Pennsylvanians, who were "especially indignant."

Steps to suppress the speech date from this revulsion of Republican sentiment. Mr. Kennedy had withheld his speech from the *Record* for revision, and he was besought to withhold it permanently. This he declined to do; but he consented to modify it somewhat by leaving out Quay's name, by diluting the Judas Iscariot comparison, by eliminating the phrase "branded criminal," and by many other similar alterations. In this softened form it was published in the *Record* of September 14, filling over four pages. As it was still a very unpleasant speech for Quay and his friends to contemplate, the efforts to suppress it were continued. On September 15 Mr. Enloe, a Democratic member from Tennessee, actuated by the most disinterested desire to help his Republican associates in their distress, introduced a resolution directing the Clerk of the House to "communicate to the Senate the fact that the House reprobates and condemns the unparliamentary language" of Mr. Kennedy used in his speech of September 3, and published in a revised and amended form in the *Record* of September 14. In the debate which followed on this resolution the main charges of the speech were repeatedly cited, and, by Mr. Enloe's request, the worst passages of the speech were read in full by the clerk. The House finally referred the Enloe resolution to the Judiciary Committee for action, and the Committee has decided to report as above mentioned.

Now, supposing the House accepts the report and votes to exclude the speech from the permanent edition of the *Record*, what will be accomplished? In the *Record* for September 16 there appears a report covering four pages of the debate on the Enloe resolution, in which the objectionable passages of the speech as read by the clerk are printed in full. What is the use of suppressing the full text of the speech from the *Record* of September 14, and allowing this report of the debate with the objectionable passages of the speech to remain in the *Record* of September 16? It is clear that the perfect work of suppression cannot be accomplished till all reference to the speech and the fact of its delivery shall have been cut from the *Record*. Has Congress the power to mutilate the record of its own debates in this way? There is a precedent in favor of eliminating from the permanent edition of the *Record* a speech which appeared in the daily edition. It was established in 1880, when an absurd poem by a Wyoming delegate, which had never been delivered, was printed by leave in the daily edition. Mr. Garfield made the motion for its suppression, but the remarks in which he did so are published in full in the permanent edition, and, like those in the debate on the Kennedy speech, they reveal the real character of the suppressed utterances.

It is, of course, within the possibilities that the present Speaker may cut the knot of all these difficulties by simply "ruling" that all mention whatever of the Kennedy speech be eliminated from the permanent edition of the *Record*. He may even rule on some fine day, when he is in especially "good form," that the *Record* is an unnecessary evil anyway, and may abolish it altogether. But so long as precedent is followed in regard to keeping a published account of the proceedings of Congress, there will be no way by which the Kennedy speech can be removed from the permanent edition of the *Record*. It is there, and it must remain there for all time, no matter how solemnly the Republican majority may shut their eyes and declare that in their opinion it was never delivered. Their whole performance in regard to it, considered as that of mature men who are in Washington as the delegated wisdom of the land, to decide upon legislation affecting the most difficult problems of modern government, is a miracle of silliness.

MORE LIGHT.

THE state of mind of many of our protectionist friends touching foreign trade, as revealed by the discussion about reciprocity, although many of them are exceedingly shrewd home-traders, is very curious. It has, for instance, been impossible for many years back to convince them that what draws foreign trade to a place is exactly what draws home trade to a place, namely, low prices. They would have it that what kept foreigners from buying of us was not high prices, but the absence of subsidized steamers, or slow postal communications, or the machinations of the British, especially the cunning device which Mr. Blaine exposed some years ago, of getting the foreigners to ask payment for their goods in bills on London. The reciprocity discussion has made this great darkness more than usually visible. Mr. Blaine's astounding announcement that the apparent balance against us in our trade of 1889 with the South American countries represented a dead loss on our part, was received by the whole Republican press, secular and religious, with perfect calm, as if it was something they had long known, and in which there was nothing new or surprising except the exact figures, while probably every merchant engaged in foreign trade was joining the professors and "the bookmen" in roaring over it, and while any one had only to go into the counting-room of any South American trader to get a full view of its monstrous absurdity.

There are many signs, however, that the discussion is doing good and is letting light into this curiously dark place, and that before long there will be nothing left of the mystery, except the absence of intellectual shame on the part of a man of Mr. Blaine's years and official standing in coming before the world with such a mass of absurdity. One of these signs is the following, which we clip from the Philadelphia *Press*, probably the most ignorant as well as most dishonest of the high-tariff organs:

> "The *Herald* is innocent. If it will look at the trade of the United States, England, and the Spanish Americas, it will find that England sends to the countries south of us the goods which make good our imports from there, for which we send our products to England. We buy of English merchants in Spanish America and bring in English vessels the goods we get from our Southern neighbors, and we pay for these goods by sending to England our products, again in English vessels, and England settles the bill by sending her goods to South America, again in English vessels, by English merchants, at an English profit."

Here we see that the writer has really at last mastered the mechanism of foreign trade. He sees that a profitable foreign trade between two countries does not necessarily mean a *direct* trade, and that nations often exchange their commodities in a roundabout way, through other nations, and then settle their balances, which are always comparatively trifling, in gold at some central clearing-house like London. But this does not keep him straight about the essential conditions of foreign trade, for immediately afterwards he falls back into the old familiar balderdash, as follows:

> "How much better it would be if this trade were direct, and if it were in our own vessels. Our manufacturers would make the goods which now go to South America from England, our breadstuffs would go direct to the countries from which they are excluded, and American ship-owners, insurance companies, and banks would make the profits of freight, insurance, and exchange on this great traffic. This would come with direct trade, and direct trade will come by the adoption of reciprocity and the passage of the Shipping Bill."

Of course direct trade would be "better," but saying this is about as useful as saying, "Ah, if I only had a million!" or "How I wish I was industrious and successful!" The writer does not take the slightest notice of the essential principle of international trade from the days of the Phœnicians down, that we can only get it by making our goods cheap; this is what has always brought it and brings it now. If a man who was selling dearer than his competitors in the New York or Chicago dry-goods trade, for example, and found his custom scanty, were to insist upon it that his business suffered through the persecution of rivals, or through delay in the delivery of his letters, or because he did not buy goods himself at their stores, he would be set down

as a lunatic and his credit would be ruined.

We find another similar flash of intelligence in the *Manufacturer*, a fortnightly protectionist organ published in Philadelphia, which by no means smiles on Mr. Blaine's reciprocity scheme, and maintains that, far from needing foreign markets, we do not now produce manufactured goods enough to supply our own markets, and that "the true way to deal with the situation in which we now find ourselves" "is to put up duties and check importations, so that American mills can have a fair chance to supply the American market." There is nothing mealy-mouthed about this writer. But see how he shows his mental growth in the next sentence:

"We do, however, have an actual surplus of farm products, which must be disposed of somehow or other. The practice has been to place it in foreign markets, *and much of it will continue to go there, no matter what our tariff arrangements and reciprocity arrangements may be, simply for the reason that our prices are the lowest as our material is the best.*"

We see here that he has really got hold of the secret of foreign trade—but only by the tail, as it were. That the rule applies to manufactures has not yet dawned on him. But it will. In another year or so he will be living in the full light. There is nothing so illuminating as discussion. It is true that it hardly ever produces, or seems to produce, an immediate effect. Neither of two disputants ever admits on the spot that his opponent has convinced him, because that would be an acknowledgment of defeat which human nature finds it hard to make. But he carries away with him the seeds of conviction, which sooner or later ripen, and he finally comes before the world emancipated.

THE ANGLO-IRISH SITUATION.

THE recent arrests of the Irish leaders indicate, apparently, some sort of change of policy on the part of the Ministry as a preparation for "the electoral contest" which the London *Times* admits "must be fought out at no very distant date." The earlier vigor with which Mr. Balfour began his administration of Irish affairs was based on the same assumption as Mr. Forster's—that the disorder and discontent in Ireland were the work of a few orators and agitators, and that if they could be removed peace would be restored. But Mr. Balfour held, and made no secret of it, that Mr. Forster had made a mistake and ruined his policy by treating the persons whom he arrested—about 1,000 in all—as what are called "first-class misdemeanants," that is, in making their imprisonment simply confinement, and allowing them in their jail all their usual comforts and conveniences, including frequent visits from their friends. Balfour determined on a sterner course, and proceeded to subject all his political prisoners to the treatment of ordinary criminals as regards food, dress, and occupation.

Every one remembers the pitiful uproar to which this policy gave rise. The determined resistance offered to it by O'Brien and others had an effect on English opinion which made it impossible to persist in it. It was accordingly abandoned, on one pretext or another, and after a while the arrests diminished in number also, and were more and more confined to the obscurer members of the Irish party. Some features of "coercion" still continued very odious, such as the practice of "shadowing"—that is, dogging—the footsteps of obnoxious local agitators with two policemen, who never left them, and listened to all their conversation—a practice which one Conservative member in the House pronounced "damnable," and which even the *Spectator* deplored, and in characteristic language hoped Mr. Balfour would "see his way" to dispense with. But, on the whole, the police pressure was diminished, and there was no doubt that the whole system was condemned by an increasing body of public opinion in England. The upper classes approved, but the masses were scandalized and exasperated, and the sympathy with the Irish spread among the Radicals, as the vote at the bye-elections showed. In the meantime, although there was more appearance of order in Ireland, there was no sign of more affection for the law, and no reason to believe that the military and police force could be diminished with safety, and it has not been diminished, nor have any of the coercive precautions been laid aside.

The probabilities are, that the Ministry did not anticipate, when they began it, that their experiment would have to last so long. Belief in Irish persistence is not strong among Englishmen, and the expectation of Gladstone's death or disability before now, and the consequent collapse of the home-rule agitation, exercised a great influence on their plans. They hardly looked forward to coercing for six years, and coming before the voters at the general election without a single remedial Irish measure to show, without any visible abatement of disaffection in Ireland, and with Gladstone alive and active. But this is exactly what has happened. The defeat of the Irish Land Bill last session has rendered the situation little short of desperate, and it is aggravated by an approaching Irish famine. Something has to be done to show that the Ministry still has a policy and energy to carry it out, and we presume the arrests shadow forth what it is. There is to be something in the nature of "resolute government" to the end.

Lord Hartington is the leader of the Liberal Unionists, partly owing to his sincerity and moderation, partly to his being the heir of a duke, hardly at all to his natural ability—for he has very little; but he is the dull, safe kind of man who, when he has family and wealth, has a powerful hold on the English imagination, and the duller he is the more profound the attention with which he is listened to. He has just been making a speech in Yorkshire before a large meeting of Unionists which has attracted a great deal of attention, on account of the extremely gloomy picture he draws of the political prospect. He indirectly, and certainly without meaning it, pays a most remarkable tribute to the capacity of the Irish party in the House. After showing how successful they had been with their tactics of obstruction, and how they had succeeded in getting an English party to act with them, he went on to say:

"I do not know, gentlemen, that these tactics have had very considerable success, but they have made of the Parnellite party a party more formidable and influential in Parliament than the Irish Nationalist party has ever been, either in the days of constitutional agitation, as carried on by O'Connell or Butt, or of physical force under leaders like Mitchel or Smith O'Brien. It is true the tactics of the Parnellite party have not been confined to Parliamentary efforts. It is quite true that they have carried on in Ireland, with equal determination and equal ability, a campaign founded upon agrarian discontent and appealing to agrarian greed. . . . . .

"They have carried on with equal energy and equal determination another campaign among the enemies of England in the United States and in every English-speaking colony.

He added that they had converted the Liberal party to Home Rule by convincing Harcourt, Morley, Trevelyan, and other Liberal leaders

"that the power of Parliament to administer the affairs of this empire in the face of the determined and resolute hostility of a small section of its members had ceased to exist—in fact, that the game of parliamentary government was up, and that it was useless longer to contend against this insidious poison. Well, I have never denied the gravity of these arguments; I have always thought that it was the strongest which is to be found in the Home Rule armory."

It is impossible to overestimate the gravity of these admissions. They show that, in the belief of one of the calmest and most phlegmatic of the Unionists, the Irish question has entered on a more serious stage than ever before; that it is being pushed to a crisis of some kind, with an audacity and ability never before displayed; that it is putting the very existence of parliamentary government in England in peril, and that deliverance through the total withdrawal of Irish constitutional rights and a determined military government, which would have been easy a century ago, has now become impossible, owing to the rising of the democratic tide in England. A policy of irritation, such as these arrests apparently indicate, as the latest Conservative resort, seems, under these circumstances, to be marked by great folly.

THE SOCIALIST OUTLOOK IN GERMANY.

ON the 1st of October will terminate the anti-Socialist laws framed in Germany twelve years ago under the influence of the indignation caused by the attempts of Hödel and Nobiling on the life of the Emperor William. The expiration of these laws finds the Social Democrats not only possessed of a numerical strength in the Reichstag undreamed of even two years ago, but convinced that the fostering care extended by the present Emperor to the working classes involves the virtual recognition of the principal claim of the Socialist party. But a few days ago the Emperor, at a banquet at Breslau, expressed a hope that the other provinces of Prussia would follow the example of Silesia in ameliorating the condition of the laboring classes, and the *Vossische Zeitung—quantum mutatus ab illo!*—applauded the words of the Emperor,

which testify to his "steadfastness in opposing the increasing ire of the hard-hearted caste that cannot bear the social equality of the laborer, nor become reconciled to the termination of the anti-Socialist laws." The Emperor is announced to have given further proof of his interest in the laboring classes by causing the publication of a pamphlet addressed "To the Workingmen of Germany," which will discuss the social reform in the spirit of the imperial decrees of February, and which will be offered for sale after the 1st of October in all the principal manufacturing towns of Germany.

That, in view of all this, the Socialists should be filled with exultation, that they should make their influence felt in the Municipal Council of Berlin, and ask for permission to celebrate the return of the expelled members of their party in the Town Hall, might have been expected And yet in the very hour of triumph the Social Democracy of Germany is seriously divided against itself, and the theories of Bebel and Liebknecht—the leaders who have spent a lifetime in disinterested devotion to thorough-going social reform—are being rapidly supplanted by the ultra-revolutionary doctrines of Dr. Bruno Wille, the apostle of the latest phase of German Socialism. It is true that the noisy meeting held on the 25th of last month at Berlin ended in an enthusiastic endorsement of Herr Bebel and his party associates in the Reichstag, but the victory has only served to bring out clearly the antagonism between the old and the new leaders.

The editors of the principal organs of the radical Socialists —viz., the Berlin *Volkstribüne*, the Dresden *Sächsische Arbeiter-Zeitung*, and the Magdeburg *Volksstimme*—have withdrawn from their papers in order to consolidate their efforts in a new and powerful opposition journal; and Bebel and Liebknecht, after more than twenty years of unquestioned supremacy in the party councils, are forced to repel, with all the power at their command, the charges of treason brought against them by Herr Wille and his associates. These charges come, first of all, under the general head of what might be termed truckling to the existing order of things, and resolve themselves specifically into the accusation of having participated in the Government commission for the workingmen's protection, and voted on several occasions with the Freisinnige party in the supplementary elections. The very victories achieved by the Social Democrats in the elections to the Reichstag are viewed with contempt by the anti-parliamentary school represented by Herr Wille, whose motto is: No agreement whatsoever with State and society; parliamentary rivalry is in itself corruption.

While it is easy enough for Herren Bebel and Liebknecht to dispose of the arguments of their opponents, who have strayed so far from Lassalle's postulates of universal suffrage and productive associations supported by the State, it is decidedly difficult for them to cope practically with the spirit of discontent which has seized many of their former adherents. The turbulent followers of Herr Wille refuse to be satisfied with the crumbs of comfort held out to them either in Bebel's vision of a pan-republican socialism, brought about by the restoration of Alsace-Lorraine to France, or in the panaceas of the young Emperor. Neither do they concede the correctness of the view that religion is a private matter with which Socialism as such has no concern, but they unequivocally demand the formal secession of the party from all established religions. In other words, the end and aim of the new Social Democracy, even if still occasionally veiled in the phrases of the "Socialists of the Chair," is revolution *per se*.

In dealing with the discordant elements within the party, Bebel and Liebknecht have the advantage of well-organized leadership and of a tangible programme. As an illustration of the thoroughness of their methods may be mentioned the new way of distributing Socialist literature, as recently described by Herr Liebknecht. The large cities having been won over to Socialist doctrines, he explained that it now became necessary to convert the rural population. For this purpose Socialist papers, as soon as read, are deposited in certain places, generally cigar-stores, in the city of Berlin, for distribution in the provinces. Hitherto this distribution had been made indiscriminately, but henceforward papers collected in the First District of Berlin will be sent only to the province of Westphalia, those from the Second to Hanover and Hesse, and so on. Other German States will be similarly supplied from their capitals. Increased attention will henceforth be paid to the language of the party journals, which must be adapted to rural comprehension. One of the most curious of the means by which discipline is maintained in the ranks of the old Social Democracy is a mysterious agency called the "Iron Mask," which watches over Government spies surreptitiously seeking admission, warns backsliding members, finds out in advance whether it will be safe to distribute Socialist tracts in any given locality—in short, plays the part of a secret inner council with great success. It employs almost exclusively the telegraph, and few can boast of having seen the handwriting of the "Iron Mask." The story goes that the person hidden behind it is a police official of high rank, who thus guards the secret of his affiliation with the Socialists, and that he is unknown even to the party leaders. Whatever the explanation of the mystery, the "Iron Mask" is certainly well calculated to fulfil its purpose, and supplies the touch of the romantic so dear to every German heart. It is, therefore, not probable that the proposition to dispense with the "Iron Mask" will prevail at the Socialist Congress shortly to assemble at Halle.

Not to be outdone by the old leaders of the Social Democracy, Dr. Bruno Wille has put in his bid for popularity in the shape of a Social Democratic theatre, the "Freie Volksbühne," which is shortly to be opened in Berlin, and whose manager he will be. The performances are to take place on Sunday afternoons, and the cost is to be defrayed by voluntary contributions, fixed, however, at a minimum of one mark for the initiation fee, and fifty pfennigs and twenty-five pfennigs for the winter and summer months respectively. The principle of equality being recognized in the conditions of membership, it is to be decided by lot whether each individual spectator is to receive a seat in the pit or in the gallery. If the enterprise is a success, Freie Volksbühnen are to be established in Hamburg, Stuttgart, Dresden, Leipzig, and other cities of Germany.

While what may be called the humor of the Socialist agitation receives its due share of public attention, the German press, on the whole, rarely takes the hysterical view of the relations between labor and capital which, thanks chiefly to the efforts of well-meaning clergymen, occasionally finds expression in American periodicals. The Berlin *National Zeitung* especially, which is distinguished by its soberness in discussing politics, and has always endeavored to have the anti-Socialist legislation supplanted by modifications of the common law, protests in advance against the pessimistic expectation of a Socialist invasion after the 1st of October, as well as against the optimistic hope that the split in the Socialist camp will result in the speedy disintegration of the party.

Among the former advocates of the anti-Socialist laws, such journals as the *Kölnische Zeitung* and the Munich *Allgemaine Zeitung* are still opposed to concessions to the Socialists, and, more or less openly, to the reformatory schemes of the Emperor. Of less interest are the antics of Government organs like the *Kreuz-Zeitung* and the *Post*, which, while opposed tooth and nail to Socialism, profess to expect a harvest of peace from the termination of the anti-Socialist laws.

The Government itself seems to be preserving a quietly expectant attitude with regard to what is to happen after the 1st of October, and pays little attention to the question discussed in the papers as to whether the excesses of the Socialists may not render necessary a revision of the press laws and modifications of the right of association throughout the Empire. The Socialists will probably be on their good behavior for some time to come, and will be strictly watched by the Government. The Liberal papers share the hope that the days of exceptional legislation are past, and even the Conservative press has learned that expulsion and persecution are dangerous political weapons nowadays, and invariably injure those who employ them.

THE MORMON QUESTION IN IDAHO.

BOISÉ CITY, Idaho, September 18, 1890.

I HAVE now, during the last five weeks, traversed this State on its eastern margin from south to north, and along its central portions from east to west, and though my first object has not been political, nor sociological, nor even religious, questions of this character have been continually thrust upon my attention, until the survey of facts seem to warrant some inferences that are worthy of consideration.

The experiment in Idaho in dealing with the Mormon question is one of the most radical that have ever been taken in modern times. Both political parties seem agreed in the policy adopted. The Mormons, as a class, are disfranchised. Not only is the practice of polygamy treated as a crime, but to be an adherent of a religious body that considers polygamy lawful is regarded as so far criminal as to debar him from taking any part in the government, either local or general.

Perhaps, however, the case should not be stated in just this form. The exact form of the elector's oath bearing upon the point is as follows:

ELECTOR'S OATH.

I do swear that I am not a bigamist or polygamist; that I am not a member of any order, organization, or association which teaches, advises, counsels, or encourages its members, devotees, or any other person, to commit the crime of bigamy or polygamy, or any other crime defined by law, as a duty arising or resulting from membership in such order, organization, or association, or which practises bigamy or polygamy, or plural or celestial marriage, as a doctrinal rite of such organization; that I do not, and will not, publicly or privately, or in any manner whatever, teach, advise, counsel, or encourage any person to commit the crime of bigamy or polygamy, or any other crime defined by law, either as a religious duty or otherwise; that I do regard the Constitution of the United States, and the laws thereof, and of this State, as interpreted by the courts, as the supreme law of the land, the teachings of any order, organization, or association to the contrary notwithstanding.....

.....

So help me God.

The Mormons have been accustomed to make an oath something like this, by the subterfuge of having the bishop formally dismiss them from the church just before the election, so that they could vote, but with the understanding that their temporary apostasy would be speedily forgiven, and they received back after election. To provide against this the Mormon is now debarred from voting for two years after it is found that he is a Mormon. This proof places him in the same condition as a foreigner, and he has to get out naturalization papers, and disown his church, just as he would the sovereignty of a foreign Power. The penalty for perjury in such cases is a long term in the penitentiary.

With these severe conditions wrought both into the Constitution and into the statutes, the feeling seems to be pretty general that the Mormon question is settled for Idaho. A goodly number, however, are less sanguine. A familiar exhibition of this is seen in the suspicion each party has that the other, after all, is going to pander to the Mormon vote. The Republicans express a total lack of confidence in the professions of the Democratic platform upon the question, and fear that when they have the power they will wink at the registration of Mormons and encourage them to vote. A prominent Democrat, however, assured me that in his vicinity it was the Republicans that were encouraging the Mormons to register, and he railed against the sect more vigorously than I ever heard a Republican do. In fact, he advocated the total extermination of them from the face of the earth. On the other hand, a prominent Republican candidate assured me that if a Mormon would only vote the Republican ticket, it was equivalent to abjuring the faith, and was sufficient proof that he was not in heart a Mormon.

Under territorial government the Mormons have been dealt with with a pretty high hand. As the officers were not amenable to local public sentiment, there has been little to restrain them, and many acts of petty spite have left their impress among the people. For example, in Bingham County I was struck with some remarkable discrepancies between my post-office map and that which had been furnished me by the Land Office. In one instance (and there were several other similar ones in the vicinity) what was called Kaintuck by the Post-office authorities was called Rexford by all the local authorities. The meaning of this was that a violent United States marshal had, through his influence at Washington, wreaked his vengeance upon a whole community by securing this most offensive change of name.

But the influence of local public sentiment will doubtless rapidly reassert itself under the machinery of a State government so as to justify the fears of those who cannot regard the Mormon question as settled. In Cassin, Oneida, and Bear Lake Counties the population is so overwhelmingly Mormon that the Gentile office-holders will be little more than carpet-baggers expending for schools and all local matters the taxes that have been levied upon those who have had no voice in raising them. Bingham County, if a single railroad town is excluded, is in scarcely any better condition. The effects of such a condition of things have been too evident in Ireland and at the South to need comment.

An important inquiry with all citizens of the State relates to the permanent population likely to occupy it in the future. At present the high price both of lead and of silver is pretty evidently giving an unnatural stimulus to the mining industries, and encouraging hopes in the Republican campaign that are likely to prove delusive. It is doubtful if the mining population will ever have a very large permanent increase. Nor is the railroad population likely ever to be a much more important factor than it now is. On the other hand, through irrigation schemes the agricultural population is likely to increase pretty rapidly. There is in immediate prospect a large increase of irrigated land in the vicinity of Eagle Rock which the Mormons will doubtless occupy. A great irrigating canal costing $1,000,000 is nearly completed in Ada County, which will make a large tract of desert land available for cultivation. Whether this will be occupied by Gentiles or Mormons it is impossible to tell. But the familiarity of the Mormons with that mode of cultivation, their general industrious habits, and their contentment to cultivate a small section of land all together will give them a great advantage in the race. As to manufactures, the absence of coal seems to put them out of the question, unless some of Ericsson's schemes for utilizing sunlight shall be put into effect in this land of cloudless sky and fierce midday heat.

I do not wish to throw any unnecessary damper upon the hopeful enthusiasm which leads so many to regard the Mormon question as settled in Idaho; yet it is important for all parties to face the real difficulties. The existence of such a hierarchy as their priesthood presents is certainly alarming, and perhaps calls for measures which, logically applied, would, in the opinion of great numbers of the people, exclude various acknowledged religious organizations and various secret orders from the ballot-box. But the boldness of the experiment almost takes the breath away from an Eastern man. The reply of the citizens is that we do not know the Mormons, that they are completely under the power of their Bishop, that they believe in a "higher law" than the Constitution, that their oath cannot be believed in things pertaining to Gentiles, that they committed the Mountain Meadow massacre, that the Chinese are the ruin of the country, and that the Indian is not fit to live. It is curious how these three classes are joined together in malediction. But for all this the Mormons, as we have met them, seem much like ordinary human beings who are laboring under a temporary religious delusion. Their congregations are not materially different from others in the vicinity. When called out, as the laymen habitually are, to give in public meeting a reason of the faith which is within them, they invariably respond with arguments that seem sincere, if not always cogent or logical. The great mass of the families could not be distinguished in their homes from those of the Gentiles. It certainly seems a hazardous experiment in popular government to attempt to punish a large body of such people, ignorant though they be, for the specific sins of their leaders; and hence we cannot regard the Mormon question as settled in Idaho.

G. FREDERICK WRIGHT.

ENGLISH LIBRARIES AND LOCAL MUSEUMS.

CHESTER, September 7, 1890.

MY interest in libraries, muniments, and prehistoric records has direc ed my attention for many years to the means of bringing to a better state of usefulness and safety what we have to show in America in the material which is slowly placing our collections on a level with the accumulations of the Old World. Though I have sometimes had feelings of discouragement, there is not a little that is reassuring in the care which some of the older States have bestowed upon their archives, and in the steadfast purpose which some of our antiquarian and historical societies, and, indeed, some of our older families, have devoted to such interests. The general Government has, however, been seriously neglectful, and I suppose one must expect that long years are needed to bring such heterogeneous and incongruous elements as make up the body of Congress into any condition favorable to grappling with the problems that interest the student of the past so greatly. The national Legislature allowed the Library of Congress to become a disgrace before any movement could be completed that promised to insure for its collections security and order. It was mortifying to see Congress after Congress potter with the subject, till at last the contentions became vexatious, and in sheer despair they summarily rid themselves of the subject by committing the matter without restraints to the Chief of Engineers. When the American Historical Association was made a department of the Smithsonian Institution to secure some vantage ground to compass with Congress some measures in the interest of preserving our records, the bill was only got to the attention of the House by the devotion of weeks on the part of Mr. Phelan of Memphis, to secure its exemption from summary tabling on the part of politicians. Every historical student who has had occasion to consult the older records of the Government knows how ignorant he may find the custodians of them of what is really in their keeping. I have known two of the departments at Washington resolutely to declare they had not certain important papers; when forced to make a search, the documents were discovered, and in one case the department had bought the manuscripts within thirty years. The massing of archæological collections at Washington, instead of being invariably carried on in the interest of a science pure enough to await developments, have been in some cases formed in pursuance of theories. With all this against the higher hopes, there is no doubt that progress is making, and we

may yet live to see the literary, historic, and archæological wealth of Washington brought into a condition which will gratify the workers in those fields.

It has accordingly come naturally to me, during my present wanderings in England, to look pretty carefully into what I could find to be instructive in these respects. My route for two months has not taken me into the neighborhood as yet of the centres of such information, but I have not failed to note the lesser examples. I was glad to see at Salisbury that the Blakemore Museum, upon which Stephens based his well-known 'Flint-Chips,' is most admirably housed, and arranged so as to make its collections, in sequence and comparison, of the utmost interest to the students of prehistoric times. The Squier and Davis collection, which, during the engrossments of our civil war, we allowed to be taken from the country, is here added to the local antiquities which have made in so many places in England the study of the palæolithic and neolithic man the centre of so much energy. The public-library system in this country takes on, in its museums of antiquities, an adjunct in the popular instruction which we have failed in America to embrace in its agencies. The local antiquary and archæologist has here a recognized duty beside the public librarian. I found at Worcester, for instance, that the inner walls of the library building were painted with geological charts of the neighborhood, thus presenting to the minds of the young the place in the development of the country's surface of the remains to be seen in the cases. Similar helps, I was told, were arranged in the library at Shrewsbury, though the building was temporarily closed when I was there.

I have met everywhere with people who were popularizing a knowledge of the local British and Roman antiquities, and one cannot fail to see how the dissemination of such information makes more intelligent readers for such books as Green's 'Making of England.' I found at Tintagel, built in as part of the Cornish stile at the entrance of the village churchyard on the cliffs, a Roman incised stone, which everybody saw as the passage within was made. I found at Barnstaple the hotels and streets filled with the members of the North Devon Archæological Association, then holding a session there, and among them was a retired medical practitioner, who was emphasizing his interest in his own and Raleigh's native village by following every step of Sir Walter in his checkered career, and who knew perfectly well everything which had been done in America in illustration of Raleigh's connection with our own history. I found the municipality and leading citizens at Bath working out the problems of Roman civilization in the sumptuous baths which the luxurious imperialists left behind them, and in the carvings and relics which are sedulously preserved in their mu eum. The surprising Roman ruins of Uriconium (at the modern Wroxeter) near Shrewsbury have given important contributions to their museum, and I could but wonder that the vast area of the Roman town, as shown by the traces of its *vallum*, had not been explored beyond the extent of an acre or two. I never saw finer testimony to the constructive art of that people than the binding cement which holds to-day without the aid of arches, in firm consistency, the breach in the walls of the only extensive fragment still standing. Everybody knows how the Roman remnants here in Chester have been made, in its museum and *in situ*, to do their work of instruction.

I have not been struck as yet with the value of the Cathedral l braries as I have examined them. That at Bath was scant, and I was more interested in the old record-book of loans, which showed how some of the English scholars of the eighteenth century drew upon it during their sojourn under the bâton of Beau Nash. I am told that I shall find similar traces of Dr. Johnson's reading when I get to Lichfield. The newly arranged library of the college of the Cathedral at Wells was not so interesting as the restored hall in which it was kept, and in which a fine old oak ceiling had been disclosed under a coating of plaster and whitewash. The library at Worcester was not without attractiveness to the student of old books; but I could not help observing, as I did in others, that the long series of the Rolls Chronicles, which could be got gratis from the Government, constituted a large part of the current increase. The Chapter library at Worcester was well arranged, and a long and narrow space over one of the Cathedral aisles had been made very happily to fit the collection, with abundance of external light. One of the canons, who showed me the collection, handled the old folios lovingly, and I could see that it had users of no ordinary kind. At Chester I find the library lodged very conveniently in the Chapter-house, which shows, as many other parts of the Cathedral do, that arrangements have been adequately made by so ardent an ecclesiologist and scholarly critic as the late Dean Howson was. I looked with sad interest on his grave in the grass-plot of the cloisters, and was witness to the filial devotion of his daughters, who were at the moment adorning the grave with flowers, as they had done every week during the five years that he had been gone from them.

I have everywhere found the local historiographer gracing his leisure with a devotion to the literature of his county. A leading citizen of Bath showed me how the history of Bath, and the works of those who have been associated with its social annals, could afford him the scope for a large collection. When one looked upon the portraits by Gainsborough which hung on this gentleman's walls, and scanned the great mass of mural monuments which, under his care, had been rearranged on the walls of the aisles, after disburdening the columns of the nave of the Abbey church, where they had been offensive by their intrusiveness, and found that the atmosphere was redolent with such contrasted memories as those of Prynne and Quin, it was easy to believe that *Bathiana* must run to almost any extent.

Warwickshire and Shakspere are prëmi nent subjects for the local antiquary. I did not see the county literature which is stored in the library at Warwick Castle; but I went over with admiration the collection illustrative of Warwickshire in the Free Library at Birmingham, gathered, as it had been, with the kindly oversight of Mr. Timmins. It embraced manuscripts of interest, the spoils of ardent collectors of former years. This same gentleman introduced me to a citizen of Coventry, who diversified his interests for many years as a teacher in the old school of that town by his antiquarian tastes, which led him to form a library of over ten thousand volumes bearing on Warwickshire annals, and fitted him to become the chief mentor of the architect in the restoration of the beautiful St. Michael's Church. The municipal muniments of Coventry preserved in St. Mary's Hall, amid the memories of Queen Elizabeth and her rival, are some of the most impressive which I have seen in local repositories.

That which is doing for Shakspere's fame both in Stratford and Birmingham is gratifying. When, ten years ago, the Free Library of the latter place was burned, and with it the large collection which they had formed of Shaksperian books, the collection was fortunately insured, and this money, together with the generosity of the sympathy which the loss engendered, has enabled the Committee, mainly in this department acting through the wide knowledge of Mr. Timmins, to rebuild a collection of far larger proportions, and I was struck with the list of desiderata in editions of Shakspere, because of its smallness. This list, however, does not include their considerable deficiencies in the early quartos and folios of Shakspere, which they look to receive—as they doubtless will in time—from the munificence of individuals rather than from the public taxes. Except for an increased security from such dispersement, it hardly seemed to me desirable that the energies of the librarians in this direction should be divided into separate channels, as in the three collections of this Shaksperian region—that already mentioned and the two at Stratford, of which last one is at the Birthplace and the other in the Memorial Theatre, so munificently supported by Mr. Flower. I soon perceived the warm devotion of Mr. Savage in the museum and library in Henley Street, as I turned over with him the manuscripts of the loving Shaksperians of the past which are garnered there, and the wonderfully complete town records of Stratford, which are in his custody in a muniment-room constructed in the lower story of the old house. I found him in the midst of investigations which he thought were going to show that Charlecote had no deer park in Shakspere's day, and that *Justice Shallow* must have a prototype of other affinities at least. I looked with interest on the long row of bound notebooks, labelled each with the name of a Shaksperian play, which had been the accumulation of Halliwell's industry, and had been given by him to the Birthplace library.

I have no purpose to make a tourist's record of what I saw in Stratford, but two things I observed more closely because I had the benefit of the assistance in exploring of Mr. Timmins and of the vicar of the church. I found in the old school building which the boy Shakspere frequented, that only recently had a crumbling of the plaster revealed, at one end of the old hall in which Shakspere saw his first play, the traces of a mural painting upon which he must have gazed. In the choir of the church I found that the dead wall which has heretofore filled in the lower part of the window against which the bust of Shakspere is placed, has been knocked away; and I was glad to learn that the friends of Shaksperian scholarship were to fill the space with a memorial window inscribed with the name of Halliwell.

I have looked, as will be noticed, occasionally into a private library in my wanderings. I found Freeman at Somerlease, with his books scattered in various rooms, largely indicative of the well-known range of his studies; and though I sat up with him in talk one night till one o'clock, he told me at breakfast that he had been at work on the siege of Malta since six. This is an episode in his 'History of Sicily,' now in progress; and there was little in the diversified currents of conversation at his dinner-table that did not serve to tap the fulness of his acquaintance with that Mediterranean theme. I saw the proofs of his first volume; and the two volumes which I suspect will be welcomed by scholars this winter, will make but a bare beginning of his protracted story. I went into one or two private libraries at Worcester, and

there was much to make the bibliophile gaze in the Shakspere folios and other rarities that grace an ancient and vaulted room in the deanery. I found the Dean of Gloucester cosily and delightfully closeted away amid his books in a corner of the beautiful cloisters of his cathedral, and I thought that never a sacred pile looked so impressive as I glanced from the books to the wonderful uplifting of the cathedral above the cloisters.

I remarked in what I said of family libraries in English country-houses, some years ago, that there had come a change over the manners of the country gentry in respect to libraries, and it had in large part come about by the introduction of the Mudie subscription system. There seemed to be few of the representatives of old families buying books in these days: they depended on the weekly boxes from the London subscription libraries. Lord Spencer, with all his rightful pride in the great library at Althorpe, told me he never bought books. I remember asking once the late Mr. Charles Francis Adams if, in his experience in visiting country families while he was our Minister, he had found this dearth of purchased books in their libraries, and he told me he had. It was some relief, then, to find the other day, at Eaton Hall, that there was one nobleman in England, and he the richest of his countrymen and living in the most princely of residences, who had not given up the wholesome habit of forming a library. His collection even now is not a very large one, and is in no way remarkable, except, as is rather singular, in Puritan tracts. It is the amassment of a gentleman interested in intellectual stimulants, with no very decided tastes, a cultivator of that most gentlemanly accomplishment, whose purposes are so often misestimated, namely, a smattering of acquirements. As his chaplain and librarian courteously led me through the beautiful room where the family find their reading, and I stopped here and there at the shelves, I could see by the appearance of the books that Thoreau and Lowell were not strangers to their minds, and New England history had so good a representative as Palfrey. I was glad to accede to a request to give them the titles of other recent American books. It was also a satisfaction to observe that in all the complete appurtenances of the highest type of an English household, where the master of all was not without the most commendable domestic habits—where he kept in his hall the axes with which he wanders about his park to score the trees that the woodman may fell—he was not unmindful of the family muniments, and had them preserved in a fire-proof room. I saw some of them, with their seals, going back to the times of the Conqueror, when the Grosveneurs were in his train. These parchments were just at the moment affording his librarian the task of making an index. I found that the Royal Historical MS. Commission had already been before me, and had noted for scholars' use what there is of historic interest in these household manuscripts. I shall have something more to say of the operation of this Commission in another letter, and I hope I may yet see Congress willing to fashion a similar Commission for the preservation and registry of our own American records.

JUSTIN WINSOR.

BOURGET'S CŒUR DE FEMME.

PARIS, September 4, 1890.

NOVEL-READING goes on at the same pace as novel-writing. I am often amazed at the amount of novels published nowadays every year; I believe that, on the average, it could safely be said that each day of the year has its new novel. Of these numerous productions, which are seen in our book-shops and railway-stations, with catching and multicolor title-pages, how many will be remembered and read in the future? It would probably be an exaggeration to say that hardly eight or ten of these novels deserve to be read to-day. The hunger for novels is such, however, that they nearly all find some readers, and we now count by many thousands the copies which are sold of a novel when it bears the name of some popular writer, such as Daudet, Dumas, Zola, or Guy de Maupassant.

Among the rising stars of the day I must cite one as deserving special mention, viz., M. Paul Bourget. Like many of our most successful writers, Bourget came out of the École Normale, the school which trains the professors of the French University. He soon abandoned the routine of public education, and first published critical articles on our best French writers. These articles were marked by a very delicate taste and a peculiar refinement of style and of thought. Literary criticism is not, however, the road to popularity nor to pecuniary success, and Bourget began to write novels. He struck immediately a new vein: his novels are not sensational; his stories are of the most simple sort. They are not complicated; they are simply the development of the most ordinary passions, but this development is accompanied by the most subtle analysis: Bourget's novels may be called psychological novels.

Nobody has ever better understood what may be called the fatality of passion. It is with an almost painful minuteness that Bourget describes the struggles of the human will with the human instinct, of conscience and duty with the irresistible movements of the carnal heart. In this sense, Bourget may be classed in the realistic school, for he is a keen observer and only describes what he has observed, but he is not a realist of the Zola school. He cares little for material details, he indulges little in descriptions of things; the *milieu* in which his heroes and heroines move only interests him by its relation to the state of their souls. This tendency gives to all his works a spiritual character; thoughts and feelings interest him more than anything else.

He also separates himself from the common naturalistic and realistic school by the fact that he has no preference for low people, for vulgarity; on the contrary, he prefers to live with people of society, of the highest, richest, most refined, and civilized society, probably because he expects to find in this society the greatest complexity of human passions. He does not belong to the school of those who mean to simplify themselves, if I may be allowed to use this Russian expression. Simplicity has no peculiar charm for him; he is an analyzer, and there is nothing to analyze in what is too simple. Human nature is the same in the highest walks of life as in the most humble stations; but where there is wealth, and the power which wealth confers, the leisure which leaves the mind and the soul in constant freedom, it is natural that temptations should be greater, that the play of human passion should become more active and more entangled. Bourget's novels do not belong to the class which our English neighbors call silver-forky—novels in which you all the time feel the sentiment which Thackeray defined by the words, "meanly to admire mean things," and to which he has attached the term snobbishness. Bourget likes to dissect elegant young women, men of fashion and of pleasure, but his sympathies go with the enthusiast, the poet, the simple and pure spirits who are thrown amid the confusion of a perverse and wicked world.

In the work called 'Mensonges,' which gave him his great popularity (though he had already written some exquisite books), his hero is a young poet, full of illusions, who becomes the prey and for a while the victim of a woman of the world, who has two lovers at the time, and is nevertheless adored by her husband. The success of 'Mensonges' was very great. People thought that they could recognize all the actors; names were pronounced which are all well known in Parisian circles; the quiet perversity of the heroine reminded many of the Mme. Marneffe of Balzac's 'Cousine Bette,' and it is clear that Bourget is often inspired by Balzac (when he is not by Henri Beyle). He is, it seems to me, the only writer of the day who can put society ladies well on the scene as Balzac did his Duchesse de Maufrigneuse, etc. This acquaintance with the ways of the world is even better shown in Bourget's last novel, 'Cœur de Femme.'* I confess to have read it twice, with a painful interest. The conception of 'Cœur de Femme' is morbid, but the author's faculty of analysis was never better shown. One of his first novels was called 'L'Irréparable'; and the name was well chosen. Nobody better understands than Bourget the irreparable character of a fault, of a sin, as well as the fatality which leads the sinner to his doom. A friend of mine, who is a Protestant, once told me that he greatly admired confession in the Catholic doctrine. It seemed to him that, as the proverb says, "Péché confessé est à moitié pardonné." He longed for the absolution which would wash the soul and make it white again. Humanly speaking, there is no complete absolution; what has been, has been, and we can no more abolish the memory of a fault, and its moral consequences, than we can hinder a stone from falling when it is thrown in the air.

Mme. de Tillière is a lady of the best society; her reputation is perfect, and the breath of calumny has never touched her; she lives, however, secretly with M. de Poyanne, for whom she has a great admiration. Poyanne is a rising statesman, whose eloquence has won him a great popularity. He is the chief representative in the House of Deputies of a new school of Conservatives and Royalists; he is an ardent Catholic and a sort of Christian Socialist. If you wished to compare him to anybody, you might compare him to M. de Mun or to Montalembert. Why do two such persons as Mme. de Tillière and Poyanne conceal their mutual passion? It is because Poyanne is already married. His wife is in an insane asylum, and he must wait till she dies before his secret engagement to Mme. de Tillière can be made public.

You see at once the difficulties of such a position; you imagine what it must cost two high-minded, enthusiastic natures to cover themselves with perpetual deceit. They both suffer from the strangeness of their existence; they are to each other a secret remorse and reproach, though they are bound to each other by the most sacred ties. Poyanne finds consolation in his ardent love for Madame de Tillière, in his work, in his active life. She on her part is idle; her love is not ardent—she has mistaken admiration for love; she respects Poyanne, but her respect becomes every day colder. She is not conscious of the gradual change; she struggles against her own confused sentiments; she is in a highly nervous and agi-

*'Cœur de Femme.' Paris: A. Lemerre; New York: F. W. Christern.

tated condition, and finally she becomes ready for the tempter.

The tempter comes to her in the most unexpected way and form. There is a man whose name she has never heard pronounced without obloquy; a man famous for his duels, his gambling habits, his reckless expenditure, his conquests—a sort of Don Juan, hard, shrewd, clever, intelligent, and heartless. How does Casal, for such is the name of our Parisian Don Juan, come across her? How is she led to him, by curiosity, by a desire to give him good advice, by the hope of saving him and of touching in his heart the chords which nobody has yet touched? How does Casal himself, so accustomed to easy conquests, so corrupt, so selfish, find himself by degrees drawn into an entirely new world of thought and of feeling? How does he become in his turn the slave of that passion of love which he has always professed to master? And how, finally, do these two creatures, coming from the most opposite poles, find themselves led towards each other by a sort of inexorable fatality? The answers to all these questions must be looked for in the book itself, and there only you will find the delicate shades of this extraordinary transformation.

Poyanne finds out the truth: he is no longer loved, and Casal is loved. The two men, under a futile pretext, call each other out, and Mme. de Tillière must, at any price, prevent the duel. She finds no other way than to go to Casal's house and ask him not to fight. Hitherto she had preserved her purity, though she had lost her heart; now it is all over: she becomes the mistress of Casal. For an hour only; she wakes from a sort of dream, and is horrified at herself and her own action. She will never see Casal again; when he thinks that he can put her, at last, on his list of victims, when he himself feels for the first time in his life real love, she disappears. Her mother is still living; she goes with her to the country, buries herself in solitude, and, when her mother dies, enters a convent.

The book ends with these lines, which contain the whole philosophy of Bourget's works: Casal is on board a steamer, and meditates "on this sea and under this sky, less infinite and less changing, less mysterious, less dangerous, and less magnificent also than can be, through tempest and calm, the passions and the sacrifices, the contrasts and the sufferings of that thing which it is impossible thoroughly to understand—a woman's heart."

Correspondence.

STEEL RAILS AND PAUPER LABOR.

To the Editor of The Nation:

Sir: Yesterday, while knocking about the Calumet River, I had the curiosity to pull into the slip of the Illinois Steel Co., whose extensive works are located in this place. There an unusual sight met my eye. Generally one can see the company's steamers unloading ore from Lake Superior points. But the *Roswell P. Flower* was not unloading; she was loading. For fear my eyes deceived me, I inquired what her cargo was: *steel rails*, and *for Canada*.

I spoke never a word, but as I rowed home I fell a prey to reminiscences. It was only a few years ago that the company told the men who asked for higher wages (which they got, by the way) that if prices fell below $75 and $80 a ton (as indeed they did), it would be necessary to close down the works (which was done later, but for the purpose of enlarging them to accommodate the rapidly increasing business).

It was only a few years ago that I had had thrust into my hands, for I was working in the mill at the time, a cheap and lying pamphlet by one Swank, to prove that it was impossible for us to compete with the pauper labor of England; that English workmen lived in hovels, had meat only once a week, and were indescribably miserable; that to compete with them we must come down to their level; and that until the American workman was prepared thus to degrade himself, we never could sell rails as cheaply as England, etc., etc. This was the stock argument of the protectionist mill owners in those days: "We can stand it, men, but it will be awfully hard on you to come down to the level of the pauper labor of Europe. We can stand it to run on half time, but as true American patriots we hate to cut your wages and see you degraded, forced to live in close, ill-ventilated tenements, starve on insufficient food, and freeze in winter, while your wife and children die by your helpless side—all because you *will vote* the Democratic ticket."

Well, now, what has happened? The price of rails has come down, and that same mill is competing, and successfully, too, with the aforesaid pauper labor. Has the mill closed? No, indeed; on the contrary, the company have been busy adding to their already enormous plant, putting in new blast furnaces, new docks, new shops; running at the full capacity of 40,000 tons a month. And the men—do they starve and freeze in hovels? Apparently not. They can be seen any day about the streets, well dressed, their families comfortably provided for. Their children are kept neat and clean, and are sent to school. In the homes of the better-paid workmen one finds good furniture and often a piano or organ, and some books, technical, political, or historic. The Swedes and Poles are the poorest paid of all the workmen; yet the Polish church is a large and expensive building, and the Swedes have recently put up a second church of their own, which is really a creditable structure. In fact, as I saw the rails going into the hold of the *Flower* yesterday, I began to realize how true the predictions had turned out that we wicked free-traders had made eight and ten years ago. We are successfully competing with the much-heralded pauper labor, the mill is running full time, the men are earning as good wages as ever, and they have lived to see the whole protection argument knocked into a cocked hat.

And how about the owners who so calmly faced the men and drew a ghastly picture of European labor toiling for a shilling a day, of banked furnaces, smokeless stacks, starving workmen, etc., etc.? Sold out at a round figure and gone to Europe; and are now probably laughing in their sleeves at the economic ignorance and credulity of the American workman. That is all very well; but wait awhile—the American workingman is waking up. Free-Trader.

South Chicago, September 17, 1890.

THE SUNDAY-SCHOOL AND THE HIGHER CRITICISM.

To the Editor of The Nation:

Sir: I wish, with your kind permission, to offer one or two suggestions on some points raised by your correspondent "B. E. H.," in No. 1315 (September 11), who has conscientious scruples about teaching the Old Testament to his Sunday-school class.

"B. E. H." finds his love of truth in conflict with his early religious training. He is not alone in that. The disease is epidemic and contagious. The only way to escape it is to let the "Higher Criticism," or any other criticism, alone. Criticism and the Sunday-school are incompatible.

But the trouble with many of us is, that criticism will not let us alone. The modern spirit lays hold of us, whether we will or not, and makes the Sunday-school seem "stale, flat, and unprofitable"—as ancient as the Deluge. I suggest that those intended for Sunday-school teachers shall not be taught to read.

To those upon whom the "Higher Criticism" has fastened its relentless grasp, I suggest that the Sunday-school is no place for them. They should not remain in it pretending to believe what they do not believe, and to teach what they do not teach. They should get out. "B. E. H." seems to forget that the very fact of holding certain positions, and allowing one's self to be called by certain names, carries with it implications which one cannot escape.

"Not a few of the children taught in this disingenuous way are attacked by serious doubts as they grow older." By "disingenuous way" I take it "B. E. H." means the way children are usually taught in Sunday-schools. I raise the question whether Sunday-school teaching can possibly be other than disingenuous. To induce children, by whatever means, to profess their belief in propositions the import of which they are totally unable to comprehend, the evidence of which they are totally unable to examine, is to practise a fraud upon them which may well lead them to doubt not only the truth of the propositions, but the honesty of those who take this unfair advantage of their ignorance and immaturity. Whether or not this is a case in which fraud is justifiable, I do not here inquire.

"To conclude the whole matter," "B. E. H." asks, "Why shall we not have the courage of our convictions and act intelligently about them?" A difficult question. Why we *do* not have the courage of our convictions, is not so difficult. A partial explanation is found in the fact that only a short time ago it was very dangerous, and is still very unpleasant and inconvenient, to have the courage of one's convictions. Bruno and Servetus had the courage of their convictions. Is it too much to say that to this day we feel the heat of the flames in which they perished?

Again, society, public sentiment, does not require that we should practise honesty in the matter of our beliefs. It encourages just the opposite course. And for this laxness there are good reasons. It is the effect of causes that have been in operation for centuries. To set them forth would require a volume. I cannot refrain from saying here, however, that honesty in the matter of opinion will not be demanded by public sentiment until the evils of the opposite course are more widely and keenly felt. Men feel most keenly those acts of their fellows which affect their lives and property most directly. The injury that is inflicted upon society by the prevalent practice of concealing our real opinions and professing, either openly or tacitly, opinions which we do not hold, is too remote and indirect to be keenly felt by the masses at the present day. For some time, doubtless, society will go on putting a premium on false pretence and trampling honest men under foot, and we shall go on lying about our beliefs in certain matters, without feeling that we are a whit more dishonest than our neighbors. A. F. H.

HYPHENATION.

To the Editor of The Nation:

Sir: In your paper of September 18, "F. L. P." suggests the use of the "German double hyphen [=] . . . to connect the parts of a compound word, reserving the single hyphen to indicate a break caused by the alignment." The difficulty in dividing a compound word at the hyphen is plain, and "F. L. P.'s" remedy is a good one; but a simpler way in such a case would be to use two hyphens, one at the end of the line containing the fore-part of the compound word to be divided and the other beginning the following line. I have used the hyphen in this way for several years. It seems natural and could not easily be misunderstood; and no one need hesitate to adopt it because it is not common usage. Furthermore, the "double hyphen" could be used for other purposes: for instance, to help the overworked comma.

I respectfully assure "F. L. P." that I have no treacherous design in making this suggestion.

William W. Anderson.

Washington, D. C., September 20, 1890.

THE STACCATO CHEER.

To the Editor of The Nation:

Sir: The "staccato cheer" was used by the "Wide Awakes," as the Republican campaign clubs were called, during the campaign of 1856, and was invented, I suspect, by them to reduce the labor of cheering when they marched in torchlight processions. As a mechanical device to save vocal wear and tear, it has certain merits. Its other attractions are not so conspicuous to at least one

Elderly Graduate.

Boston, September 18, 1890.

[We are certain that its introduction at Harvard post-dated the commencement of the war.—Ed. Nation.]

THE ARCHITECTURE AT HARVARD.

To the Editor of The Nation:

Sir: I trust that Mr. Van Brunt's interesting letter in this week's *Nation* may have an adequate answer from some competent hand.

I fear he is right in saying that the later Harvard buildings express the civilization of the time. But the University ought to criticise, reprove, and correct the civilization of the time—that is a large part of its function. *Its* buildings ought not to be monuments of pretentious ugliness, inappropriateness, and disorder. Mr. Van Brunt seems to think they should be valued and respected whatever the qualities they express. His plea would cover such monstrosities as the "Public Buildings" of Philadelphia and the United States Post-office in New York, which are, I suppose, for their size and cost, as ugly structures as can be found in the world. Yet they, alas! only too accurately express some of the most marked characteristics of the civilization of our country and age.

I rejoice at Mr. Norton's suggestion that the buildings should be pulled down as unsuited to the noble, civilizing functions of a great university.

A Harvard A. M.

September 20, 1890.

Notes.

"The new volume of the 'American Catalogue' will cover the period July 1, 1884, to June 30, 1890. The edition will be 1,250 copies only, and there will be no reissue. . . . This work is indispensable to the bookstore or library. About 100 copies each remain of the Subject Catalogue of 1876 . . . and of the Catalogue of 1876–84." So reads the advertisement of this enterprise, whose publication office is 330 Pearl Street, N. Y., in the new issue of the 'Publishers' Trade-List Annual.' Nothing is more sure than that the 'American Catalogue' will become a scarce work, and that many a library, public and private, will deplore the lack of it when too late. If its deserts as a national work of which we should be proud, or as a useful book of reference in any cultivated home, were understood, an edition three times as large would be in request. Of the 'Trade-List Annual' we need say nothing further than that for the eighteenth time the publishers of the United States bind their catalogues together and sell the collection for a sum which hardly exceeds the cost of binding.

The Executive Committee of the Selden Society have decided that the fourth volume of the Society's publications shall contain a very interesting and hitherto unpublished collection of precedents in French for proceedings in Manorial Courts. The date of the collection is doubtful, but is certainly not later than 1350. The rest of the volume will consist of actual cases from Court Rolls. The volume will be edited by Professor Maitland of Cambridge and Mr. W. Paley Baildon of Lincoln's Inn. The fifth volume will consist of the well-known 'Mirror,' edited from the only MS. in existence, with a translation and a commentary. The third volume is nearly ready. The annual subscription is $5.18, payable in America to Professor William A. Keener, Columbia Law School, New York. Each subscriber will receive a copy of all the publications issued in respect of the subscription for the year. Subscribers paying now $20.72 will receive a copy of the volumes published by the Society for the years 1887, 1888, 1889, and the volume for 1890 when published.

A really important announcement is that of Julius Bien & Co. of this city, the leading cartographic establishment in the United States, that they have nearly ready an 'Atlas of the Metropolitan District,' comprising the environs of New York within a radius of fifty miles. The maps will be engraved on copper and printed in color, and "will give on a large scale all the details of the topography, hydrography, and economic features" of the area in question, with population according to the new census (would it were some other!). For the New Jersey side the material was already available in the State survey; for the rest, special surveys were necessary. The volume will not be costly.

The *Century* Company is about to begin issuing in ten volumes the 'Life of Lincoln,' by Messrs. Hay and Nicolay, but by subscription only. To the regular trade will be offered the 'Autobiography of Joseph Jefferson,' also partly known to the public through the pages of the *Century Magazine*; 'Another Brownie Book,' by Palmer Cox; and 'Santa Claus on a Lark,' a book of Christmas stories, by Washington Gladden.

Houghton, Mifflin & Co. announce 'Sidney,' by Mrs. Deland, and 'Piero da Castiglione,' a story-poem by Stuart Sterne.

Henry Holt & Co. will shortly bring out a two-volume work on Psychology, by Prof. William James of Harvard.

A work on Socialism, by Prof. Richard T. Ely, is in preparation for T. Y. Crowell & Co.

Fleming H. Revell announces a wholly new and authorized edition of Matthew Henry's 'Commentary' in six octavo volumes.

Thomas Whittaker publishes directly 'The Makers of Modern English: A Handbook to the Greater Poets of the Century,' by William J. Dawson.

Ginn & Co. have in press the second part of Tarbell's 'Lessons in Language.'

'Races and Peoples,' a review of the whole domain of ethnography, by Dr. D. G. Brinton; and 'The Time-Relations of Mental Phenomena,' by Prof. Joseph Jastrow, are to be published by N. D. C. Hodges of this city.

Bernard Quaritch, London, proposes to publish 'The Saga Library,' edited by William Morris in conjunction with Eirikr Magnusson. It will consist of a series of translations of Icelandic works of the thirteenth and first part of the fourteenth centuries. Another enterprise of the same publisher is 'The First Half-Century of the Latin Bible,' a bibliography for the period 1450–1500, by W. A. Copinger. But 250 copies will be printed.

The autumn list of T. Fisher Unwin, London, includes 'Gypsy Sorcery and Fortune-Telling,' by Charles Godfrey Leland; 'Travels with the Beduins,' by Gray Hill; 'The Vikings in Western Christendom (A. D. 789–888),' by C. F. Keary; 'Nelson,' by G. Lathom Browne; a reprint of Mary Wollstonecraft's 'Vindication of the Rights of Woman,' with an introduction by Mrs. Henry Fawcett, tracing the development of the theory of the equality of the sexes to the present day; and 'National Life and Thought,' lectures on various nations of the world by Prof. Thorold Rogers, W. R. Morfill, J. Theodore Bent, and others.

From Macmillan & Co.'s autumn list of publications we select 'Landmarks of Homeric Study,' by Mr. Gladstone, who has planned this work for America; a translation of Dr. Carl Schuchhardt's 'Schliemann's Excavations at Troy, etc.,' presented in the light of recent knowledge; 'The Greek World under Roman Sway,' and a 'History of Greek Literature,' by Prof. J. P. Mahaffy; 'A Geography of Europe,' by James Sime; 'The Ruined Abbeys of Yorkshire,' by A. Brunet-Debaines; 'The Oxford Movement,' by R. W. Church, Dean of St. Paul's; 'Chronological Outlines of English Literature,' by F. Ryland; 'Selections from English Prose Writers,' edited, in five volumes, by Henry Craik, on the plan of Ward's 'English Poets'; 'Elements of Politics,' by Henry Sidgwick; 'A Manual of Public Health,' by A. Winter Blyth; and the 'Buccaneers and Marooners of America,' by Howard Pyle—in the entertaining "Adventure Series."

Macmillan & Co. will, in addition to the foregoing, publish 'The Book of the Forty-five Mornings,' by Rudyard Kipling, who, in a letter addressed to them on September 9, denies having given authority to any other house in this country to issue the work, or that he has received any royalties from John W. Lovell & Co., who announce "a special arrangement" with the author for an edition of their own.

A school and college edition of Sidney's 'Defence of Poetry' (Ginn & Co.), by Prof. A. S. Cook of Yale, adopts the classical text-book model in its most extreme form. There are fifty-eight pages of text and seventy-five pages of notes in finer type, besides an introduction and index. The text of Sidney is not difficult to understand, and his style in this work approaches the modern, but he is rich in allusions and in ideas derived from the ancients, and so may be submitted to this elaborate annotation. Considerable space is occupied, too, by the citation of parallel passages in other authors. For

those who think it desirable to have literature studied in this way, the book is as complete as could be wished. The editor, to judge by the specimen questions which he prints, would make the volume a text-book of literary knowledge on a still more extended scale, as he requires the collateral reading of Xenophon's 'Cyropædia,' the 'Utopia,' Plutarch's 'Alexander,' three of Virgil's 'Eclogues' (besides the character of Æneas and the tale of Turnus), a play of Shakspere, the Odyssey, a portion of the 'Iliad' and of Ariosto, besides "brief accounts" of the earliest Latin, Greek, and English literatures, three poetical extracts from the Bible, the biography of Miltiades, and anecdotes of Phalaris and Dionysius; and these "suggestions" are not meant to be "exhaustive." This is a striking example of the disproportion into which such a mode of studying literature tends to run.

The fifth volume of Prof. Henry Morley's 'English Writers' (Cassell & Co.) carries on the history of fourteenth-century literature, and is devoted to Wyclif and Chaucer. The increase of Wyclif literature during the last thirty years makes a compendious account of his life and works, such as this, of exceptional value, and none will regret the scale upon which Prof. Morley has conceived the essay. Chaucer is treated of with great detail, both as man and writer: the facts of his life, the discussion of the authenticity of his works, and abstracts of their contents make 265 pages, much of it in close print. The volume thus maintains the encyclopædic character of its predecessors, with little literary criticism and much learning, but without sinking into mere compilation. Under Chaucer, for example, the author advances his own judgment against some conclusions of Prof. Ten Brink.

That just medium of the annotator between the too much and the too little which has distinguished the Shakspere text-books of Dr. Rolfe and made them exceptionally good for school use, marks the latest of his works, the 'Poems' (Harpers), in which are included revisions of his previous editions of some of the poems. The volume is a library edition, and contains all poems (apart from those in the plays) thought to be Shakspere's. Those pieces from the 'Passionate Pilgrim' which are not his are given in the notes, where, too, the 1599 edition of 'Venus and Adonis' is collated. Dr. Rolfe, as usual, has made use of the critical work of other authors in his introduction, and in the Sonnets has indebted himself very much to Dowden's edition in the notes as well. He adds at the end a brief account of the evidence to connect the Sonnets with Mary Fytton. A few engravings are introduced by way of ornament rather than of illustration, though we should except that of Mary Fytton's effigy from her tomb.

It sounds fitting that three Italians should unite in illustrating "Romeo and Juliet." This is what Ludovic Marchetti, Lucius Rossi, and Oreste Cortazzo have done, in color and in monochrome, and Raphael Tuck & Sons have made a fair-looking folio of the text for the display of so much ornamentation. The result, however, is neither imagination nor noticeably good draughtsmanship, and the archæology (looked after by Signor Rossi) hardly counts. The spirit of melodrama pervades the compositions.

A number of new editions are grouped on our table. From Macmillan we have Southey's 'Life of Nelson' and the 'Essays of Elia.' The former belongs in the series intended for Indian schools, or for "Oriental students of the English language," to whom Southey's latest editor, Prof. Michael Macmillan, recommends the Life as a wholesome corrective of "a style embellished with florid ornamentation." The notes in this series are obviously for foreigners, and explain such common expressions as "to repair to their respective frigates," "not upon good terms with," etc.; but when the editor attempts to correct Southey's English, in "the two first ships," he is on dangerous ground, "Adams' *English Language*, §522" to the contrary notwithstanding. The 'Essays of Elia' (if we do not mistake, a resetting of the "Temple" edition) has the guarantee of Mr. Augustine Birrell for the scrupulousness of the text, and he furnishes the introduction. The new form is less handy than the old, the type is small, and the presswork pale. The Messrs. Putnam send us a cheapened, popular reissue of Nadaillac's 'Prehistoric America,' with Mr. Dall's competent editing—to all intents and purposes as good a book as its dearer predecessor; and the "Vandyke Edition" of Amicis's 'Holland and its People,' in large print with heterogeneous illustrations, the body of which we would, for our part, have exchanged for an index. Charles Scribner's Sons revive Prof. Guyot's 'The Earth and Man,' printed from new plates, with additional patching in the appendices. The twelfth and final chapter, "History and Geography," is too futile and obsolete to be worth retaining, and should have been excised. This is no longer the year 1848. The same house have produced two really charming volumes in a "Cameo Edition"—so called from the embellishment of the cover—out of Mr. Cable's 'Old Creole Days' and Thomas Nelson Page's 'In Ole Virginia' ("Marse Chan," etc.). Each has an etched frontispiece, and both will be in demand for holiday gifts, since we may speak no longer of summer reading. Both show the negro still dominant in our literature, as he has been in our politics for sixty years.

Houghton, Mifflin & Co. give a new lease of life in a pretty dress to Thomas Hughes's 'Alfred the Great,' and have added to their delectable "Riverside Classics" a new edition of Dr. John Brown's 'Rab and his Friends, and Other Dogs and Men'; "Marjorie Fleming," the exquisite memoir of the author's father, and the estimate of Dr. Chalmers, being the chief of the non-canine matter. In the memoir, on p. 169, it were but just to Dr. Brown and to Wordsworth to repair the maimed extract from the lines to Hartley Coleridge; and justice to Rab called for better press-work on the title-page, where there is an amorphous vignette that needs at least two glances to be interpreted, in the manner of Lewis Carroll's nonsense verses:

> "He thought he saw a Banker's Clerk
> Descending from the bus:
> He looked again, and found it was
> A Hippopotamus."

The frontispiece is a fine portrait of John Brown.

The Riverside Edition of Mr. Lowell's Writings proceeds apace with vols. 3 and 4. These contain the Essays on Shakspere, Dryden, Chaucer, Pope, Milton, Dante, Spenser, Wordsworth, White of Selborne ("My Garden Acquaintance"), "A Good Word for Winter," and the much-read "On a Certain Condescension in Foreigners." We need hardly repeat our remarks on the beauty of this reissue, of which six volumes are yet to come.

Amid the debate over the architecture visible and desirable at Harvard College, we receive from the publisher, Mr. J. Eastman Chase of Boston, a large etching (12x17) of the new gateway. The artist, Mr. Charles H. Woodbury, has well chosen for his purpose the central feature of the design, to the exclusion of the wings, and, by diminishing the height of the elm just in front of the gate, has picturesquely exaggerated the towering effect of the belfry of the adjacent Harvard Hall, with which the view is cut off. He has followed, with some license, a well-known photograph (taken, by the way, in the leafless season), and has thus secured substantial accuracy of proportion and detail, at the sacrifice of some larger qualities which an original drawing might have resulted in. But many Harvard graduates will be glad to own this souvenir of a construction which would seem to have evoked a disproportionate amount of attention, were it not that too commonly "architecture" is looked upon as having no concern with such trivialities, and that this gate is likely to alter the whole scheme of the enclosure of the college yard, with perhaps still wider consequences for the better.

A new quarterly magazine of philosophy, science, religion, and sociology, the *Monist*, is to be launched on October 1 by the Open Court Publishing Company of Chicago. An imposing list of colaborers is given, American and foreign.

Another new venture is the *Tribune Monthly*, a reprinting in magazine form of the more valuable matter from the daily *Tribune* which used to be consigned to "Extras." No. 1, for September, is devoted to "A Summer at Chautauqua," with process illustrations.

—The second volume of the *Archiv für Soziale Gesetzgebung und Statistik* (Tübingen: H. Laupp; New York: International News Company), is a stately book of nearly 700 pages, attractively printed in Roman type on good paper, and containing a number of well-written and interesting articles on a wide range of subjects, as well as copious information concerning recent legislation in Europe on economic topics. The striking feature in this, as in most of the remarkably numerous German periodicals devoted to the science of economics, is, if not always a socialistic leaning, at least a consciousness on the part of the writers that socialistic demands and theories are to be dealt with in a conciliatory manner. Indeed, the leading article, one of 136 pages, on the draft of a new civil code for the German Empire as it will affect the working classes, is an emanation of the rankest Socialism, filled, not only with the bald sophisms which constitute the staple of all socialistic and protectionist writings, but with the most perverse misrepresentation of facts and insidious incitement to class antagonisms. What makes the appearance of such an article in a serious scientific publication more remarkable is the fact that its author, Dr. Anton Menger, is Professor of Law at the University of Vienna. It must be admitted that some of the articles are quite free from bias, socialistic or otherwise. Dr. P. F. Aschrott, a Berlin judge, who visited this country in 1888, contributes an intelligent and candid account of Trusts, particularly the Standard Oil Trust and the Sugar Trust, and expresses the opinion that the public reprobation of them is partly due to exaggerated and excited newspaper clamor. Among other articles may be mentioned one on agrarian legislation in Rumania, showing a deplorable condition of the peasantry; one attributing the downfall of the Roman Empire also to the deplorable condition of the agricultural class; one on the Truck system of Great Britain and the laws directed against it; one on the status of factory operatives in Russia; one on the French census of 1886, etc., etc. The variety of topics, as will be inferred from the above brief and imperfect account, is wide enough; but the one prevailing impression received by

an American reader will be that of astonishment at the childlike faith of writers and legislators on the continent of Europe in the efficacy of legislation in reforming economic evils, and in removing economic conditions, which have been naturally evolved in the progress of civilization, and must ultimately be dealt with in the self-reliant and self-restraining spirit to which all human civilization is due.

—A new composer has appeared in Italy who, we are informed, promises to write operas worthy of being known outside of his own country. The promise, of course, *may* not be kept, but its present look is brilliant. It consists in an opera, or, as it styles itself, a *melodramma*, in a single act, called "Cavalleria Rusticana" (Homespun Chivalry), written by a young man named Pietro Mascagni. He is the son of a baker of Leghorn. Count Florestano de Larderel took it upon himself to give the youth the benefit of a musical education at the Conservatory of Milan, and Sonzogno, the proprietor of the *Secolo* of that city, stimulated the production of this first fruit of Mascagni's talent by offering three prizes for the three best operas to be submitted to him. The works that gained the first and the third prizes will perhaps never be heard of again; but the second prize was the "Cavalleria Rusticana," which last spring was a great success at Rome and afterwards at Leghorn, where the young composer's townsmen burst into and filled the theatre at the last rehearsal, and at the first representation even bore down the soldiery placed on guard, and took the house by storm. The new opera will be heard next winter at Turin, Milan, Bologna, Genoa, Florence, Naples, and perhaps elsewhere. The libretto was taken from the "Scene Popolari" of Verga, a play in three acts sufficiently well known on the Italian stage. The reduction is cleverly enough done. The scene is laid in Sicily, and the story is a simple one of peasant love, unhappy, and ending in bloodshed. To this the composer has written music full of freshness, grace, and brilliancy. As is natural in a first work, there are indices of the author's admirations, and there are repeated one or two turns of musical expression which may later degenerate into mannerisms (or may either be given up or become the earmarks of genius), but there is also plenty of force and originality, and—so far as can be judged from the piano-forte edition—the essential quality without which all others are as sounding brass, namely, charm.

—A singularly practical application of the study of theoretical meteorology is given in a memorandum lately prepared by John Eliot, meteorological reporter to the Government of India, "on the snowfall in the mountain districts of northern India and Afghanistan" during the first five months of this year. The records of previous years have shown that when the cold-weather snowfall in the Himalaya is heavy, the succeeding summer monsoon is delayed in its arrival and is apt to be weak when it comes; the summer rains are consequently late and light, the crops fail, and famine results in the densely populated peninsula. But if the winter snows are light in the mountains, the rise of temperature in the hot season is earlier and stronger, the rainy summer monsoon comes sooner and is more powerful, and all goes well—or as well as it can with an ignorant population of a hundred millions or so. Mr. Eliot's recent memorandum shows that the mountain snows of 1890 have been distinctly less heavy than usual, and he therefore anticipates a favorable season for crops this year. The actual case is hardly as simple as this brief presentation would make it, and the original paper discusses several factors not mentioned here.

—Mr. Eliot has recently published also an essay on nocturnal inversions of temperature; the high and low-level meteorological stations on the mountains and plains of India being particularly well adapted to investigations of this subject. It appears that, while the average temperature of the air decreases upwards, and while this decrease is especially marked in the daytime, when the lower air is heated by the warm ground, yet on still, clear nights the air near the ground on the broad Indo-Gangetic plains is absolutely colder than the air at the hill stations, and hence presumably colder than the open air a thousand or more feet above the plains. It is this reversal of the usual conditions that is known as the nocturnal inversion of temperature. Following several other investigators of the subject, Mr. Eliot shows conclusively that the cold of the lower air at night is not due to the descent of the upper air, such as occurs in the descending nocturnal breezes on mountain-slopes, but is the direct product of the cooling of the lower air, by reason of its closeness to the ground, which is cooled by radiation. The same strong nocturnal inversion certainly occurs on our Western plains. It has been reported, but not in as full a manner as is desirable, that the temperature at night generally sank to a lower degree on the open plains than at their margin, where the nocturnal breeze flowed out at the mouth of valleys opening from the mountains, and that, for this reason, it was possible at certain high-level stations to raise more delicate crops close to the foot of the mountains than out on the plains. This accords very well with the theory of the subject, for the descending mountain breeze would tend to warm somewhat by compression in descent, and thus its cooling by conduction to the ground would be diminished, while on the level plains, where the air lies quiet all night, its cooling is not checked. Can any of our Western readers report specific examples of this occurrence?

CHILD'S CHURCH AND STATE UNDER THE TUDORS.

Church and State under the Tudors. By Gilbert W. Child, M.A., Exeter College, Oxford. Longmans, Green & Co. 1890.

This work, appearing at the moment when Newman closes his singular career, might be regarded as a sort of supplement to his 'Apologia.' It helps to prove, if not that he was right in going over to Rome, at least that he was right in leaving the ground on which he had before stood. The theory with which he and his party set out, and which they fondly called the *via media*, was that the Church of England had always been Catholic; that she could prove her unbroken tradition and her continuous authority as a branch of the Catholic Church independent of the Church of Rome; that for a time she had been subjected to Papal power and overlaid by Papal abuses, but had set herself free and spontaneously reformed herself in the sixteenth century; that the authors of her emancipation and reform had been, not any external power, but her own clerical assemblies and authorities; that she had always held the doctrines of the Eucharistic Real Presence and Baptismal Regeneration; that she had always maintained Apostolical Succession and the necessity of episcopal ordination; that she had never been Protestant herself, and that she had never acknowledged or been in communion with the Protestant churches of the Continent.

This is the view which Newman, Pusey, and the rest of the Tractarians persuaded themselves to accept, and which it is to be presumed the Ritualists still maintain, though Ritualism, for the most part, corresponds strictly to its name, and is more æsthetic than it is theological, whereas the original school of Newman and Pusey was more theological and historical than it was æsthetic. Hook's 'Lives of the Archbishops of Cauterbury' is throughout an attempt to accommodate the facts of history to the theory of the *via media*, and a very desperate attempt we must say it is. Poor Charles Kingsley exposed himself to a terrible mauling by a maladroit impeachment of Newman's theological integrity; but it is hardly possible to imagine that any intellect, however straightforward to begin with, and however pure the motives of its possessor might be, could go through such a process as that of wrenching the facts of ecclesiastical history into conformity with the Tractarian hypothesis without itself undergoing serious sophistication.

The opposite view really stands in little need of statutory or detailed proof. It is almost superfluous in support of it to explore the dusty and uninviting records of ecclesiastical legislation under the Tudors. The fact is as broad and patent as any fact in history, that the changes in the Anglican Church throughout the sixteenth century followed those in the personal character and policy of the sovereigns and their counsellors. Henry VIII. broke with Rome and carried the English Church with him on a ground manifestly personal to himself. He assumed the full power of the Pope; and the ecclesiastical legislation, including the doctrinal enactments, to the end of his reign, bore the plain impress of his personal tendencies, which were those of a Catholic and a former opponent of Luther, admitting of Protestantism only so much as was requisite to sustain his own position of antagonism to the Pope. The personal genius of his terrible minister, Cromwell, is equally impressed on a policy the object of which was to put the Church as well as the State under the feet of the despot and his vicegerent. Under Edward VI. the Church of England becomes Protestant indeed, with an ever-increasing tendency in the Zwinglian direction, and at the same time distinctly Erastian, her bishops being required to take out patents for their offices as mere servants of the Crown, while she enters into open and avowed communion with the Protestant churches of the Continent. This revolution, again, was manifestly brought about by the policy of the Protector Somerset and the other councillors of Edward who had thrown themselves for support on the Protestant party, as well as by the personal tendencies of Edward, a precocious theologian and an extreme Protestant. Nobody, we suppose, doubts that the counter-revolution which took place under Mary, and which restored the full supremacy of the Pope and the whole Roman system of doctrine and worship, with the persecution of Protestantism which ensued, were the direct consequences of the accession of Katharine's daughter to the throne and of her bigoted devotion to the Roman faith. As little can it be questioned that the overthrow of Mary's system and the substantial restoration of that of Edward VI. and his Council were the personal acts of Elizabeth, who, whatever might be her religious belief, could not have recognized the authority of the Pope without acknowledging that she was herself a bastard and a usurper. If it was true, as the Anglican theory of ecclesiastical history assumes, that there was no doo-

trinal revolution or counter-revolution, but only a gradual self-reformation of the Church through her own organs, what are we to say of the martyrdoms? Cranmer, Latimer, and Ridley, if they held the doctrines now held by Tractarians or Ritualists, must have been fools to go to the stake for differences so trivial, or rather formal, as those which in that case would have separated them from Rome. Dr. Pusey, in his 'Eirenicon,' pronounced in effect that there was no vital contradiction, such as would be a bar to union between his Church and that of Rome, on any points except Papal Infallibility and the Adoration of the Virgin: and of these neither was at issue in the case of Cranmer, Latimer, and Ridley. Why, again, did all Mary's bishops, except the unscrupulous Kitchin, resign upon the accession of Elizabeth, and leave apostolical succession in the Church of England hanging by so slender a thread that the adversary has been able to raise doubts, not wholly without plausibility, whether the succession continued to exist at all?

However, if statutory and detailed proof is needed, we think it has been furnished by Dr. Child, who has travelled with persevering industry through all the documentary evidence, whether in the shape of acts of Parliament or in any other shape, and has set the results before us with great distinctness, with judicial calmness, and in a very clear and forcible style. He seems to us to have demonstrated the principal propositions which he set out to demonstrate, and which are that the Church of England, down to the time of Henry VIII., was Papal; that the separation from Rome was purely and simply the act of the King and Parliament—the share of the clergy in it, such as it was, being entirely involuntary; that the Act of Supremacy transferred the whole power of the Pope to the King, while the submission of the clergy bound them to entire dependence on him; that Henry thus created a National Church, of which he himself was in all but name Pope; that he did not make this church Protestant; that in Edward's reign, the personal papacy of the sovereign having fallen into abeyance, its powers were taken up by the predominant Protestant faction at the Council, which took a Zwinglian direction and retained it to the end of the reign; that Mary, by two acts of Parliament, swept away the Protestant legislation of Edward and the anti-Papal legislation of Henry, and restored the full supremacy of Rome; that Elizabeth, by her royal power, restored Edward's liturgy, and by the Act of Supremacy deprived all Mary's bishops, and that this act and the Act of Uniformity were passed against the unanimous opposition of the spiritual Peers in the upper house, while Convocation took no part, except in so far as the lower house passed resolutions approving the whole of Mary's legislation; that almost all the prominent Elizabethan bishops and divines were in doctrine Zwinglian or Calvinist, declared themselves at one with the leading Swiss reformers, especially with Bullinger and Peter Martyr, and regarded their own church as one of the sisterhood of Protestant churches; and that there was no mention of the divine right of bishops in the English Church till it was suggested in 1588 by Bancroft, who accompanied his suggestion by a distinct claim of the whole Papal power for the Queen. Dr. Child makes it plain that the clergy, from the time when Henry brought them to his feet by the Premunire, never initiated the changes or exercised any real control over them, though their chiefs were consulted as experts, and the assent of a subservient Convocation was used to give color to the action of the Government in Church affairs.

That the Thirty-nine Articles are Protestant, not Catholic, is as plain as the sun in heaven. By no efforts of interpretation possible even to so subtle an intellect as that which elaborated Tract XC, can they be wrested to any other sense. Hence the Tractarians were driven to the desperate expedient of maintaining that the Prayer-book, in which some vestiges of Catholicism lingered, not the Articles, ought to be taken as the canon of faith, and that by the language of the Prayer-book the Articles were to be construed. Dr. Child meets this allegation conclusively by pointing out that while both Liturgy and Articles were the work of the same hand, the Articles were the later composition of the two; that, in a new edition published in the same year with the Articles, the Liturgy was brought into conformity with them in such respects as were deemed important, and (what is really decisive in itself) that it is preposterous to take the devotional and rhetorical document as the expression of the framer's belief instead of that which was meant to serve a controversial and legal purpose. The fact, which is patent, that the Liturgy was an old document modified with the evident desire of retaining as much of the ancient and customary as possible, while the Articles were an original manifesto directed to the questions of the day, is enough to decide in which of the two compositions the opinions of the theologians who put them forth are to be sought. The very novelty of the hypothesis which made the Liturgy, instead of the Articles, the standard was enough to condemn it. How came it to pass that the Church, the keeper of all truth, had remained in total ignorance of this momentous truth concerning herself till it was revealed to her by the Tractarian party in the fourth decade of the nineteenth century? Keble felt the objection, and tried to meet it by suggesting that the lateness of the discovery in the history of the Church had an analogy in the lateness of the Christian Revelation in the history of the world. Of all the strange applications of Butler's much misused argument, this is perhaps the strangest.

The necessity of episcopal ordination is of course maintained by all high Anglicans, and their inflexible adherence to it stands fatally in the way of reunion with any non-episcopal church. But Dr. Child asserts, and we believe it will be thought makes good the assertion, that it can be proved beyond reasonable doubt that episcopal orders were not insisted upon in practice in the Church of England as an indispensable condition of ministry, down to the Great Rebellion, or, in one or two instances, even after it. In the cases of Whittingham and Travers, cited by Dr. Child, the fact that episcopal ordination was not by the ecclesiastical jurisprudence of the day held indispensable seems clearly to appear. But the testimony of Bishop Cosin, also cited by Dr. Child, in itself would suffice. Cosin was, as Dr. Child says, a Laudian High Churchman, a learned casuist, and one of the principal speakers at the Savoy Conference. In a letter written in 1650, while he shows his Laudian disposition to disparage French Protestant orders, he distinctly admits that the English bishops had in many instances admitted persons so ordained to charges in the English Church without reordination, and that the laws of the English Church did not require more of such persons than that they should declare their public consent to the received religion and subscribe the Articles. No opposition or protest, so far as we are aware, was raised when James I., the head of the English Church, sent deputies to the Calvinistic Synod of Dort, thereby affirming that the two churches were in communion with each other, and that the orders of the Calvinistic divines who composed the Synod were valid. The deputies, one of whom was a bishop and two others became bishops, took exception to an anti-episcopal resolution; but by sitting in the Synod they recognized the orders of their Calvinistic colleagues.

Those who hold that the existence of a valid ministry, the preservation of the truth, and the life of the Church, depend upon an episcopate tracing its descent by unbroken succession from the Apostles, must tremble when they think how near, as we have said, at the accession of Elizabeth, the Church of England was to being left without any bishops at all. But, setting this aside, if the bishops, as successors of the Apostles, are the divinely appointed transmitters of the true faith and spiritual life, is it possible to believe that the immense majority of them comprised in the Roman and Greek churches is in error, while the small minority comprised in the Anglican Episcopate alone is in the right path? This is a dilemma which must be faced, though Anglicans who regard Rome as a true church and look forward to union with her are unwilling to confront it. Theology at all events must not shrink from practical consequences, however startling or inconvenient. Either the Anglican Church is heretical, or the other Episcopal churches, with all the bishops whom they contain, are schismatical for refusing her communion, in which case Church authority, with the power of holding a General Council, resides in her alone. That the Greek Church, as well as the Church of Rome, does refuse her communion is a fact in which she must now, after more than one abortive overture to the Greeks, be constrained to acquiesce.

That the Church of England under the Tudors was Protestant and Erastian, Dr. Child, we repeat, seems to have clearly proved, if any proof could be needed. Nor will he have any difficulty in carrying on his demonstration, as he promises to do, through the reigns of the Stuarts and the Hanoverians. That in which we cannot concur with him is his apparent approval of the Erastian system. Religion may, as many people now think, be a delusion, and in that case, no doubt, the more its disturbing influence on society and the false enthusiasm which it generates are restrained by statesmanship, the better. But if spiritual life is a reality, surely nothing can be more pernicious or more revolting than that it should be dealt with for worldly purposes by such a set of politicians as the Tudor sovereigns and the political intriguers, some of them public robbers and judicial murderers, who sat in those councils. Dr. Child seems inclined to fall in with the idea that the ecclesiastical work of Elizabeth was a monument of practical wisdom, while he chimes in also with the conventional praise of that vain, arbitrary, and capricious as well as immodest woman. But the eulogy is belied by the events which followed. The attempt to found a National Church on the politic principle of neutrality and amalgamation, and to force the spiritual life of the nation into it, signally failed. The latter part of Elizabeth's reign was spent in the cruel and ungrateful persecution of the Puritans, who, as readers of Motley know, had saved her throne and the country when both had been brought to the brink of destruction by an insane parsimony which had left England defenceless against Spanish invasion. Persecution of course exasperated and drove at last into rebellion a set of men who would have remained the most loyal of subjects had not the self-will of the Queen denied the concessions which wise

statesmen, like Burleigh, and, to their credit be it said, the leaders of the hierarchy, would have made. Through the reign of Elizabeth's successor the storm continued brewing till in that of his son it burst in civil war, and levelled the whole edifice of Elizabeth Tudor's vaunted wisdom with the ground. Nor would it be easy to show that the revived establishment of the Restoration and the Hanoverians was either spiritually or politically a blessing to the nation. The happy experience of the New World has proved that the most profound statesmanship in matters ecclesiastical is that which confines civil government to its proper purposes, and leaves conscience and worship entirely free.

Albrecht. By Arlo Bates. Boston: Roberts Bros.

The Broughton House. By Bliss Perry. Charles Scribner's Sons.

UNLESS we are mere raging heathen, we acquire in the nursery a knowledge of the marvellous career of the prophet Daniel, the "Master of the Magicians." Perhaps more than any other hero in that book which the authors of the novel before us graciously acknowledge as "an older book than this is," he appeals to a child's imagination. He is young, beautiful, and extremely wise. He is a poor captive commanding great kings, receiving highest honors, and inspiring unspeakable awe. The tests and trials to which he is subjected are peculiarly picturesque and thrilling, and the mystery of his communion with God in heaven only heightens his fascination without detracting at all from his perfectly sympathetic humanity. He is, indeed, a sacred inheritance, quite apart from any early belief in the divine inspiration of the only record through which we know him, and unimpaired by any later scepticism. Perhaps the people who have arrived at conviction of the human origin of the record are those who would be most offended by any tampering or trifling with Daniel, and most reluctant to have their mental image of him disturbed by the capricious embellishments and invention of a modern novelist. With the luck which ever attended him, Daniel, in these later days, has been adopted as a hero of romance by people whose skill in interpreting character from visible signs or granted facts is almost comparable with his own skill in the interpretation of dreams. To the human Daniel they have done no harm at all, and, considering the sad travesties of Biblical characters which prance and rant through some not unpopular modern novels, to say that they have done no harm is unequivocal testimony to the merit of their work. They have approached him with reverence, sympathy, and dignity of style, and have developed his character in perfect conformity with the hints and indications given in the "older book." But, animated by the modern so-called scientific spirit, the propensity for destroying mystery which science is not sufficiently advanced exactly to explain, they have rather belittled the superhuman Daniel. Not by direct assertion, but by unquestionable implication, Daniel falls from the unapproachable height of a person whose mystic powers we accept on faith, without desire to investigate, to the level of a very sensitive hypnotic subject—in fact, a "trance medium," a person whom we insist on investigating, and concerning whom we entertain much scepticism with little respect.

Daniel's is the only character which provokes comparison—indeed, the only one for which the multitude has any standard of comparison. Among the personages whose story is woven with his, Nebuchadnezzar still continues to enjoy wide fame, not for the extent of his conquests or the splendor of his capital, but because he became as a beast of the field and ate grass as oxen. Arioch, the captain of the King's guard, is known only by name, and Amytis, the Median Queen, is unknown except to scholars. After Daniel, these three are the most prominent figures in the 'Master of the Magicians.' They never suggest laborious reconstruction from odd bones showing here and there in dusty heaps of Oriental lore, but are real people, hotly bent on the achievement of personal desires, fundamentally human, with a superficial strangeness only, attributable to their high position and gorgeously spectacular surrounding. A sense of humor would probably restrain people from shedding tears for Nebuchadnezzar (he is somewhat pedantically called Nebuchadrezzar), yet the King is so kinglike in his pagan way that his hideous fate appears peculiarly sorrowful. Amytis is a wicked woman, worse than most of her kind because her opportunities were great. Wickedness in men has infinite variety, but ages have produced only one sort of wicked woman. Arioch is a courtier and a soldier, a man of his world and time, raised above both by the ability to recognize virtue when he saw it and to love well. The authors have not exhausted their power and patience in the delineation of these mighty people. The most insignificant has some touch of individuality, and every scene and situation is described clearly, naturally, with wonderful simplicity, too, considering the temptations to pedantry. They nowhere appear as critics of the Babylonians or as apologists; they are impersonal observers of life glowing with barbaric, sensuous magnificence and black with shame. They are free alike from prudery and grossness, and out of the fulness of knowledge illumined by imagination have written a story which for an hour or two plunges the reader into the heart of a dim and almost fabulous antiquity.

The whole story of 'Julius Courtney' leads up to an Oriental secret, and it must be said to his credit that he was perfectly willing to reveal it, and would have done so but for the scruples of Dr. Lefevre about receiving knowledge through which he would be able, like Courtney, to spread havoc among his fellow-men. Dr. Lefevre is distinctly a person whom the story-readers will never forgive—Courtney's secret was, from a selfish point of view, such a desirable and useful one to know. This faint show of explaining the inexplicable spoils a very good story, for it stigmatizes as impossible all the preceding narrative, which, though strange and far outside of common experience, has been made by the author's art to appear highly probable. It also disturbs confidence in the soundness of his apparent knowledge of the point reached by experimenters in what he calls that strange annex of modern medical science known as psycho-dynamics. No conclusion could be further from those of modern investigators than that the power of hypnotizing, or the aptitude for being hypnotized, or the process of transmitting nervous force, can be learned from any writings of mediæval alchemists or Asiatic sages.

Desirable though the possession of Courtney's secret must appear to individuals, its general dissemination would result in the speedy annihilation of the race. Once revealed, the subsequent chapters of human history would be few, and their substance comprised in the tale of the Kilkenny cats. By contrast, knowledge of the secret possessed by Dr. Benary, the skilled physician, in 'Two Women or One?' would be incalculably beneficial to all. If by simply depressing a bone of the skull, all criminals and fools could be made virtuous and wise, how soon we should be enjoying an earthly paradise! The point is to know what bone to depress. Up to that critical point Dr. Benary's scientific explanations are positive, lucid, and amazingly glib. He is committed inflexibly to the doctrine of heredity. Nobody is himself; everybody is but an agglomeration of the good and evil tendencies of innumerable ancestors, dependent for the direction and completeness of development upon his early environment and tuition. It is really curious, the avidity with which story-writers have snapped at and swallowed the bait of heredity, and their solemn convictions about the potency of environment are truly comforting in this hour of doubt. Some day, we fear, an iconoclast may arise for the destruction of his brethren. He may perhaps call his book 'The Romance of a Parson's Son.'

But to return to Dr. Benary. He discourses on his hobby with such eloquent assurance that a woman who confesses herself a most guilty sinner perceives gradually how her enormities may admit of palliation, and finally yields herself to a surgical experiment which shall either kill her or convert her into an innocent, grown-up child. Dr. Benary satisfies her natural curiosity about the proposed operation no further than to say that it is "very remotely like trepanning." Until the moment when the miracle is wrought, the story has sufficient semblance of reality, but from that moment it becomes more and more ineffective. No one could believe that the miracle had been wrought, and all that follows is palpable invention. The author of 'Julius Courtney' conceals his weakness till the end, but Mr. Harland, less cunning, breaks down in the middle. He has not at his command that fund of circumstantial yet preposterous detail in which French triflers with scientific marvels shroud an intrinsic impossibility, and no description of the New York blizzard or of joyous, Herculean artist, can atone for failure to sustain curiosity about the problem by which it has been excited.

The physiological puzzle and psychic mystery in Mr. Howells's 'Shadow of a Dream' remain unsolved when the story of the lives which the dream clouded and the hearts it broke has come to a tragic close. The author nowhere intimates that he alone holds the secret of the sort of stuff that dreams are made of, so the mind is free to attach itself to the effects of Faulkner's dream-habit on himself, and on those so intimately related to him that they were compelled to dwell within the shadow. The conversations about visions and scientific hypotheses are casual and speculative, clearly without intention to excite anticipation of spe-

cial enlightenment. The precise and conservative remarks of Dr. Wingate have a convincing air of authority which is quite fatal to any admiration one may have conceived for his more daring confrères who claim to have probed the infinite. In short, Mr. Howells's well-known and admirable method of narrating ordinary events and depicting ordinary characters is applied with notable success to the narration of an unusual, though hardly extraordinary episode, and to the drawing of several people not quite like everybody else even in their superficial character. No one could feel for a moment that he is inventing, that for the sake of effect he exaggerates or conceals, or that he is ever insincere in his criticisms and conclusions. The virtue of intellectual honesty shines as a torch from his pages, and let no one disparage that even if he believe that it is founded on illiberality.

Mr. March, who tells the story, displays more warmth than in any of the novels in which we have known him; but the situation demands more, and there is no surprise in his ability to rise to it. He has an understanding sympathy for people unlike himself, and a beautiful tenderness for Faulkner, who was not only unlike him, but objectionable in many respects. No matter in what future novels he may appear, he cannot be more finely magnanimous than when, in Faulkner's great distress and need, he quite forgets the offence against modern taste committed by a man who had once wanted to talk about Byron and Shelley, and whom he suspects of trying to live up to the rather high-strung literature which he might have written had his lot been cast in a literary community. Face to face with a dying man, a man driven to the verge of madness by an agonizing dream or mental delusion, March is just as kind, as gentle and pitiful as if that man had spent his best years in denouncing the whole tribe of romantic writers that ever infested any land.

Unfortunately, perhaps, for March, every one is familiar with Mr. Howells's literary creed or dogma, and it is impossible to dissociate March's judgments of books and literary methods from the author's. Identification is inevitable when March, in the midst of his story, apologizes for appearing to be wholly absorbed in the Faulkners' affairs, which of course he is not, nor yet Mrs. March, that estimable corrective of enthusiasms which she does not share. This apology is an amusing instance of the author's horror of fictitious misrepresentation. Less scrupulous people may be of opinion that even if thoughtless readers should see visions of Mr. March letting the insurance business languish to the gross injury of Mrs. March and the little Marches, the author could afford to let the mistake go, content that in such a lapse from veracity he is not flagrantly imaginative. At the close of the first part, the melancholy, painful, wonderfully vivid bit of narration which comprises the introduction and the knot, we tremble lest March shall apologize for a dramatic crisis. But the sight of death overwhelms literary predilection, and his silence gives consent to the argument that life may be productive of dramatic moments, and that the world may read about them without serious vitiation.

The second part, in which the consequences of Faulkner's dream are developed, falls a little below the first in vividness and feeling. Mrs. Faulkner, who bears the chief burden, is not so well studied, or at least not so well measured, as Mrs. March, for instance. The author recognizes that she is an exceptional woman—that is, a woman of unusually large nature, passionate yet righteous, of a clear and courageous intelligence. Yet when she is called on to decide for her own joy or despair, she behaves exactly as one of Mr. Howells's well-understood women might, women who have none of Mrs. Faulkner's presumable ability to arrive at proportion and value in questions of duty involving sentiment. Besides, experience counts for nothing in her character. An ingenuous young girl might work herself up to the belief that she had done wrong because wrong had been dreamed of her; or a Mrs. March, who never changes. Such irrational sensitiveness influences seriously only the very young or the inflexible. Mrs. Faulkner was not young, she was distinctly not guilty, she knew the world, and had adaptability; therefore, considering her conclusions in the face of facts, she is vague and unsubstantial, perilously near a mere creature of romance. March's entreaty to Neville to reconsider the decision reached by him and Mrs. Faulkner may be taken as the author's conclusive utterance on the problem of conduct involved. It is a passionate admonition against the self-analysis that leads to self-destruction.

Prophecy is generally vain, not always gratuitous. There is tolerably sure ground for the prediction that posterity will pronounce Mr. Stockton's stories and method unique. He has followed no school and founded none. He is as far from a realist as from an idealist. His fancy dictates without rule or precedent, and his ingenuity supports its wildest extravagance. Though his people are severely moral, he has nothing to do with morals, and though actual puzzles of character and conduct are outside his province, he invents amazing problems of both, and discusses and solves them plausibly. His perfectly serious manner and matter-of-fact style lend a temporary appearance of probability to the impossible, and invest ludicrously irrational people with the semblance of acute intelligence and of prosaic common sense. He addresses himself neither to the understanding nor to feeling, but to the imagination and the sense for fine-spun absurdity. The first situation in the 'Merry Chanter' promises an unusually amusing entanglement. Perhaps it is too good to be heightened; at all events, most of the incidents that follow the engagement of their crew of captains by the owners of the *Merry Chanter* fall short of what goes before. Some are excruciatingly funny, but the whole lacks the author's customary spontaneity and air of unimpeachable veracity. Towards the end he seems to be weary of the extraordinary collection of passengers that he has got on board the schooner, and not to know exactly how to get rid of them. He does manage to arrange a destiny for each, but not very happily. The best device is that which permits the fugitive British peer, Lord Crabstairs, to become a freeman on his native soil. The payment of the accumulated debts of several generations of Crabstairs in exchange for all the legal papers relating to their indebtedness is a nice stroke of satire on the madness that sooner or later overtakes the persistent collector of antiquities.

Of all the novelists Mr. Besant is the most fertile, fluent, and uniformly agreeable. Dear to him is every kind of romance, and doubly dear the romance of love. He can tell a stirring tale of military adventure; a pathetic tale of the grievances of the poor, the sorrows of the oppressed; an amusing tale of transient fashionable follies—but he is most at home and most attractive when he is leading young lovers through deep waters of affliction to joy everlasting. The romance of 'Armorel of Lyonesse' is a very pretty one, packed full of romantic events and situations for which no apology is offered. When Tristram, pressing day by day through Lyonesse, came at last to "Tintagil half in sea, and high on land," Iselt, the Queen,

> "Down in a casement sat,
> A low sea-sunset glorying round her hair
> And glossy-throated grace."

Just so is Armorel, queen by courtesy of one of the Scilly Islands, introduced, but here ends comparison between her and the false wife of Mark the Cornish King. Mr. Besant did not choose his scene and title for the purpose of inflicting a modern and enfeebled version of Sir Thomas Malory, and, but for one or two references to Sir Bedivere, one might suppose that he dwelt in darkest ignorance of the Arthurian legend. Armorel in her island home is an innocent, ignorant, and robust young person, with definite religious opinions, and a slight quaintness of expression, both derived from an ancestress nearly a hundred years old, who sits with her bonnet on all day dozing in a big chair, and can only be roused to speech by the scraping of Armorel's fiddle. When the ancient dame falls into her last sleep and Armorel becomes the mistress of long-hidden treasure, she shows that shrewdness and ability to take care of herself which come by right to the descendant of gentlemen who had been the most daring smugglers and wreckers in the Archipelago.

Armorel's inheritance, as it comes pouring out of long-locked drawers and sea-chests, strains credulity, but of course she had to have a fortune in order to go forth and see the world, and fit herself to wed the beautiful prince who has already knocked at her door, smiled in her eyes, and ridden away. The singleness of her devotion to her prince when, after several years, she finds him again, a pauper and bond slave to a cruel-hearted villain, is quite beautiful to dwell upon; so are the combined delicacy and pluck with which she forces him to strike for freedom and lay the villain low. Laying him low is no child's play, for his villany is not vulgar and superficial; it is subtle, intellectual, with ramifications many and deep. He preys upon the brains of the needy, buying very cheaply their paintings, their poems, their stories, and, thus being enabled to pose as a universal genius, waxes fat, famous, and fashionable at their expense. Thanks to the courage and fidelity of the girl from Scilly, his discomfiture is complete. Nobody can feel quite sure after reading 'Armorel of Lyonesse' that the most cunning sinner may not dig pits for his own betrayal, or that righteousness never triumphs in a wicked world.

A romance of the Channel Islands is almost as rare as a romance of Scilly, and the manners and customs of dwellers upon one group of islands are about as unknown as those of the other to the average Britisher. Especially was this the case when George II. was King and the melancholy little drama described in the tale of 'The Locket' was being enacted in Guernsey. The opening chapters of 'The Locket' are rarely dainty and smooth and pleasing. The picture of the Grandméau girls, in their quaint summer-house overlooking the sea, is as exquisite as the miniatures of their century. One sees their faces blooming in a thick-set circle of pearls. The gloomy figure of Leonard Delafaye casts a slight shadow over the sunny scene, but it vanishes with the coming of Andrew Morier, the young Jerseyman, and is forgotten in the happiness of his love for Clementine Grandméau. The atmosphere of peace is so well expressed that we are un-

prepared for tragedy, and the suddenness of its coming hurts and shocks. When the tragic situation is once accepted, an appreciation of the strength with which Delafaye is drawn follows. His revelation to John Ambrose of the facts of his life and their influence on his nature is a passionate cry from a weary, guilty soul given its full force by the author's admirable restraint. Had John Ambrose been a less guileless man, he could never have taken Delafaye's confidence for anything less than full confession. Delafaye's character and temperament fully account for his yielding to a horrible temptation, account for everything except the giving of the fateful locket to Clementine. When he insisted on her keeping it, he was plainly in a state of emotional excitement, but one cannot help thinking that in a cooler moment, knowing how dangerous for him was her possession of the trinket, he would have taken it away from her. This gift of the locket is very important to the development, and its striking improbability infects the whole set of circumstances which surround the death of Morier. Somewhere the author intimates that the events of the tale are true, but such a fact is so startlingly exceptional that an impression of its truth or even its likelihood cannot be given in fiction.

In what is called the fore-word of 'Albrecht' the author anticipates criticism. His first valuable comment is, that "it must be evident to the most casual observer that the treatment of the theme with which the present story deals would probably not have taken the form it has had 'Undine' not been written before it." The remark is profoundly true, subject to a slight modification. If the casual observer should happen to be at all familiar with 'Undine,' it is not in the treatment of the theme which he will find resemblance, but in the theme itself, the idea of 'Albrecht.' If, on the other hand, he knows not 'Undine,' he will find that Mr. Bates has written a pretty fairy story, and credit him with a fine imagination chiefly on account of the idea—Fouqué's idea, with a cumbersome addition. The story of 'Undine' is a literary creation which, humanly speaking, has conferred immortality upon its author, a fact of which Mr. Bates was well aware when he undertook to write 'Albrecht.' The most curious and interesting feature of his performance is his complacent readiness to stand comparison with perfection. Wholesale appropriation of great ideas is not a crime punishable by law, but it may be characterized without undue severity as a literary impertinence.

The story of 'The Broughton House' is long enough and uneventful enough to give ample opportunity for a complete representation of the group brought together for a month in a quiet New England hostelry. Still, the impression left by the book is of incompleteness and of imperfect grasp of salient points of character. Sonderby, the schoolmaster, on whom the author expends pages of detail, is, after all, an indefinite and enigmatical person. Perhaps he achieved the greatness which is confidently predicted for him, but the assertion of his fine possibilities is not supported by his recorded words and deeds. His ambiguous sentiment for Mrs. Floyd appears worthless and irritating. It has not the selfish force of passion (the passion of a man for another man's wife is always supremely selfish), nor the steady helpfulness of pure sympathy for a woman whose circumstances are most unhappy. Mrs. Floyd, who has intense capacity for feeling and almost none for expression, is the most distinct figure of the group. Married to a man with the artistic temperament, the temperament which makes itself the excuse for every kind of moral delinquency, the absolute helplessness of a Mrs. Floyd to shape destiny is a pitiful and not uncommon spectacle. The situation between Mr. and Mrs. Floyd is rendered so naturally and adequately that it goes far to compensate for minor deficiencies, and, in a novel of character, it is fairer to judge the author's fitness for his work by one success than by half-a-dozen approximate failures.

Locke. By Alexander Campbell Fraser. [Philosophical Classics for English Readers.] Edinburgh: Wm. Blackwood & Sons; Philadelphia: J. B. Lippincott Co. 1890.

Mr. Galton's researches have set us to asking of every distinguished personality, what were the traits of his family; although in respect, not to Mr. Galton's eminent persons, but to the truly great—those men who, in their various directions of action, thought, and feeling, make such an impression of power that we cannot name from all history more than three hundred such—in respect to these men it has not been shown that talented families are more likely than dull families to produce them. The gifts of fortune, however, are of importance even to these. It is not true that they rise above other men as a man above a race of intelligent dogs. In the judgment of Palissy the potter (and what better witness could be asked ?), the majority of geniuses are crushed under adverse circumstances. John Locke, whose biography by Berkeleyan Professor Fraser is at our hand, came of a family of small gentry, his mother being a tradesman's daughter. The family had shown good, but no distinguished ability, and no remarkable vitality. The philosopher, John, the eldest child of his parents, was born (1632) two years after their marriage; there was one other child five years later. John Locke himself never contemplated marriage.

He resembled not in the least a genius of the regulation pattern—a great beast, incapable of self-control, self-indulgent, not paying his debts, subject to hallucinations, half-mad, absent minded. He did not even, like the popular hero, attribute all that distinguished him to his mother's influence. He called her "pious and affectionate," but rarely mentioned her. On the other hand, he often spoke of his father with strong love, with respect for his character, and with admiration for his "parts." That father gave him all his instruction up to the age of fourteen years; and since he alone of Locke's teachers escaped the bitter maledictions of his later life for their pedantry and "verbal learning," the father it doubtless was who first taught our philosopher to think for himself.

"I no sooner perceived myself in the world," says Locke, "but I found myself in a storm." When he was ten years old, the Civil War broke out, and the house was near Bristol, one of the centres of operations. His father at first joined the Parliamentary army, but returned within two years. Such events made food for reflection and doubtless suggested toleration.

At fourteen he was put to Westminster school, under stern Dr. Busby, whose pedantry he detested; at twenty sent to peripatetic Oxford, and was still thoroughly discontented. He had not been a precocious boy, and was quite unconscious of superior power. At first he only read romances, and probably never studied very hard. He was awakened by the books of Descartes, whose system he did not embrace, but whose lucidity encouraged him to believe himself not a fool. "This same John Locke," says Anthony à Wood, "was a man of turbulent spirit, clamorous and discontented; while the rest of our club took notes deferentially from the mouth of the master, the said Locke scorned to do so, but was ever prating and troublesome." But this is the distortion of hatred, such as that which later prompted the lie that caused Charles II. to order Locke's expulsion from his studentship. The envious tribe said to infest colleges must take everlasting comfort in the reflection that efforts like theirs expelled John Locke from Oxford, and almost stifled the 'Essay concerning Human Understanding.'

Two years before the Restoration, he took his master's degree, and was afterwards appointed to that life studentship, to lectureships in Greek and rhetoric, and to a censorship in moral philosophy. At a later date, he took the degree of Bachelor in Medicine. His father and brother died in 1661, leaving him about half enough to live upon. In 1666, being thirty-four years old, he made the acquaintance of Lord Ashley, afterwards Earl of Shaftesbury, grandfather of the author of the 'Characteristics.' This nobleman took up Locke and formed him into a man of business, a man of the world, and a politician, fit to become, as he did become, the philosophical champion of the Glorious Revolution.

Locke falsifies the maxim that he who has done nothing great at twenty-seven years of age never will. His first publication (barring a few early verses) at double that age consisted of two anonymous articles in an encyclopædia. He never learned to write a good style. His great 'Essay' appeared three years later, May, 1689, though he had been at work upon it for nearly twenty years. He only lived fifteen years more, during which he was much engaged in public business, so that the time of his active authorship was brief.

Locke's was a frail and diminutive figure, with sloping shoulders, a gracefully set head, a forehead appearing low because cut off below by strong eyebrows rising to an angle over a nose long, pointed, and high-ridged. His eyes were prominent, his mouth well-formed, his chin strong. He must have resembled a little the late E. H. Palmer. His health was always delicate; he was a great sufferer from asthma.

That great observer, Sydenham, many years before Locke became famous, wrote of him as "a man whom, in the acuteness of his judgment and in the simplicity—that is, the excellence—of his manners, I confidently declare to have amongst the men of our own time few equals and no superiors." That Locke's *manners* should have made so powerful an impression upon Sydenham bespeaks magnetism if not greatness. A fascinating companion, gay, witty, observant, shrewd, thoroughly in earnest in his convictions, he added to his good fellowship the air of meaning to get himself all the happiness out of life he could, and to impart it to those about him. He maintained he had the sanction of Scripture in living for enjoyment, and the great pleasures he pursued were, he tells us, these five: health, reputation, knowledge, the luxury of doing good to others, and the hope of heaven. Few men have had so many warm friends; and to these friends he was devoted with a passion strong as a lover's.

At the same time he was no mean diplomatist, knew well enough how to play upon weaknesses, and no one more than he possessed the art of turning men inside out. Many little maxims on this head are scattered through his writings. He himself was impenetrable. "I

believe there is not in the world," said one who had tried a lance with him, "such a master of taciturnity and passion." He confesses himself to be choleric, though soon appeased; but, in fact, self-control is the characteristic mark of his thoroughly well-regulated life. His personal economy was strict. He was methodical in business to a fault. His prudence was carried to the point of excessive caution. He was moderate in everything, and probability was his guiding star. He was deeply religious; but it was public spirit, the benevolent wish to improve the condition of his country and the world, which was the mainspring of his life and inspired all he wrote.

Hence, the vast influence which Locke's philosophy exerted upon the development of Europe for more than a century. If it be said that in truth no such force was exerted, but that Locke only happened to be the mouthpiece of the ideas which were destined to govern the world, can there after all be anything greater than so to anticipate the vital thought of the coming age as to be mistaken for its master? Locke's grand word was substantially this: "Men must think for themselves, and genuine thought is an act of perception. Men must see out of their own eyes, and it will not do to smother individual thought—the only thought there really is—beneath the weight of general propositions, laid down as innate and infallible, but really only traditional—oppressive and unwholesome heritages from a barbarous and stupid past." When we think of the manner in which the Cartesians, Spinoza, and the others had been squeezing out the quintessence of blindness from "First Principles," and consider to what that method was capable of lending itself, in religion and in politics, we cannot fail to acknowledge a superior element of truth in the practicality of Locke's thought, which on the whole should place him nearly upon a level with Descartes.

Prof. Fraser's is the fourth life of Locke drawn more or less from unprinted sources. It cannot be said to be a sympathetic account of him. The biographer seems to see no charm in his hero, and is perpetually speaking of his want of imagination; which only means he was not given to unpractical dreaming. The account of Locke's writings is, however, unusually good; and the insufferable sophistry of T. H. Green is well disposed of in a paragraph. Prof. Fraser pleads for a new edition of Locke's works, and it is very true that this great man, whose utterances still have their lessons for the world, with wholesome influences for all plastic minds, should be studied in a complete, correct, and critical edition.

Literary Papers of William Austin. With a Biographical Sketch by his son, James Walker Austin. Boston: Little, Brown & Co. 1890. (250 copies printed.)

MR. WILLIAM AUSTIN has gained a niche in American literary history as the author of "Peter Rugg, the Missing Man," in which some critics have seen a forecast of Hawthorne's peculiar style of romance. The present volume contains this and other tales, together with the Bunker-Hill Oration of 1801, a paper on the Humanity of Jesus Christ, and a reprint of Letters from London originally issued in 1804. The author was born in 1778, graduated from Harvard in 1798, was a short while schoolmaster and chaplain in the navy, studied law at Lincoln's Inn, London, and on his return to America practised his profession and took part in politics until his death in 1841. The stories were written between 1824 and 1837, in mature years, and are perhaps more remarkable for being few in number than for any other reason. In "Peter Rugg" we have a local version of the Flying Dutchman. It is not without cleverness in the telling when judged by the time of its production, but its foreshadowings of Hawthorne's genius seem to us purely imaginary. It was exceedingly popular. The other tales are even more crude. They are five in number, and are, in general character, of the class of "moral tales": their titles, "The Late Joseph Natterstrom," and "The Man with the Cloaks," may still occasionally be met with, and these are the best. Of the Bunker-Hill Oration we can only say it is a curious survival of Revolutionary eloquence; and of the essay upon Christ's Human Character, that it has likewise some historic value as an illustration of style and of religious feeling.

The most interesting portion of the volume is the "Letters from London." They are the work of a young man in his student days, and are written in a very ambitious vein; but they show very vividly the enthusiasm of the time in favor of our newly developed political system. The comments made upon England are those natural to an American, and there are some glimpses of English statesmen and literary men, containing nothing novel, but adding to the passing interest of the reader. Mr. Austin's point of view was that of the student of institutions, and the burden of his remarks is the inferiority of the English to the American Constitution in procuring general happiness for the people. Among the marks of the then contemporary thought we observe the disapproval of commerce:

"Thank God," he says, "the United States are rather an agricultural than a commercial country; otherwise, in spite of our Constitution, our republic would soon be lost in an odious aristocracy, and, what is still worse, a commercial aristocracy, which experience proves to be the most inexorable and cold-blooded of all tyrannies, where maxims are founded on cautious speculation and acted on in all the varieties of monopoly—maxims which, fortified in law, strengthen the powerful at the expense of the weak."

Manufactures fare even worse in his eyes. "Every nation," he says, "is miserable in proportion to her manufactories," and he draws a picture of their social effects in most vigorous rhetoric. He looked to the farms of the West to preserve the health of the body politic, even if poverty, artisans and capitalists, manufactures and commerce, should gain a hold in the Atlantic cities. He also apprehended powerful results from the development of the Democratic idea by our future writers on civil polity: "All that which is connected with or related to man will be treated in a manner which must shock the feelings of all Europe and oppose the principles of all ages." His sympathies were clearly with that view, which he apparently derived from Beccaria, that society by its laws tends to develop the very rich and the very poor—the former few, the latter the masses. It is to be noted that Godwin was his principal literary acquaintance in London, and he seems to have shared the radical admiration for that author's 'Political Justice.' The practical remarks made upon the Establishment, the poor laws, the class structure of society, the criminal law, and similar matters are acute, sound, and often strongly expressed. The Latin quotations, the contrasts of the Indian with civilization, the Rousseau-like questions, give a pleasant flavor of a past time, and the self-glorification of the young patriot in his own country's political promise reminds us of that vigorous hopefulness which has since his time become much sobered. The portraits of Pitt, Fox, Erskine, and others are labored, but have the freshness of contemporary impressions, and the sketches of Godwin, Holcroft, and Fuseli are not without a minor interest. The entire collection of letters affords a clear-cut example of the first impression made by England upon a young American of the beginning of the century, who was disposed to reflect on what he observed.

The biography of Mr. Austin might, we think, have been treated with advantage upon a larger scale. Only a few pages, of which much is quoted matter, have been devoted to it. His literary papers belong to his youth or to the little leisure of professional years. They show a very vigorous mind, well-instructed and touched with a public enthusiasm; but of the action of his mind in real life very little is shown, and of his individuality and personal traits next to nothing. He appears to have been more largely endowed with character than with literary talents, but the present volume limits our view to his works as a writer. Their interest is historical only, and necessarily provincial.

Japan and the Pacific, and a Japanese View of the Eastern Question. By Manjiro Inagaki, B.A. Scribner & Welford.

THE name of Manjiro is honorably associated with the modern navigation of the Pacific by the Japanese. In a junk as a waif, in a whale-boat as a returned castaway, and as the captain of the first Japanese steamer worked by the Mikado's subjects, Manjiro has made honorable fame. It is highly appropriate, therefore, that one of the same name, a graduate of Cambridge University, in England, should politically exploit the Pacific and forecast its future history.

In a handsomely printed volume of two hundred and sixty-five pages, Mr. Manjiro Inagaki gives his views of the "Eastern Question." The matter is divided into two parts, the first essay, on "Japan and the Pacific," occupying fifty-two pages; and the remainder of the book, in nine chapters, treating of Eurasian politics since the sixteenth century. There are also five maps, which illustrate the text fairly well. The genesis of the book appears to have been a student's thesis prepared with a view to obtaining a degree, and afterwards expanded and properly divided and annotated for book form. That it was written in England, and mostly in the company of Russophobists, is evident at a glance. While the author is an independent student in his reading, it is pretty certain that in his interpretation of facts he has been very ably and powerfully assisted. We read with pleasure his statement in the preface that he intends to continue his investigations in eastern Europe, America, and Asia. Should he publish, at some future time, the result of his further researches, a comparison of his earlier and later views would be interesting. In the present work Mr. Manjiro Inagaki gives us such an anti-Russian, not to say British, view of the Jingo sort, that we can hardly accept it as a genuine "Japanese view." Indeed, it reminds us somewhat of the opera of "The Mikado," in which almost the only Japanese features are the clothes, more or less correctly worn; the language, music, postures, and ideas being almost wholly European.

Evidently the essay will be published in Japan, and do its work in preparing the military classes for future complications. The Pacific Ocean is fast becoming the focus of international politics, and Japan may soon be involved in defensive or offensive alliance with either Russia or England. These Powers,

as the author thinks (p. 69), "will at some future period fight for supremacy in the North Pacific." It is with intense interest, and with exultation, that he adds, "Japan lies between the future combatants." He shows only too clearly that the Japanese, in imitation of European nations, are concentrating their energies on militarism. Instead of looking to the United States as an example, the Japanese are expending their resources disproportionately on armies, fleets, forts, and the paraphernalia of war. "*Japan is the key of the Pacific*," writes the author in italics. The future seizure of Fusan in Corea by Japan is hinted at. The episode of the British wanton and unprovoked seizure of Port Hamilton is narrated in detail, and it is shown that as a "head-station for the Canadian Pacific Railway trade," it would be useless without an Anglo-Japanese alliance. To complete the British chain of islands round the world, the possession of Formosa, "the Malta of the Pacific," is deemed necessary, and "England will without doubt occupy Formosa."

The geographical and maritime situation, and the future commercial possibilities of Dai Nippon, are concisely discussed. Mr. Inagaki thinks, and we agree with him, that Japan may yet become one of the greatest of manufacturing countries.

The second part of the work calls for no special notice, being merely a clever student's résumé of the movement of European politics during the past three centuries, especially as these have concerned Russia and England in Asia. The final chapter, on Central Asia, is a good statement of the present situation; but we imagine that the whole second part of the book will be read with curiosity as a study in Japanese literary art, rather than for exact information at first hand. As a monograph, it will have greater value in the author's own country. As a means of counteracting Russian power and progress in Asia, the author urges a forward policy of railway construction by the British in all the countries in their possession or under their influence.

Die Entstehung der Arten durch räumliche Sonderung. Gesammelte Aufsätze von Moriz Wagner. Nach letztwilliger Bestimmung des Verstorbenen herausgegeben von Dr. med. Moriz Wagner. Basel: Benno Schwabe; New York: Westermann. 8vo, pp. 667.

MORIZ WAGNER, journalist, traveller, and zoologist, is hardly as well known in this country as he should be. Besides the fact that he is one of the three greatest authorities on the distribution, migration, and variation of organisms, his attitude towards the Darwinian theory is another that gives him an especial interest for American students. He is an evolutionist, an advocate of Lamarckism, in the theory of descent, and in a measure of Darwinism, but only in so far as it may not call for advocacy of selection as the all-powerful and almost the sole factor in the transformation of descendants and the formation of new species. The work in hand, on the origin of species through migration and isolation, is a republication by his nephew of a number of articles from different periodicals, the earliest bearing the date 1868, the latest that of 1886. The discussions by which endeavor is made to establish the migration theory involve the greater part of the evidence, recent or palæontological, brought forward by others in support of zoölogical evolution, as well as a great deal gathered by Wagner from fields traversed by himself. The scientific value of the book is not impaired by being written in a style that will appeal to a wide circle of readers, and the result is a solid volume, nearly 700 pages, of which we should be glad to see a good English translation. For an understanding of the author's peculiar theory, and of his position as an opponent of the Darwinian, we may refer to the propositions on page 96, in which are put forth what he considers to be the (in themselves) very simple causes or laws which set bounds to the form and fix its typical difference upon the migrating organism:

"(1.) The greater the total amount of change in the hitherto existing conditions of life which the emigrating individuals find on entering a new territory, the more intensely must the innate variability of every organism manifest itself.

"(2.) The less this increased individual variability of organism is disturbed in the peaceful process of reproduction by the mingling of numerous subsequent immigrants of the same species, the more frequently will nature succeed, by intensification and transmission of the new characteristics, in forming a new variety (*Abart oder Rasse*), *i. e.*, a commencing species.

"(3.) The more advantageous the changes experienced by the individual organs are to the variety, the more readily will it be able to adapt itself to the surrounding conditions; and the longer the undisturbed breeding of a commencing variety of colonists in a new territory continues without its mingling with subsequent immigrants of the same species, the oftener a new species will arise out of the variety."

Wagner makes migration and subsequent isolation a necessity in the formation of species. He says a new race cannot be formed without a long-enduring separation of colonists from their fellows of the same species. Unlimited crossing in a species produces uniformity, and brings a variety (if its characteristics have not been fixed through a series of generations) back to the common form. In part this could not apply to asexual and to some hermaphroditic forms; yet migration would place them under conditions favoring variation, and isolation would be all the more perfect from lack of sexual crossing.

"Jede Spezies oder konstante Varietät im Tier- und Pflanzenreich entsteht durch räumliche Absonderung eines Emigranten oder Emigrantenpaars vom Wohngebiet einer fruchtbaren Art, d. h. einer Spezies, welche noch im Stadium der Variationsfähigkeit sich befindet. Der Akt der Sonderung und Kolonienbildung (durch aktive oder passive Migration) ist stets die nächstwirkende Ursache, welche zur Entstehung einer neuen Art den Anstoss giebt und ohne welche keine Form zur typischen Konstanz sich ausprägt. . . . Der 'Kampf ums Dasein' spielt im Haushalt der Natur überhaupt eine wesentlich andere Rolle, als sie die Darwin'sche Selektionstheorie postuliert. . . . Der 'Struggle for Life' wirkt daher für den gesunden und normalen Bestand der organischen Typen, aber er selbst ist keineswegs von formbildender Wirkung. Er ist in den meisten Fällen weder die Ursache des Entstehens einer neuen, noch des Erlöschens einer alten Spezies."

Enough has been said by way of making the basis of Wagner's theory intelligible; we can give but a faint idea of the wealth of fact and argument with which he supports himself or confronts his opponents. Much of the evidence is familiar—the persistence of low types, the lack of difference between the mummied crocodile and ibis of the Nile and those of today, the necessity of isolation in artificial selection (shown, for instance, by the single race of dogs in western Asia, where religion by making the animal unclean prevents selection), and so on—it needs no recapitulation. One impression left from reading the book is, that less has been heard of the author because his opponents found it easier to meet him by silence than by argument.

To make a very distinct separation between the migration theory and the selection theory is difficult, if possible. Wagner opposes his theory to that of Darwin; he says in the latter it is the struggle for existence, but in the former it is isolation, that is the most powerful factor in building species. It is evident that to produce the results claimed by selectionists, migration is not an absolute necessity, as is claimed by Wagner. On the other hand, the effects claimed by the latter are abundantly proved to follow migration. This, however, is not the same as proving migration to be the direct cause of the variation. The objections to be urged against this theory differ somewhat from those to be brought against one that demands the retention only of beneficial variations, the survival of the fittest, one that preserves rather than originates. Whether an individual is ultimately to survive may be decided many times before it comes to depend on particular beneficial organs that might be traced to selection. The struggle begins in the ovary; the competition fraught with the greatest percentage of danger may occur in the nest of eggs; and continuation of existence depends on so many, on such a changeable and disconnected succession of factors—factors appearing, serving their purpose, and disappearing by the thousand—that "natural selection" becomes simply a convenient term, designating the effects of a legion of causes. Migration and isolation, again, are the means of bringing into action upon the emigrating individuals different modifying agents; they favor the action of causes producing diversity among the members of a species without more than indirectly being causes themselves. The origin of new species and varieties may in fact be ascribed to inheritance of acquired tendencies toward variation in special directions by some, or many, of the individuals constituting the species; tendencies induced by stress of circumstances, external or internal, climate, food, habits, use, disuse, etc., etc., being favored in their persistence and increase, and in the accumulation of their effects, by isolation of those members of the species, or endangered by intercrossing them with others.

The book contains a good biographical sketch of the author by Dr. Karl von Scherzer.

Universités Transatlantiques. Par Pierre de Coubertin. Paris: Hachette. 1890.

IN the fall of 1889, M. de Coubertin, already known by writings on education in England, was sent by the French Minister of Education on a tour of inspection among the schools and colleges of the United States, of which some results are presented in the volume designated above. The title is somewhat of a misnomer, for M. Coubertin gives us miscellaneous *impressions de voyage*, on the great cities, the elections, the political tone, and what not, which serve to vary the somewhat monotonous notes on educational institutions. Even in regard to these latter, his title is not fairly descriptive. His main interest obviously lies not with the higher study and research which we begin at last to associate with the term university, but with the academies and with that part of the colleges which falls rather into the domain of secondary education; and the most appreciative passages in the book are concerned with some of the preparatory schools. The larger institutions get very unequal treatment. Princeton and Cornell are described with care; Harvard and Johns Hopkins are but briefly noticed.

Throughout, the life of the students receives more attention than their course of study; the author writes with more or less covert reference to the changes which he would see intro-

duced into the French schools, and which he sums up at the close of his volume in the words *sport et liberté*. The foot-ball field is prominent in his pages, and he is astounded to learn that even at the Catholic University in Washington it is proposed to encourage the young theologians in this sport. He finds the game somewhat more scientific and rather more brutal than in England (*quaere* as to this), but it has his hearty sympathy as part of the general cultivation of outdoor exercise. On the other hand, the gymnasiums which are springing up in all our colleges meet with very scant recognition, and the craze for anthropometry with even less. M. de Coubertin has a strong preference for exercise in the open air, and a great suspicion of the efficacy of gymnastic apparatus. The labors in anthropometry of Dr. Sargent at Harvard and of Dr. Hitchcock at Amherst are perhaps treated too lightly; but we confess to having read with satisfaction, as well as amusement, the gently sarcastic remarks with which the courteous Frenchman touches on the eagerness shown by some of our gymnastic directors in striving to attain a "normal" development and to manufacture a "normal" man.

The Menœchmi of Plautus. Edited on the basis of Brix's edition by Harold North Fowler. [Students' Series of Latin Classics.] Boston: Leach, Shewell & Sanborn. 1889.

To the special introduction to the "Menœchmi" has been prefixed, though in an abridged form, all that is of general value in Brix's introduction to the "Trinummus," such as information in regard to the life of Plautus and the principal manuscripts, rules of prosody, etc. Traces of haste or carelessness are discernible in the fact that the numerous examples of metrical peculiarities which Brix, as was natural, drew from the "Trinummus," have here been retained (without the references) instead of being replaced, as might easily have been done, by similar examples from the play in hand. A feature of the introduction which will commend it especially to our students, is a sketch of the many modern imitations of the "Menœchmi"; in which, however, we should prefer a more extended treatment of Shakspere's play than the editor gives. The new edition of the "Menœchmi" by Schoell appeared too recently to be available for the criticism of the text, which is mainly that of Brix. In a few cases the manuscript reading has been retained, and usually with good reason. The great majority of the changes in this edition, as compared with the original, are to be found in the commentary and critical appendix. And in the commentary lies also the greatest defect in the work. Brix's commentary is not adapted to American college students. It contains too much erudition and too many exhaustive notes. Mr. Fowler has transferred many of these to the appendix, but there still remain a great number in the commentary, which is marred, likewise, by frequent references to authorities which are not only inaccessible to the mass of American students, but, even if accessible, would probably never be consulted. A number of notes have been added from other editions, notably Wagner's, and a few, of minor importance, seem to be original. In a very few instances Brix's view is attacked, usually with reason. Some metrical notes could easily have been omitted if a short treatment of the senarius had been given in the introduction—a lack but inadequately supplied by any of the grammars.

Numerous quotations from the "Comedy of Errors" are scattered through the commentary, and some good translations of idiomatic passages insure the interest of the student.

The Nine Worlds. Stories from Norse Mythology. By Mary E. Litchfield. Boston: Ginn & Co. 1890.

'THE NINE WORLDS' is a successful attempt to retell for children of all growths the story of the old Norse gods, in much the same way that Hawthorne, in the 'Wonder Book,' has written of the gods and goddesses of classical mythology. Judiciously attuned to modern ears, the stories of Norse mythology are not only intrinsically worth the telling, but are the interesting record of a stadium in the history of the culture of our own Teutonic ancestors, a knowledge of which the recent increased attention in this direction has rendered almost imperative. The author has well succeeded in reincarnating for us these very human deities, in the midst of their characteristic northern environment. Compared with the gods of the south, they are naturally, as the impersonations of a people of a much more primitive culture, in their ideality more than a plane lower. They are nearer a condition of nature: their motives of action are simpler, their impulses more superficial, their physical needs larger and more palpable. The whole tone of the northern legends, too, is pitched in a sterner key, as befits the natural surroundings of the people among whom they were evolved and the corresponding impress made upon the manner of thought. The writer of the present stories has not forgotten this when she has found it necessary to fill out an occasional hiatus in the original myth. It was hardly necessary, however, for her to give a list of authorities; for the dramatic story of the gods as the author has written it is, in reality, as a connected whole, to no small extent the product of her own fertile imagination.

BOOKS OF THE WEEK.

Amicis, E. de. Holland and its People. Vandyke ed. G. P. Putnam's Sons. $2.25.
Ballard, Julia P. Among the Moths and Butterflies. G. P. Putnam's Sons. $1.50.
Banks, Nancy H. Stairs of Sand. Chicago: Rand, McNally & Co.
Bardeen, C. R. Home Exercise for Health and Cure. Syracuse: C. W. Bardeen.
Barr, Amelia E. The Household of McNeil. Dodd, Mead & Co. $1.25.
Betham-Edwards, M. For One and the World. John W. Lovell Co. 50 cents.
Bixley, J. E. C. The Catholic Democracy of America. Baltimore: John Murphy & Co. 25 cents.
Brown, Alton, and Brown, Mary. Famous Novels by Great Men. The Minerva Publishing Co. 50 cents.
Browne, T. S. In the Riding-School. Boston: D. Lothrop Co. $1.
Cable, G. W. Old Creole Days. Charles Scribner's Sons. $1.25.
Cooper, S. W. Think and Thank. Philadelphia: The Jewish Publication Society of America.
Cropper, J. The Faith of a Realist. G. P. Putnam's Sons.
Dane, D. "Vengeance is Mine." Cassell Publishing Co. $1.50.
Dumas, A., fils. The Lady with the Camellias. Belford Co.
Fawcett, E. How a Husband Forgave. Belford Co.
Fontaine, C. Historiettes Modernes. Boston: D. C. Heath & Co. 65 cents.
Glazebrook, M. G. Lessons from the Old Testament. London: Percival & Co.
Goss, W. L. Recollections of a Private. T. Y. Crowell & Co. $3.25.
Guernsey, Lucy Ellen. The Hidden Treasure. Thomas Whittaker. $1.50.
Gunter, A. C. Small Boys in Big Boots. The Home Publishing Co.
Guyot, Prof. A. The Earth and Man. Revised ed. Chas. Scribner's Sons.
Hall, E. The Turnover Club. Chicago: Rand, McNally & Co. 50 cents.
Halstead, Ada L. Hazel Verne. Chicago: Laird & Lee.

Sent, post prepaid, by the Publisher,

J. EASTMAN CHASE,
7 Hamilton Place, Boston.

DESCRIPTIVE LIST

OF

NOVELS AND TALES

DEALING WITH

American Country Life.

The object of this list (consisting of extracts from the *Atlantic, Critic, Nation*, and other critical journals) is to direct readers, such as would enjoy the kind of books here described, to a number of novels which, in many cases, have been forgotten within a year or two after publication. It is hoped that the publication of this and similar lists will lessen in some measure the disposition to read an inferior NEW book, when superior OLD books, equally fresh to most readers, are at hand.

Respecting the list, MR. W. D. HOWELLS writes to the compiler thus:

"I am delighted with the notion of your list of Novels about Country Life in America, and I think you have most charmingly realized it. The book will be useful to every book-lover and critic and librarian. Now that it satisfies it, I know that I have always felt the need of just such a list."

52 double-column pages. Price, 50 cents (32 specimen pages, 10 cents). Address

W. M. GRISWOLD,
Cambridge, Mass.

SILVER, BURDETT & CO.,

PUBLISHERS,

KRUELL'S CONTEMPORARY PORTRAIT-GALLERY.
"The Nation."
1865-1890.
In commemoration of the 25th anniversary of this journal, Mr. Kruell has engraved on wood, in the highest style of the art, after a recent photograph by G. C. Cox, a portrait of the founder and present editor of the *Nation*,
EDWIN LAWRENCE GODKIN.
The size of the block is 9x6 inches; the impression is on Japan paper, under the personal supervision of the artist, and is loosely mounted. *Only one hundred proofs* will be offered for sale, and each will be signed and numbered. Price, Ten Dollars, carriage prepaid, Address GUSTAV KRUELL, East Orange, N. J.
*** Mr. Kruell offers at the same price, and in the same style, proof portraits of CHARLES DARWIN (one in his prime, one in old age), ASA GRAY, WILLIAM LLOYD GARRISON, and WENDELL PHILLIPS. The edition in these cases is limited to 200 copies for all except Gray (100).
"*Certainly we may look in vain among other graphic arts for anything comparable with these portraits.*"—The Nation, January 23, 1890.

FORE AND FOUR.

To be fore-handed is almost as good as to be four-handed. To own a Remington Standard Typewriter is to be practically both. This first and foremost writing-machine is indeed chief among business facilities, and may be made helpful, not only to do correspondence, but as a salesman, and, in fact, as a general utility man.

READY OCTOBER 1.

ROBINSON ON PATENTS.

A Treatise on the Law of Patents for Useful Inventions. By W. C. ROBINSON. *LL.D., Professor of Law in Yale University. 3 vols., 8vo, law sheep, $19.50 net. Delivery additional.*

This important work, including upwards of ☞ 2,200 pages, has been in preparation for a number of years.

It fully and adequately deals with the whole field of patent law, and is believed to be *the first treatise presenting to the profession a scientific and exhaustive discussion of the principles as well as the rules and practice of patent law.*

It has been the aim of the author to place in the hands of the profession ☞ A COMPLETE PRACTICAL WORKING TREATISE, in which *might be found always at hand an answer to any question arising in the course of professional study, with the theory on which it rests and the authorities by which it is supported.* Having this end in view, *every patent case in the American and English reports has been diligently searched, and every statement bearing upon any question of patent law has been utilized in the preparation of the text.*

NEW EDITION OF

COOLEY'S CONSTITUTIONAL LIMITATIONS.

A Treatise on the Constitutional Limitations which rest upon the Legislative Power of the States of the American Union. By THOMAS M. COOLEY, *LL.D., formerly one of the Justices of the Supreme Court of Michigan, and Jay Professor of Law in the University of Michigan, now Chairman of the Inter-State Commerce Commission. Sixth Edition, with large additions, giving the results of the recent cases, by* ALEXIS C. ANGELL *of the Detroit Bar. 8vo, law sheep, 983 pages, $6.00.*

The Fifth Edition of this eminent and universally known work was issued in 1883, and seven years since that time have been so prolific in important constitutional questions that a new edition has been rendered absolutely essential. The author's duties on the Inter-State Commerce Commission have made it impossible for him to prepare the present edition for the press, and the services of Mr. Alexis C. Angell of the Detroit bar were therefore secured for the purpose. He has examined all the new cases, making use of them so far as seemed important, and *adding to the references till the whole number now reaches over ten thousand.*

Where it was necessary the text has been subjected to changes and additions.

A NEW WORK ON

FRAUDULENT CONVEYANCES.

Mr. Melville M. Bigelow, in the second volume of his treatise on Fraud (Just Ready), treats with the utmost thoroughness and practical usefulness of the subject of ☞ Fraudulent Conveyances; also of Bankruptcy in its connection with the subject of Fraud.

A Treatise on the Law of Fraud on its Civil Side. By MELVILLE M. BIGELOW, *Ph.D., Harvard. 2 vols., 8vo, law sheep, $12.00.*

Vol. I. (1888), comprising Procedure, Constructive Fraud, Deceit, etc. 8vo, law sheep, $6.00.

Vol. II. (1890—Just Ready), comprising Fraudulent Conveyances and Bankruptcy. 8vo, law sheep, $6.00.

The present volume completes Mr. Bigelow's important work, the first volume of which was so well received by the profession and the press.

It forms an entirely new and original exposition of the whole law of the subject, not, as at one time was proposed, a new edition of a smaller work on Fraud by Mr. Bigelow, published in 1877.

It is a complete and exhaustive treatise, the sole work of the kind covering the whole subject.

The work of a specialist on the subject, and of the utmost importance to those interested in this topic because of the great minuteness of exposition and illustration, on the same plan as the author's treatise on Estoppel.

LITTLE, BROWN & COMPANY, PUBLISHERS,

254 Washington Street, Boston, Mass.

A Theological Curiosity.

Familiar to our Forefathers 1,500 years ago, but not now known to one man in 50,000.

The Apocryphal Books, being the Gospels and the Epistles thrown out of the New Testament by the Council of Nice, A.D. 325; translated from the original tongues with copious Notes, and Illustrations from ancient Missals and Miniatures.

Of this work, Dr. TALMAGE has recently said:

"*Christ is the joyous boy of the fields. We are not permitted to think that the shadows of Calvary darkened His pathway as a youth, and the Apocryphal Books of the New Testament show much of the early life of Christ not to be found in the four Evangelists.*"

Price, in large 8vo, cloth, $2.00. Sold only by subscription. Agents wanted in every county. Send for circulars.

GEBBIE & CO., Publishers, Philadelphia.

BOOKS WANTED—*Executors and others* having libraries or small parcels of books for sale will find cash purchaser at full market value. Address FRANCIS P. HARPER, 17 East 16th St., N. Y.

THE NATION.—*A BOUND SET*, also an unbound set, various vols., both bound and unbound; 25,000 odd numbers. Will buy, sell, or exchange. A. S. CLARK, 34 Park Row, N. Y. City.

Charles Scribner's Sons'

NEW BOOKS.

History of the United States.

By HENRY ADAMS.

Vols. V. and VI.—First Administration of James Madison, 1809–1813. 12mo, $4.00.

"It would be difficult to speak too highly of the work as a whole. Certainly no English historian, and, we think, no American, has dealt with this difficult period in so just and bold a manner."—*New York Tribune.*

Vols. I. and II. THE FIRST ADMINISTRATION OF THOMAS JEFFERSON. 1801–1805. 12mo, $4.00.
Vols. III. and IV. THE SECOND ADMINISTRATION OF THOMAS JEFFERSON. 1805–1809. 12mo, $4.00.

Famous Women of the French Court.

Translated from the French of IMBERT DE SAINT-AMAND. By T. S. PERRY. Each, volume, 12mo, with Portrait, $1.25.

Citizeness Bonaparte.

This volume sketches the career of Josephine from her marriage with Napoleon to the period described in *The Wife of the First Consul*—the most romantic portion of her life.

ALREADY ISSUED.

THE WIFE OF THE FIRST CONSUL.
THE HAPPY DAYS OF THE EMPRESS MARIE LOUISE.
MARIE ANTOINETTE AND THE END OF THE OLD RÉGIME.

"Full of charm and interest, brilliant description, and strong, clear historical sketches."—*N. Y. Tribune.*

Two Books by Eugene Field.

A LITTLE BOOK OF WESTERN VERSE.

A LITTLE BOOK OF PROFITABLE TALES.

Each, 16mo, $1.25.

These volumes, in addition to their abundant wit and humor, reveal the tender pathos and graceful imagery of the author's mind. Some of the poems are as affecting as the mining-dialect narratives are mirth-provoking. Both volumes are exquisitely printed.

CAMEO EDITION.

Old Creole Days.

By G. W. CABLE. With Etching by PERCY MORAN. 16mo, $1.25.

In Ole Virginia.

By T. N. PAGE. With Etching by W. L. SHEPPARD. 16mo, $1.25.

The popularity of the first two volumes issued in the Cameo Edition last fall, Donald G. Mitchell's 'Reveries' and 'Dream Life,' lends interest to the publication in the same dainty form of these well-known volumes. They are printed from new plates, on fine paper.

Word Studies in the New Testament.

By MARVIN R. VINCENT, D.D.

THE EPISTLES OF PAUL—ROMANS, CORINTHIANS, EPHESIANS, PHILIPPIANS, COLOSSIANS, PHILEMON. 8vo, $4.00.

In the third volume of Dr. Vincent's popular work, the plan is continued of explaining for the benefit of English readers the meaning of all the significant Greek words and of tracing their history.

"This precious volume is not a commentary. It is not a dictionary. It fills a niche hitherto left empty. The very things which a minister ought to know about the words of the New Testament he will be able to learn here."—*Dr. Theodore L. Cuyler.*

*** For sale by all booksellers, or sent, postpaid, by*

CHARLES SCRIBNER'S SONS,
743-745 Broadway, New York.

Houghton, Mifflin & Co.'s New Books.

Cardinal Newman.

By RICHARD H. HUTTON, Editor of *The Spectator*, London. Crown 8vo, $1.00.

A book of profound interest on the career and character of a very remarkable man.

Studies in Letters ana Life.

By GEORGE E. WOODBERRY, author of 'The North Shore Watch and Other Poems,' and 'Edgar Allan Poe.' 16mo, $1.25.

A volume of essays marked by excellent critical judgment, a fine sense of proportion, and an admirably strong and clear style.

Ascutney Street.

A Story by Mrs. A. D. T. WHITNEY, author of 'Faith Gartney's Girlhood,' etc. 12mo, $1.50.

One of Mrs. Whitney's characteristic stories, wholesome, inspiring, and altogether interesting.

Piero da Castiglione.

By STUART STERNE, author of 'Angelo,' 'Giorgio,' and 'Beyond the Shadow.' 16mo, $1.00.

A story in verse, which may well be as popular as 'Angelo,' told with unusual power and intensity.

A Fable for Critics.

By JAMES RUSSELL LOWELL. An entirely new Edition, with outline Portraits of the authors introduced, by JOSEPH LINDEN SMITH. Crown 8vo, $1.00.

The Bird and the Bell, with Other Poems.

By CHRISTOPHER PEARSE CRANCH, author of 'Ariel and Caliban,' a translation of The Æneid of Virgil, etc. New Edition. $1.25.

After the Ball,

AND HER LOVER'S FRIEND. Poems by NORA PERRY. *New Edition*, complete in one volume. 16mo, $1.25.

Mr. Longfellow, upon reading the initial poem, 'After the Ball,' said he wished he had written it.

*** For sale by all Booksellers. Sent, post-paid, on receipt of price, by the Publishers,*

Houghton, Mifflin & Co., Boston,
11 East Seventeenth St., New York.

J. & R. LAMB,

59 Carmine St., New York.

CHANCEL FURNITURE.

The question is often asked, for what can you supply simple solid wood furniture for a small chancel? Here are a few prices for OAK, simple designs, best workmanship:

Altar and retable, - - -	$75 00
Reredos, - - - -	50 00
Credence, - - - -	10 00
Bishop's chair, - - -	30 00
Priest's chair, - - -	25 00
Altar-rail standards in brass, each	10 00
Top rail, - - per foot,	1 00
Clergy stall. - - - -	20 00
Clergy desk, - - - -	20 00
Lectern, - - - -	20 00
Pulpit, - - - - -	45 00

These are not extravagant prices, but you secure good material and correct designs in either light or dark wood.

For designs and other estimates send for handbook on CHANCELS.

Kindly remember, we do ALL work needed for the church interior.

Stained Glass, Decoration,
Metal Work, Mosaic, etc.

Send for illustrated handbook of any department, or call and see work at 59 Carmine Street.

Carmine Street is a continuation of Sixth Avenue south, and the Sixth Avenue cars pass the door of No. 59.

The Nation.

NEW YORK, THURSDAY, OCTOBER 2, 1890.

The Week.

THE report of the Tariff Conference Committee was a division of spoils such as takes place in some parts of the world in caves after a successful raid on the travelling public. The Binding-Twine Trust gets seven-tenths of a cent per pound, instead of one and one-fourth; but, as a compensation for this moderation in taxing the farmers, the duties on other kinds of twine and cordage are raised to one and three-fourths cents per pound, which is one-fourth of a cent higher than either house had agreed to. The sugar question was settled by the conferees making all sugar above No. 16—that is, all that has been passed through a refinery—dutiable at one-half cent per pound, and an extra one-tenth for any sugar from countries that pay a bounty, either directly or indirectly; the Secretary of the Treasury to determine whether a bounty is paid or not. A bounty is to be paid on domestic sugar of 2 cents per pound on sugar testing ninety degrees, and 1¾ cents on that testing between eighty and ninety. The provision regarding the free admission of tin plate in case the domestic production does not exceed one-third of the consumption, is amended by postponing the date of that boon till 1897. The duty on metallic tin of four cents per pound is not to take effect until 1893, and is to come off in 1895, unless the domestic production at that time has amounted to as much as 5,000 tons in a single year. The reciprocity clause is postponed to January 1, 1892, after which time, but not before, the taxing power of Congress on the articles of sugar, tea, coffee, and hides, is transferred to the President of the United States. The bill is a dreadful hotch-potch, but through it all can be discerned the robbery of the people for the benefit of special interests and classes in a higher degree and more brazen fashion than even in the Tariff of Abominations of 1828. The reduction of the revenue is estimated by the conferees at $66,000,000. Whether this will produce a deficit in the Treasury or not, the report does not say.

There is something truly pathetic in Senator Sherman's appeal to the protected Trusts and "combines" not to take advantage of the McKinley tariff, but to break up and go to competing with each other like good fellows The Trusts and "combines" began their operations under the shelter of the tariff three years ago, the Sugar Trust being the first in the field. Then came the Lead Trust, followed by the Cotton-Bagging, the Binding-Twine, the Plate-Glass, the Linseed-Oil, the Window-Glass, and ever so many more. The Republican newspapers began to threaten them with all sorts of penalties if they did not desist, and Senator Sherman made a speech in which he said that he should have no hesitation in voting to remove all duties from any article which was made the subject of monopoly in this manner. Yet not only have the duties on the trusted articles not been repealed in a single instance, not even on sugar, but in many cases (notably linseed oil and cotton bagging) they have been increased. And now Senator Sherman himself votes for these things, and then gets up in the Senate and solemnly warns these "combines" not to take the plums thrown into their laps, but to separate and compete vigorously with each other, because if they do not, he (Sherman) will some day "be as ready to vote for the repeal of this law as he is now ready to vote for it." We can imagine the derision with which this speech will be received by the Trusts.

There is an ingenious method of settling disputes about money which is in very common use, and which is known as "splitting the difference." A claims that B has borrowed five dollars of him which never has been repaid; B claims either that he never had the money or that he has returned it. The dispute is referred to a third party as arbitrator. B either owes five dollars or he owes nothing, but the arbitrator saves himself the trouble of investigating the facts by "splitting the difference," and decides that B must pay two dollars and a half, and that A must receive it as payment in full of his claim. Having thus certainly wronged one party or the other to the extent of half the sum in dispute, he departs contented, and everything is well. On this venerable principle the Conference Committee has settled the question of the tariff on works of art. The House having voted for free art and the Senate for the continuance of the old rate of duty, the matter came before the Committee with the other disputed clauses of the Tariff Bill. The House conferees were naturally committed to free art, while of the Senate conferees, four, viz., Messrs. Aldrich, Sherman, Hiscock, and Carlisle, had given assurance that they favored it. The advocates of free art felt that the matter was in the hands of their friends and awaited the decision with considerable confidence. Alas! they had not reckoned on this ancient and honorable method of settling a dispute. The Senate had voted for 30 per cent. and the House for no duty at all. The Conference Committee "split the difference," and gave themselves no further trouble in the matter. No more flagrant instance has been seen of the lack of any rational principle in our tariff tinkering than this compromise. It is wrong from every conceivable point of view, and can please no one.

Mr. P. Henry Smith puts the following question to us:

"Why is it that all industrial Europe at the present time is actually in a demoralized state because of the passage by the American Congress of a measure which is known as the McKinley Bill? Do we legislate for the United States or for the countries of Europe?"

A short answer to this question may be found on pages 164 and 165 of the last volume of our Diplomatic Correspondence, where Secretary Blaine sends to Minister Reid at Paris the resolutions of the Chicago Board of Trade in reference to the exclusion of our pork products from France and Germany. The resolutions say that "whereas, under this legislation, our exportation of hog products has diminished in value from $104,000,000 in 1881 to $59,000,000 in 1888," etc., etc., our Government is urged to take steps to remove the exclusion and reopen those markets to us. Now, what kind of an argument or answer should we consider it to be if Minister Ribot or Chancellor von Caprivi should say: "Why is it that America is actually demoralized at the present time by our pork decrees? Do we legislate for ourselves or for the United States?" Secretary Blaine, as the correspondence shows, thought that legislation which restricted our sales and their purchases was injurious to both, and this view was pressed with considerable vehemence by Mr. Reid in his communications to the French Minister. Perhaps Mr. P. Henry Smith had better address his future communications to the *Tribune*.

Since the passage of the Tariff Bill in the Senate the subject of chief concern, judging from the shower of petitions and memorials pro and con, is the Conger Lard Bill. This is another bill to protect one particular industry at the expense of another, or of several others. It is not a bill to prevent deception of the buyer of lard, but to put such obstacles in the way of selling mixtures of lard and cotton-seed oil as will give a great advantage to the producers of lard. The manufacturers of "lard compound" have no objection to a law requiring them to brand their packages so as to distinguish it from pure lard. In fact, they adopted in their business the brand "Lard Compound" two years ago. Nor have they any objection to the most stringent law against unwholesome food products. What they do object to is a lot of jesuitical provisions in the bill which fix the amount of lard compound that may be sold at one time, or in one kind of package, and prohibit the use of wooden pails or buckets, or tin cans or caddies, etc., etc. These provisions are plainly intended for other purpcses than the prevention of fraud or injury to health. A more honest way of creating a monopoly would be to enact that the manufacturers of lard compound shall pay one cent or two cents per pound of all they make to the producers of lard, or, more specifically, to John P. Squire & Co. of Boston.

Republican newspapers are discussing the evil of absenteeism in Congress, which has never before reached such alarming proportions as during the present session. "It has become a serious question," says the New York *Tribune*, "how to cure this great evil of neglect of duty by Representatives." One obvious remedy would be to remove the

immediate cause, which is the assumption by the Speaker of the power to say that there is a quorum present. Democrats cannot be expected to be regular in their attendance when their presence is seized upon as a means of forcing the passage of measures to which they are opposed; and Republicans are naturally lax when they reflect that "Tom" Reed can count a quorum if he chooses, whether they are in the chamber or not. The effectual cure for this evil is the adoption of a rule for the House of Representatives like that embodied in the Constitutions of New York and many other States, which requires that a majority of all the members shall be present and vote yea in order to pass any measure. If the dominant party has but a narrow margin, as commonly happens to the Republicans in the New York Assembly, it must keep nearly every member in his seat or it can pass no measure to which the Democrats are opposed, because 65 of the 128 members must vote yea in order to pass any measure. There is never any serious trouble about absenteeism in the New York Legislature under this just rule, and there would be none in Congress if it were adopted in that body.

"Turn about is fair play." The House of Representatives of the Fifty-second Congress, with Idaho and Wyoming represented, will have 332 members. Suppose that the Democrats elect 170, while the Republicans have but 162, and that the Democrats organize the body. Suppose that a number of seats are contested. Suppose that a partisan Democratic Committee on Elections reports in favor of unseating a Republican whose claim to his seat is so strong that a fair-minded Democrat feels constrained to make a speech opposing what he styles the "ridiculous proposition" that the Democratic contestant ought to be seated on a claim which "would not be considered by any court in any State of the Union for one moment." Suppose that other Democrats are known to share this view, and to be so averse to carrying out the scheme that several of them will refuse to vote to seat the Democratic contestant, so that it is doubtful whether a majority of the 332 members can be found who will answer yea on the roll-call. Supposing all this, does anybody believe that a Republican newspaper in the United States would maintain for one moment that the Democratic Speaker ought to have the power of compelling Republican members to enter the chamber in order to secure a quorum, and then of making their presence as effective towards consummating the outrage as though they voted in its favor? Yet that is precisely the point which was involved in the Venable-Langston controversy, with the simple change of party relations. Every fair-minded Republican will concede that the supposititious case in the Fifty-second Congress would be intolerable. All that the Democrats claim is, that the actual case in the Fifty-first Congress is equally intolerable.

The official report of the proceedings in the House of Representatives on Tuesday week, when that body unseated a member holding a certificate of election from the Governor of his State, and put another man in his place, should receive the careful attention of every thoughtful reader. That such action could be taken without a word of debate; without the reading of the Committee's report; without even "a statement of the reasons for the seating of this man," when a conscience-stricken Republican ventured to ask for it; without a verification of the presence of a quorum when the Speaker's dictum was questioned—would seem incredible if it had not really happened. Fifteen years ago Mr. Blaine declared that "the moment you clothe your Speaker with power to go behind your roll-call and assume that there is a quorum in the hall, you stand on the very brink of a volcano." Are we not so standing when the *Congressional Record* reports such a substitution of brute force for the orderly methods of parliamentary government?

The final action of the House on Mr. Kennedy's famous Quay speech amounts to a suppression of it in the permanent edition of the *Congressional Record* of one date, and allowing it to stand in the same edition of a subsequent date. If this is a satisfactory result to Quay, he must be singularly constituted. Furthermore, the final vote was far from being even a party vindication, for thirty-two Republicans voted against the expunging of the speech, thus taking the ground that Mr. Kennedy's characterization of the leader of the party as a "Judas Iscariot" and a "branded criminal" was not a censurable, but an entirely just and proper performance. Mr. Kennedy himself was not at all quelled by the act of suppression, but declared his willingness to stand before the people of the country on the speech as he first delivered it, with entire confidence that his words would be approved. We are quite sure that he will not be asked by the Republicans to stand before the people in Pennsylvania or anywhere else in order to get a verdict on his words.

The Republican managers in Pennsylvania had good cause for the anxiety which they revealed in advance concerning the character of Senator Emery's speech against Delamater, the Republican candidate for Governor, which was delivered at Bradford on Friday. The speech is one of the most crushing indictments ever made against a candidate of a great party for high office. It should be remembered that Senator Emery is a Republican of life-long party loyalty, with no "taint" of Mugwumpism or independence of any kind. He speaks against his party's candidate now because he believes him to be a dishonest man, having given notice, in advance of his nomination, that he would do so if he were thrust upon the party by Quay. He sums up his indictment of Delamater in the following three charges:

"I charge that he procured his election to the Senate of this State in 1886 by improper means; that he procured by improper means citizens of Crawford County to vote for him at the general election, and that, when a memorial had been contemplated to be presented to the Senate of the State to prevent him from taking the oath of office, he paid large sums of money for the suppression of said memorial. I charge that he did take the oath of office, thereby committing a crime against the good name and statutes of the Commonwealth.

"I charge, also, that during his service in the Senate he attempted to alter a public record, by framing a conference report on a bill before it had been properly considered, contrary to all rules and practice, signing or having had signed the names of the alleged members of the Committee, and in so doing offended the dignity of the Legislature and the laws of the Commonwealth. I make these charges without fear of successful denial, and I court an action at law, whereby I may place my proof before the people oath-bound."

In support of these charges, Mr. Emery offers a great array of evidence, some of which is already in the form of affidavits, and some of which he presents without giving the names of the witnesses, merely speaking of them as X., Y., and Z., but promising to produce them in person if he is summoned into court to sustain his charges. This is a wise movement on his part, for if he had revealed their names, the Quay-Wanamaker managers would have had no trouble in getting all the liars they desired to swear in the newspapers to the contrary effect. As the matter stands now, Senator Emery must be called into court, or his charges must be allowed to stand uncontradicted. They leave the Republican campaign in Pennsylvania in a more disreputable condition than ever. With their platform warmly endorsing a public thief and "branded criminal," and with a man at the head of their ticket arraigned by an honorable member of their own party as a briber, perjurer, and forger, the Republicans have a pretty heavy burden to carry.

The answer which Quay's candidate for Governor of Pennsylvania, Delamater, makes to Senator Emery's charges that he is guilty of bribery, perjury, and forgery, is: "I wish to say, with the fullest force and vigor of my voice, that they are wilful and malicious lies." His answer to Senator Emery's invitation to come into court and have the charges tried on the evidence which the latter is ready to produce, is: "No man lives in Pennsylvania who thinks more of probity of character in social, political, and business life than your candidate for Governor. His reputation rests in the confidence of his people, as evidenced by his overwhelming nomination and election for Senator, and in the subsequent testimonial of their approval and esteem in his nomination for the highest office in the Commonwealth." That is called by the Philadelphia *Press* "branding Emery's charges," and it may be regarded in that light in Pennsylvania. Viewed from this part of the country it looks like a very weak evasion, and as being much feebler as a defence against unanswerable charges than the weapon which the *Press* is accustomed to use with such telling effect in similar emergencies, and which it has frequently used in behalf of Quay. That is, to say flatly that the real motive of the charges is a desire to break down the protective tariff. That covers everything. If

Delamater had declared boldly his belief that Senator Emery is a free-trader in disguise, and is very likely bribed by Cobden-Club money to take the course he is pursuing, there would not have been a particle of doubt about the charges being thoroughly "branded."

What must be the feelings of Quay and Wanamaker when they find the name of Robert Ellis Thompson among the supporters of Pattison in the present campaign in Pennsylvania? Mr. Thompson is the Professor of Protection for the United States of America. After he signed the Independent address, there was no excuse for anybody to say that the issue before the people of the State was a tariff issue, because that would imply that the pupils know more than the master, which is absurd. Quay, Delamater, and Wanamaker are the catechumens of Thompson in the school of protection. If the latter says that "there is but *one issue* in this campaign: purity of the ballot, fair elections, honest and courageous men in office, clear administration of public affairs are and always will be supreme questions in a republic," it is not open to Quay to say that the true issue in the State is protection to home industry. Leave Prof. Thompson and Henry C. Lea to take care of that.

There is a touch of Quayism about the latest Republican scandal at Washington. It has been revealed that the Postmaster of the House, J. L. Wheat, a protégé of the Speaker, let the contract for carrying the mails for $5,000, on condition that the contractor should pay back to him $150 a month for his kindness in awarding him the contract. Wheat admits having received five monthly payments, or $750, in this way; but when an investigation was called for on Thursday, a Republican member, Caswell of Wisconsin, came forward with the defence that the practice of receiving money in this way "had obtained during several Congresses," that Wheat had fallen in with it without sufficient thought as to its character, but that he had now become convinced that "the money was not a proper and legitimate perquisite, and had, therefore, covered every dollar into the Treasury." That is, as he had, under fear of discovery, paid back into the Treasury what he had taken without warrant, there was nothing to investigate, since no offence had been committed. The House was not quite prepared to take this view, but amended the proposed resolution of inquiry into Wheat's conduct so as to include the conduct of his Democratic predecessors, and then adopted it. According to this view, Wheat's thievery will be made less heinous provided it can be shown that he merely followed the bad example of his Democratic predecessors in committing it.

The nomination of Sherman Hoar as the Democratic candidate for Congress in a Massachusetts district is significant of the drift towards that party among intelligent men of the younger generation. Mr. Hoar is a son of the ex-Attorney-General and a nephew of the Senator; he was bred a Republican; he is a fair type of the large class of young men belonging to the families of good standing who used to be set down without inquiry as Republicans. A quarter of a century ago the Republican party of Massachusetts was preëminently "the respectable party," and so the one towards which young men were inclined to drift. As the Boston correspondent of the Springfield *Republican* says: "It has been the feeling of the Republicans for a generation that they contained most of the respectability of the State, and that it was not honorable for a man to belong to the Democratic party." But a change has come, and the same correspondent says that now "the men who are at the front of the Democratic party ask no odds of the Republicans as regards standing in the community, and the old stigma which adhered to the Democracy in the days of the war, when most of us were taught to believe that a Democrat was as bad as a horse-thief, is rapidly being removed from the minds of the younger generation. The principles which the Democrats have proclaimed this year, in contrast with those promulgated by the Republicans, will draw to the party many who believe the Democrats are right, but who have felt that they would forfeit some of their social or business standing if they should become affiliated with the Democrats." Another illustration of changing conditions in New England is the nomination on the Democratic ticket in Massachusetts for Secretary of State of a farmer who was formerly a good Republican, but has become convinced that the interests of the farmer will be promoted by a reform of the tariff.

The eleemosynary theory of public office, as a means of support for ne'er-do-weels, has received its most striking illustration in the case of Gen. Nathaniel P. Banks. For a generation past it has been recognized by both parties in Massachusetts as a solemn duty to provide this "old public functionary" with a salary out of the public treasury, and the Democrats have discharged their share of the obligation as scrupulously as the Republicans. The Republicans, however, have at last grown weary, and the Congressional Convention in his district has just refused the General a renomination. If the Democrats had any offices to give just now, a hopeful appeal would undoubtedly be made to them, as it is their "turn"; but they have none. Indeed, unless both parties will join hands and pass a proposed bill placing him on the retired list of the army, it looks as though he had drawn his last official salary. It is melancholy, of course, to see a poor old gentleman deprived of what seems his only possible means of support, but it is a travesty on our theory of government to give the place of Representative in Congress to one whose only qualification is that he needs the pay.

The career of Gen. Banks affords an illustration of the change which has come over the public mind as to candidates for office. The present generation knows him only as a political relic, but he was a great figure thirty to forty years ago—Chairman of the Massachusetts Constitutional Convention, Speaker of the House of Representatives at Washington, and then Governor of his State. It was as "the bobbin boy" that he first came to be known, just as Henry Clay used to be styled "the mill-boy of the slashes," for he had been a poor boy and worked in his youth in a cotton-factory, giving all his spare time to reading and study, according to the old formula by which merit conquered the obstacles of poverty. We do not have "bobbin boys" as candidates for public office in these days; we do not confer place as the reward of fitness attained by industry; we do not point to a man who has been made Governor or Senator, and say to the poor boy, "You see there an example of what you may become if you will work hard, use your spare time in study, and render yourself so conspicuously qualified for a public trust that your fellow-citizens will confer it upon you." The question nowadays is, "How big a pile has he, and how much will he put up if we nominate him?"

The latest developments of the local political situation are all encouraging. In the first place, Tammany is visibly alarmed, and is calling through its solitary organ in the city press for union and harmony for the sake of the Presidential chances in 1892. A plea of this kind from the gang which has put a "knife" into nearly every Democratic Presidential candidate for a quarter of a century, is most moving. Only a few days ago Croker was eager to "go it alone" with Godfather Grant, but no sooner does his wish appear likely to be gratified than he begins to plead for harmony and union. In the second place, the straight-ticket advocates among the Republicans are modifying their demands, and are expressing a willingness to confer with other anti-Tammany forces. In the third place, we are happy to say that there is no longer any danger of precipitate action by the People's Municipal League in the nomination of its ticket.

The recent choice of a layman as President of Amherst College, a Congregational institution in New England, is followed by similar action in the case of a prominent Methodist institution in the West, Mr. Henry W. Rogers, a lawyer by profession, and only thirty-seven years of age, having just been elected as head of the Northwestern University of Evanston, Ill. Not less significant of the remarkable change in the governing forces of denominational institutions is the fact that there is only one clergyman among the twenty-one trustees of the new Baptist university in Chicago, while the head of the committee on the selection of officers is a Unitarian, another member is a Universalist, and a third is not a church-member at all. Such things would have seemed nothing short of incredible less than fifty years ago.

A GENERAL SUMMING UP.

If we were looking for a suitable text for a sermon on the final passage of the McKinley Tariff Bill, we could find nothing more appropriate than the interview with Mr. Henry W. Oliver of Pittsburgh published in the morning papers. Says Mr. Oliver:

"The new Tariff Bill has the best proportioned rates and is the most protective bill that has ever been passed."

This is the same Mr. Oliver who, as a member of the Tariff Commission of 1882-3, put his name to the following words of truth and soberness:

"Early in its deliberations the Commission became convinced that a substantial reduction of tariff duties is demanded, not by a mere indiscriminate popular clamor, but by the best conservative opinion of the country, including that which has in former times been most strenuous for the preservation of our national industrial defences. Such a reduction of the existing tariff the Commission regards not only as a due recognition of public sentiment and a measure of justice to consumers, but one conducive to the general industrial prosperity, and which, although it may be temporarily inconvenient, will be ultimately beneficial to the special interests affected by such reduction."

And much more to the same effect, ending with a bill which the Commission said would reduce the then existing tariff from 20 to 25 per cent. on the average. This report was signed by a selected list of protectionists, including Robert P. Porter, the present Superintendent of the Census; the late John L. Hayes, Secretary of the Wool-Manufacturers' Association; and A. M. Garland, President of the Wool-Growers' Association, as well as Mr. Oliver aforesaid.

If what they said then was true, it is still more so now. If what they said then was applicable to the condition of American industry in its broadest scope, agricultural, mechanical, and commercial, it is still more so now. They pointed out that excessive duties led to improvident investment of capital with consequent failure and loss. "They encourage," continues the report, "the investment of capital in manufacturing enterprise by rash and unskilled speculators, to be followed by disaster to the adventurers and their employees, and a plethora of commodities which deranges the operations of skilled and prudent enterprise." This tendency has led to the creation and multiplication of Trusts among manufacturers whose business had been inordinately stimulated by excessive duties, as Mr. Oliver and his associates said it would be.

But long before the Tariff Commission of 1882-'3 made their memorable deliverance, Republican statesmen who still hold positions of leadership had taken the same position. Said Senator Sherman in the tariff debate of 1872:

"It must be remembered that the present duties taken together are far in excess of what they were before the war, and that they have been three times largely increased since the passage of the Morrill Tariff Act of 1861. . . . The result of such duties is to secure to mechanical industries higher wages than can be earned in other kindred employments. Such excessive protection not only ceases to diversify production, but forces labor into protected employments. If the present rates of duty were high enough during and since the war, when home industry was burdened with heavy internal taxes—with stamp duties, income taxes, and high rates on raw materials—then surely they are now too high when all these taxes are removed. . . . I have listened with patience, day by day, to the statements of gentlemen who are interested in our domestic productions. I am a firm believer in the general idea of protecting their industries; but I assure them, as I assure their representatives here, that if the present high rates of duties, unexampled in our country, and higher by nearly 50 per cent. than they were in 1861, are maintained on metallic and textile fabrics after we have repealed the very internal taxes which gave rise to them, and after we have substantially given them their raw materials free of duties, we shall have a feeling of dissatisfaction among other interests in the country that will overthrow the whole system, and do greater harm than can possibly be done by a moderate reduction of the present rates of duty. And I am quite sure that intelligent men engaged in the production of various forms of textile and metallic fabrics feel, as I do, that it is wiser and better to do what is just and right, to make a reduction on their products, at least to the extent of the reduction in this bill on their raw materials, rather than to invite a controversy in which I believe they will be in the wrong."

In like manner Mr. Allison of Iowa declared in this debate that the tariff duties at that time were too high, that they were oppressive to agriculture and injurious to the manufacturers themselves. He said that the country had prospered more under the tariff of 1846 (the so-called free-trade tariff) than it had either before or since. This is interesting in the light of Mr. Allison's present position and votes.

"It is claimed," he said, "that the high rates of our present tariff are necessary because the revenue to be obtained therefrom is essential to the Government; and that if we reduce the rates at all, the effect will be the depression of all the industrial interests of the country. The tariff of 1846, although professedly and confessedly a tariff for revenue, was, so far as regards all the great interests of the country, as perfect a tariff as any we ever had. If any interest was depressed under the tariff of 1846, it was the iron interest. I do not believe that this interest, as compared with other interests, had sufficient advantage under that tariff; yet, when we compare the growth of the country from 1840 to 1850 with the growth of the country from 1850 to 1860, the latter decade being entirely under the tariff of 1846, or the amended and greatly reduced tariff of 1857, we find that the increase of our wealth between 1850 and 1860 was equivalent to 126 per cent., while it was only 64 per cent. between 1840 and 1850, four years of which decade were under the tariff of 1842, known as a high-protective tariff, but the average rate of which was about 70 per cent. *below* the existing rate, or 27 per cent. under the tariff of 1842 as against 44 per cent. upon all importations under the present tariff. Our industries were generally prosperous in 1860, with the exception possibly of the iron industry. This was the statement of Mr. Morrill of Vermont on the floor during the discussions of the tariff of 1864."

We might fill columns with similar extracts from the utterances of leading Republican Senators and Representatives dating only a few years back. What has come over the spirit of their dream? Why do we find them now advocating and voting for a tariff higher and more oppressive than any other that ever was heard of or dreamed of in our history? Why do we find them swearing now that everything is white which they called black a few years ago? At which of the two times did they speak the truth, and at which of the two were they telling falsehoods?

This is not a difficult question to answer. At the time when Oliver and Porter, Sherman and Allison, and the rest, were calling for lower duties and showing how the tariff was an injury to the country and an injustice to consumers, the tariff was not an issue in politics. Parties had not divided on it. There was no motive for deceiving people or deceiving themselves. They could afford to speak the truth. The Republican party was not then indebted to a particular class of manufacturers for a campaign fund. It had no debts of a pecuniary nature to discharge. All the conditions were favorable to candor and truth-telling. We do them the justice to believe that they would always tell the truth when they have no contrary motive. But since Mr. Cleveland and the Democratic party took ground for a moderate reduction of the tariff, rather less than Oliver & Co. recommended in 1883, and since the Trusts and "combines" and the protected classes in general put up their money to elect Harrison, the situation is changed and we see what we see.

THE SPEAKER.

ONLY one theory of the nature of the Speaker's office has prevailed in parliamentary countries since its foundation. It was framed on the very establishment of parliamentary government in England, and was carried to this country by the colonists, and has never undergone any change or alteration either in formal rules or in the minds of intelligent men. That theory is well set forth by Cushing as follows, and all other writers on parliamentary procedure fully concur with him:

"The duties of a presiding officer are of such a nature, and require him to *possess so entirely and exclusively the confidence of the assembly*, that, with certain exceptions, which will presently be mentioned, he is not allowed to exercise any other functions than those which properly belong to his office; that is to say, he is excluded from submitting propositions to the assembly, from participating in its deliberations, and from voting. The advantages of these restrictions are supposed to be threefold: (1) the presiding officer is thus left to devote himself exclusively to his official duties, and to the cultivation of the peculiar talents which they require, which would hardly be the case if he were called to take the part and sustain the reputation of a member, and *were influenced by any other ambition than that of performing well the duties of his office; (2) he is thereby secured against the seductions of partiality, and is placed beyond the reach even of suspicion*, by being excluded from engaging as a party in debates and proceedings in which it may become his duty officially to act as judge; and, third, he is relieved *from the danger of weakening his personal consideration by failing in the measures he undertakes, or by giving cause of offence to his associates*, to which a participation in the proceedings as a member would inevitably expose him."

It is obvious that it is only by maintaining rigidly the judicial character of the Speaker's functions that the efficiency or purity of parliamentary government can in any country be preserved. It is as a judge that he enjoys that "confidence of the assembly" which, as Cushing says, forms the very foundation of his authority. It is as a judge that he is expected to interpret and apply the rules. It is because he is assumed to be indifferent between the two political parties in his official action that both submit with a good grace to his decisions. He of course always, as a member of the House, belongs to one or other of these parties, but his highest qualification for the place is the general belief that he will not

allow his party predilections to influence his rulings. A parliamentary body presided over by an avowed partisan would always be on the verge of physical violence. The minority would be constantly tempted to resist what they deemed injustice by force, and parliamentary government would fall into that contempt which has always ended in the appearance of Cæsars, Cromwells, Napoleons, and Boulangers. No such man can long sit in the Speaker's chair without destroying or weakening in every member's mind that delicate respect for law and precedent on which parliamentary institutions rest, and which they never long survive.

It is quite true that it has of late been felt necessary in several parliaments, notably the English House of Commons, to increase the Speaker's control of the procedure, with the view of preventing plain attempts to obstruct or delay business and defeat the will of the majority. But the greater the Speaker's authority becomes, the more needful is it that there should be no doubt or distrust of the spirit in which he exercises it. The larger his powers, the more thoroughly judicial should his temper be, the more carefully should he avoid all appearance of either personal or political partiality.

To illustrate this, let us suppose that when the Speaker of the House of Commons was armed with the greatly enlarged powers which he now possesses over debate, he had come out as a strong and bellicose Unionist, had snubbed and sneered at the Gladstonians, refused to let them "catch his eye" when he pleased, and avowed openly his intention to push the Irish Coercion Bill through to the best of his ability as just what the Irish rascals needed: what a frightful scandal it would have been considered. Suppose, in addition to this, he had left the chair to stump his own constituency against Home Rule, and had loaded the Opposition with abuse, and told his constituents what measures he was going to pass and what to defeat—had, in short, taken openly the position of the party leader—that is, of Balfour and Salisbury; suppose that the Conservatives had supported him in this and shouted, "That's the talk," "Go for 'em, Art.," "Thank God, we have a man in the Speaker's chair at last," what a profound sensation it would have produced throughout the civilized world; what a heavy blow most sober-minded and intelligent men of all countries would feel had been given to parliamentary government everywhere.

And yet we have been witnessing just such a spectacle in this country within the last three months. We have seen this theoretically judicial functionary openly assuming the duties of the leader of his party in the Legislature, and putting himself in direct charge of pending legislation, and seizing for the use of the majority every power, short of physical force, within his reach for the passage of such bills as he approved of, and finally abandoning his place for a stumping tour in his own State, during which he denounced the minority, and produced a full legislative programme in the character of the chief party manager.

Let us admit, for the sake of argument and illustration, that his plan of making a quorum (which he himself denounced vigorously ten years ago) by counting every member whom he sees within the House, is a good one; is it not obvious that this power of seeing members—that is, of substituting his personal testimony for that of the journal—is one which increases enormously the need of the confidence of the House in the judicial quality of his mind and in the rectitude of his character? The more there is left to a man's discretion in dealing with other people's interests and rights, the stronger must be the guarantees of his honesty and impartiality. But Speaker Reed has actually offered the world the grotesque spectacle of increasing partisanship in conjunction with increasing authority and greatly enlarged discretion. Hear what Gen. Garfield said as to the danger of this new power, in 1880:

"Who is to control his seeing? How do we know but that he may see forty members more for his own purposes than there are here in the House? I think my friend from Virginia will see that he lets in the one-man power in a far more dangerous way than ever has occurred before in any legislative assembly of which he and I have any knowledge."

Hear also what Mr. Blaine said of it when he was Speaker in 1875:

"There can be no record like the call of the yeas and nays; and from that there is no appeal. The moment you clothe your Speaker with power to go behind your roll-call and assume that there is a quorum in the hall, why, gentlemen, you stand on the very brink of a volcano."

In other words, the power which is now claimed and exercised for all sorts of purposes by this furious and reckless partisan, a power absolutely destructive of all the best traditions of the Speaker's office, is one which these two prominent Republican leaders pronounced, in times far more exciting than those in which we now live, unfit to be given to any Speaker, as Speakers then were—that is, before any Speaker had openly taken charge of money-making legislation, and browbeaten the minority as public enemies. We look with confidence for the judgment of the country on this wanton attempt to destroy one of its most valuable possessions—the respect within the walls of the Legislature for law and justice and decency.

THE LEADER OF SOCIETY.

Rumor has it, and it is not an improbable rumor, that Mr. Ward McAllister has been offered $50,000 by Mr. Abbey for a winter's course of lectures on Society. Whether Mr. McAllister will accept remains to be seen, but we should say that the chances were that he would accept. The offer is a very flattering one, and evidently by no means an empty compliment. Mr. Abbey backs his opinion of Mr. McAllister's popularity with a mighty sum, and Mr. Abbey is no mean judge of what takes with the American people. We believe there is today no man in the country who excites so much popular curiosity, particularly in the West, as Mr. McAllister, simply because he is supposed to hold the key to what a vast body of people consider an enchanted land, the region called "Society," or more particularly "New York Society." The eagerness to get into it, and the desire to know how to get in, and how to behave when in, are every year ravaging a greater and greater number of American bosoms; and the pressure on the barriers is becoming every year more dangerous. In no capital is Society by any means as hard to enter as it used to be. In every capital a crowd of almost uncontrollable newly enriched people are jostling each other fiercely at the golden gates, and offering the porter fabulous sums to let them squeeze through. But the crowd is kept down in European cities by the greater slowness with which fortunes are made. Curiosity, too, about Society is much less there than it is here, because nearly all aspirants have either had glimpses of it before they actually became candidates for admission, or have received through mere filtration from above, in the course of their previous lives, more or less acquaintance with its usages. There is hardly a newly enriched man or woman in England, struggling to get into the upper circles, who has not had, before he actually came to close quarters with his problem, a certain familiarity with dinner-giving and ball-giving, perhaps on a scale of some luxury. What he gains by social promotion is, therefore, in most cases, simply more distinguished company at his entertainments.

In the United States the conditions are different. Here, as a rule, the candidate for admission to Society arrives at the barriers with hardly any equipment but his checkbook. Neither he nor his wife knows anything about dinner or ball-giving, or about etiquette in general. The way "Society ladies," "club men," and others behave when in each other's company is a great mystery to them both, which they are dying to solve. Hence the demand for "manuals of etiquette," and hence the minuteness of the directions about the minor morals into which these works have to descend. Very often they have to begin with such elementary matter as cautions against spitting on carpets, or using the dinner-knife as a shovel.

The number of these people who have acquired enough money to get into Society, particularly in the West, is enormous. Every year makes additions to the army of them who, having already "travelled extensively in Europe," are dying to "bring out their girls" or marry their boys among the haughty aristocrats who, they fondly believe, fill the mansions in Fifth and Madison Avenues. To this rather helpless and simple-minded multitude Mr. McAllister appears as a kind of Moses, who can lead them into the land of promise. They think he can decide who is fit for "Society," and who is not, and that he may be propitiated into indulgent views about manners and general outfit if properly approached. The report that he had said there were only 400 "Society people" in New York, sent a thrill through the mass which has hardly subsided at this hour. They had no idea the number was so small, and the announcement excited both their hopes and fears to the highest pitch. What he really did say, we are informed on all but the highest authority, was, that there were only about four hundred people in New

York, not "fit for Society"—God forbid!—but who were in the habit of giving dinners and other more or less costly entertainments.

The history of this speech of his has been very droll, and furnishes a striking illustration of the place he fills in the popular imagination. It was treated by the newspapers as something very like the Venetian "Closing of the Council," that is, a final determination who were the ladies and gentlemen of this community. "Official" and "semi-official" lists of them were concocted, sold, and read with great delight or deep depression, as the case might be; and the "Four Hundred" has actually passed into popular parlance as a not wholly humorous designation of the beginnings of an American aristocracy. The fortune of the selection abroad was even more illustrious. In the London *Daily News* the other day, we saw the Four Hundred of New York described as the descendants of a body of "Old Dutch burghers," who lived absolutely to themselves, and constituted one of the most exclusive societies in the world.

Of course Mr. McAllister is not responsible for this nonsense. He knows better than anybody the curious material of which his world is made up, and the smallness of its pretensions to any distinction but that of wealth. All he claims is, that there is something in New York called Society, in which people eat and dress well, and amuse themselves expensively, and that he has more to say than any other one person about the time and manner in which the newcomers can be admitted to it. Some of those who were in it before he appeared on the scene flout his pretensions, it is true, and in moments of excitement call him "a cad"; but to the aspirants he is the very glass of fashion and mould of form, the most interesting, and for certain purposes the most powerful, living American. Wine merchants in particular reverence him much, for he can do a great deal for a brand of sherry or champagne; and the students of etiquette look up to him as tyros in the law do to the Justices of the United States Supreme Court. Even the haughtiest mothers bringing daughters "out" cannot afford to despise his help. Young men who live in boarding-houses, and long for acquaintance with "nice people, don't you know," look on him with awe and admiration. To country people, especially the girls, who come to see the city sights, he typifies all they have read or heard of life at foreign courts, and they fancy he rules over a body of gay people not unlike the Society of the Burg at Vienna. In truth, in the present temper of the American people, laden as they are with a surplus, and eager to spend it in some splendid and luxurious fashion, he is the hero of the time. What kind of a lecturer he will prove we do not venture to guess. Doubtless his success, if he succeeds, will be due to the solid chunks of knowledge he will communicate rather than to the charms of his style. We fear that he cannot succeed equally well as a lecturer and author. If his book fulfils the great expectations entertained of it, it must in some degree interfere with the interests of his platform efforts. But in one way or the other we may be sure he will strengthen his hold both on "Society people" and the people who are getting ready for Society.

BOULANGISM UNMASKED.

PARIS, September 18, 1890.

EUROPE has never been more calm than it is at present: the Triple Alliance professes to be purely defensive; the sovereigns exchange visits and uniforms. The present calm reminds me of the beautiful verse of Racine in "Iphigénie—

"Tout ce tait, et l'armée et les vents et Neptune."

In France the Government has, so to speak, no more difficulties to deal with. M. Constans, the Prime Minister, is the uncontested leader of the Republican party, and it must be said to his credit that he triumphs with great modesty. "Je suis," said he the other day, "un vieil universitaire que le hasard a fait ministre." In this dead season we were reduced to comparing the merits of the two last successful novels, 'Notre Cœur,' by Guy de Maupassant, and 'Cœur de Femme,' by Paul Bourget. But the calm was broken by the publication in the *Figaro* of a succession of articles which appeared under the title "Les Coulisses du Boulangisme."

The author of these "Confidences" does not sign his articles, but it is well known now that he is a M. Mermeix, one of the Deputies from Paris, who belonged to the Boulangist organization while Boulanger's party had a sort of semi-official existence, with its committees called national committees, its papers, its lecturers, its secret funds. Who is M. Mermeix? It is quite possible to represent the "cité-lumière," as Victor Hugo called Paris, the great capital which thinks itself at the head of civilization, and to be perfectly unknown. M. Mermeix has suddenly risen from complete obscurity; he has a duel a day; he challenges and is challenged on account of his "Confidences"; he is wounded, always slightly wounded; he is always ready to meet the persons who accuse him of inaccuracy, economy of truth, calumny, baseness, ingratitude towards his former chief. He is still a young man. He began life as a reporter, and developed in that capacity a great activity, a certain suppleness of intelligence, and a sort of photographic memory, which are the leading characteristics of a good reporter.

Did he belong to any party? No. He went to Frohsdorf after the death of the Comte de Chambord, and reported all the incidents of the funeral, of the journey of the Comte de Paris, his family, and the representatives of the great Legitimist families, in a manner to satisfy the most ardent Royalist. I have been told that on this occasion he received from the Comte de Paris the present of a pin, which probably still at times adorns his cravat. When the Boulanger star began to rise, M. Mermeix followed it, and threw his lot among the followers of the enigmatic General, who came from all the corners of the horizon. Shall we be so severe as to say of them, as Corneille says of the men who were conspiring against Augustus, in "Cinna"—

"Un tas d'hommes perdus de dettes et de crimes,
Que pressent de mes lois les ordres légitimes,
Et qui, désespérant de les plus éviter,
Si tout n'est renversé ne sauraient subsister"?

Shall we use the words of Tacitus, repeated with so much effect by Gambetta in the great speech which made him famous, when, referring to the men who made the *Coup d'État* of December, he described them as "ære alieno et vitiis onustos"?

It has at all times been the fate of the enigmatic men who, in the midst of the confusion of parties, are working for their own ambition, to be surrounded by dubious characters. How was the Boulangist party recruited? What were its objects? This political problem is receiving its solution; the "Coulisses du Boulangisme" throw more light on it than did the indictments of M. Quesnay de Beaurepaire, who was the public prosecutor in the great trial of Boulanger, Rochefort, and Dillon before the French Senate. One of my English friends, who does not believe in the future of republican institutions in France, has invariably asked me for twenty years, when I met him: "How does the army feel on the subject of your politics? Is there no general who will take the army in hand and use it for the benefit, if not of monarchy, at least of himself?" It seemed almost incredible to him, as it probably seems still, that an army of a million of men, recruited from all ranks of the people, should be no political factor at all.

It would take too long to give the reasons for this political inertia; let us accept it as a fact. Marshal MacMahon, who is a Marshal of France, who, to be sure, suffered a great defeat in the late war, but who has a fine military record and bears the title of Duke of Magenta, never dreamed of a *coup d'état;* and when the elections which followed the 16th of May condemned the policy his Ministry had adopted, he changed his Cabinet and finally resigned. Marshal Canrobert, who is probably the most popular man in the French Army, and who is a Senator, has always shown the same spirit. In fact, not a single general ever gave any hope to those who dream of a revolution or a *coup d'état* till General Boulanger became Minister of War. It must not be forgotten that he was the nominee of the most advanced Republicans—of those who call themselves the Radicals. From that day he contrived to keep himself always before the public; he could be all things to all men; he could be theatrical; he was ubiquitous. His enemies as well as his friends were not long in discovering that he had no fixed object but his ambition; that his political phraseology was but a figment; that he was not dogmatic. He became a sort of enigma, in consequence of a kind of versatility and of the contrast between his personal tastes and his language, between the apparent decision of his character and the indistinctness of his real aspirations.

A great American statesman whom I saw long ago, in the days of Napoleon III., remarked to me: "It seems to me that you have always four political parties in France; and when one is in power, the other three combine against it." The remark was very correct, and it is still so, though the Legitimists and Orleanists are now merged into the same party, the Royalist party. We still have four parties: the Republicans in power, whom we call the Opportunists; the Republicans out of power, who go under the general name of Radicals; the Royalists; the Bonapartists. When a general election takes place, coalitions of the parties in opposition are formed against the Government—more or less avowed, according to the circumstances. The difficulty for such coalitions is to find a cry. In 1885 the cry was Tonquin, and, in many places, besides Tonquin, the new law which excluded the priest and religious instruction from the school. The success of the Opposition was great, and there was a minority of 200 members against the ruling party, consisting of Republican Opportunists. At the time of the last general elections, Tonquin was almost forgotten, the *Kulturkampf* had lost its first

ardor; Boulanger offered himself to all the malcontents. To the Radicals he promised the revision of the Constitution; the Monarchists he gave to understand, if he did not say so distinctly to them, that a revision of the Constitution might lead to monarchy, and that no limitation of the sovereignty of the people would be opposed by him. Such was the popularity of the man that the Republican party thought it necessary to replace the *scrutin de liste* with the *scrutin d'arrondissement*. If the general ticket had been retained, it was understood and already accepted by all the malcontents that Gen. Boulanger should head all the tickets in all the departments, whether his name should be followed by Republican, or Bonapartist, or Royalist names. He was to be the great elector, to make the tickets for the whole country; he would have obtained in this way a real *plébiscite* and become the Dictator of France.

History will some day find it difficult to explain the rise and downfall of Boulangism. The "Coulisses du Boulangisme" take us behind the political curtain and show us a sort of comedy which is at the same time comical and saddening. The minor actors in the comedy will soon be forgotten—their names are hardly worth mentioning; but Boulanger himself will perforce have a place in the pages of French history. He will also have his legend. You will find for many years in some cottages, in some country inn, the portrait of the dashing General on his black charger. The philosophy of Boulangism will be explained by future historians, who will find in it a proof of the hidden hero-worship which exists in the Latin race. In want of the real hero, the popular mind had seized a virtual hero, a virtual man of action, a virtual deliverer of Alsace-Lorraine. What this virtuality was, we all know now; and it is not without a sense of shame that many speak of the man of action who ran before danger, of the political adventurer who dreaded adventures. Much dirty linen is washed under our eyes in these "Coulisses du Boulangisme," and all sincere men of all parties cannot help suffering at the spectacle which is placed before their eyes. The general impression which these revelations produce is one of contrition: we see more clearly than we did before that with universal suffrage corruption becomes universal; that a democracy becomes a plutocracy; that political power is the way to wealth, to pleasure, and is no longer the price of pure patriotism; that France is sadly in need of great men, of statesmen, of political guides. Boulanger is fallen, but France herself is humbled. She must feel that Boulanger is not a Napoleon and that Jersey is not St. Helena.

THE NEW PARLIAMENT IN JAPAN.

TOKIO, August, 1890.

IT is a fact suggestive of the frequent failure among Japanese to appreciate certain of our points of view, that there is not a person in Japan to-day who knows the total number of national electors or of the votes cast at the national election of July 1. It has simply not occurred to the officials to take measures for compiling the complete figures. Some estimate may be formed, however, from scattered reports procured for me by the Government. The figures reveal an extraordinary eagerness to exercise the new franchise. The electors numbered very nearly 500,000, and the average voting percentage reached, if it did not exceed, the high figure of 90. Even in apathetic Tokio the percentage rose to 83, and in Osaka to 90; while in some of the provincial constituencies the remarkable record of 97 and 99 was attained. Candidates, too, were plentiful. The average for the whole country was 3 or 4 for each seat, but in many country districts a list of from 5 to 9 appeared, and in Tokio itself there were 93 candidates for 12 places. From the fact that independent candidacies formed a large proportion (one-third) of the whole number, we may appreciate, on the one hand, the high estimate set upon a seat in the new Parliament even by those who have hitherto avoided politics, and, on the other, the limited membership of the bodies calling themselves "parties," and the extent of the reserve force of citizenship ready to show active interest when political power is given to it.

The cardinal fact, however, which has been made clear is, that an election characterized by a hot scramble among candidates, and by the greatest interest on the part of electors, can be held here in the most placid and orderly manner. Needless to say, the unfriendly prophets who for several months have misrepresented affairs here in the foreign press would have had it far otherwise. But, excepting an insignificant case or two of disorder or intimidation, the 1st of July was everywhere a Sabbath of peace and calm.

The constituencies were divided in the most unaccountable manner. In Tokio they averaged 350 electors each; yet one of them contained 1,600, another 182. In country districts some reached 3,000, others only 300. In Saitama province a constituency containing 320 electors returned one member, while a contiguous one in the same province, returning two members, held over 7,000 electors. Such an arrangement was, of course, of the grossest unfairness to candidates. It was not a case of gerrymandering, however, as it would have been had it occurred in any other country: the ordinary local units of county, town, and ward were preserved and taken as a basis, and it was simply another case of failure to realize one of our elementary points of view.

The quality of the material composing this initial national Parliament is, of course, of the first consequence. A few of the choicest spirits, such as Mr. Fukuzawa, have caused some disappointment by refusing to stand; others of conspicuous merit and ability, such as Mr. Hatoyama (a Yale graduate, until recently a legal adviser to the Government, and a professor in the Imperial University), have been defeated by less worthy candidates; while from the provinces will come many men of only ordinary calibre and of limited experience. But on the whole the best talent of the country, the leading minds in every department of activity, have been returned, and certainly not our own country, perhaps no European nation, can show a legislature containing such a large proportion of its best intellectual material. The present occupations of 217 out of the 300 members of the Lower House (*Shiugi In*) are distributed as follows: Agriculture, 77; no occupation, 36; membership in local assemblies, 24 (of these 13 are presidents); Government office, 24; law, 17; trade, 14; journalism, 11; education, 5; banking, 4; medicine, 3; mining, 1; art, 1. That there will be many of tried parliamentary experience is certain, for at least thirty-five have been members of local assemblies and eighteen of them have served as presidents. To be sure, the prominent party men, those who devote themselves almost entirely to politics, are present in large numbers; but this class of citizens represent here, much more than with us, political integrity and earnest thinking. In rank the membership is thus divided: *shizoku* (samurai), 35 per cent.; *heimin* (commoners), 65 per cent.; so that the prophecy of some that this would be a *shizoku* Parliament only is by no means verified.

A glance at the Tokio delegation will convey an idea of the general character and standing of the members-elect. Here is Tanimoto, formerly Paymaster-General of the Navy, President of the Tokio Street-Car Co., and now President of the Tokio Stock Exchange; Kazama, a farmer's boy who came to Tokio so poor that he could study law only by talking with other students, now a successful lawyer and member of the Tokio Assembly; Ota, apprenticed to a wine-merchant, but afterwards successively South Sea trader, editor, founder of a free school, and Government official, now manager of the Stock Exchange and President of his District Assembly; Oyagi, formerly a feudal noble, now a professor of law; Tsuda, diplomat in Holland under the old Shogunate and in China under the present Government, then judge, now Senator; Kusumoto, formerly Governor of Niigata, Vice-Governor of Tokio, Vice-President of the Senate, now President of the Tokio Assembly; and there are dozens of others who have equally good records. Kusumoto and Tsuda are among the candidates for the Presidency of the lower house, as is also Mutsu, the recently returned American Minister. Two things may be predicted: (1) that no Government official will get the Presidency; (2) that none but a Tokio man can hope for it.

A word must be said about the success of the various parties and the probable proportion between Government and Opposition strength. Estimates vary (for party sympathies are not always avowed here), but roughly the members will stand: *Daido* (United) 60, *Jiyu* (Radical) 50, *Kaishin* (Progressive) 50, Independent 140. Of the latter the Government may count on 80. The strength of the first three groups united (for, as I wrote lately, a union is imminent) will be 160, plus a score or more of Independents; so that the Opposition seems sure to have a safe working majority in any case. Already the Government realizes this, and is acting so as to take some of the wind out of the Opposition sails, by amending those obnoxious measures which would be likely to offer the greatest chance of an immediate Opposition victory. The law regulating political meetings and associations, Bismarckian in its restrictions, has been remodelled; and before November comes, the hateful Peace Preservation Regulations of December, 1887 (much discussed in your columns in the spring of 1888), will be repealed, and the unduly severe press laws revised.

One thing must be clearly understood abroad, that the success of the Opposition in obtaining a majority of the seats means not the slightest danger to stability of government or efficiency of administration. Neither the measures nor the men of the Opposition are anything but reputable and conservative. Not the measures, for perhaps the most radical and visionary of those that are advocated is the introduction of trial by jury! Certainly not the men, for all three of the leaders, Count Itagaki, Count Okuma, and Count Goto, though counted among the "outs," belong historically to the very band of Restoration leaders who now control the Government (Goto is, in fact, a member of the Ministry), and are at this moment using their Opposition strength to secure by compromise a more important influence in the control of affairs; while the lesser lights, men of the sort I have already described, are both by character and surroundings too high in the social, the political, the industrial, the mercantile world, to be anything but conservative,

In short, it must not be forgotten that "Radical" and "Liberal" are purely relative words in Japanese politics; that there are in fact no crying grievances; that the real sting of whatever measures are obnoxious is that they are imposed by a close corporation of rulers, who, be it said, have safely conducted the Government through great crises, and, being but men, naturally do not choose as yet to surrender their powers completely to others—others, too, who, though quite as good, perhaps, have not yet proved their capacity. It is the more needful to insist on this utter absence of any elements of instability or of dangerous radicalism, as an impression seems to have been received in our own country that the political outlook here is ominous—an impression wholly without foundation.

Of the House of Peers it is premature to speak. The nominations by the Emperor have not yet been made, and its composition is as yet not entirely certain. It is likely, however, that none of the new nobility whose services have marked them out in public estimation for a seat will fail to receive it; that its membership will vie with that of the lower house in ability; and that its first President will be Count Ito, the framer of the Constitution.

J. H. W.

Correspondence.

A FORCE BILL FOR YOUNG MEN'S CHRISTIAN ASSOCIATIONS.

To the Editor of The Nation:

Sir: Those who are so zealous for the "Force Bill" before Congress may read the following incident with much profit, taken from the *Andover Review* for October (p. 371). The writer is a clergyman who resolved to suspend most of his pastoral duties for a while, and spend some time in personal contact with laboring and business men, endeavoring to find out their habits of life and thought, opinions, moral and religious, and the conditions under which they had to shape their behavior, etc. The incident is as follows:

"It was stated again and again that the negro was not allowed in certain hotels and restaurants. I asked an intelligent, respectably dressed young negro, who was a bookkeeper for a loan company, if he would go with me to different eating-places and see how he would be received. After a little hesitation he agreed, and we first went together to a highly respectable restaurant, and were received and served, so far as I could see, exactly alike. We could not see any difference. To avoid any possible advantage caused by our going in together, we next agreed that he should go to the next place alone, and I would come in a little later. He went to one of the most fashionable caterers in the city, gave his order, and was served politely and promptly. I came in a little after and found him enjoying himself, very much surprised to find matters as they were. We next went separately to another house, which, I have been told, refused to let the negroes come in, and there my friend disposed of his meal with no disturbance except possibly to his digestive apparatus. We then made a move on the city Young Men's Christian Association, and the negro applied for a full membership in the Association, while I waited in the reading-room. He gave satisfactory references, but, after some conversation, was politely refused admission on the ground of color, and that only."

This occurred, not in South Carolina or Georgia, but in Topeka, Kan., and the incident ought to speak for itself to religious people who are allowing politicians to make dupes of them for a lease of power which they cannot obtain by an appeal to intelligence and a sense of justice. Perhaps if the "Force Bill" were applied to Young Men's Christian Associations, it would do some good.

Very truly, J. H. H.

New York, September 25, 1890.

RESPONSES.

To the Editor of The Nation:

Sir: (1.) In connection with your remarks in No. 1317 (September 25), concerning nocturnal inversions of temperature, it may be in order to state that around the bay of San Francisco, during the colder season of the year, there are frosts at night at the lowest altitudes, but none at higher. The frost-line is very nearly at 100 feet above sea-level. Below this line the gardener finds it necessary at night to cover such delicate flowers as the calla lily, which, when above it, can be left exposed without danger.

(2.) The staccato cheer was introduced at Harvard by the Class of 1866.

A. D. Hodges, jr.

Notes.

The house of Sampson Low, Marston & Co. was formerly the English intermediary of the American house of Harper & Brothers, and still has its imprint on the English edition of *Harper's Magazine*. It is now announced that this relation will be superseded in favor of a new firm, styled James R. Osgood, McIlvaine & Co., about to be established in Albemarle Street, London. Mr. Osgood needs no introduction to the American public. Mr. Clarence W. McIlvaine, the junior partner, has been for several years in the employ of the Messrs. Harper. The hope is expressed that the new arrangement "will tend to promote still closer and more friendly connections between authors and publishers" on both sides of the Atlantic.

Houghton, Mifflin & Co. will bring out during the present season a Life of Richard H. Dana, jr., by Charles Francis Adams, in two volumes; a Life of William Gilmore Simms, by Prof. W. P. Trent, in the "American Men of Letters" series; a Life of Francis Wayland, by Prof. J. O. Murray, and of Charles G. Finney, by Prof. George Frederick Wright, in the series of "American Religious Leaders"; a Life of Lewis Cass, by Prof. A. C. McLaughlin, in the series of "American Statesmen"; 'The Genesis of the United States,' by Alexander Brown, in two volumes; 'The Discovery and Spanish Occupation of America,' by John Fiske; 'Christopher Columbus,' by Justin Winsor; 'A Browning Dictionary,' by George Willis Cooke; the seventh of the eight parts of Prof. F. J. Child's 'English and Scottish Popular Ballads'; 'Verses along the Way,' by Mary E. Blake; 'The Inverted Torch,' by Edith M. Thomas; 'Songs of Life,' by Edna Dean Proctor; 'The Bird and the Bell, with Other Poems,' by Christopher Pearse Cranch; 'Lyrics for a Lute,' by Frank Dempster Sherman; 'Representative Sonnets by American Authors,' selected by Charles H. Crandall; 'American Sonnets,' edited by Thomas Wentworth Higginson and Mrs. E. H. Bigelow; 'The Divina Commedia of Dante,' translated into English prose by Prof. Charles Eliot Norton, in three volumes, and a new edition, uniform with the foregoing, of his translation of the 'Vita Nuova'; 'Over the Teacups,' by Oliver Wendell Holmes; 'A Sketch of Chester Harding,' an autobiography edited by his daughter, Margaret E. White; 'A Ward of the Golden Gate,' by Bret Harte; 'Strangers and Wayfarers,' by Sarah Orne Jewett; 'Walford,' a novel, by Ellen Olney Kirk; Hawthorne's 'Our Old Home,' illustrated freely with photogravures; Longfellow's 'Hiawatha,' similarly illustrated; 'The Art of Playwriting,' by Prof. Alfred Hennequin; 'The Silva of North America,' by Prof. Charles S. Sargent, the first of twelve quarto volumes each containing fifty plates; and 'The Butterflies of the Eastern United States and Canada,' by Samuel H. Scudder.

The Messrs. Putnam will put on the market limited editions of the late Sir William Stirling-Maxwell's 'Annals of the Artists of Spain,' in four volumes (large-paper and small-paper), and of "Heroes of the Nations," a series edited by Evelyn Abbott, M.A., of Oxford, which is introduced by W. Clark Russell with 'Nelson and the Naval Supremacy of England.'

Duprat & Co., No. 349 Fifth Avenue, invite subscriptions to an *édition de luxe* of Shakspere's 'Antony and Cleopatra,' with an introduction by Dr. W. J. Rolfe, and seventeen illustrations designed and etched by Paul Avril. One hundred and fifty copies will be printed on the presses of D. Jouaust.

Henry Holt & Co. will publish immediately 'Our Dictionaries, and Other English-Language Topics,' by R. O. Williams.

'The Life, Letters, and Friendships of Richard Monckton Milnes, Lord Houghton,' by T. Wemyss Reid, and 'English Sanitary Institutions, Reviewed in their Course of Development and in some of their Political and Social Relations,' by Sir John Simon, are in the press of the Cassell Publishing Co., together with 'Flower de Hundred, the Story of a Virginia Plantation,' by Mrs. Burton Harrison.

The J. G. Cupples Co., Boston, announce 'Penelope's Web: An Episode of Sorrento,' by Owen Innsly, and 'Joe Cummings; or, The Story of the Son of a Squaw in Search of his Mother,' by himself.

Funk & Wagnalls have arranged for the authorized publication of Edwin Arnold's new poem, 'The Light of the World.' It will appear in October.

The Salem (Mass.) Publishing and Printing Co. have nearly ready for delivery a small edition of the Proceedings at the Meeting of the Thomas Hooker Association held at Hartford, Conn., on May 15, 1890. The same firm are about to bring out 'The Emery Genealogy'; Part II. of 'Notes and Additions to Babson's History of Gloucester, Mass.'; and 'Broad Street Epitaphs' and 'Chater Street Epitaphs' (Salem).

'Two Lost Centuries of Britain,' namely, the period immediately following the departure of the Romans, is the title of an historical study by William H. Babcock, which J. B. Lippincott Company will shortly issue.

S. C. Griggs & Co., Chicago, promise 'Civilization: An Historical Review of its Elements,' by Charles Morris of Philadelphia, and 'Hindu Literature; or, The Ancient Books of India,' a popular account by Mrs. Elizabeth A. Reed.

One sign of the increasing interest in Oriental life is the issue of manuals of history and literature, which serve to diffuse general ideas on the subject. Under the title, 'Arabic Authors' (London: William Heinemann), Mr. F. F. Arbuthnot has given an entertaining sketch of Moslem literature in the Arabic language, from the pre-Islamic poetry to the seventeenth century of our era, mostly biographical and anecdotal. In general he follows good authorities, though he in some cases retains statements that have been set aside by recent researches, as in his accounts of Lokman and of the Moallakat or Suspended Poems. The book would be improved by the introduction of literary criticism; it is too largely biographical and statis-

tical. The sketch of Mohammed's life might profitably be shortened, and more space devoted to pointing out the peculiarities of thought and style of the Koran. It is precisely the Arabian idea of literary style that is an unknown quantity in Western thought, and it deserves to be expounded for the benefit of Western readers. Nevertheless, Mr. Arbuthnot has collected much interesting matter, and his book is welcome; college instructors may find it useful as a text-book. In the preface he calls attention to the present movement in England to revive the old Oriental Translation Fund, which was established in 1828 and did good work for fifty years. It is to be hoped that the movement may succeed.

The "Finger New Testament," which comes to us from Thomas Nelson & Sons, well deserves its name, having but a finger's length, the breadth of two, and the thickness of a third of an inch (or *pouce*, as we may say in French, to preserve the standard of measurement). For its minuteness the type is remarkably legible, but one can barely use this little curiosity—except for memorizing texts or for the most casual reference—unless with the aid of a magnifier. There is a neat, flexible binding with rounded corners, and the whole thing is nicely calculated for the vest pocket.

A large amount of expert writing is embraced in the third volume of 'The International Manual of Anthony's Photographic Bulletin' (E. & H. T. Anthony & Co.), which has, in fact, a double editorship, English and American. The samples of prints and processes are very numerous, and serve to embellish the well-packed pages. A second edition of the 'Photographer Instructor,' edited by W. I. Lincoln Adams and Prof. Charles Ehrmann (Scovill & Adams Co.), reaches our table at the same time with the foregoing.

In *L'Art* for August 1 (Macmillan), M. Émile Michel begins an elaborate discussion of Rembrandt's drawings, of which a great number of fac-similes are exhibited in connection with the text. The same number contains a full-page etching after Bonnat's portrait of Alexandre Falguière, an artist who has won distinction both as a statuary and as a painter. In No. 630, August 15, there is an etching of equal importance from Boldini's portrait of the composer Verdi, crowned with a silk hat, a muffler about his neck, and an expression in harmony with these suggestions of a bitter cold morning.

The pastels and drawings of Millet form the subject of one of the leading articles in the *Portfolio* for September (Macmillan), by Julia M. Ady, who has something more to say in a future number. The most striking etching is Herbert Dicksee's "Lion Drinking."

Artistic Japan (New York: S. Bing) completed its fourth volume in May, the number for that month containing an excellent first article by A. Lequeux on the Japanese theatre. Numerous cuts from Japanese drawings illustrate this writer's account, and more especially helpful is a folding colored plate showing the stage and interior of the theatre.

The latest map of Africa may well be the best, and the Dark Continent has just been delineated anew, in three sheets, in Part 19 of Hachette's 'Atlas de Géographie Moderne' (New York: F. W. Christern). The boundaries of the several States and Territories are clearly indicated in color, and the whole execution of the map is to be praised. The back of each sheet is utilized for statistical data and minor maps.

The September Proceedings of the Royal Geographical Society contains a valuable paper on the Karun River and the commercial geography of Southwest Persia, by the Hon. Geo. Curzon, M.P. This river, the only navigable stream in Persia, empties into the Shat el-Arab, or estuary of the Tigris-Euphrates, about forty miles from its mouth. Small steamers can ascend it, at high water, as far as the ancient town of Shushter, some two hundred miles from the Gulf. Continuous navigation, however, is prevented during the greater part of the year by the rapids of Ahwaz. In October, 1888, this river was nominally opened by a decree of the Shah to the mercantile marine of the world. But serious obstacles have been, till recently, opposed by the local authorities to all attempts of the English, who monopolize the commerce of the Persian Gulf, to avail themselves of the privilege. Now, however, a company runs steamers on the lower river in conjunction with a Government steamer on the upper river. It is hoped by this means not only to develop the rich but uninhabited plains bordering the Karun, but also to make this river the channel for the foreign trade of the central and southwestern provinces of Persia, which are now wholly dependent on the far longer and more difficult caravan routes from Baghdad, Busrah, and Bushire. In the course of his paper Mr. Curzon stated that a company was being formed in England for the commercial development of this part of Persia.

The *Scottish Geographical Magazine* for September is wholly taken up with an illustrated paper on the geology of the Maltese Islands, by Dr. John Murray. The introduction treats of the history, population, and agriculture of the islands in a very entertaining manner. Dr. Murray remarks upon the slight impression which the ninety years' occupation by the English has had upon the habits and customs of the Maltese. "Should the British leave the islands to-morrow," said a Maltese gentleman, "there would be no more traces of them in ten years than there are now of Greeks, Romans, or Arabs."

Missouri, Arkansas, and Texas are at present conducting geological surveys from which much information may be expected in the course of a few years. Several bulletins have been issued, the latest that has come to hand being on the cretaceous rocks of Texas and their economic value, by Robert T. Hill. These rocks cover an area of over 70,000 square miles, a fourth of Texas, or more than all New England together. They are of great importance as the foundation of many rich prairie soils, as the providers of water for numerous artesian wells, and as affording valuable building-stones. The principal inland cities of the State are built upon them. Mr. Hill's report is carefully prepared and well illustrated, and maintains his reputation as a hard-working geologist.

The principal articles in part ix. of the 'Handwörterbuch der Staatswissenschaften' (Jena: G. Fischer; New York: Westermann) are Building Societies (17 pages), Cotton Manufacture (24 pages), divided into two parts, one on history and statistics, the other on tariff history; Building Laws (11 pages), Mining (24 pages), Possession, in law (20 pages), and Statistics of Population, not completed in this part, but covering more than forty pages. There is an unusually large number of biographical notices, among which may be mentioned Beccaria, Bentham, Berkeley, Bernoulli.

On the first of October the Berlin *Nation* completed its eighth year, under the editorship of Dr. Theodor Barth, and improved the occasion to make an appeal to its friends for an enlarged circulation and support. It has well deserved such support by its high political aims and tone and its excellent literary quality. It is such a German periodical as an American wishing to keep informed of German liberalism and to perfect his knowledge of the language would desire to take. The publisher is H. S. Hermann, Beuthstrasse 8, Berlin S. W.

—In the *Atlantic* for October, Prof. Palmer publishes an elaborately wrought translation of the meeting of Odysseus and Penelope in rhythmic prose, with the same traits that made his version of the first part of the 'Odyssey' excellent; and in connection with it he discusses the use of the hexameter in English, especially with regard to rendering Homer. This metrical question is made the principal matter, and the fragment of Homer is given as illustration. He argues that the hexameter approaches the freedom of prose; but as English lacks a dactyllic movement, and hence cannot employ the normal hexameter, it is best to adopt prose with an iambic beat as the medium of translation in which least is lost. The reasoning is close and plausible, but the objections are ignored, and one must look for them in the illustration given. The most obvious defect in rhythmic prose is its liability to fall into short and sing-song metres, which, though they may be infrequent, are fatal to the reader's pleasure so far as that depends on word-music. We take a half-page at random and find examples in plenty. For the sake of bringing out the metrical point, we print the words as they would naturally be divided by the ear:

> "For certainly of iron
> Is the heart within her breast."
> "Move the massive bed out there,
> And throw the bedding on."
> "Round this I formed my chamber,
> And I worked till it was done."

These are enough. The recurrence of such measures, if the ear is conscious of them, is more than trying, and the loss of dignity is beyond question. A weak ending, unobjectionable in prose, imports triviality into English verse, unless the metre is already defined as heroic; but in rhythmic prose there must be many such, and the measure, being variable, is undefined. Our caveat against Prof. Paimer, however, runs further than this. The hexameter does not seem to us nearer prose than the pentameter. Every metre alike establishes in the reader a state of expectation, which prose cannot do; and it is in consequence of this that metre in verse makes reading easier to the mind, and in prose makes it harder; it assists attention in the one, it distracts in the other. The truth seems to be that the music of prose is different in kind from that of verse, nor is Homer's hexameter nearer to Plato's melody than the poetry of *Hamlet* is to his prose. We can only indicate the lines of our disagreement, and it is only upon the metrical question that we differ from Prof. Palmer, as from William Morris or any other writer of this hybrid literary form: his translation, in simplicity, directness, gravity, freshness, truth, charms us, and it is only because of the annoyance of such jingling snatches as we have quoted that our pleasure is not complete. In the rest of the number we notice the unfavorable criticism of Frémont, and the just estimate of Benedict Arnold by John Fiske, out of a number of interesting topics.

— *Harper's* is largely occupied with short stories of very diverse quality, but the paper of Mr. Child upon "Agricultural Chili" continues a series of South American topics which must borrow much interest from the prominence of that part of the world in present politics and trade. "The First Oil Well" and "New Moneys of Lincoln's Administration" are the special topics in the number; and in

the way of literary reminiscences, Mr. George Ticknor Curtis gives a vivid and good-humored sketch of Willis's young foppery in Boston, and of the engagement and early home of Lydia Maria Child, while Joaquin Miller writes of his hero, Byron, and tells a dream he had of him while staying at Newstead Abbey. There are several excellent cuts in the number, and the long series upon Wordsworth's Sonnets seems to come to its end in a kind of glory of decorated pages artistic in their arrangement as well as in the nature-feeling of their artist, Mr. Alfred Parsons.

—Prof. Shaler carries on in *Scribner's* the interesting inquiry which was begun last month into the influence of the physical characteristics of our country upon the nation. The tendency to ascribe a great deal to some one of many causes, and to discriminate imperfectly between conditions and motive powers, is very noticeable, as when, for example, he suggests that the civil war might have had a different issue had it not been for the upland Appalachian wedge striking into the South with its white counties and soil unadapted to cotton and tobacco. The essay is very like a prophecy, and casts our horoscope by means of glacial drift and uplifted ocean-bottoms and timber-belts. The outlook which is arrived at is particularly favorable for New England. The soil, though stubborn, is fertile, and increases in fertility by use, and there is much moist land to be made into fields and gardens; the seacoast and some mineral wealth, and especially an unequalled water-power, are also to be reckoned up; the result is, that when the new lands of the West begin to be exhausted by immigration and by culture, the farming districts of New England will recover, and civilization in its valleys will be full of variety, with manufactures and marine trade, and indeed all that can be desired. We have only to wait a century; but Prof. Shaler, turning from nature for a moment, anticipates that New England cities will then be peopled by citizens of Celtic descent, while the English race will maintain itself only on the farms as an agricultural population. In similar colors he depicts the future of the entire country east of the Mississippi in successive groups. The seacoast lowlands in the Atlantic and the Gulf States, except Florida, are, he thinks, in danger of Africanization. The Ohio Valley has a prospect of Mesopotamian populousness and abundance. Every part of the region bears some olive leaf of future plenty. This is most exhilarating reading for any American pessimist, and we await with confidence the author's forecast even of Nevada, that it may not be a "rotten borough" for ever. The question of architecture in the West is also an encouraging paper, to which we would gladly devote some space, but we can only direct the attention of those who are interested in the future of the art to this very open account of the matter.

—The *Century* has, in connection with Mr. Lodge's review of the present state of civil-service reform ("Why Patronage in Office is un-American"), a good deal of comment upon the subject which deserves to be read. Mr. Lodge devotes himself mainly to showing that historically the reform is not a return to the practice of the founders, but is a new thing; that patronage is an inheritance from our English traditions, and thoroughly un-American and out of harmony with our characteristic principles; and finally he demarcates strongly the patronage from the reform offices, and urges the inclusion of fourth-rate postmasterships among the latter as the next step. It is, he thinks, not possible that any ground gained by the reform can be lost by Congressional action. The second striking article in the number is an account of the bearing of photographs of nebulæ upon our knowledge of their actual conformation and upon the theory of the generation of stars. The writer, Mr. G. H. Darwin, attempts to harmonize speculatively the nebular and the meteoric hypotheses of the universe by showing that the showers of stones may behave in such a way as to be equivalent to the showers of molecules as conceived in the kinetic theory of gases. He does not assume to have proved this, but offers his ingenious train of thought as being at least on the true line of inquiry, and affording, if true, a solution of the main difficulty now felt with regard to the nebular theory. The illustration given of the nebula in Andromeda brings before the eye the marvellous results of the art of photography applied to the heavens, by which we see what even the teiescope cannot make clear. Mr. Darwin says: "There is but little doubt but that one hundred millions of stars would already be perceptible" if the whole heavens were surveyed as thoroughly as some parts now have been.

—Some patriotic citizens of Cambridge have preserved in pamphlet form the admirable and indignant protest of the Rev. Edward H. Hall, minister of the first parish of Cambridge, himself a chaplain in the war, against the wretched degradation of our recent pension legislation. It was delivered on June 1, the Sunday after the last Memorial Day, and is a fine specimen of the old style of plain New England utterance from the pulpit on public questions:

"I am sorry to have devoted this summer Sunday to such a lament; yet it has seemed to me an unavoidable duty, however remote the topic may be from our usual themes. . . . The pulpit is often charged with being vague and general in its denunciations, and dealing with sin in the abstract rather than with particular offences. I bring before you this morning a very specific iniquity, and am much disappointed if I have not succeeded in describing it in the most definite terms which the English language affords. I am anxious to leave upon you the impression that the entire pension legislation of the past ten years is the most disreputable business in which an honorable nation could possibly engage; that it carries in itself all the elements of corruption, hypocrisy, and demoralization; that it is not called for by patriotism, by charity, or by statesmanship; that it is a burlesque upon statesmanship; that it is a libel upon charity; and that it strikes the most cruel blow at patriotism which that noble sentiment ever received."

No braver or better appeal has appeared than this of Mr. Hall; and, if we mistake not, it was the earliest public protest from the pulpit on this subject. It preceded Bishop Potter's oration by several weeks. It is excellent reading, and instructive as well; for its statements are precise and guarded, and it has an appendix "giving statistics of pension legislation and expenditures." It is printed by John Wilson & Son, Cambridge.

—We made brief mention last week of the German Socialistic Association called "Freie Volksbühne," with a membership at present of about 2,000 persons, which has been formed at Berlin for the purpose of "acquainting the people with poetry in its modern aspect, and especially of representing, reading, and explaining dramas which contain criticisms of the existing order of things and wage war against obsolete prejudices." Among the works which the repertory of this Socialist theatre is to include, are Tolstoi's "Powers of Darkness," Ibsen's "Ghosts," Zola's "Thérèse Raquin," and two most unequivocally revolutionary dramas of the young realistic school in Germany, viz., "Sonnenaufgang," by Gerhard Hauptmann, and "Dantons Tod," by Büchner. The regulations and by-laws of the Association are of a most democratic character. All persons over fourteen years of age are admitted to membership, the distribution of seats is to be arranged by lot, each member is entitled to at least one Sunday performance during the winter months, besides the week-day performances that he may attend. On the governing board of the society, which embraces, among other writers of more or less reputation, Otto Brahm, the well-known Schiller biographer, there appear at least three persons who would be classified as workingmen. As we may presume that the police also will not be slow to take an interest in the performances, there seems to be a good prospect of lively times at this theatre.

ADAM SEDGWICK.

The Life and Letters of the Rev. Adam Sedgwick, LL.D., D.C.L., F.R.S., Fellow of Trinity College, Cambridge, Prebendary of Norwich, Woodwardian Professor of Geology, 1818–1873. By John Willis Clark, M.A., and Thomas McKenney Hughes, M.A. 2 vols., 4to, pp. x., 539 and vii., 640. Numerous illustrations. Cambridge, England: University Press; New York: Macmillan & Co. 1890.

TWELVE hundred pages may seem overmuch print to give to the biography of a man whose very name is doubtless unknown to most well-informed persons, and who passed away nearly twenty years ago. When we add that the subject of this great memoir was not a man of action, but a scholarly person whose title to fame rests upon his fair success in a long career as a teacher, and his very good, though limited, work in the science of geology, the monument seems at first sight excessively large. This impression will disappear as soon as the reader has entered on his task; he will find that, in the character of this person, which is admirably portrayed in these pages, there is full warrant for all the pains which the editors have taken to give a full account of his life. In them we have one of the most successful of the many recent efforts to delineate with patient accuracy the history of a man from his cradle to his grave.

Adam Sedgwick was born in 1785, and died in 1873 in his eighty-eighth year. He came from a sturdy race of Yorkshire yeomen; his ancestors having been for three hundred years *statesmen*, or holders of small farms, in the dales and wide common pasturages in the unfenced hills. One of the most charming parts of this work consists of the vivid picture of this rural life which is given by sketches of its people and their ways from Sedgwick's own pen. Whoever would gain an idea concerning the source of Britain's strength should study this admirable picture of the people of the Dale of Dent, which he has traced with loving care. Their vigorous qualities were inherited by the subject of this memoir; he had that curious mixture of fierce strength and gentleness which is so often found among these northern British. Although Sedgwick was of rustic blood, his ancestors had evidently for some generations been people of more than ordinary culture for their place in life, and his father, the parson of the parish, was a graduate of Cambridge, and won a fair position in the mathematical tripos. To Cambridge, therefore, the son naturally found his way. He entered Trinity College at the age of nineteen, an uncouth lad who for some time found little social favor; gradually, however, his admirable qualities won him many and enduring friends. In four years he gained

the rank of fifth wrangler, and in the opinion of the principal examiner he exhibited more inherent power than the men who were by the results of the examination placed above him.

The natural way for a needy young man who had won distinction in mathematics was to set up as a coach, and for some years Sedgwick followed this beaten path. In time he won a fellowship and then a permanent tutorship in Trinity College. The regulations required that fellows should be ordained as deacons within seven years after their election; apparently to meet this need, and not on account of any strong spiritual call to priestly duties, he at the last possible time entered the Church.

In 1818 came the incident of his election as Woodwardian Professor of Geology. The circumstances which led to his selection are curious, for they illustrate not only the quality of the man, but the singular condition of learning on the side of physical science in the early part of the century. The Woodwardian Professorship required celibacy of its incumbent. A certain professor, Hailstone, after having occupied the office with small profit to geological science for a number of years, married, and in this way the professorship became vacant. It appears clear that Sedgwick was ignorant of geology; he had had no opportunities for acquiring even the elements of that science, and his letters from Switzerland and from the lake district in England show no natural leaning towards this branch of learning. He does not seem to have been a bit abashed at his lack of acquirement, and he was elected by an overwhelming majority over a competitor who had received some training in the science. His predecessor, who had held the office for nearly thirty years, had never lectured. Sedgwick pledged himself to deliver an annual course, a pledge which he fulfilled faithfully for the fifty-four following years. The ease and speed with which he gained a practical knowledge of the subject, and the readiness with which he acquired the habit of the field geologist, are indeed surprising. Within three years he became a successful interpreter of difficult problems, and in five years after his beginning was fairly to be counted as among the most skilful field workers of Great Britain.

The best of Sedgwick's work began with his acquaintance with Roderick Impey Murchison. Murchison, like Sedgwick, had taken up geology rather late in life. He was a man of much less natural ability than Sedgwick, but of a far more persistent mind. Murchison gave his partner a share of his determination, and in return received the best part of his training in the art of interpreting the structure of the rocks. After several tours in Scotland, northern England, and on the Continent, these able men settled down to the study of the singularly difficult geology of western England and Wales. This work began about 1830, and though it led to an unhappy contest between these once warm friends, its results to geologic science were perhaps more important than those which have ever been attained from any equally narrowed field.

Until the labors of Sedgwick and Murchison, the strata below the level of the carboniferous had remained undivided, and had been little studied by geologists; to them the Germans had applied the common name of "Grauwacke": they were believed to represent the brief early conditions of the planet, and were supposed from their confusion to be essentially uninterpretable. It fell to Murchison, by the division of the field of operations, to pay most attention to the rocks extending from what is now termed the Devonian downward to the section still generally known as the lower Silurian. Sedgwick began his labors with the lowest determinable stratified rocks of Wales. These beds have been profoundly dislocated by the mountain-building forces, and greatly worn away by erosion. Sedgwick's labor upon them is, when we consider the lack of previous experience on the part of geologists in such tasks, entitled to be ranked as the greatest piece of inquiry which up to that time had been accomplished in the science. Throughout his work he shows a singular capacity for geometric conceptions—a capacity doubtless due in part to his considerable inheritance of mathematical talent and his thorough training in the elements of that science.

Sedgwick, working upward from the lower massive crystalline rocks, termed the series of deposits with which he had to deal the Cambrian, happily taking the name from the ancient geographic appellation of the country where they are found. Murchison, working downward from the horizon of the Devonian, named his series Silurian, from the title of an historic division of the Britons, the Silures. The result was, that Sedgwick's upper Cambrian denoted the same rocks which Murchison designated as lower Silurian, and hence arose a contest of many years' duration which divided English geologists into two hostile bands. There is a question of nature as well as of name in the matter, and the controversy is not entirely settled even at the present day. The masterly and very fair analysis of the debate contained in the last chapter of the second volume will be of great interest to all geologists. This analysis makes it plain that Sedgwick had a far better grasp of the problems he had in hand than Murchison, whose work was exceedingly confused, so that he had again and again to mend his pleas; and, but for the power which his position as Director of the Geological Survey gave him, there is hardly a doubt that Sedgwick's views would have quickly prevailed. In many ways this controversy has been the largest and the most enlightening of all those which have found a place in natural science. Unhappily it parted two able and admirable men who have done more to shape the science than any other students of Britain.

The effects of this debate upon Sedgwick were most unhappy. In his prime they turned him away from geology, and so lost to the science the services of perhaps the ablest interpreter of British strata who has ever dealt with their more complicated problems. Sedgwick's mind was of the discursive order. The manifold questions of University politics absorbed his attention to the end of his days, and, after the outbreak of the quarrel with Murchison, except for his services as teacher, he did little good work for science. Throughout his life he was characterized by a singular incapacity to appreciate the work of others. Thus, when the Darwinian hypothesis came, he could find no good whatever in it. He not only denied the general conclusion, but failed to perceive the masterly nature of the essay which was apparent to most of those who rejected its principal conclusions. This incapacity appears to have been due to the singular excurrent quality of his mind. The outgoing tide of his thought and feeling was so strong that it seemed to brush away all knowledge which did not come to him through personal experience.

In the pages of this memoir we constantly come in contact with beautiful pictures of English life, throughout the wide scale from the household of the Queen, with whom he enjoyed a somewhat remarkable intimacy, to that of the humblest dalesman of his native valley. The present writer knows of no English biography which is as rich in incident of personal contact. So far as possible, the editors have permitted Sedgwick to tell his own story through his numerous and admirable letters. They give a most vivid picture of a vigorous, loving nature, and incidentally they afford one of the saddest commentaries which can be imagined of the effects of the required celibacy of the old universities on their ablest men. Sedgwick was naturally a family man, but he was held so firmly to a monastic life that he never had the courage to break away from it. The picture of the man in his later years, hungering for a household, grasping at every chance to get some share, through his sympathies, of that side of human life, is indeed sorrowful.

The book is admirably printed, and has a good though somewhat insufficient index. Some blunders occur in this index, of which perhaps the most notable is the statement that Alexander Agassiz met Sedgwick at Edinburgh in 1834, which happens, in fact, to have been before Alexander Agassiz was born. The text generally, however, is so good that it requires a rather microscopic eye to detect the faults.

CAPITAL AND INTEREST.

Capital and Interest; A Critical History of Economical Theory. By Eugen V. Boehm-Bawerk, Professor of Political Economy in the University of Innsbruck. Translated, with a preface and analysis, by William A. Smart, M.A., Lecturer on Political Economy in Queen Margaret College, Glasgow. Macmillan & Co. 1890.

WE will begin our examination of Prof. Boehm-Bawerk's remarkable treatise where he ends it, premising, however, that the present volume is only a negation of previously accepted theories of the phenomenon of interest, and has been followed by a second, 'The Positive Theory of Capital,' which is not now before us. The question which the author seeks to answer is, How does it come about that capital always and everywhere yields a surplus value over the cost of its own replacement? Errors of human judgment may of course now and then result in the loss of both capital and interest without affecting the law (whatever that law is) by virtue of which the former is preserved from age to age, and yields all the time something, over and above its own wear and tear, which is called interest.

In his last chapter the author says: "The interest problem in its last resort is a problem of *value*." In other words, before solving the problem of interest, Prof. Boehm-Bawerk proposes to solve the most stubborn of all economical problems—a problem which, although supposed to have been set at rest many times and by many distinguished men, is ever and anon coming back to us with some puzzle that contradicts the solution. Value, says the orthodox political economy, is regulated by cost of production. So says Macvane; we cite his elementary work because it is the latest that comes to us from a writer of real and recognized ability, of the school of the prophets. Prof. Macvane has grouped in one chapter the exceptions to this law of value, and we are thus spared the trouble of searching the prophets in order to find them. The cases in which value is *not* regulated by cost of production are no less than seven, viz.: (1) "Simple gifts of the Creator"; (2) products that cannot be increased in supply, such as old pictures and statuary, relics of antiquity, things covered by patent and copyright, etc.; (3) products of highly skilled labor; (4) pro-

ducts exchanged between distant places where there is no effective competition (Cairnes, it may be remarked, while an adherent of the cost-of-production theory, casts out at one shovelful all articles of international trade); (5) things having a joint cost of production, such as hides and beef, since it may happen that the demand for hides may be such that cattle will be slaughtered for their hides only, so that the value of beef may be reduced to zero; (6) arbitrary exceptions, such as things produced by slave labor, things sold below cost for advertising purposes, etc.; (7) articles produced by "combines" and Trusts. After enumerating these things that are outside the law, Prof. Macvane says:

"It must not be inferred from the space devoted to exceptional commodities in this chapter that they constitute a very large proportion of all the things bought and sold, or that their value departs very widely from the ordinary rule. Compared with the great mass of exchanges subject to the ordinary rule, they are very small in amount; and the extent of their departure from the common law of value is not often great."

Without entering into particulars, for which we have not space, it may be said that if another law of value could be found which was not subject to these exceptions, or to any, it would be pretty sure, sooner or later, to supersede the old law, although the latter has the sanction of such names as Adam Smith, Ricardo, J. S. Mill, Cairnes, and Bagehot. The other law of value, affirmed rather than worked out in the volume before us, is, that value depends upon human wants and satisfactions, and not upon cost of production at all. To state it shortly, we value a thing at so much because it answers our wants and because there is a limit to its supply. Given our wants and given the supply, it is immaterial to buyers what the cost of production may have been. Of course Prof. Boehm-Bawerk is not the first to propound this theory of value. He assigns the place of honor to Menger, who laid down the formula that value does not depend upon cost of production, but cost of production does depend upon value. In other words, if a thing is worth so much in the market, a corresponding amount of cost will be incurred to produce it. But before Menger the idea crops out here and there that demand is the cause of value, and if it is the cause, why should it not "regulate" value, *i. e.*, cause it to be greater or less at different times and places? We recall at this point an admirable brochure by Mr. M. L. Scudder, jr., of Chicago, entitled, 'The Labor Value Fallacy,' published a few years ago, which goes on all fours with Prof. Boehm-Bawerk's destructive examination of the theories of Karl Marx (pp. 367-391).

"The acute Jevons," as Prof. Boehm-Bawerk points out, came very near propounding a satisfactory definition of value, and with it a satisfactory explanation of interest. He failed in the latter particular by confounding surplus production with surplus value. It does not follow that because the use of capital multiplies useful products it therefore creates surplus value. The increased quantity may have really less value, *i. e.*, may command a less quantity of other goods, than a diminished quantity would have had. This is often observed in the grain markets, where a partial failure of the wheat harvest may bring the cultivators more money than a full crop. Davenant's empirical law is acted upon by grain speculators the world over, even though they have never heard of it.

Now the task to which Prof. Boehm-Bawerk has set himself is just this: Why does capital bring into the world not merely more useful things, but more *value*, than resides in itself, so that the possessors of capital can derive an income from it either with or without their own personal exertions, from year to year and from generation to generation, and without doing any harm or wrong to any other persons, but, on the contrary, with benefit and advantage to them? The work before us is a clearing of the ground, a sweeping away of all former theories on the subject, and we say frankly that we think the author has demolished them all by a rigid yet perfectly fair and courteous treatment of them. The amount of learning he has brought to bear upon the subject is prodigious. He begins with the historical opposition to interest based partly on economical, but mainly on religious grounds, traces the struggle down to the triumph of interest wrought out by the sheer needs of mankind rather than by the force of argument, and then takes up one by one the various theories that have been advanced to solve the interest problem as stated above.

We can do hardly more than name these theories here. Turgot's Fructification theory is shown to be wrong because it was merely arguing in a circle. Land, said Turgot, yields a net product. But every man can convert his capital into land if he wants to, therefore capital not invested in land must yield a net product also, since otherwise the owners of it would buy land. Does this explain interest? No more than the fact of interest would explain the rent of land; for since the owners of capital can get interest for it, and since land can be sold for capital, therefore land must yield a surplus, since otherwise, etc., etc. Adam Smith had no distinctive theory of interest. Ricardo held that in the process of production rent and wages are determined, or at all events determinable, quantities, and that profit (which includes interest) is the remainder. But this does not show why there should be any remainder, and therefore does not touch the interest problem. The "naïve Productivity theory," which embraces among its supporters J. B. Say and Leroy-Beaulieu, and has some countenance from Roscher, tells us in a roundabout way that interest exists because capital is productive. Productive of what? Of value, or of surplus value? The naïve Productivity theory does not really show why capital reproduces itself; still less does it show why it produces a little more than itself, to wit, interest.

Another set of Productivity theorists, among them Lord Lauderdale (an acute thinker), Malthus, H. C. Carey, and Strasburger, attempted to explain why increased production, due to the employment of capital, is accompanied by surplus value. They all failed, but the only one who failed ridiculously was Carey, of whom Prof. Boehm-Bawerk says:

"Carey offers one of the very worst examples of confused thinking on a subject where there has already been much confusion. What he says on interest is a tissue of incredibly clumsy and wanton mistakes—mistakes of such a nature that it is almost inconceivable how they should ever have received any consideration in the scientific world."

The Use theory, which separates capital, as it were, into a body and a soul, and considers the use of it as something distinct from the possession of it, has eminent names to support it. Storch, Nebenius, Hermann, Schaeffle, Knies, and Menger are grouped under this head. The culmination of the Use theory is found in Menger, who, as already mentioned, turned the definition of value around end for end, making value the regulator of cost of production instead of cost of production the regulator of value. "To Menger, then," says Prof. Boehm-Bawerk, "belongs the great merit of having distinctly answered this preliminary question. In doing so he has definitely and for all time indicated the point at which and the direction in which the interest problem is to be solved." Nevertheless, the Use theory, in this its best estate, failed to explain interest, because it was based upon a fiction, namely, the existence of a use of capital as an independent value distinct from the capital itself. Prof. Boehm-Bawerk follows the metaphysics of political economy into its cave, and smokes it out, but we cannot stop to indicate the process. The conclusion is quite satisfactory. Equally satisfactory is the showing that even if there were a use value independent of the capital itself, it would still come short of explaining interest.

The next nut to be cracked is Senior's Abstinence theory. This celebrated and generally accepted doctrine maintains that when an owner of capital abstains from consuming it and applies it to production, he makes a sacrifice. Abstinence thus becomes a cost of production. It must be paid for just like labor and materials. This is extremely plausible, especially after other theories of interest have been tried and found wanting. Moreover, it tallies with the fact that waiting is an element everywhere present in the phenomenon of interest. But taking the theory as it is stated—that the late Mr. Vanderbilt, for example, when he abstained from consuming his capital of one or two hundred millions of dollars, made a sacrifice—let us ask how much he ought to be paid for it. The interest tables say at least four million dollars per year. But, in point of fact, if he had attempted to consume the tenth part of his capital, he would probably have killed himself. To consume it would have been a much greater sacrifice than to keep it. So this theory goes by the board along with the others.

The Exploitation theory of Rodbertus and Marx explains interest as simply a game of grab. The owners of capital plunge their hands into the stream of wealth and take out what they want. They want all that the laborers can possibly spare. They are enabled to do this because the laborers who produce the wealth are oppressed and hampered by their wants. These must have their food and raiment day by day. They cannot wait. The capitalist can wait. Therefore he takes his advantage. He exploits labor. Prof. Boehm-Bawerk has much respect for Rodbertus, but very little for Marx, whose easy sophism, veiled under the ever-recurring phrase "socially necessary labor," is subjected to a merciless analysis. This is not the first exposure of Marx's sophistry, but it is the best that we have seen. It fully justifies the statement of Mr. Smart, in his preface, that "the crushing confutation of the labor-value theory is work that will not require to be done twice in economic science, and the vindication of interest as a price for an economic service or good suggested by the very nature of things (which may be modified, but cannot be prevented), will necessitate reconsideration by the Socialist party of their official economic basis."

The Exploitation theory requires that the laborer should have to-day all that the product of his labor will be worth when it is finished and sold, which may be a year or any number of years hence. Manifestly this cannot be. Present goods have more *value* than future goods. Here we get an inkling of the true explanation of interest. In the nature of things, a certain portion of *value*

is due to the lapse of time, as when an acorn is planted which will be an oak one hundred years hence. The laborer cannot be paid the value of an oak for his service in planting an acorn, because nobody can get that value till the hundred years have passed. Similarly, laborers cannot have the whole value of cotton cloth, because time is required for spinning, weaving, dyeing, packing, carting, and waiting for buyers. Capital enables us to wait, and capital must be paid for this service, which is as real a service as any labor employed in production.

But we must not anticipate Prof. Boehm-Bowerk's second volume. We have read the first volume with increasing interest from the first page to the last. Although it consists almost wholly of destructive criticism, it is very necessary work. We recall nothing of the kind equal to it. Even though he may not have said the last word on the particular subject of his inquiry, he has said enough to fix his place in the front rank of the world's economists.

THREE FRENCH NOVELS.

Une Gageure. Par Victor Cherbuliez. Paris: Hachette & Cie.; New York: Christern, 1890.

La Dernière Bataille. Par Édouard Drumont. Paris: E. Dentu; New York: Christern. 1890.

Le Capitaine Sans-Façon, 1813. Par Gilbert Augustin-Thierry. Paris: A. Colin & Cie.; New York: Christern. 1890. 12mo, pp. viii., 339.

Two strongly contrasting young women are the chief figures in Cherbuliez's latest novel. One of them is the Duchesse d'Armanches, a beauty who belongs to the great world of fashion, but who finds time hang heavy on her hands with a stupid and invalid husband. This would be, indeed, too heavy a burden to be borne if the Duchess had not the happy faculty —happy for herself—of throwing herself completely at any moment into the caprice of the moment, and so making life a comedy in which she is both actor and audience. She paints, she sings, she reads Plato in a translation, she takes a fancy to Claire Vionnaz, whom she makes her companion and confidant. Claire Vionnaz, the other young woman, is also at times beautiful, and always simple-minded in the best sense, though the gentlest of readers is forced to confess that she occasionally seems simple-minded to him in a sense which is less good. She is completely cajoled by the Duchess, and believes that their friendship is of the antique Roman sort.

To these women, at the château of the Duchess, appears the hero of the tale, M. le Comte de Louvaigue, who, after some love-making addressed to the belle Cécile, asks seriously the belle Claire to marry him. She consents at once, naturally, for she has sworn often to live and die unwed. The Duchess, as one might well expect, is not pleased with this match, and does her best to break it off by sowing doubts in the minds of the lovers as to the quality and quantity of the affection by which they are inspired. Hence arises the wager which gives its title to the book. The Duchess bets with M. de Louvaigue that his wife will never love him, and the forfeit is to be one of her smiles if he wins, or a fuller consolation if he loses. There is no need to follow up the story of this most delicate of all wagers to its end. M. Cherbuliez leads his readers through all its involutions, and windings, and chances, and changes, and perils, till at last Satan is baffled and the weakly indulgent Providence whose domain lies behind the footlights pours blessings on the heads of a happy couple.

M. Cherbuliez is one of the chief novelists of France. Some critics call him the most perfect of French writers. But when one lays down such a book as 'Une Gageure,' how can he help asking himself some questions? Is this life? Are these smooth-gliding, well-dressed images men and women? Is all this aplomb, this smooth flow of talk, that sparkles with wit to be sure, but never hesitates or is at a loss, these measured voices—are these characteristic of human passion? And, doubtless, the reader will conclude that they are, if he believes that life is a sort of minuet, and that men and women generally live and love and are happy or miserable in strict accordance with the best rules of good manners.

The title of M. Édouard Drumont's last unhappy book raises false hopes in the reader's mind. The first impression that it gives—an impression which a perusal of the volume goes far towards confirming—is that its author has grown weary of his ridiculous Jew-killing crusade, and is merely striking one last blow as he leaves the field. It is not, perhaps, absolutely impossible that this may turn out to be true; but M. Drumont obviously does not intend that it shall be so, for he announces on his fly-leaf that 'L'Europe Juive' is in preparation, and no one can guess whether a series long as the 'Biographie Universelle' may not follow in its train. It is four years since M. Drumont entered on his anti-Semitic campaign, and each year since 1886 has seen a new volume from his pen that needed no signature to identify it as his. Each one held up the Jew to scorn as a parasite and a robber at all times and everywhere, and especially as the cause of every social disorder and distemper that afflicts France. The Jew, he maintains, is a microbe, a bacillus, that spreads throughout society corruption and disease and death. His talk is much of it mere raving, but he does not seem to be mad.

Some have thought that his fanaticism was a simple attitude, assumed with an eye to the main chance—an *affaire de librairie*. But, though the book that we have in hand did pass its eightieth thousand within a fortnight, one is not driven inevitably to the conclusion that avarice was the sole begetter of it. Its tone suggests that there must be some personal grievance rankling in its author's mind, some slight to repay, some insult to throw back. The spirit of it is as far as possible remote from the *sæva indignatio* of Swift. M. Drumont's heart is not torn: it seems to be no more than his skin that is scratched. And, besides, one feels in reading him that he is more than anything else an agitator, and that he is not without a consciousness that cries and contortions have their use in drawing a crowd, some of whom may listen to him.

There are, on the other hand, many things in him that are attractive. He is clever, very amusing in his way, seldom tiresome, and one who never lets the truth spoil a good story. An ardent Catholic and royalist, an aristocrat in feeling, though by birth of the lower class of the bourgeoisie, a Socialist, a newspaper writer, a Bohemian, a thorough Parisian, compact of half-a-dozen different sorts of men, he is interesting if only as a puzzle. We said that some of the characteristics of the book in hand gave an impression that it marked the end of M. Drumont's crusade. It is plainly a collection of odds and ends, thrown together with no attempt at order and unity. It suggests the sweeping out of drawers, the ransacking of portfolios, the clearing up of the writing-table for new work. In the heterogeneous mass one finds idyls of country life, dry financial discourse, a long account of the secret history of the Panama Canal, a demolition of Boulanger by means of chiromancy, an extended account of the author's life and brief ancestry, some entertaining literary gossip, and a thousand other things clever or dull. There are some interesting pages on M. Drumont's friendship for Alphonse Daudet—a bond which, it is to be hoped, may not be destroyed by M. Bonnières's recent discovery that Daudet is an equivalent of Davidet, "un nom Juif provençalisé." One does not wonder that the book is read: only it ought never to have been written.

'Le Capitaine Sans-Façon' is not a new book, but only a worked-over edition of one published in 1882; neither can it be considered, as its author largely calls it, an historical novel, for it is nothing more than an expanded sketch of unimportant events in a remote corner of France during the First Empire. Its author, who appears to take himself and his book very seriously, pursues the unusual course of printing in an appendix a number of documents designed to serve as vouchers for the fidelity of his picture, but which only betray how little of interest he has added to the facts which were ready to his hand. Most of what he has added is, indeed, far from being an improvement of his raw materials; he inserts one or two wholly irrelevant chapters of stereotyped French patriotism or vain-glory, which are more than usually offensive and out of place in view of the revelations of corruption and all manner of vileness in official circles, and of brutish ignorance and immorality among the country population, with which his pages are filled. The state of things he describes is a familiar feature in the current conception of France under Napoleon III.; but to find that under the real Napoleon the nation was no better and no better off than under his pinchbeck imitator, is not congruous with French claims to leadership in civilization.

In the matter of style M. Augustin-Thierry can hardly be said to atone for other deficiencies; he cultivates assiduously the mechanical epigram and metallic brilliancy that characterize contemporary French style, and produce a stencil-plate species of effect similar to that of a ballet dancer's smile. In spite of its faults, however, the book is not without interest as describing events which lie out of the beaten track, and throwing new side-lights on the French national character. It can be recommended, also, as being inoffensive from an almost entire absence of the lubricity which constitutes so large an element in French light literature. Its subject-matter is concerned with the depredations of a small band of highwaymen, who are saved from utter vulgarity by being the instruments of a half-royalist, half-religious conspiracy, and owe much of their brief success to the low condition of the peasantry and the wildness of the country.

An Introduction to the Study of Dante. By John Addington Symonds. 2d ed. Edinburgh: Adam & Charles Black. 1890. Sm. 8vo, pp. xii., 288.

Mr. Symonds writes too readily upon many important subjects to write well upon them all, and this is not one of his best books. It exhibits his characteristic fluency of style, his facility of acquisition, and his breadth of culture, but it shows also a lack of thorough knowledge, as well as of the thought that penetrates to the core of a matter. The first edition of this essay was published seventeen years ago, and this new edition appears improved by the correction of mistakes and mis-

prints, by the removal of several doubtful statements, and, as Mr. Symonds says, "by the adjustment of some points of criticism to the present standard of Dante literature." There remain, however, many points in which this adjustment has not been made.

The recent brilliant development of critical literary studies in Italy has had hardly any more conspicuous result than the change it has wrought in respect to the biography of Dante. The outlines of his life remain, indeed, well-established and unaltered; but many of the details with which those outlines have hitherto been filled up, have, one after another, been shown to be either false or doubtful, until, as Signor Bartoli declares at the beginning of his volume on the life of the poet, it has become obvious that the lives of him hitherto written are in great part romances, fabricated, indeed, in good faith, but not the less essentially untrustworthy. All, even the most erudite, from Balbo to Wegele, though they may contain much information in regard to the history of Dante's time, fail as biographies to stand the test of critical examination. Mr. Symonds has based that part of his essay which relates to Dante's life on these old and formerly accepted narratives, and he naturally repeats the errors that have grown familiar.

It is a minor matter, but it is an illustration of Mr. Symonds's too frequent habit of assertion upon an imperfect basis of knowledge or reflection, that, in speaking of Dante's life in exile, he says: "Dante's works, unfortunately, contain no reference to England, though he shows familiarity with Paris and also with the Flemish towns." But in fact there is more than one reference to England in the 'Divine Comedy,' and there is nothing in the poem or in Dante's other works that shows any greater familiarity with Paris or the Flemish towns than with London. A local reference to London occurs in the verse (*Inf.* xii, 120), in which Dante describes Guy de Montfort, the murderer of Prince Henry, son of Richard Duke of Cornwall, as

> "he who cleft
> The heart that on the Thames is still revered"

—that is, the heart of Prince Henry, which was said to be preserved in a golden vase on the tomb of Edward the Confessor in Westminster Abbey. The only passage, so far as we recall, which indicates any local knowledge of Paris, is that (*Par.* x, 138) where the Rue de Feurre or du Fouarre is mentioned, as the street in which Sigier lectured; and as for the towns of Flanders, the only verse of note relating to them is that (*Inf.* xv, 4-6) in which Dante refers to the dykes between Wissant and Bruges, built to protect them from the flood of the sea. No one of these passages is such as to prove that Dante had seen the places to which he refers, and one affords as much indication as the others that he had done so.*

No poet has give a fuller or more instructive narrative of his real life—his inner life of spiritual experience—than Dante, in his various writings, and it is the great defect of Mr. Symonds's work, as an introduction to the study of Dante, that it fails to afford any adequate account of this moral and intellectual autobiography, or to show the mutual relations of the different works of the poet, and the light which each of them throws upon the others as well as upon the character of the writer. The relation between the 'New Life' and the 'Divine Comedy' is too close to be missed, but the 'Convito' is of even more importance to the proper understanding of the great poem than the 'New Life' itself; and to the 'Convito,' and to its essential contribution to knowledge of Dante's nature, studies, and thought, Mr. Symonds makes hardly a reference. He does not describe its purpose or its contents, and he cites but a single passage from it.

The chapters devoted to the 'Divine Comedy' contain some delicate and suggestive criticisms of minor points, but show no grasp of the great meaning and substantial qualities of the poem. Nor are they without errors which a careful student would have avoided. For instance, in speaking of the symmetry of the structure of the three spiritual realms, Mr. Symonds says: "There are nine circles in hell, nine cornices in purgatory, nine spheres in paradise." But in truth purgatory has but seven cornices, and the correspondence with the nine-fold divisions of the other realms is secured by the ante-purgatory at the base, and the terrestrial paradise at the summit of the purgatorial mountain. So again, on the same leaf, he states that the *Inferno* is shorter than the *Purgatorio* by thirty lines, than the *Paradiso* by twenty-four. If these facts were worth mentioning, it was worth while to give them accurately: the *Purgatorio* is longer than the *Inferno* by thirty-five, and the *Paradiso* by thirty-eight verses. These are trifles, but they have a bearing on greater things.

When the serious student of the poem reads in the contents of Mr. Symonds's book that "Dante's personality, untainted by Symbolism, [is] the main interest of the 'Divine Comedy,'" he marvels that one who holds such an opinion should find it worth while to write an 'Introduction to the Study of Dante.' But books about Dante with much less good in them than this have been written.

The Defence of Charleston Harbor, including Fort Sumter and the adjacent islands. 1863-1865. By John Johnson, formerly Major of Engineers in the service of the Confederate States, with original papers in appendix, full official reports, maps, and illustrations. Charleston, S. C.: Walker, Evans & Cogswell Co. 1890.

THIS handsome volume ought to meet with a wide reception, North as well as South. It is written from the Confederate standpoint, for the author, now well known as the rector of St. Philip's, Charleston, was during the war an officer of engineers, who distinguished himself in the defence of Fort Sumter. But his book seems to us to be a thoroughly fair and dispassionate narrative, and the subject is certainly one of the most interesting and dramatic of the operations of the war. It is a story of fighting by land and by sea, of the employment of novel engines of war of tremendous power, of armored ships, of torpedoes and torpedo boats, of strong walls of masonry battered down, of almost impregnable works constructed of earth and sand, of gallant and desperate assaults, and of steady, unflinching, and heroic resistance. It is a story well worth telling in detail, and well worth the trouble of illustrating with pictures and maps, as is done here with so much pains. We have capital views of the interior of Fort Sumter after the several bombardments, besides careful drawings of separate portions of the work; there are portraits of many of the principal officers, chiefly those on the Southern side, and good maps. Maj. Johnson's style is clear. He is commendably free from the tendency to excessive eulogy of his own people so common in books of this character, as he also is from any tinge of bitterness when speaking of the Federal commanders and their men.

The narrative does not comprise the history of the first two years; it begins with the attack on Fort Sumter by Admiral Du Pont on April 7, 1863, in which the iron-clad monitors, from which so much was expected, accomplished so little. Maj. Johnson's description of this famous fight is very good; he makes due allowance for most of the unprecedented difficulties which attended the conduct of ships of such a novel construction and of an armament so extremely liable to get out of order; but we hardly think that he has sufficiently considered that the Federal commanders cared much less about the loss of their ships, or about the loss of their own lives or of those of their men, than about the acquisition by their enemy of such powerful engines of war as these monitors were, and that it was from this perfectly reasonable cause that the attack was made in the cautious and circumspect way which at the time seemed to the Confederates so unaccountable. Compare, in the Scribner series, 'The Atlantic Coast,' by Admiral Ammen, page 161.

It is, however, to the systematic operations initiated by Gen. Gillmore that the greater part of the narrative is devoted. That distinguished engineer officer, having the previous year reduced Fort Pulaski in the Savannah River by means of batteries the construction of which had been concealed until they were ready to open fire, and which were a mile distant from the fort, was confident of being able to repeat this feat, and even to improve upon it, when he was ordered to Charleston Harbor. His plan was to silence, and practically to destroy, Fort Sumter, thereby, as he calculated, rendering it possible for the fleet to pass up the channel, removing the obstructions without interference, and reduce the city. Maj. Johnson does full justice to the ability with which the Federal commanders kept secret the construction of their formidable works on Folly Island, and planned and carried out the surprise and capture of the Confederate defences on the southern end of Morris Island on July 10, 1863. He is disposed to think that Fort (or Battery, as the Confederates called it) Wagner might have been carried, if it had been assaulted without delay—an opinion which many Union officers have always entertained. The attack, however, was not made till the next morning, and then, the garrison having been heavily reinforced, it failed. Our loss was heavy. A week later came the desperate assault led by Col. Shaw and his black regiment, in which some 2,000 gallant officers and men fell. This severe loss was, in the opinion of our author, entirely unnecessary.

"Twice foiled in his attempts to get possession of Battery Wagner, the Union commander changed his plans in two leading particulars. Battery Wagner was now to be besieged by regular approaches, and Fort Sumter was to be demolished from ground already in his possession. The heavy Parrott rifle-guns, 100, 200, and 300-pounders, which had been brought to Morris Island for this purpose might, in fact, have been put in position earlier than they were, and both of those disastrous assaults on Wagner avoided. The range of these large Parrott rifles was something unprecedented in warfare, being from 4,000 to 8,000 yards, and that secured the demolition of Fort Sumter without any respect to Wagner" (pp. 107, 108).

This is, perhaps, the most important criticism that Major Johnson has to make on Gen. Gillmore's operations.

Our author's descriptions of life in Fort

---

* There are three other references to England, or English affairs, in the 'Divine Comedy,' one (*Purg.* vii, 131) where among the kings "Henry of England [Henry III.], the hope of the simple life," is seen seated alone; another (*Par.* xix, 122) where the poet condemns that pride

> "Which makes the Scot and Englishman so mad
> That they within their boundaries cannot rest;"

and the third, in the striking self-condemnation of Bertrand de Born (*Inf.* xxviii, 135), as, "I was he who gave to the young king the ill encouragements"—the counsels, that is, by which Prince Henry was made rebellious to his father, Henry II.

Sumter during the terrible battering to which it was subjected are exceedingly interesting. Nothing could exceed the patience, courage, alertness, and resolute and unwavering determination of its defenders. The ingenuity displayed in remedying the terrible effects of our fire, the unfaltering submission to the hardships occasioned by its severity, and by its being protracted for days and nights until the strain on body and mind together must have been simply fearful, are depicted with a calmness and also with a naturalness that leave nothing to be desired.

Maj. Johnson's military criticisms contained in his fourteenth and last chapter are carefully made, and are doubtless in the main sound. The appendices are several of them valuable. That entitled "Notes of Ironclad Warfare, 1854-1882," and that on "The Strategic Value of Morris Island," are perhaps the best. We have no hesitation in welcoming this book as a very valuable addition to our military history.

B. F. Stevens's Facsimiles of Manuscripts in European Archives relating to America, 1773-1783. Vol. V., Nos. 454-564. Issued to the subscribers at 4 Trafalgar Square, Charing Cross, London. August, 1890.

THE papers contained in this instalment of Mr. Stevens's great publication deal with matters already treated in the previous volumes, and especially with the Commission sent out in 1778 to propose terms of reconciliation. Incidentally we get Sir Henry Clinton's account of the battle of Monmouth Court-House, which has not, we believe, been published before:

"With regard to the affair of Monmouth, I knew Washington could have passed the defilés with nothing but his Avant Garde. I knew Lord Cornwallis's Division was equal to that, and therefore I attacked. I saw that Attack must Operate on the troops sent round my flanks, which accordingly happened and Lee wisely quitted. And when I had secured the first defilé, which I might have had against the World, I tried the Experiment a little further, for had Washington been blockhead enough to sustain Lee, I should have catched him between two defilés, and it is easy to see what must have happened. Having drove everything over both defilés, it was not for me to give him the advantage I had lately taken by Attacking him so posted, nor indeed could I have done it, as the Troops were fairly spent. Having fulfilled my first and great object, given time for my Baggage to move into safety, the Troops retired to the first defilé, and the Rebels repossessed the second and took post on advantageous ground. The 33d Regiment, and 1st Battalion of Grenadiers attacked handsomely. The rebels quitted in confusion, and thus ended the Fray, for tho' it was two hours before the 33d Regiment (making the Rear Guard) joined us at the defilé, not a Shot was fired during that time.

"It may be asked whether the Orders of the 28th relative to reinforcements were obeyed, and if not, wherefore: All I can say is that I sent the first Order by a Deputy Adjutant General,—to assist his Memory it was written,—it was addressed to General Grant, whose Division I had left not half an hour before,—the Deputy Adjt General reported to General Grant the Order he was entrusted with, and General Grant referred him to General Knyphausen. Whether he was right in so doing, he best knows. As nothing happened, I was silent. The second Order was sent and delivered by the Captain of the Guides, but was not obeyed. I will be free, however, to own I am glad it was not, as with those Troops I marched on to Middletown, where I thought it possible the Enemy might try to prevent me. Which position I took, and soon quitted, wishing Mr. Washington might take it, and if he had, I was determined to Attack him, as that was to be done with advantage. We had not a day's provision left when we opened our Communication with the fleet."

The claim, often made, that Monmouth Court-House was a victory for the Americans, seems to us to rest on a misapprehension. Sir Henry Clinton was retreating across New Jersey. It was the object of Washington to harass his retreat and capture a part of his baggage train, which Sir Henry pronounces in this report to have been "wantonly enormous." That object was not accomplished. The British reached Sandy Hook without the loss of a wagon. Whether Lee "wisely quitted," as Clinton says, or whether he fled ignominiously, as most Americans believe, the affair was for Washington tactically a failure. Yet it may well be that at that time a tactical failure which could be represented as a victory was worth something to the American cause.

The Theory of Light. By Thomas Preston. Macmillan & Co. 1890.

MR. PRESTON'S work occupies a position between that of an elementary work on optics and that of an exhaustive treatise on the theory of radiant energy. It presupposes a fair acquaintance with the fundamental laws of optics and a good knowledge of the higher mathematics. It is on the whole well and clearly written, and cannot fail to be of service to those who wish for more than an elementary treatise, or a guide to the elaborate and difficult treatment of the subject, such as we now find only in French and German works. The initial chapter gives a brief history of the science of optics; an account of the discovery of the velocity of light and the development of the corpuscular theory, and an introduction to the wave theory. The rest of the work is mainly devoted to applications of the theory. We notice a number of points not usually treated even in more complete works, and very welcome to students. Thus, we have an elementary deduction of the average kinetic energy of a vibrating particle; a short section on the group velocity of a train of waves; a reference to Osborne Reynolds's dynamical explanation of the fact that a group of deep water waves advances with only half the rapidity of the individual waves; the principle of least time (or law of Fermat), now rarely stated in text-books; and some interesting notices of graphic methods in problems relating to diffraction, of which Cornu's spiral is the most novel. Under the head of rotatory polarization we have a notice of the Kerr effects and Jellett's analyzer; under that of dispersion, an account of Kundt's observations on anomalous dispersion.

The subject of the measurement of the velocity of light is quite fully treated, and justice is done to the fine work of Prof. Michelson of Clark University. Strangely enough, the work of Prof. Newcomb is not even alluded to. An account of the admirable researches of Michelson and Morley on the relative motion of matter and ether finds a well-deserved place, and the work concludes with a chapter on electro-magnetic radiation which, of course, includes the recent splendid work of Hertz. On the other hand, there are one or two omissions, chief of which is the theory of the prism, which is given very briefly and incompletely. The chapter on caustics appears to us superfluous, as the subject is almost purely geometrical and of little or no physical significance. On the whole, Mr. Preston's work will serve a good purpose in instruction and deserves favorable notice.

BOOKS OF THE WEEK.

A Brief Digest to Volumes VII to XII of American State Reports. San Francisco: Bancroft, Whitney Co.
Adams, H. History of the United States of America during the First Administration of James Madison. 2 vols. Charles Scribner's Sons. $4.

Fine Arts.

THE GRANT MONUMENT.

THE drawings offered in competition for the Grant Monument by Messrs. Carrère & Hastings, Mr. Charles W. Clinton, Mr. John H. Duncan, the Messrs. Le Brun, and Mr. John Ord are on exhibition at the Ortgies Gallery in Fifth Avenue. It is altogether proper that such an exhibition should be held, but it would be more useful, perhaps, if the final decision were still to be made. No doubt, however, much volunteered good advice and many troublesome suggestions would be offered in that case, from which the Committee saves itself by not showing the designs until one had been decided on, and no doubt the Committee fully believe that they are in no need of such assistance.

The design of Messrs. Carrère & Hastings is a study of a character already familiar to those architects—a study of elaborate approaches and mass rising behind mass, in long succession. A huge semicircular colonnade and its portico lead, by a doorway in the middle of the convex side, to a porch, and this to a square building covered with a low dome, and forming, with its two porches and two apses, something like a Greek cross. This leads, on the side opposite the entrance, to a very lofty and massive tower. The difficulty of succeeding in such an effort as this is not to be forgotten. The impossibility of showing the design properly without a bird's-eye view, or else a series of perspective views, must be considered; but still it cannot be believed that the effect would be altogether happy. The design for the cathedral and its appendages and approaches, as shown by the same architects at the Architectural League Exhibition last winter, was certainly more successful, perhaps only because more matured, more carefully worked out.

Mr. Clinton's design is of a very simple circular building, like a temple of Vesta, with a colonnade surrounding a cylindrical *cella*, but crowned by a second story also circular and much smaller in diameter—a kind of open cupola. The whole structure seems much smaller than it really is. Even after examination and after study of the Pantheon-like ground-plan, and after gaining a "realizing sense" of the colossal size of the lower order of columns, the edifice still appears to the eye a slight and delicate garden pavilion. In some respects this is the best design exhibited; but the serious character of the above-named fault cannot be denied.

Mr. Duncan's design is announced as the successful one. It consists of a square hall having four porticos (of which one projects like an apse), and a cylindrical drum surmounting the nearly cubical lower structure, surmounted in its turn by a cone formed of steps, and, at top, a *quadriga*. The general appearance, then, is that of a round and cone-topped tomb of the Roman imperial epoch, such as was that of Cæcilia Metella or the great mausoleum of Hadrian, set upon a square basement of overwhelming size. The idea is not fortunate. The two structures are rather too visibly separate, for the cylinder and cone do not form a good roof or superstructure to the cube, nor does the cube lend itself at all well to the service of a pedestal for the cylinder and cone. This, which would be palpable to all in a perspective view, or in execution, the geometrical "elevation" partly conceals. The interior effects would be much happier. A great square hall opens into the four porticos, of which three, indeed, are closed by screen-walls between the columns, though still allowing light to pour freely in. Beneath this, on the side of the semicircular or apse-like portico, is a crypt, which, as a place for the sarcophagus, is well imagined. The details of this design are not very agreeable. The great columns, Grecian Doric in their general character, hardly agree with the Roman look of the whole mass: they have no virtue but ponderous solidity. The entablatures which stripe the building horizontally are very far from decorative. Grace, indeed, and harmony of parts are not to be found in the exterior, which it would not be unfair to call clumsy.

The design of Messrs. Le Brun offers a large drum crowned by a dome, and having four rectangular porticos. The dome is light and high, as compared with what we know of Roman work, and yet the building is generally Roman in character; it is as if an architect of Marcus Aurelius's time had tried to design a dome as showy outside as that of the Pantheon is within. The details are hardly as graceful as those of Mr. Clinton's design, and yet, on the whole, this one is to be preferred to it, and therefore, we think, to all the others.

Mr. Ord's design provides a huge square tower, having a dome flanked by minor towers rising from the main mass, which itself is surrounded by four apses with semi-domes low in proportion to the main structure. It is not fortunate in detail or in proportion. The large bas-reliefs seem to us incredibly inappropriate and in bad taste; in one is seen Grant as "the guest of the world," surrounded by recognizable sovereign and ruling personages, he *primus inter pares*—a position his simplicity would hardly have rejoiced in.

Among Mr. Duncan's drawings is one which shows in an odd way the discrepancy between the gigantic ideas entertained by the Committee and the existing state of things. It appears that the funds already subscribed would allow of building one of the four sides of the proposed great central hall, but only to about half its height, and, with this, the apse-like projection on that side, and the whole crypt. The design for this small instalment is very clever; the details, which are to be parts of a stupendous whole, are still seen to be available as parts of a very small separate entity; and it appears that the Grant tomb, if it never should grow any bigger than as shown here, would be at least as good architecturally as if the whole design were realized. This smaller structure seems to contain at most three-tenths of the whole, if the whole foundation is supposed to be put in, or about one-fifth of the whole if this is not done.

HENRY HOLT & CO.

HAVE READY:

James's Psychology.

By WILLIAM JAMES, Professor of Philosophy in Harvard College. (American Science Series.) 2 vols., 8vo. $6.00.

Probably the most complete statement yet made of the present aspects of this rapidly progressing science.

Our Dictionaries

AND OTHER ENGLISH LANGUAGE TOPICS. By R. O. WILLIAMS. 12mo, $1.25.

Contains a sketch of the growth of English and American Dictionaries, and discussions of the legitimate use of English words.

Bridgman & Davis's Declamations.

BRIEF DECLAMATIONS. Selected and edited by HARRY C. DAVIS and JOHN C. BRIDGMAN. $1.00.

Some 200 three-minute declamation, made up partly of the standard pieces that fathers know and sons should learn, but mostly of good examples of current public speaking.

Mrs. Alexander's Blind Fate.

Leisure Hour Series, $1.00; Leisure Moment Series, 30 cents.

Books in Rich Bindings.

We are just receiving our Holiday Stock and have already on our counters many sets of Standard Books, bound very elegantly in our own patterns. We have among others:

The Life of Nathaniel Hawthorne.

By MONCURE D. CONWAY. With 15 inserted photographs. 1 vol., half russia, $8.00.

Life of Abraham Lincoln.

By ISAAC H. ARNOLD. With autographs and 40 inserted portraits. 2 vols., half calf, $23.00.

An exceedingly interesting book, and the only copy of its kind.

Hawthorne's Marble Faun.

2 vols., half russia, $25.00. With 58 inserted photos.

Hare's Walks in London.

6 vols., half calf, $75. With 242 inserted photos.

The attention of book lovers is called to these and many other extended books which cannot be seen elsewhere and cannot be duplicated.

Full lists furnished on application.

E. P. DUTTON & CO.,

31 West Twenty-third Street,

NEW YORK.

The "Tax on Knowledge"

is about to be abolished by the new Tariff Bill, at least the duty on books in other languages than English.

A corresponding *reduction* in our rates of importation for Foreign Books in the *German, French, Italian,* and *Modern* as well as the *Greek, Latin,* and *Oriental* languages will be made promptly.

Such books may then be sent *by mail* from our foreign offices without the delay and annoyance of customs examination and assessment of duty; or imported in our *weekly shipments* from Paris, Leipzig, London, with the guarantee of safe delivery.

Our rates for *English* duty-paid books, in weekly shipments, are the lowest; mail sendings if desired.

Librarians and private bookbuyers are invited to correspond with us.

With Fire and Sword.

The New Novel From the Polish Attracts the Widest Attention, and is Universally Praised.

☞ FOR SALE EVERYWHERE.

☞ *What is Said of It.*

A capital story. The only modern romance with which it can be compared for fire, sprightliness, rapidity of action, swift changes, and absorbing interest, is the "Three Musketeers" of Dumas.—*New York Tribune.*

A great novel. He exhibits the sustained power and sweep of narrative of Walter Scott, and the humor of Cervantes. A greater novelist than Tolstoi.—*Philadelphia Inquirer.*

Altogether uncommon, . . . one of the noblest works of historical romance ever written in any language, and it has been done into English by the hand of a master.—*The Pilot.*

One of the most brilliant historical novels ever written. . . . A story of chivalry, of heroism, of romance, and of devotion.—*Christian Union.*

The first of Polish novelists, past or present, and second to none now living in England, France, or Germany. He has Dumas's facility for conceiving and carrying out a complicated historical romance; he has much of Bret Harte's dry humor and laconic pathos, and a good deal of Turgenieff's melancholy suggestiveness, with some of his delicacy of touch.—*Blackwood's Magazine.*

There is not a tedious page in the entire magnificent story.—*Boston Home Journal.*

The book is one of real power.—*Chicago Times.*

He handles his wealth of incidents with a picturesque skill that holds the attention at every step. . . . Those who desire a novel that, like Thackeray's "Henry Esmond" or Scott's "Ivanhoe," can be returned to again and again with pleasure and profit, should by all means procure "With Fire and Sword."—*Boston Gazette.*

The romance is one for which to be heartily thankful, so thoroughly enchanting is it. It is one of the few which are worthy to stand on the same shelf with the romances of Dumas, and there is no doubt that it is destined to win in this country, as it has already won in Europe, the widest popularity.—*Boston Courier.*

A romance which once read is not easily forgotten.—*Literary World.*

Its dramatic power, the impetuous, yet never uncontrolled or misdirected, force with which the friendship of comrades, the devotion of lovers, the gloom of mourners, the bluster of braggarts, the modest gallantry of unassuming heroes, the greed of servants, the revengefulness of the defeated, the superstitions of the common people, and all such features of the age are represented—*these qualities constitute the volume one of the most remarkable which the English reading public has had laid before it in a long time.*—*Congregationalist.*

WITH FIRE AND SWORD, AN HISTORICAL NOVEL OF POLAND AND RUSSIA. By HENRYK SIENKIEWICZ. Translated from the original by JEREMIAH CURTIN. Crown 8vo. Cloth. 795 pages. $2.00.

LITTLE, BROWN & COMPANY, PUBLISHERS,
254 Washington Street, Boston, Mass.

WORTHINGTON'S INTERNATIONAL LIBRARY.

A series of contemporaneous works of fiction by great writers of America, France, Germany, and Great Britain, forming a standard collection of pure, wholesome, entertaining reading, illustrated with exquisite Photogravures, faultlessly printed on beautiful paper, *and bound in either cloth at $1.25, or in illuminated paper covers at 75 cents each.*

JUST OUT:

12. FLIRT. A Novel by PAUL HERVIEU. Illustrated with Photogravures by MADELEINE LEMAIRE. Translated by Hugh Craig.
A delightful book, dealing with Parisian life of 1890, showing its elegance, its pleasures, its refinements, and its loves, presenting exact types of the highest circles of society. The story is pure in deeds, the language chaste and limpid, the conversations sparkling with wit. Added to these admirable descriptions are the inimitable designs from the brush of a Parisienne illustrating the most feminine and worldly scenes of the story.

1. Gertrude's Marriage. By W. HEIMBURG.
3. Two Daughters of One Race. By W. HEIMBURG.
4. Lora, the Major's Daughter. By W. HEIMBURG.
5. Wives of Men of Genius. By ALPHONSE DAUDET.
6. Henriette; or, A Corsican Mother. By FRANCOIS COPPÉE.
7. Magdalen's Fortunes. By W. HEIMBURG.
8. The Pastor's Daughter. By W. HEIMBURG.
9. The Feet of Love. By ANNE REEVE ALDRICH.
10. Bella's Blue Book. The Story of an Ugly Woman. By MARIE CALM.
11. Lucie's Mistake. By W. HEIMBURG.
13. Children of the World. By PAUL HEYSE.

WORTHINGTON CO., 747 Broadway, New York.

ROBERTS BROTHERS
NEW BOOKS.

Illustrated Edition of
THE LIGHT OF ASIA.
By SIR EDWIN ARNOLD. Square 12mo. With a new Portrait. Gilt top, price $1.50; full gilt, gilt edges, price $2.00.
The illustrations are taken, for the most part, from photographs of Buddhist sculptures and frescoes found in ancient ruins of India, averaging 2,000 years old.

The Winds, the Woods, and the Wanderer.
A Fable for Children. By LILY F. WESSELHOEFT, author of 'Sparrow, the Tramp,' and 'Flipwing, the Spy.' With illustrations. 16mo. Cloth. Price $1.25.
In the story of 'The Winds, the Woods, and the Wanderer,' the author has endeavored to depict an artistic temperament that is misunderstood by the practical natures by which it is surrounded.

Stories Told at Twilight.
By LOUISE CHANDLER MOULTON, author of 'Bed-Time Stories,' 'Firelight Stories,' etc. With illustrations by H. Winthrop Peirce. 16mo. Cloth. Price $1.25.
Mrs. Moulton has a happy faculty of story-telling which makes them interesting to both young and old.

Dear Daughter Dorothy.
By MISS A. G. PLYMPTON. With seven illustrations by the author. Small 4to. Cloth. Price $1.00.
A charming story about a charming little girl.

Zoe
A Story. By the author of 'Miss Toosey's Mission,' and 'Laddie,' 'Pen,' 'Our Little Ann,' 'Lil,' and 'Tip Cat.' 16mo. Cloth. Price 60 cents.

Sold by all booksellers. Mailed, postpaid, on receipt of price, by the publishers.

ROBERTS BROTHERS,
BOSTON.

THE FORUM.

Contents for October, 1890.

SOCIAL PROBLEMS AND THE CHURCH. Bishop F. D. Huntington of Central New York.

THE DECADENCE OF NEW ENGLAND. George S. Boutwell of Massachusetts. Statistics and an argument to show that the New England States are not in danger of industrial decay.

FORMATIVE INFLUENCES. Frederic Harrison.—An autobiographical account of the growth of his opinions; his methods of literary work.

THE WORKING OF THE NEW SILVER ACT. Prof. F. W. Taussig of Harvard.

FIRST STEPS TOWARD NATIONALISM. Edward Bellamy.—How the author of 'Looking Backward' would begin the nationalization of industry; the immediate programme of his followers.

THE FUTURE OF OUR DAUGHTERS. Mrs. Helen E. Starrett.—On the proper education of women.

CHINA'S MENACE TO THE WORLD. Thomas Magee. The threatened effect of the cheap habit of living, and of the great endurance of the Chinese on the industries of the Western nations.

THE IDEA OF LIFE AFTER DEATH. Prof. J. Peter Lesley.

TWO FORCES IN FICTION. Mary D. Cutting.

THE ZODIACAL LIGHT. Prof. Arthur Williams Wright.

CLIMATE AND THE GULF STREAM. Jaques W. Redway.

50 cents a copy. $5 a year.

KRUELL'S CONTEMPORARY PORTRAIT-GALLERY.

"The Nation."

1865-1890.

In commemoration of the 25th anniversary of this journal, Mr. Kruell has engraved on wood, in the highest style of the art, after a recent photograph by G. C. COX, a portrait of the founder and present editor of the *Nation*,

Edwin Lawrence Godkin.

The size of the block is 9x6 inches; the impression is on Japan paper, under the personal supervision of the artist, and is loosely mounted. *Only one hundred proofs* will be offered for sale, and each will be signed and numbered. Price, Ten Dollars, carriage prepaid. Address GUSTAV KRUELL, East Orange, N. J.

*** Mr. Kruell offers at the same price, and in the same style, proof portraits of CHARLES DARWIN (one in his prime, one in old age), ASA GRAY, WILLIAM LLOYD GARRISON, and WENDELL PHILLIPS. The edition in these cases is limited to 200 copies for all except Gray (100).

"*Certainly we may look in vain among other graphic arts for anything comparable with these portraits.*"—The Nation, January 23, 1890.

The Popular Science Monthly.

812 Broadway, New York.

A Theological Curiosity.

Familiar to our Forefathers 1,500 years ago, but not now known to one man in 50,000.

The Apocryphal Books, being the Gospels and the Epistles thrown out of the New Testament by the Council of Nice, A.D. 325; translated from the original tongues with copious Notes, and Illustrations from ancient Missals and Miniatures.

Of this work, Dr. TALMAGE has recently said:

"*Christ is the joyous boy of the fields. We are not permitted to think that the shadows of Calvary darkened his pathway as a youth, and the Apocryphal Books of the New Testament show much of the early life of Christ not to be found in the four Evangelists.*"

Price, in large 8vo, cloth, $2.00. Sold only by subscription. Agents wanted in every county. Send for circulars.
GEBBIE & CO., Publishers, Philadelphia.

EUROPEAN WINTER AND SUMMER RESORT. University town of Innsbruck, Tirol, Austria; 1,900 feet above the sea, with dry, bracing climate. Hotel Tirol, open all the year, Carl Landsee, Proprietor. Large, airy, sunny rooms, well furnished. Elevator. Superior cuisine (table d'hôte or à la carte). Reduced rates in winter. Carriages and sleighs at low rates. Charming excursions made from the hotel at all seasons. Unusual advantages for securing teachers of the languages, history, science, art, music, etc., at very moderate terms. Eminent medical care and skilled nurses if desired. Best English and American references. Illustrated pamphlets sent on application.

DESCRIPTIVE LIST
OF
NOVELS AND TALES
DEALING WITH
American Country Life.

The object of this list (consisting of extracts from the *Atlantic, Critic, Nation*, and other critical journals) is to direct readers, such as would enjoy the kind of books here described, to a number of novels which, in many cases, have been forgotten within a year or two after publication. It is hoped that the publication of this and similar lists will lessen in some measure the disposition to read an inferior NEW book, when superior OLD books, equally fresh to most readers, are at hand.

Respecting the list, Mr. W. D. HOWELLS writes to the compiler thus:

"I am delighted with the notion of your list of Novels about Country Life in America, and I think you have most charmingly realized it. The book will be useful to every book-lover and critic and librarian. Now that it satisfies it, I know that I have always felt the need of just such a list."

52 double-column pages. Price, 50 cents (32 specimen pages, 10 cents). Address
W. M. GRISWOLD,
Cambridge, Mass.

MATTHEW ARNOLD IN THE "NINETEENTH CENTURY."

"The New York NATION—a newspaper which I read regularly and with profit, a newspaper which is the best, so far as my experience goes, of all American newspapers, and one of the best newspapers anywhere."

THE NATION,

an independent weekly journal, was established in 1865. Its contributors include the most prominent names in literature, science, and art both in this country and abroad. It is emphatically found in the homes of people of culture and refinement. No intelligent American desirous of keeping abreast of the best political and literary thought of the day can afford to be without it. Subscription price, $3.00 a year, postpaid.

To Advertisers:

The issues of the NATION to be published on Thursdays, November 26th, December 4th, 11th, and 18th will be holiday issues containing the announcements of the leading publishers and other discriminating advertisers. Copy for these issues should be in our hands by each Tuesday preceding the dates above mentioned.

The Quarterly Journal

OF

ECONOMICS,

PUBLISHED FOR

HARVARD UNIVERSITY,

Begins its fifth volume with the issue of October. It is established as an aid to investigators, students, and all to whom the thorough and unbiassed discussion of economic questions appeals. It publishes studies in economic history, criticism, speculation, and on important questions of the day. It welcomes any real contribution to economic knowledge from whatever school of thought. Among the contributors to the first four volumes have been eminent economists from Germany, England, France, and the United States.

CONTENTS FOR OCTOBER, 1890.

I. SOME EXPERIMENTS ON BEHALF OF THE UNEMPLOYED. *Amos G. Warner.*
II. BOEHM-BAWERK ON VALUE AND WAGES. *S. M. Macvane.*

New York, U. S. A., and London.

MACMILLAN & CO.

JUST PUBLISHED.

The Anglomaniacs.

A story of New York society to-day. 1 vol., 12mo, on extra fine laid paper, dainty binding, $1.00.

This is the story that has attracted such wide attention while running through the *Century Magazine*. There has been no such picture of New York social life painted within the memory of the present generation. The satire is as keen as a rapier point, while the story itself has its marked pathetic side. Never has the subject of Anglomania been so cleverly treated as in these pages, and it is not to be wondered at that society is deeply agitated as to the authorship of a story which touches it in its most vulnerable part.

Vengeance is Mine.

A novel. By DANIEL DANE. 1 vol. 12mo, cloth, $1.50.

The name of Daniel Dane is a new one to fiction, but the publishers predict that it will not long remain unknown. The plot is original, the situations are new, the characters are drawn with a keen appreciation of human nature, and the style is vigorous and entertaining. The hero of the story, Arnold North, is a scientific man of high standing in London, who, notwithstanding his devotion to science, finds time to fall in love, and that, too, with another man's wife. That Arnold North will, before long, become one of the recognized characters of fiction there can be but little doubt.

Not of Her Father's Race.

A novel. By WILLIAM T. MEREDITH. Paper, 50 cents; cloth, 75 cents.

This is a striking story of race—of a girl with a white father and a mulatto mother, who inherits the characteristics and appearance of her father. Mr. Meredith's book is not only a story of race, it is a keen satire on New York life and politics, a satire on society and the "four hundred" and their imitators in fashionable folly. The scenes of the novel begin in the South and are quickly changed to New York city, where the wealthy Southerner with his beautiful daughter become leaders in the world of fashion. The book is unlike any other that has taken the question of race for its subject, and it is handled with a bold and picturesque touch.

The Soul of Pierre.

By GEORGES OHNET, author of 'The Master of the Forge,' etc. Translated by MARY J. SERRANO, translator of 'Marie Bashkirtseff: The Journal of a Young Artist,' etc. With original illustrations by ÉMILE BAYARD. Paper, 50 cts.; extra cloth, $1.00.

FINE EDITION With all the original Illustrations by EMILE BAYARD, the volume beautifully printed on extra paper made specially for this edition, and handsomely bound in extra cloth. Gilt top, in box, $2.00.

An Artist's Honor.

Translated by E. P. ROBINS from the French of OCTAVE FEUILLET, author of 'The Romance of a Poor Young Man,' etc. Paper, 50 cts.; extra cloth, 75 cts.

Written in Red;

Or, The Conspiracy in the North Case. A Story of Boston. By CHARLES HOWARD MONTAGUE and C. W. DYAR. Paper, 50 cts.; extra cloth, 75 cts.

FOR SALE BY ALL BOOKSELLERS.

Cassell Publishing Co.,

104 and 106 Fourth Ave., New York City.

The Nation

VOL. LI.—NO. 1319. THURSDAY, OCTOBER 9, 1890. PRICE 10 CENTS.

G. P. Putnam's Sons,

27 and 29 West 23d St., N. Y.,

WILL PUBLISH NEXT WEEK:

The Unwritten Constitution of THE UNITED STATES: A Philosophical Enquiry into the Fundamentals of American Constitutional Law. By CHRISTOPHER G. TIEDEMAN, A.M., LL.B., Professor of Law in the University of Missouri. 12mo, cloth, $1.00.

7,000 Words Often Mispronounced. A complete handbook of difficulties in English Pronunciation, including an unusually large number of Proper Names and Words from Foreign Languages. By W. H. P. PHYFE, author of 'The School Pronouncer,' etc. Sixth and cheaper edition. 16mo, 75 cents.

"A work of great value, which ought to be in the hands of every pupil in school and college, and, indeed, of every man and woman."—*Chicago Times.*

"The work is an invaluable manual for every one who would acquire the art of correct pronunciation."—*Boston Home Journal.*

"It will be found for its purpose a work of reference as useful as it is unique. As it becomes known it will be universally welcomed and approved."—*George Wm. Curtis.*

"Your books must attract attention to pronunciation as a department needing special study in our schools and elsewhere. I hope they may be widely used."—*F. A. March, Lafayette College.*

Gilbert Elgar's Son. By HARRIET E. DAVIS. A charmingly written story of Quaker life in Maryland. 16mo, cloth, $1.25.

Principles of Procedure in Deliberative Bodies. By GEORGE GLOVER CROCKER, President Massachusetts Senate in 1883. Second Edition. 16mo, cloth extra, 75 cents.

"The treatment of the subject is scientific and at the same time eminently practical, so that the book is adapted to the use of those experienced in parliamentary procedure, as well as of beginners."—*John D. Long, ex-Governor of Massachusetts and ex-Member of Congress.*

"It seems to me to be an admirable book for those who desire a knowledge of the ordinary rules of parliamentary practice, and will, I have no doubt, be very useful in extending such knowledge."—*James A. Beaver, Governor of Pennsylvania.*

"Mr. Crocker, preserving all his usual accuracy and clearness, has condensed into a pocket manual what others who have treated the subject have not been able to say as well in ponderous volumes."—*H. L. Dawes, Senator for Massachusetts.*

" . . . The author is evidently an authority on this subject. The book has a carefully prepared topical index, and is in every way adapted for use by clubs, societies, and deliberative bodies of all kinds."—*Indianapolis Sentinel.*

"In no treatise which we have seen can a knowledge of parliamentary procedure be gained so easily as in Mr. Crocker's little volume."—*Providence Journal.*

"It is clearly and concisely written, and its rules embody the best usages on all points. The book is of convenient size, and the mechanical work on it of rare excellence."—*Register, Wheeling, W. Va.*

BRENTANO'S
NEW TEXT-BOOKS.

I. A Spanish Grammar.

A new method for learning Spanish as taught by the masters of the language, and for acquiring the Castilian pronunciation, with the *new rules of accentuation by the Royal Academy of Spain*, and an alphabetical index of the conjugations of all irregular, defective, and impersonal verbs, by A. M. SOTELDO, author of the Gramática Inglesa para los Españoles—the actual national text-book in Venezuela. 12mo, bound, $2.00.

This grammar is reliable and practical. It has been composed by one of the foremost contemporary Spanish grammarians, and will be recognized as an authority on the Spanish language and a standard handbook for the acquisition of Spanish by English-speaking nations.

II. The "Phonetic" Series

OF HAND-BOOKS TO THE STUDY OF LANGUAGE.

No. 1. Colloquial French for Travellers and Students.

Handy sized 16mo; tastefully bound in cloth, 50 cents.

This is the first volume of a series of hand-books which has two aims—one to give a careful analysis, for students, of the sounds employed in speaking various languages, as compared with English, with an explanation of the differences in easily understood terms; and the other to be thoroughly useful phrase-books for travellers.

III. Nouvelle Edition Berlitz.

1ère Série: Comédies, ea ..... .25
2ème Série: Nouvelles, ea. ..... .25

French, German, Spanish, Italian, Russian, Danish, Dutch Grammars, Dictionaries, Readers, Conversation Books, etc. Grammars of any language of the world can be obtained through us.

GINN & CO., Pubs., Boston, New York, and Chicago.

TO-DAY.
A WEEKLY JOURNAL OF POLITICS.

Published at 3 Somerset Street, Boston, Mass. Subscription, $1.00 per Year.

A Record of the Facts and Considerations which show that Individual Liberty is good for the people of the United States, and that, therefore, Legislative Regulation is injurious for them.

They are injured by governmental interference with Banks, Railroads, Post-office, Education, International Trade, Relations between Laborers and Employers, and by the countless other extensions of the political function in a socialistic sense, leading to the neglect of Justice, the one needful.

It has been published for over a year. Readers with the object should come to its support. Our endeavor will be to provide them with [illegible] and useful paper.

Select List OF STANDARD WORKS

For Public and Private Libraries and the General Reader.

Corson's Introduction to Shakespeare. A critical study of Shakespeare's Art, with Examination Questions upon Special Plays. $1.50.
"Altogether, so excellent a volume of Shaksperian criticism has not been put forth by an American scholar in many a day."—*The N. Y. Nation.*

Corson's Introduction to Browning. A guide to the study of Browning's Poetry. Also has 33 Poems, with Notes. $1.50.
"The best model of what the introduction to a writer should be that I have seen in connection with any author."—*R. G. Moulton, Cambridge, Eng.*

George's Selections from Wordsworth. 168 Poems, chosen with a view to illustrate the growth of the poet's mind and art. $1.50.
"The list is the best possible for a text-book in schools."—*Aubrey de Vere.*

George's Wordsworth's Prelude. Annotated for High School and College. Never before published alone. $1.25.
"It is in every way admirable. To say that the editing is worthy of the text is saying a great deal, yet hardly too much."—*Prof. M. B. Anderson, Iowa State Univ.*

Meiklejohn's English Language. Treats salient features with a master's skill and with the utmost clearness and simplicity. $1.50.
"A superior work, admirably adapted to class use or general reference."—*The Mass. Teacher.*

Wilson's The State. Elements of Historical and Practical Politics. The organization and functions of government, $2.00.
"It is by all odds the most complete and valuable study of the kind that has ever appeared in the English language."—*The Albany Argus.*

Gustafson's Study of the Drink Question. Gives the most complete review of the question ever published. Impartial and careful in its evidence, fair and fearless in its conclusions, $1.50.
"The best book for the study of the temperance question."—*Dr. Lyman Abbott.*

Houghton, Mifflin & Co.'s New Books.

Sidney.

A Novel, by MARGARET DELAND, author of 'John Ward, Preacher,' and 'The Old Garden and Other Verses.' $1.25.

A story of remarkable interest, involving questions of an unusual character, which cannot fail to cause much discussion. 'Sidney' promises to be one of the most noteworthy novels of the year.

Our Old Home.

By NATHANIEL HAWTHORNE. *Holiday Edition.* From new plates, with Thirty-one Photogravures of English scenery, country-houses, churches, etc., and an etched Portrait of Hawthorne. 2 vols., 16mo; gilt top, $4 00; half calf, $7.00; polished calf, $9.00.

The Vision of Sir Launfal.

By JAMES RUSSELL LOWELL. An entirely New Edition from new plates. With Photogravure Illustrations, including a Portrait of Mr. Lowell from the crayon by PAGE in 1842, and eight original drawings by EDMUND H. GARRETT. Tastefully bound, $1 50.

The Professor at the Breakfast-Table.

The Poet at the Breakfast-Table.

By OLIVER WENDELL HOLMES. *Birthday Edition.* Each in 2 vols. 16mo, uniform with the *Birthday Edition* of 'The Autocrat' published last year and received with so remarkable favor. Each work, with engraved title-page, gilt top, $2.50; half calf, $4.50; polished calf or full levant, $8.00.

The Inverted Torch.

Poems, by EDITH M. THOMAS, author of 'Lyrics and Sonnets,' and 'The Round Year.' $1.00.

The inspiration of this noteworthy volume is the same as that of Tennyson's 'In Memoriam.'

White and Gold Series.

LEGENDS AND LYRICS. By JOHN G. WHITTIER.

PASTORALS, LYRICS, AND SONNETS. By WILLIAM WORDSWORTH.

Two additional volumes in a very attractive series. Each 16mo, gilt top, $1 00; half levant, $3.00; full polished calf or full levant, $4.00.

Doctor Zay.

A Novel. By ELIZABETH STUART PHELPS. *Riverside Paper Series,* 50 cents.

Houghton, Mifflin & Co., Boston,
11 East Seventeenth St., New York.

Charles Scribner's Sons'

NEW BOOKS.

Third and Final Volume of the

Cyclopedia of Music and Musicians.

Edited by JOHN DENISON CHAMPLIN, Jr. Critical Editor, WILLIAM F. APTHORP. With over 1,000 illustrations, including 36 Full-page etched Portraits. Three vols., 4to. Decorated Parchment Binding, uniform with the 'Cyclopedia of Painters and Paintings.' This Edition limited to 500 Numbered Sets. $25.00 per volume *net*.

This volume completes an important work which takes its place as an acknowledged authority in its special field, and ranks with its predecessor, the 'Cyclopedia of Painters and Paintings,' as an invaluable work of reference, while it resembles the latter still further in the skill and conscientious care with which it has been prepared and the sumptuously handsome form in which it is issued.

Against Heavy Odds.

A Tale of Norse Heroism. By HJALMAR HJORTH BOYESEN. With 13 full-page Illustrations by W. L. TAYLOR. 12mo, $1.00.

The adventures of Ingomar Vang, a brave Norwegian lad, and his manly, courageous, and successful fight against adverse fortune, form the theme of a story of fascinating interest. The illustrations are in Mr. Taylor's best style.

Aspects of the Earth.

A Popular Account of Some Familiar Geological Phenomena. By Prof. N. S. SHALER of Harvard. With 100 Illustrations. *New and cheaper edition.* 8vo, $2.50.

"The subjects are as interesting as the way in which they are treated, and the illustrations are not only numerous, but excellent."—*New York Tribune.*

Bric-a-Brac Stories.

By Mrs. BURTON HARRISON. Illustrated and cover designed by WALTER CRANE. *New and cheaper edition.* 12mo, $1.50.

"It would be difficult to find a more delightful collection of fairy tales. The book is illustrated with twenty-four fascinating drawings."—*Boston Herald.*

History of the United States.

By HENRY ADAMS.

Vols. V. and VI.—First Administration of James Madison, 1809–1813. 12mo, $4.00.

"It would be difficult to speak too highly of the work as a whole. Certainly no English historian, and, we think, no American, has dealt with this difficult period in so just and bold a manner."—*New York Tribune.*

Vols. I. and II. THE FIRST ADMINISTRATION OF THOMAS JEFFERSON. 1801–1805. 12mo, $4.00.

Vols. III. and IV. THE SECOND ADMINISTRATION OF THOMAS JEFFERSON. 1805–1809. 12mo, $4.00.

Two Books by Eugene Field.

A LITTLE BOOK OF WESTERN VERSE.

A LITTLE BOOK OF PROFITABLE TALES.

Each, 16mo, $1.25.

"The Tales are all gems in their way and full of interest. The other volume is filled with wit, pathos, and healthy sentiment. The poems are admirable."—*N. Y. Journal of Commerce.*

CAMEO EDITION.

Old Creole Days.

By G. W. CABLE. With Etching by PERCY MORAN. 16mo, $1.25.

In Ole Virginia.

By T. N. PAGE. With Etching by W. L. SHEPPARD. 16mo, $1.25.

"It was a happy thought to put side by side in the same typographical dress the two best collections of Southern stories extant. Each volume has an etching typical of Southern life."—*Christian Union.*

**** *Sold by all booksellers, or sent, postpaid, by*

A Theological Curiosity.

Familiar to our Forefathers 1,500 years ago, but not now known to one man in 50,000.

The Apocryphal Books, being the Gospels and the Epistles thrown out of the New Testament by the Council of Nice, A.D. 325; translated from the original tongues with copious Notes, and Illustrations from ancient Missals and Miniatures.

Of this work, Dr. TALMAGE has recently said:

"*Christ is the joyous boy of the fields. We are not permitted to think that the shadows of Calvary darkened His pathway as a youth, and the Apocryphal Books of the New Testament show much of the early life of Christ not to be found in the four Evangelists.*"

Price, in large 8vo, cloth, $2.00. Sold only by subscription. Agents wanted in every county. Send for circulars.

GEBBIE & CO., Publishers, Philadelphia.

FRENCH STUDENTS

Can have the GENDER OF FRENCH NOUNS AT A GLANCE, on a small card 5 inches by 7. Address, with 10 cents in stamps, DE FEIFFER'S SCHOOL OF LANGUAGES, 180 Tremont Street, Boston.

The Nation.

NEW YORK, THURSDAY, OCTOBER 9, 1890.

The Week.

THE Republican "keynote of the campaign" is a pamphlet of twenty-seven pages entitled 'The Grand Old Party.' It is ornamented with portraits of Lincoln and of Grant, and it tells what Congress has done during the past session for the benefit of labor. First, it has helped the farmer by raising the duty on horses and mules to $30 per head, and on hogs to $1.50 per head. It has also made corresponding advances on buckwheat, oats, cheese, cabbages, hay, garden seeds, straw, pork, and a lot of staple exports that our farmers are sending to Europe by great ship-loads almost every day in the year. Then the party has done an equally good turn for the operatives in factories, according to this veracious chronicle, which says that, "while guarding by every wise and lawful means the interests of the American farmer, the McKinley Bill has skilfully maintained the conditions which have contributed so marvellously to the prosperity of the American mechanic in the past twenty years. . . . It is a bill which enables American manufacturers to do a profitable business, notwithstanding the dreadful disparity in the price of labor." How promptly the lie has been given to this statement is shown by the journal of the carpet industry in this city, which contains the remarkable statement that the carpet-manufacturers of Philadelphia, who represent two-thirds of all the looms in the country, have signed an agreement *to shut down 40 per cent. of their looms for one year*. They have done this simply because the McKinley Bill has so added to the cost of their raw material that they cannot dispose of their product at a profit. Their market has been curtailed by the advance in price made necessary by the advance in carpet wool. Fewer people can afford to buy carpets. The shrinkage in the demand has been ascertained or estimated to be equal to 40 per cent. Of course they have not taken this step with any view of influencing legislation, but simply to save themselves from loss. The legislation is already in force, and the carpet makers have only to adjust their business to it.

Now, how does this comport with the statement of the Republican campaign pamphlet that labor has been benefited by the McKinley Bill? The very first thing done is to throw out of employment 40 per cent. of the carpet-weavers; of course their wages cease when the mills close, and if we suppose that they can turn their hands to anything else, they will simply crowd the avenue to employment in other industries. This is the way that labor has been helped by the McKinley Bill, and this is not the only case nor the worst one, as will be found out when the tin schedule takes effect. This was cunningly postponed till next July, at which time the tin-workers will "catch it" worse than the carpet-workers are catching it now.

The Boston *Commercial Bulletin* is not more than half pleased with the McKinley Tariff Act, now that it is passed. It says that "to the free-traders it is a disappointment, to the more conservative element of the protectionists a disappointment whose bitterness is intensified by the thought that in a large degree they are responsible for it." This observation is perhaps intended to smooth the pillow of Senator Hoar. "*The bill is by no means utterly bad*," continues the *Bulletin*. Then the *Bulletin* proceeds to point out in what particulars it is utterly bad. The new duties on wool, camel's hair, dégras, and sumac are cited as instances of utter badness. We had not heard of any complaint about sumac until the *Bulletin* told us about it. We now learn that this article is used for dressing certain kinds of leather, and that Sicily sumac is the only kind that answers the purpose perfectly, American sumac being impregnated with gallic acid from which the Sicilian variety is free. Under these circumstances, what do the McKinleyites do? They increase the duty on sumac to 4-10 of a cent per pound, the present rate being 3-10. This was done, says the *Bulletin*, in a vein of fine sarcasm, "with the apparent hope of changing our own soil and climate by the process." No, dear friend, Congress was not so foolish as that. What it intended, and what you meant to say it intended, was to increase the profits of the sumac-men at the expense of the leather-men. Such legislation is called "equalizing the conditions of production." If the soil of Sicily is free from gallic acid, that fact gives Sicily an advantage estimated at four-tenths of a cent per pound. Nobody expects to remove gallic acid from our soil at any such ridiculous rate as that, but it is expected that leather-dressers will put up with gallic acid rather than pay four-tenths of a cent extra for the kind of sumac that is free from it.

We receive every day a new lot of trade circulars announcing an advance in the prices of manufactured goods due to the passage of the McKinley Bill, but we have not received any similar announcement respecting agricultural produce. Henry M. Peyser & Co. of Nos. 138 and 140 Grand Street inform their customers that they are reluctantly compelled to advance the prices of kid gloves, *especially of the cheaper grades*. These tariff men always know where to strike. The wearers of the higher grades of gloves are the rich people, most of whom bring home their gloves in their trunks when they return from Europe. The former rate of duty on kid gloves was uniform at 50 per cent. ad valorem. The new McKinley rate is embraced in twenty-six lines of the bill which nobody but an expert can understand. Messrs. Peyser & Co. tell us that it will not be necessary to make the advance suddenly, "but the fact that the new tariff goes into effect within so short a period after its passage leaves no other course open for us." J. B. Ryer & Co., 167 and 169 Canal Street, find it necessary for the same reason to mark up the prices of upholstery goods, and for this purpose they withdraw all quotations pending a calculation of the additional cost. A firm engaged in the sale of musical instruments and parts thereof send out a circular saying that the McKinley Act puts the duty from 40 to 140 per cent. above the old rates. Looking at the McKinley Act in order to see how this comes about, we were surprised to find that musical instruments are not mentioned at all. In the tariff of 1883, under the head of sundries, is a clause, numbered 469, in these words: "Musical instruments of all kinds, 25 per centum ad valorem." This has been stricken out, and nothing put in its place, the effect being to put musical instruments in the category of manufactures of metal not otherwise provided for, at 45 per cent. ad valorem—a cunning way to increase the rate of duty and conceal the fact until the bill is passed and beyond recall.

In these days, when farm workers find so many discouragements, it must be pleasing to listen to such words of cheer as Mr. W. W. Phelps, the United States Minister to Berlin, uttered last week in a plea for protection before the Republican Convention of Bergen County, N. J. "The export of agricultural products," said he, "must find a limited and failing market; the export of manufactured articles must find an increasing and permanent market. The lowest grade of labor can raise corn and wheat and pork. It does not require the intelligence and skill and invention in which the American labor surpasses the world. Ultimately, then, we must lose these markets for our wheat, but not for our wares." Secretary Blaine, in his first reciprocity letter, told the farmers that in the McKinley Bill there was not a section or a line that would open the market for another bushel of wheat or another barrel of pork. According to Mr. Phelps, no legislation can check the "failing market" abroad for our agricultural products, raised, as he puts it, by the "lowest grade of labor." We leave our agricultural classes to pass on this ranking of them by the protectionist orator. But we call their attention to his conclusion, which is, that, inasmuch as there is to be no foreign market for farm products, the farmer must not squeal when, in a measure like this McKinley Bill, taxes are piled on

him in aid of manufacturers, because he must look to the employees of these manufacturers, who will have "intelligence and skill," to buy his grain and meat. The farmer's mind must be of a very "low grade" indeed if he cannot see that this is simply a proposal to pay more, as a certainty, for what he buys, in exchange for a distant promise that he will get a better home market for what he sells. And if he did, what would the result be but taking money out of one pocket to put it into another?

Considerable light is thrown upon Speaker Reed's conundrum, "What is reciprocity?" in a late despatch addressed by the Argentine Minister for Foreign Affairs to each of the Argentine Ministers in Europe. The Argentine Government, says the despatch, is giving serious attention to the modifications going on in the tariffs of European countries and to the marked protectionist spirit manifested in them. These changes have produced justifiable alarm in the Argentine Republic, since they threaten that country's export trade, and so her national well-being. The situation is one calling for defensive measures. Accordingly, each minister is directed to give careful study to the new tariff laws as they bear upon Argentine exports, and, in case the increase of rates is found to cut into Argentine trade, to indicate to the home Government his opinion as to "what products of the said country are best indicated for the imposition of a heavy tax, on arrival at our custom-houses, *as a measure of reciprocity.*" According to this, reciprocity may turn out only a new name for commercial warfare. It is suggestive, at any rate, of what would be likely to happen if President Harrison should undertake to set our wonderful scheme of reciprocity in operation as against the Argentines. Should he deem them not properly grateful for our great goodness in buying their hides, and clap a smart tax on the same, he would doubtless find them ready to act in the spirit of the above despatch, and to put such duties on our machinery and petroleum as would make an end of our export trade with them at once. Evidently, new chapters remain to be written in the history of reciprocity—though probably they will prove only new chapters in humbuggery.

The President has made a shrewd political manœuvre in appointing Mr. Blaine's man Collector of the Port at Portland in spite of Speaker Reed's objections. It is evident, from the super-heated condition of Congressman Boutelle and other of Mr. Reed's champions, that Republican politics in Maine are already badly rent with internal dissensions because of this appointment, and that matters are likely to grow worse instead of better as time goes on. If neither Mr. Blaine nor Mr. Reed can get a solid delegation from Maine to the next Republican National Convention, neither of them will have a strong chance for either obtaining or controlling the Presidential nomination, and the President will thus put two aspirants out of the field. Whether by doing this he will benefit his own prospects for the nomination is quite another matter.

The Lincoln Independent Republican Committee, as the anti-Quay Republicans of Pennsylvania style themselves, have sent an earnest appeal to President Harrison, which he, as a Presbyterian Elder, ought to make the subject of prayer and meditation. They say to him, after tersely summing up the evidence against Quay as a public thief:

"The issue is plain. In the interest of sound public morals and of primitive Republican facts, all seek the political downfall of a man whose public record dishonors himself, his party, and his State. There is but one alternative, either Mr. Quay must be shorn of political power, or the Republican party must lose its high name as the party of progress and the representative of great moral ideas. It must accept the ignoble title of the Party of Immoral Ideas, whose claim to power is no longer right, but might, and whose appeal is not now, as in the days of Lincoln, addressed through lofty and legitimate argument to the reason of the people, to their native sense of justice and of truth. It will then become a party whose youthful aspiration is sunk in hopeless corruption, and whose purse strings have strangled its patriotism. To avert such a catastrophe we appeal to you, as the Chief Magistrate of the nation, to aid us in this struggle by withdrawing from Mr. Quay the patronage of Pennsylvania, the responsibility for which has been placed in the Constitution in your hands. It is in this delegated power to give and to withhold office, to bribe and punish, that Mr. Quay's strength largely lies. Withhold it from him, and his political power will cease to exist."

The President should remember that the men who make this appeal are not wicked and hardened Mugwumps, but life-long Republicans; not free-traders in the pay of the Cobden Club, but life-long and eminent champions of protection, with such men as Robert Ellis Thompson and Henry C. Lea at their head. None of them supported Cleveland, but all of them were earnest Harrison men.

The latest Republican candidate who is charged with using public money as if it were his own, is that party's recent nominee for Governor of Michigan, Mr. James M. Turner. He is accused by a former superintendent of the State School for the Blind, Mr. J. T. McElroy, of having deliberately violated the law of the State a few years ago, while serving as a member of the Board of Control and acting as its treasurer. The law explicitly forbids any officer in charge of public moneys to "commingle the same with his own or with the money of any other firm or corporation." Mr. McElroy says that it is within his personal knowledge that Mr. Turner put the money appropriated for the Blind School into his personal account, and drew to meet the expenses of the institution and of his own private business from the same account. He further charges that Mr. Turner used his official position to force the institution to purchase building materials from his own business concern, though the law expressly forbade him to be a party to any contract or purchase or sales, directly or indirectly; and that in building a wing of the School a million and a half of brick were used which came from Turner's own brickyard. In support of this charge an affidavit from the contractor doing the work is printed, declaring that though equally good brick could have been obtained at a lower price, Mr. Turner would allow none but his own to be used. Other minor charges of a similar character are made by Mr. McElroy, who says that he first formulated these charges in 1887, when Mr. Turner was a candidate for reappointment to the Board of Control, and filed them with the Governor; that Turner admitted the truth of them to him in a private conversation just after the charges had been filed, and offered to secure McElroy's appointment as Superintendent for five years, at any salary he might name, if he would cease his opposition. This he declined to do, and, as the final outcome of a three hours' interview, Turner offered to withdraw his name if McElroy would recall his statement from the Governor's hands. This was accordingly done.

The "brick boycott" has been declared "off" by the august Board of Walking Delegates, and this silly disturbance of the building industry of several large cities is consequently removed. It will be remembered that the boycott was instituted by the brick-manufacturers because the Board of Walking Delegates had issued orders to all Knights of Labor unloading bricks in this city not to handle the bricks of the Verplanck Company because that company had refused to force all its several thousand employees into the "noble and holy order" of Knights. The manufacturers, instead of suing the Walking Delegates for conspiracy, combined and agreed to allow no bricks to come to market from their works until the boycott upon the Verplanck Company was lifted. They have won their fight, but they could have won it with much less harm to their own business, and without disturbance to building industries, by bringing the Walking Delegates into court and having them sent to prison for a brief period of meditation and seclusion.

Mr. Webb's action in intimating that Knights of Labor will not be employed on the New York Central Railroad, not only needs no defence, but is, as we have heretofore pointed out, the discharge of an imperative duty. If there is no law to warrant the indictment of a railroad manager who knowingly keeps in the employ of the road men bound to stop trains and obstruct traffic, without notice, on secret orders issued by outsiders, there ought to be one. It is just as criminal as knowingly permitting the use of an unsafe bridge or a defective locomotive. Private employers may, if they please, run such risks as long as the risk is only incurred by themselves, but railroad corporations or common carriers of any description have no right to do so. The character of his employees is one which every common carrier is bound to look to at his peril. The complaints which the Knights and their friends make of Mr. Webb's action, are due to that strange modern delusion that men can have a right to be hired by somebody else who has no desire for their services. Every man has a right to be a Knight of Labor if it pleases him, but nobody has the right to be hired by anybody who thinks Knights of La-

bor unsuited to his kind of work. There are plenty of disqualifications of the same sort. Nobody likes to employ any man whose attention is likely to be distracted from his proper duties by other occupations or pursuits, or who has outside interests hostile to those of his employer.

Mr. John Morley's reply to Mr. Balfour's article on the Land Bill in answer to Mr. Parnell in the *North American Review*, which appears in the October number of that periodical, will be found very pungent reading. Mr. Morley brings out, with the force of which he is so great a master, that most curious feature of the Balfour land-purchase scheme—the absolute disregard displayed in it of the opinions of the Irish people about the matter. Balfour proposes to lend the Irish farmers $250,000,000 of British Government money against the wishes of the great bulk of the Irish representatives in Parliament, and indeed without consulting them or any Irish representative body, and to make the county taxes liable in case any of the purchasers makes default in the payment of his annual instalments. That is to say, suppose a certain number of purchasers in any county fall into arrears, and suppose the Government to be unwilling, for political reasons, to foreclose on them and sell them out, it would actually have the power under the bill to seize on the county taxes, even the school rates and the poor rates, to pay these strictly private debts! We venture to assert that in no civilized country, except perhaps Russia, has a scheme been proposed displaying such contempt for the rights and wishes of the governed as this plan of solving the Irish problem.

The Tipperary trials bid fair to become one of the greatest farces of "resolute government" in Ireland. The proceedings are marked by a series of rows every day, and the court adjourns "in the greatest confusion." The reason is, of course, that the trials, besides rousing intense party feeling, are conducted before local magistrates, themselves intense local partisans, who have been engaged in all sorts of scrimmages themselves with the defendants, and who are of course ridiculously unfit to try cases involving the liberty of speech of their political opponents. Every day the precise object of the prosecutions becomes more mysterious. The usual object of criminal prosecutions is to frighten the defendant so that he shall not do it again, and to frighten others from doing it, by his fate. But nobody supposes Dillon and O'Brien will be frightened. On the contrary, they court imprisonment, and are looked on by all their followers as martyrs, whose advice, whatever it was, is consecrated by their sufferings. The theory on which they are being pursued is that on which Austria and Naples pursued their malcontents before 1848. That theory is, that you can stifle popular discontent by savage punishment of the orators and writers who give expression to it and stimulate it, and Englishmen at one time used never to weary of denouncing it and ridiculing it. The London *Times* has, by way of adding fuel to the flame, committed the folly of denying that there is any danger of famine in Ireland, and accusing the people who are preparing to relieve it of hypocrisy.

The evidence in favor of the great popularity of the new Universal Suffrage Law in Spain is complete, now that Don Carlos himself has given it his approval. The symbol and champion of divine right recently accorded an interview to the Venice correspondent of a Spanish paper. Asked his opinion of universal suffrage, he replied that of course he could not regard it as the source of right, but, as "an instrument of government and administration," he frankly confessed that he thought well of it, provided it were honestly put into exercise. His adherents, he added, would contest several seats in the coming elections, not for the sake of making a display of power, but to show their enemies the nature of their organization, and to prevent the misunderstanding of their position which would arise from their abstention from voting. The present political situation in Spain, he thought, could not long continue, and he was calmly waiting for the day when he should be able to "realize the hopes of good Spaniards." When inquiry was made if he thought of inciting another civil war, he gave strong assurances that he did not. An appeal to force he would not reject as a last resort, but was determined to try everything else first. He wished to give every proof that his party was fit to govern, and that, without yielding a jot of his principles, he desired for Spain all true and lawful progress. All this is, of course, rather better evidence of Don Carlos's impotence than anything else, but is of good augury for Spain's domestic peace in any case.

The troubles in Armenia are apparently no nearer settlement than when the massacre at Erzerum, on the 20th of June, first riveted the attention of European diplomacy upon this latest phase of the interminable Eastern question. Systematic persecution of the peaceable Armenians on the part of the savage Kurds has followed that fierce outbreak of Mohammedan fanaticism; and the cable accounts of the appointment of a commission for the investigation of the troubles, its dissolution, and replacement by a "stronger" commission, the resignation of the Armenian Patriarch and the withdrawal of his resignation, only serve to show the utter incompetency of the Sultan's Government in dealing with the problem which for twelve years has been awaiting solution. According to Article 61 of the Treaty of Berlin, Turkey was obliged to institute administrative reforms in Armenia, and to protect its inhabitants against depredations of the Circassians and Kurds. These reforms comprised the introduction of a *gendarmerie*, officered by Europeans, the appointment of Europeans as Inspectors of the Departments of Finance and Justice, and the nomination of *Valis*, or local Governors, as representatives of the Sultan. These reforms were either never instituted or else violated in letter and spirit, and by 1880 the condition of the Armenians had grown so much worse than it was before the Berlin Treaty that its cosignatories addressed an identical note to the Sultan reminding him of his obligations. A lame reply to that note led to a sharp demand of the Powers for the immediate institution of the reforms, and this in its turn was followed by a representation on the part of Turkey of the difficulties she had to contend with in Armenia and elsewhere, and a cool proposal of other reforms than those stipulated. In spite of the indignation excited by this reply, nothing further was done by the European governments, although an attempt was made in the following year by Great Britain, in consequence of an address to the British Vice-Consul at Van, signed by 940 Armenians, to get the other governments to join once more in remonstrating against Turkish remissness. Bismarck, however, did not consider it expedient to exercise pressure upon the Sultan before the settlement of the then pending frontier dispute between Turkey and Greece, and later on the troubles in Egypt, Afghanistan, and Bulgaria pushed the Armenian question into the background.

The demands of the Armenians themselves are reasonable enough. They ask for the removal of the restrictions which prohibit them from carrying arms and serving either in the army, police, or as law officers, and hence render them defenceless alike against the Kurds and the Turkish police, which, as often as not, makes common cause with the depredators. In addition, the Armenians plead for the consolidation of the vilayets of Erzerum, Van, Bitlis, and Diarbekir into a single province, with Erzerum as the capital, and the appointment of a Christian Governor-General approved by the Powers—a concession granted to the Christians of Syria after the massacre at Damascus, in 1860, and found to result beneficially to both Christians and Mohammedans. Finally they ask that at least a portion of the public revenues be devoted to the maintenance of roads and schools, the latter having been hitherto supported by private means. The Turkish Government, so far from showing itself disposed to grant these demands, has characteristically treated them as evidences of a rebellious temper, and prepared the way for the frightful acts of violence perpetrated at Erzerum. The jealousy with which the authorities had for years regarded the slightest acts of national self-assertion on the part of the Armenians bore legitimate fruit in the eagerness with which the Mohammedan rabble of Erzerum believed the absurd stories that the Armenians were manufacturing rifles and even cannon in a school-house. That, for the first time in many years, the principal organs of the European Powers are at one in condemning Turkish supineness, is the only gratifying feature of the Armenian question. Even the Liberal press of Austria, generally so sensitive with regard to Russian interference with Turkish affairs, views with equanimity Russian indignation in this instance.

THE MONEY MARKET.

THE renewed liquidation in stocks which began on Saturday is due to an apprehension that the present ease in money is only temporary, and that the stringency which prevailed a few weeks ago is liable to come again at any time, and to be remediless when it does come. It is the common talk that the Treasury cannot come to the relief of the market a second time, because it has exhausted its resources. It is said truly enough that the disbursements for interest and Sinking Fund have been anticipated for nine months, and that the payments on this score will be just so much less hereafter; and upon this fact alone the imagination may construct all kinds of terrors. But obviously this is only a half-truth, since the inlet to the Treasury is no larger than the outlet at the present time, whatever it may have been heretofore. It is impossible and unthinkable that there should be an accumulation of money in the Treasury to the hurt of trade and industry. If, by any circumstances now unforeseen, the income should be greater than the outgo, and there should be in consequence a Treasury glut and a business famine, the Secretary would certainly find a way to restore the balance. There is not the slightest ground for fear on that score. The real ground for fear is, that the balance will be on the other side before the end of the fiscal year; in other words, that the Government will be in the face of a deficit. The reserves of the Treasury are large enough to stave off such a crisis until Congress can see what its complexion is and take steps to meet it, but it is in this direction and not in the other that trouble is to be looked for, if at all.

There never was a fairer promise of general prosperity than when the present Congress came together. There was not a cloud in the sky. Business had adjusted itself to its conditions and everything was running smoothly. Confidence was high and credit was unimpaired. Nothing of a material or commercial nature has happened to cloud this prospect. In fact, the mercantile community has been very conservative. Speculation has been slack and rather on the bear than on the bull side. Probably there never was a time when the community was better prepared for stringency in money if it should come, because there never was a time when the ratio of debt to capital was lower than it is now. Nevertheless, there is a cloud on the horizon, and of considerable magnitude. This is evidenced by the continued shrinkage in Stock Exchange securities—a shrinkage which makes no discrimination between dividend and non-dividend-paying classes, and which takes little or no account of earnings, gross or net. At the same time that this is going on, general business is good, and the exchanges, as shown by Clearing-house returns, are 16 to 18 per cent. greater in volume than they were last year at this time. Here is an apparent contradiction of terms in one and the same problem. It must have some explanation.

The problem is so complex that nobody need dogmatize upon it. Whatever opinions anybody may hold, he must allow that they are liable to a great margin of error. One thing, however, is pretty clear, and that is that Wall Street is a pretty good barometer, and that things do not go badly there for any great length of time without a good reason. Wall Street scents calamity and takes steps to guard against it. It is very well that Wall Street does so, for this is the way to stave off calamity altogether. A cablegram in the morning papers from London says:

> "American securities continue to be the weakest in the market. Business in the department of American railway securities is virtually suspended, the main cause being extreme uncertainty felt regarding the influence of the new tariff and silver laws on American trade and industries. Bankers and investors hold aloof from American undertakings, and are restricting their loans and operations in that direction wherever possible. One result of the new measures considered assured is a large decrease in the trade between England and America. English manufacturers' stocks have been hurried to America, but it is deemed certain that the volume of business between the two countries will henceforth be lessened. American exports, also, it is thought, must decline, thereby curtailing the freight traffic of American railroads. Those interested in American prosperity are of the opinion that it remains to be seen whether the new tariff measure will result in stimulating native industries sufficiently to eventually compensate for the immediate loss they consider certain."

That this is a correct diagnosis of the trouble we have no doubt whatever. The only disturbing elements in the financial situation are those which Congress has precipitated into channels of business. It has stopped our exportation of silver by enacting that it shall be bought with our own money and stored away in our own vaults. In this way it has disturbed the nation's exchanges to the amount of thirty millions of dollars. It has created a still greater disturbance by an unnecessary and gratuitous increase of the tariff, made avowedly to check foreign trade. The theory has been advanced that at some future time, not particularly designated, domestic trade will be correspondingly improved. For the present, and for an indefinite period, foreign trade is to be curtailed without any corresponding increase of domestic trade. Take the tin-plate trade, for example. Here Congress has put on record its opinion that not before the first of January, 1897, will domestic trade in tin plate be equal to *one-third* of the present foreign trade in the article. But the foreign trade is to be curtailed at once by an arbitrary act of the Government. If this novel method of getting Congress to express its opinion, which was naïvely suggested by Senator Spooner, had been adopted as to all the other articles on which new restrictions are placed, we should have had on the statute-book in black and white the very apprehensions which the business world, both here and abroad, now entertains. Added to these things is the further apprehension that there will be a Treasury deficit within twelve months. This was predicted by Senator Edmunds before Congress adjourned; but, as we have said, there will be a session of Congress in the meantime, and the resources and credit of the Government, which are still undiminished, can be applied to the exigency, whatever it may be.

A NEW REPUBLICAN DEPARTURE.

MAJOR GOULD, candidate for Auditor on the Massachusetts Republican State ticket, has withdrawn "under fire." This is so unusual a proceeding in a Republican candidate that it calls for special attention. The charge against the Major is, that, while acting as United States Collector of Internal Revenue in Georgia between 1869 and 1872, his accounts showed a deficit, in principal and interest, amounting to $75,000; that a suit was brought against him in the United States Circuit Court for conspiracy to defraud the Government, but was dismissed under a *nolle prosequi* entered by the District Attorney; that subsequently suit was brought in the same court against his bondsmen, and at a second trial a verdict was rendered on April 23, 1886, in favor of the Government, calling upon the bondsmen for $41,622.36 principal and $34,462.78 interest. Several of the bondsmen had died in the meantime, and others had no property; and, after many fruitless efforts to collect the judgment, the Government compromised on Monday week, by accepting from one bondsman $3,000 and costs as full satisfaction for its claim. Its loss through Gould was, therefore, over $70,000. The truth of these charges is admitted by the Chairman of the Massachusetts Republican State Committee and by the chief organ of the party, the Boston *Journal*. The latter, in making the admission, says: "It is not believed by his [Gould's] friends that the money found its way into his pocket. He asserts that this is so, but he is unable to give a full accounting."

It appears from official records of the Treasury Department at Washington that the Major deserted his office at Savannah when the defalcation was discovered, and from that day to the present time has been "missing" in the opinion of the Treasury officials, who are said to be desirous of instituting proceedings against him. He took up his residence in Medfield, Mass., however, nearly twenty years ago, and was elected to the State Senate as a Republican in 1886 and 1887. He was a member of the Massachusetts delegation to the Republican National Convention in 1888, and is known as the "original Harrison man" of that delegation. It is evident by interviews which were published with him as late as Tuesday week that he had no idea of withdrawing from the ticket. He said to a reporter of the Boston *Herald* who visited him the evening before, that such a movement as withdrawal was the "furthest from his mind"; that he "had no reason for taking such a step"; that he "had not been requested to withdraw," and that, as for the stories going the rounds about him—

> "I think it would be in very bad taste for me to say anything about them just now, as they are not specific enough. Besides, I should find little else to do if I attempted to refute all the campaign stories which will be circulated about me. Look here at these papers and see if I have not a good war record. My re-

cord as a soldier is spotless, but I would rather not speak about it until there is something said in a direct way. This is not the first time I have been similarly assailed, for the same things were said when I ran for the Senate; but I effectually disproved the charges at the time. If there is anything in the depths, I want to find it out. I really don't know what to think of these things, but I can assure you they are only rumors."

"Do you know of any one who has been active in spreading these defamatory reports?"

"I suppose they originated in the mind of some old crank who has a petty grievance against me. I refrain from making any specific charges, for I wish to be on good terms with all my townspeople. I would rather have their good-will than all the rest of the State."

The charges were just as "specific" when the Major made this familiar Republican type of defence as they were on the following day, when he wrote his card of withdrawal, in which he said that while he knew that he was "completely innocent," he also knew "how impossible it is in a political campaign for a candidate to meet any charge against him," and for that reason he believed it to be his "duty to the Republican party to decline the nomination."

We submit that this is entirely out of harmony with almost unvarying Republican practice for at least six years. If such a course had been followed in 1884, the party would have been without a Presidential candidate at the very opening of its campaign. If it were to be followed in Pennsylvania to-day, the party would have no head to its State ticket; and if it were to be followed in its national counsels, it would have no head to its National Committee. The charges against Delamater and his master, Quay, are no less and no more specific than those against Maj. Gould. The latter have been sustained in court, and the former would be if Delamater and Quay would consent to take them there. Why should there be more sensitiveness among Massachusetts Republicans than among those of Pennsylvania and of the national Administration? Probably because the party majority is much smaller and much less certain in Massachusetts than it is in Pennsylvania, owing to the prevalence of more "squeamish notions" of right and wrong in the former State.

Major Gould's defence of his character before he was forced to retire under fire, was as perfect in every way as any of the kind we have ever seen. It was as fervid as Delamater's, and was based as his was not, upon a "war record"; and it was far better than Quay's, because it was vocal, while Quay's has never been spoken. It is not considered a part of his "duty to the Republican party" in Pennsylvania for a rascal to get off the party ticket when he has been found out and exposed, and this, it seems to us, is more in accord with party usage than the Massachusetts view. In Pennsylvania, it is the custom of eminent Republican citizens to give rascals on their party tickets receptions at their leading club, to take them cordially by the hand, and denounce all other Republicans who decline to join them in these marks of honor as "unpatriotic Americans who are seeking the overthrow of the protective-tariff system in the interest of British free trade." The Massachusetts Republican managers must see the harm they are doing by their squeamishness, for they are reflecting upon the character and conduct of some of the best men their party has ever contained.

NEW ENGLAND IN THE CENSUS.

On Thursday last the Census Office announced the population of New Hampshire, the only one of the New England States whose population had not previously been made public. The following table shows the population of each of the New England States in 1890 and in 1880:

	1890.	1880.
Connecticut	745,861	622,700
Maine	660,261	648,936
Massachusetts	2,233,407	1,783,085
New Hampshire	375,827	346,991
Rhode Island	345,343	276,531
Vermont	332,205	332,286
Total	4,692,904	4,010,529

The increase has therefore been 682,375, or at the rate of 17.01 per cent. So much has been written, and truthfully written, about the exodus of the farming class from rural New England, that it is probable that many well-informed persons have acquired the idea that the population of that portion of the country was either decreasing, or increasing very slowly. The census figures show, however, that so far from this being the case, the absolute increase in the population of New England has been greater than in any previous decade since 1790, and that the percentage of increase has been greater than during any previous decennial period since 1850.

The population of New England at each census, the absolute increase, and the percentage of increase during each decade, are shown in the following table:

Date of Census.	Population.	Percentage of increase.	Increase.
1890....	4,692,904	17.01	682,375
1880....	4,010,529	14.98	522,605
1870....	3,487,924	11.25	352,641
1860....	3,135,283	14.92	407,167
1850....	2,728,116	22.07	493,294
1840....	2,234,822	14.33	280,105
1830....	1,954,717	17.78	295,138
1820....	1,659,579	12.74	187,606
1810....	1,471,973	19.38	238,962
1800....	1,233,011	22.14	223,603
1790....	1,009,408		

The three northern New England States, viz., Maine, New Hampshire, and Vermont, have, however, during the last decade, grown very little, and the last named has even suffered a trifling net loss of population. Sixteen-seventeenths of the entire increase in New England is to be credited to its three southern States, viz., Massachusetts, Rhode Island, and Connecticut. At one time, as the following table will show, almost precisely the reverse of this state of things existed:

	Northern New England.			Southern New England.		
Date of Census.	Population.	Increase.	Percentage of Increase.	Population.	Increase.	Percentage of Increase.
1890.....	1,293,593	40,080	3.02	3,399,311	642,295	23.94
1880.....	1,328,213	52,447	4.11	2,685,816	470,158	21.25
1870.....	1,275,766	6,316	.50	2,215,658	346,825	18.51
1860.....	1,269,450	54,185	4.46	1,868,833	353,082	23.38
1850.....	1,215,265	196,950	19.70	1,512,851	296,344	30.81
1840.....	1,078,315	138,680	18.68	1,156,607	163,225	15.04
1830.....	940,436	171,178	22.00	1,006,282	123,060	14.00
1820.....	778,257	117,197	17.73	881,822	71,400	8.68
1810.....	661,060	171,018	24.90	810,918	67,061	9.14
1800.....	490,042	106,192	51.22	743,857	57,404	8.37
1790.....	383,850			686,453		

In the closing years of the last century and the early decades of this, southern New England was, as to growth, in a condition very similar to that which now exists in northern New England.

In Massachusetts, Rhode Island, and Connecticut there were in 1790 already forty-nine inhabitants to the square mile, or more than there are to-day in any State west of the Mississippi or south of the Potomac or the Ohio. Under the then existing conditions, it was not possible for many more people to find support from the soil, and, until the great development of manufacturing came, the increase in southern New England, and especially in Connecticut and Rhode Island, was very small. From 1790 to 1800 the population of Rhode Island increased but 297. In the first half-century of national existence, Connecticut's population grew only 30 per cent., as against an increase of 140 per cent. in the second half. With the great development of manufacturing subsequent to 1820, the rate of growth of the southern New England States perceptibly increased. Since 1840, when the great tide of foreign immigration which set in about that time was attracted to these States by the opportunities for employment held out by their mills and factories, their percentage of increase has been high.

Northern New England, on the other hand, in 1790 had a population of less than seven to the square mile. There was plenty of room for growth, and, until 1830, it was rapid. For the next two decades, while these States continued to grow, they did so much less rapidly than before. By 1850, although they then had only twenty-five inhabitants to the square mile, the practical limit of their growth as agricultural, or semi-agricultural, communities seems to have been reached.

In the last forty years their population has increased but 12½ per cent.

There is much more waste land in northern than in southern New England. Cheap railroad and steamship transportation from better soils has made it unprofitable to till lands which a century ago would have yielded a living to their cultivators. The increased use of agricultural machinery has enabled fewer hands to work a farm of the same area. The social attractions of city life are far greater, and are brought much more closely home to the country-bred youth, than was the case a century ago. These are doubtless some of the most important reasons why Maine, Vermont, and New Hampshire seem to have stopped in their growth, although they have to-day but twenty-eight inhabitants to the square mile.

"GRIPPY POINTS" ABOUT BELDEN.

We have received during the past few days several copies of two campaign documents which have been sent out by Congressman Belden, Chairman of the Republican Congressional Committee, accompanied by the following circular :

My Dear Sir: It is my pleasure to hand you a copy of our 'Campaign Text-Book,' which has been prepared and printed by the Committee for distribution among Republican editors, speakers, writers, and talkers.

The grippy points of the present and recent record of the Republican party are grouped together in such a manner as to make a complete summary of the great and affirmative things done by the Republican Congress and Republican Administration, to which I most respectfully invite your attention.

I am, very sincerely yours,

J. J. Belden.

One of the documents is ornamented with colored cuts of an American and a British flag, and is headed "Under Which Flag?" and the other has on its first page cuts of Lincoln and Grant, and is called "The Grand Old Party." The first, as its title and decoration indicate, is an imitation of the familiar forged-extract document of the campaign of 1888, and we are bound to say that it surpasses its model in the boldness and liberality of its forgeries. These are ingeniously commingled with some apparently genuine quotations, in order to give them an air of plausibility, but while precise dates are given for the seemingly genuine ones, no dates at all are assigned to the forgeries. Good examples of the latter are the following, which we quote as they appear in the document :

[London Times.]

It is to the new world that the Cobden Club is chiefly looking as the most likely sphere for its vigorous foreign policy. It has done what it can in Europe, and it is now turning its eyes westward and bracing itself for the struggle which is to come. It cannot rest while the United States are unsubdued.

[London Standard.]

A bill to establish in America what the English call free trade has just been defeated in the House by the narrow majority of four. The measure was of enormous importance for English manufacturers, as it would have enabled them to export goods to the States without the crushing tariff now imposed, and its fate was watched with intense interest by Englishmen. Were it passed it would have been worth £100,000,000 per annum to British manufacturers.

Aside from the absence of dates, these quotations bear all the familiar attributes of former Republican forgeries. They are expressed in language which English writers never use, they treat the tariff question from the American rather than the English side, and they are adapted too perfectly for the work their authors design them to do. But the absence of dates is conclusive of itself, for even the bogus-extract makers are aware of the fact that a precise date is a mark of genuineness which is so valuable that they would put it on if they dared. They know it makes detection and exposure both speedy and-conclusive, and hence they do not forge that as well as the extract.

But it is not our purpose to-day to go into the character of the documents which Mr. Belden is circulating, but rather into the character of Mr. Belden himself. What are the "grippy points" in his career which especially fit him for the work upon which he has embarked as the chosen leader of the Republican party in its Congressional campaign? Is there anything in his career which would lead one to suppose that he would not find the concoction and circulating of lies and forgeries congenial work? These questions are timely in view of the fact that the same party has a public thief as the chosen leader of its National Campaign Committee. Happily they can be answered by reference to unimpeachable Republican authority.

Mr. Belden first became prominent in the politics of this State through the Canal Ring exposures made by Gov. Tilden. It will be remembered that the New York *Tribune* took a leading part in the publication of the revelations, and it is to its files that we shall go for light upon Mr. Belden's character. The *Tribune* made its first publication about Belden as a Canal Ring magnate on March 20, 1875, when it published many specimen contracts, including one of James J. Belden's in which "he agreed to do certain work for $86,584, and by means of unbalanced bids obtained $222,610," and another one of his in which "he bid $10,617 and received $49,936, the work still going on." In commenting editorially upon these contracts the *Tribune* of the same date said :

"Fraud is written all over the face of them. . . . The most lucrative contracts are in the hands of cliques, whose political affiliations are far-reaching and powerful. A leading member [Belden] of one of the most active and unconscionable of these cliques is intimately allied, by financial and domestic ties, with the Chairman of the Assembly Committee on Canals."

On the same day the *Tribune* published a "black list," which it republished frequently while the revelations were in progress, and on this Belden's name stood third, and at the bottom, the *Tribune* said: "This is a good list to save. Let every honest voter cut it out, and keep watch for the men whose names are on it." On March 23, 27, 29, 30, 31, April 14 and 17, many columns were given to the Canal Ring exposures, and much space to Belden, and what the *Tribune* called the "combination of Belden, Dennison, and Gale." In all instances he was spoken of in more or less plain terms as a swindling contractor. On March 29, while commenting upon a list of "Canal Ring names which the *Tribune* has already made familiar and odious," the editor said:

"Here is James J. Belden, the great Belden, and A. Cadwell and Mead, the lesser Beldens. The Canal Ring is a real ring, it has no end or beginning. Its members are grouped about every contract and every swindle, and yet in the eyes of the law are individuals and not partners."

On March 31, in an editorial article on the general pernicious influence of Canal Ring politics, the *Tribune* thus paid its respects to Belden as a practical Christian worker, almost as active as the pious Mr. Wanamaker of the present day:

"The Christian Canal Ring Contractor will go down to history with the Christian Statesman. Both have enjoyed a long lease of power, and are victims of a newspaper eclipse. The Christian Statesman lasted until he was exposed; the Christian Canal Contractor was found out long before his name got into the *Tribune*, for the leading contractors of the Ring, it may well be said, long ago lost the respect of their decent neighbors. A case in point is that of a contractor whose name stands high on the *Tribune's* black list. He built and largely supports a leading church in his city. He is the head of a large and flourishing Sunday-school. He is the sponsor of the temperance society [spoken of more directly in another *Tribune* article as the "Belden Cold Water Temple"], and is yet the *owner of some of the worst swindling contracts* and a partner of another of the black sheep."

Writing from Syracuse, in a letter published on April 10, the *Tribune's* staff correspondent bore testimony on the same point by saying:

"The chief, the brains of the Syracuse Ring, is James J. Belden, whose fortune, largely derived from canal contracts, is said to mount up to more than two millions. He is a man of ability, and though none of the Canal Ring have more than a common-school culture, he is a gentleman of refined bearing. But canal contracts make strange partners, and this patron of churches and sponsor of charitable societies is a partner of an uncouth man who can neither read nor write. Mr. Belden has been prominent in good works. He has given liberally to churches, and his example has been followed in this by one or two other members of the Ring. He has thrown all his influence on the side of temperance.

"One can imagine how strange it sounded to hear a church announcement of an exhibition of the 'Belden Cold Water Temple' tread closely upon the heels of the minister's denunciation of canal rings and thefts by contract. Mr. Belden became interested in education, too, just before he wanted to run for Mayor, and gave large sums to the Syracuse University."

In order that there might be no doubt about Belden's complicity, the *Tribune* said of him, also on March 31 :

"These rings within the Ring have their offices in sets opening into one another, are for all practical purposes partners, and yet in the eyes of the law are distinct persons. Their bank account is in the name of one of their number. *Belden carries the bag for the Belden, Denison & Gale combination*, and the division of profits is periodic and impartial. . . . The chief curse that they have brought upon the State, say thoughtful men, is, not that they have stolen the canals poor, but that they have corrupted so much that was pure and withered so much that was promising. Besides their debauching of Legislatures and tampering with Canal Boards, there was the corruption and intimidation of a whole army of young men—not only those holding subordinate positions on the canals, but aspirants in politics, whose principles were undermined and standards degraded by the insidious influences of the most insinuating of rings. The Canal Ring was not alone a political conspiracy; it was a social pest, a moral nuisance, and the sooner it is under the ground the clearer the air will be."

We have not space for other quotations, but we could fill columns with them. The

court records can also be cited for evidence against Belden. In January, 1882, he presented to the State Board of Audit a claim for services and materials on the Erie Canal to the amount of $125,406.90. This claim the Republican Attorney-General, Mr. Russell, contested in behalf of the State, on the ground that nothing was due, that Belden had been overpaid already, and had procured such payments by fraud. The case was tried before a tribunal consisting of Gen. Carr, formerly Republican Secretary of State, Ira Davenport, Republican Comptroller, and Mr. Maxwell, State Treasurer. After an elaborate trial, in which more than 1,000 pages of testimony were presented, the claim was unanimously rejected, and the decision reached that Belden had been overpaid $102,610.30, and had secured that overpayment by means of excessive estimates which he had presented, "knowing them to be excessive," and making them "for the purpose of defrauding the State." A tribunal with a Republican majority thus decided that Belden had not only wilfully defrauded the State of over $102,000, but was trying to defraud it of over $125,000 more. Belden carried the case to the General Term of the Supreme Court, and the finding of the tribunal was affirmed in January, 1884. Still unsatisfied, he carried it to the Court of Appeals, and it was affirmed again by that court on October 5, 1886.

There still remains one more "grippy point" to be added to this interesting collection. When Jacob Sharp was under investigation in February, 1886, there appeared among the payments which he had made one of $65,000 to James J. Belden for services as a lobbyist at Albany in securing the Broadway Railway franchise. When he was asked to explain what the money had been used for, Sharp replied: "Well, Mr. Belden is a man who don't stir round for nothing. He expects to make something." It is the expectation of "making something" which fits a man with this record to be a "born leader" with Quay in the latter-day Republican party.

THE BOULANGIST EPISODE.

It would be difficult to find in French history an episode better worth studying as an illustration of French manners than the Boulanger affair, which has been so amusingly shown up in the series of letters which a certain M. Mermeix has been publishing in the *Figaro*, entitled "Les Coulisses du Boulangisme," and which we have already noticed in these columns. In the first place, the sudden rise of Boulanger himself into political influence so great that it seemed at one time doubtful whether he could not execute a successful *coup d'état*, is a striking example of the extraordinary contrast, which has been so often remarked upon, between the Frenchman's character as a politician and his character as a private individual. As a private individual, there is no man more prudent, economical, frugal, and slow-going. He is content with small savings and slow accumulation, and is exceedingly averse to great risks. As a politician he is one of the most impatient and restless of men. He cannot bear to wait long for results, and is always ready to try a new experiment in government, no matter what his experience may have been of former ones.

Boulanger, for instance, had all the well-known marks of a French humbug. The fine seat in the saddle, the contempt for the parliamentary talkers, the unwillingness to say exactly how he would set matters to rights except by breaking up the existing government, and so on, were all signs with which the French public was made familiar in 1851. Nevertheless, Boulanger had an immense Parisian success. On one night he appears to have had a fair chance of succeeding, temporarily at least, in an attempt to overturn M. Carnot. Nobody was able to say what he would do if he got into power, and nobody knew where the money came from with which he was living luxuriously; and yet a large body of followers were willing to trust him to the end, and several constituencies gave him immense majorities at the elections. Why they did so, nobody now seems able to tell. All are now laughing or wondering over the affair as they might over a queer, grotesque dream.

The manner in which the affair has been exposed is as illustrative as the affair itself. Where but in France would one of Boulanger's attached adherents have exposed the inside workings of the movement as a service to the cause? Mermeix's letters in the *Figaro* have, every one admits, ruined both the Boulangists and the Monarchists; but Mermeix is nevertheless convinced that he has done the right thing in the right way. He was, and he says he is still, an ardent Boulangist, and is satisfied that the best service he can render his hero is to show that he is probably a charlatan himself, and that all those who surrounded him were charlatans too. Nobody seriously questions his statements, and yet nearly every Boulangist wants either to slap his face or spit in it. Consequently he has a numerous crop of duels on hand. He has fought five, and is now in bed of the fifth The funniest feature in this stage of the affair is that he likes the duels. He accepts all the challenges for which he can find time, and is not apparently the least afraid of being killed. They come to him very like an interview here. He is a journalist, and enjoys immensely the notoriety the affair has given him.

But why is he not afraid of being killed? This question has been answered by a competent French authority lately in the columns of the London *Speaker*. What he says is, that Frenchmen of intelligence have really come to recognize the absurdity of the duel as a means of settling disputes, but they find it so firmly embedded in the national manners that no man can safely refuse to fight. They have, therefore, as a sort of compromise, arranged that duels shall never be fatal except through some unfortunate accident, and to this end that the sword shall always be the weapon. But swords require skill, and there are very great inequalities in the skill of different swordsmen. Although nearly all Parisian Frenchmen practise fencing with more or less assiduity, yet we never, or hardly ever, hear of any Frenchman refusing a duel with swords, or choosing some other weapon on this account. Why is this? Simply because each feels sure that, no matter how awkward he may be, his adversary will take care not to kill him; and the more accomplished a swordsman the adversary is, the greater the safety in fighting him, because he is certain early in the fray to inflict on one of his opponent's arms the little scratch which enables the doctors to say that he has been put into a "condition d'infériorité absolue." That is, the rules provide that a man wounded, however slightly, is not fairly matched against a well man. This is now so well understood that the combatants go on the ground with the greatest cheerfulness, the only terror of the occasion being, to the impecunious party, the expense of taking his two seconds and the doctor in carriages to the field, and paying half the cost afterwards of a champagne breakfast at a restaurant. This last is *de rigueur*, unless the wound obliges the vanquished to take to his bed, which is very rare. Under these circumstances there is, of course, hardly any young fellow in journalistic or loafing cricles in Paris who does not want to fight, especially if can get up a quarrel with a man of some note. The *Figaro* says that the passion for going on the "terrain" is now so great that James Gordon Bennett is going to run a drag between Paris and Vesinet, with room for forty persons, to accommodate duellists. On each seat there will be room for one principal, two seconds, and a doctor. The inside will be arranged as an ambulance, with a priest in attendance.

But Mermeix has not fared very well in the affair. He received many challenges, but a man in his position naturally seeks to select such opponents as will bring him most éclat. Some he therefore refused, and those whom he slighted in this way had to take their satisfaction by calling him names in the street, or taking an occasional spit at his face. Others, again, whom he expected and wanted to challenge him, did not do so. In one way or another he got five satisfactory challenges, but three times out of these five he has, by some awkwardness on his own part, been wounded. Some of his enemies refused to meet him when challenged by him, and in his annoyance over this he made use of language which irritated a M. Dumonteil, of whom he had never heard before, as it put him (Dumonteil) in the category of "people who do not fight." In the ensuing duel, Mermeix charged awkwardly, and Dumonteil struck him in the chest by pure inadvertence; the blade passing near the heart, though in the regulation breast-wound the point glances off the breast-bone, or runs along the rib. On seeing the wound, the victor was nearly crazy with grief, but Mermeix was quite cheerful. He had, at the last accounts, only one other affair pending—with a M. Millevoye, his colleague in the Chamber. It was still uncertain whether Millevoye would fight or not. If he refuses, the Mermeix incident will be closed.

LIBRARIANS IN CONVENTION.

THE eleventh meeting of the American Library Association, held last month at Fabyan's, was better attended than any previous convention. Two hundred and fifty persons overtaxed the resources of the hotel, and, in the matter of crowding, women were treated worse than men. The President, Mr. F. M. Crunden of St. Louis, who, by the way, is an excellent presiding officer, discussed the past and future policy of the Association, offering important suggestions, and the Secretary followed in the same strain. It is evident that the policy—to which attention was called in our notes last year—of dividing into sections in which shall be grouped libraries of like interest, will be still further extended in the future. Already three States, New York, Iowa, and New Hampshire, have organized State associations. It will probably be found expedient in thickly settled States to have even greater subdivision. Massachusetts, for example, might have a general conference with headquarters at Boston, an Essex County conference with headquarters at Salem, a Central Massachusetts conference meeting at Worcester, and a Western Massachusetts conference meeting at Springfield. Each conference would come together two or three times a year to discuss a dinner and talk over plans for library improvement and library extension. This, in fact, is only adopting the method of some of the religious denominations.

A new feature was introduced this year which promises extensive results. Some one had the happy thought to make a strong effort to secure the attendance of trustees. Two or three have come in past years; this year twenty-eight appeared. They were among the most interested and enthusiastic persons present. At the suggestion of one of them, Mr. C. A. Hovey of Brookline, Mass., steps were taken, which seem likely to be successful, to raise a fund for the publications of the Society and other necessary expenses. This is a very important matter. Librarians are ready enough to coöperate in bibliographical and indexing work—their time they will give; but money they have not, and the publishing section has been obliged to turn away from important undertakings for want of a little money which would have insured publication. Another step was taken by the trustees: they prepared a circular to the vast body of absent trustees, assuring them, from their observation at the present meeting, that good work is done by the Association, and urging them to let their librarians come hereafter and to come themselves. The latter is not the least important recommendation.

We said, when the Library School was established, that it would be worth while to have a school for trustees as well as for librarians and their assistants. The ignorance of trustees about library matters is necessarily great. When appointed, they generally know absolutely nothing of library management, and sometimes very little of literature; and yet, because they have been elected by the town meeting or appointed by the City Council, and have the power, they at once feel themselves qualified to decide everything. If they are wise enough to secure a competent librarian and let him run the library under criticism, not as to details, but as to results, perhaps the less they know the better; for sometimes a little knowledge in a trustee is a dangerous thing. Competent librarians are not always to be had, though, thanks to the Library Association, and especially to the Library School, they are becoming more common. To select a librarian well, however, requires some knowledge of library affairs, and at least the feeling that the selection is a serious matter, and not to be governed by party association, or personal friendship, or charitable feeling. Then there are broad questions of library policy which must be decided by the Board, and broad questions of management on which the best librarian may be glad to have advice. Whatever, then, interests trustees in the science of the library, enlarges their views of its possibilities, and familiarizes them with the questions under discussion, will be in the end a great gain; and this will be the effect of the new movement.

Moreover, ignorance is not the only evil to be removed. Indifference is not unknown among trustees, and a want of faith in the higher educational work of libraries, born of ignorance and indifference. The trustees who come to the meetings of the Association must be already thoroughly interested, or they would not come; they will easily catch the enthusiastic spirit which has always been one of the characteristics of these meetings, and will diffuse it among their associates. They will also, perhaps, induce them to read the very well considered paper of Mr. C. C. Soule, himself a trustee, on the duties of trustees, and the bright papers of Miss H. E. Green of the Boston Athenæum on library experts, which digressed on to the same subject. A scholarly address by Dr. William T. Harris, the United States Commissioner of Education, and an amusing squib on antediluvian libraries by the Rev. Ernest C. Richardson, the new Librarian of Princeton, deserve especial mention; but all the papers and reports were good.

After the four days' conference, nearly one-fifth of the members took a coaching trip through the White Mountains. The weather, which in previous years has always been most propitious, this year gave nothing but clouds and rain. However, it cleared for a day at Boston, which was seen by nearly a hundred visitors in its best aspect. A dinner given to librarians by the publishers and booksellers closed the meeting, and produced a great sensation in the city, owing to some criticisms which Mr. Poole of the Chicago Newberry Library made on the new building of the Boston Public Library. The President of the Board of Trustees, who is understood to be chiefly responsible for the plans, replied in an interview; Mr. Poole rejoined in another; and the controversy, unfortunately, was not devoid of personalities.

We have never believed with Mr. Poole that his plan for a library is the only good one; but it has great merits. It is the old-fashioned mercantile-library plan, improved by making the building fire-proof, limiting the size of rooms to about fifty feet square, cutting the windows up to the ceiling, and never allowing books to be put higher than the hand can reach. These are all most excellent points, and we shall look with much interest to see how they are carried out, and what is the result in the Newberry Library. But there are other plans by which ventilation, light, and easy service can be obtained. The Boston Public Library may turn out to be a good one in a very different way. It is not of much use to criticise that building now. The roof is just going on, so that the main features are unalterable, and yet the interior is not enough finished to enable any one to decide what the practical results will be. Yet, as the discussion has been opened, a few remarks may be made.

To the observer from the outside, the lower story seems to have few windows, and one fears that it will be dark—a common, a serious, and a most unpardonable defect in libraries. The defenders urge that a fire-proof building must have small and few windows. The excuse will hardly hold good. In the front of the building is a large square which no body of flame could pass. On the sides, if the streets are so narrow that danger is apprehended, one would think that, unless there are to be suitable shutters, the building, to be fire-proof, should have no windows at all. One opening could admit a fire as well as fifty. And if there are suitable shutters, why not have windows enough and large enough to be serviceable? The architects allege that the windows, though few, are broad and high up, and that when the walls are whitened, the light will be sufficient. We hope it will be so, but may remark that few architects, judging from their buildings, know how much light is needed for long-continued reading. Window space is apparently calculated as if every day was sure to be cloudless and bright.

The book-stack, however, nobody expects to be light; it is intended to be lighted by electricity. There are, to be sure, seventy windows, but the wall space in which they occur is so vast that the light from them must be inadequate, especially as no attempt has been made to place them so that each would light one of the alleys between the book-cases; for it is plain that a window whose light falls upon the end of a book-case might almost as well be walled up. This seems to us to be a mistake. Of course the stack is not to be frequented by the public; but the attendants will go there to get books, and the librarians of the various departments must frequently have occasion to go to the shelves. Why make it needlessly hard for them? And why increase the cost of running the library, which will be large enough at best, by making it necessary to use electric light the greater part of the time? Fire-proofing is no reason, for the stack might have been well lighted from the inner court, whence there could not be any fear of fire. Nor is there any beauty there to be destroyed. A plain wall cut by 70 plain windows might as well be cut by 140 or 280 plain windows.

Probably the most distasteful of Mr. Poole's remarks was the assertion (which was not denied by Mr. Abbott of the Trustees), that the Trustees will be obliged to ask for more money to complete the building. But what of that? Every one knows—it is one of the commonplaces of the humorist—that buildings always cost more than the architect's estimate. The City Council must have known, when they voted $1,300,000 for the proposed library, that they would be called upon for half as much again before all was done; and the Council distinctly understood that it was voting for an architectural monument. The plans and models were publicly exhibited and commented upon for a long time; everybody saw that a great deal of money was to be spent for architectural and sculptural ornament. The previous plans, for which the piles had already been driven, were rejected, as we understood, not because they would have made a bad library (there are those who think the contrary), but on the express ground that the building was pretentious and commonplace, and would have been an architectural disgrace to the city, as people are now saying that the new Courthouse is. It may be that the Trustees were to blame for proposing so costly a building; but when the plans had once been accepted by the representatives of the people, they were not to blame for carrying them out.

AN OBJECT LESSON IN IRISH POLITICS.

TIPPERARY, September 26, 1890.

MR. BALFOUR hitherto has spent the vaca-

tion in golfing in Scotland. Since Parliament rose he has not visited the country over which he exercises autocratic sway, and for whose peace, order, and good government he is responsible. The prosecution of Mr. O'Brien, Mr. Dillon, and others has surprised all parties. It is difficult to guess the motive for this measure. To most persons it seems an egregious blunder. Only for the suffering it is likely to bring to trusted leaders, nothing has occurred for a long time more favorable to the Irish cause, more tending to arouse the people and consolidate the agitation. The Conservative theory has been latterly that, under a firm and wise rule, Ireland, emancipating herself from the tyranny of the National League, has been steadily settling down into peace and prosperity. Especially as regards Tipperary it has been contended that the tenants' combination was rapidly disintegrating. These theories are now exploded, and the Government partisans are face to face with the necessity of again recommencing the Sisyphean task of ruling by imprisonment and coercion. Early in the present Administration we were informed that twenty years of resolute and firm government would for ever solve the Irish problem. In the course of last session Lord Salisbury adjourned this consummation till the days of our grandchildren. When Parliament reopens, we shall doubtless hear of a further postponement. Many of Lord Salisbury's and Mr. Chamberlain's adherents must begin to surmise that, after all, it may be worth while to hear other councillors.

A few words will explain the position of affairs in Tipperary, leading up to the present prosecutions. For some years a land war raged between owner and occupiers on the Ponsonby estate, in the County of Cork. A settlement was about to be made through the purchase of their farms by the tenants, there remaining only a slight difference as to terms between buyers and seller, when a syndicate of landlords interfered, declared the owner was being compelled to take too low a price, and themselves purchased the estate. The tenants declared they could not pay the required rents; they were, after an exciting struggle, evicted, and some 6,000 acres have since then lain waste or been turned into cattle-runs. The head of this syndicate was supposed to be Mr. Smith Barry, whose principal Irish property lay in and around the town of Tipperary. Then came a new development of the agrarian agitation. Mr. O'Brien and Mr. Dillon appealed to these Smith Barry tenants, and called upon them to espouse the cause of the Ponsonby tenants, and refuse to pay rent to a man who had hindered an amicable settlement on an estate with which he had hitherto had nothing to do. Although Smith Barry had been considered on the whole a good landlord, his tenants answered the call, and stated that unless he washed his hands of the Ponsonby business, they would not pay him any more rent, but would let him do his worst. This entailed great sacrifices: the town was for the most part held on leases at low ground-rents, and many of the occupiers had expended thousands of pounds on their holdings. Tipperary threw itself into the contest. The managers arranged that, to prevent heavy losses and distress among numerous employees, some of the chief shopkeepers should be allowed to pay their rents and continue on as Smith Barry's tenants. But local feeling was against this; all must protest alike—the rich could stand loss better than the poor. The trade of these richer renters was boycotted so effectually that they were soon glad to make their peace and throw in their lot with the other tenants. No opposition was offered to eviction. A mart with shops, new houses, and streets was by public subscription built on adjacent property, for the accommodation of the evicted. Some emigrated, others—among them the proprietor of a small woollen mill, with plant and machinery—removed to neighboring towns, and old Tipperary now consists largely of closed shops and deserted dwellings.

Those who have not joined the combination struggle on, a subscription having been inaugurated by the landlord class for their assistance; and a great force of police and military has been drafted into the town—there being almost one armed man for every adult male inhabitant. All the important local leaders, clerical and lay, and all unknown visitors, have hitherto been "shadowed" by police, who never lose sight of them, and generally keep so close as to overhear conversation. Against the wishes and advice of the leaders, some outrages have occurred, happily, however, attended with no serious consequences. The police have shot one lad dead and wounded a few other persons. Most of the prosecutions and imprisonments of the last few years have been in some way connected with this Ponsonby-Smith Barry business.

It is generally supposed that the struggle has had the approval of only one section of the Irish party. Mr. Parnell has apparently remained neutral. For their recent vigorous support of the Tipperary contest, Mr. O'Brien, Mr. Dillon, and some other members of Parliament and local leaders are being prosecuted before two "removables." Mr. Morley and a few others, with some ladies and several members of Parliament, also two of the accused in custody, were in the train coming down from Dublin yesterday. We walked quietly up the town from the station. I never saw a more peaceful gathering or a more orderly street. A band of police were drawn up at a corner. As we passed, a cheer was raised for "Mr. Morley," and immediately the officer in charge cried: "This is a disorderly meeting; disperse it!" The police at once began to hustle us about. An English Member, unused to such proceedings, protested, and the officer, apparently somewhat cowed, called off the men. For the next hour there was no disturbance. Most exasperating to Irishmen is the cowardly Government policy of relaxing in despotism when English visitors are present.

Soon afterwards we walked to the court through perfectly peaceful streets. Small groups of the populace were about, and several of the more well-to-do inhabitants accompanied us. The street in front of the court-house was occupied by 150 armed police and soldiers, and a surgeon with an attendant carrying a box of medical and surgical appliances. The gate of the court-house was held by police, and admittance was denied to all except the accused and their advisers, with members of Parliament and press men. Mr. O'Brien and others objected to this exclusion of the people as distinctly illegal. The court was an open court, and the public had a right to enter as long as there was space for them. I looked in; there were scarcely half-a-dozen there, besides a score of police. There was room for 100 or more. Some persons insisting on their right to enter, a scuffle ensued between them and the police, who, behind cordons of their companions and the military, had to deal with only some fifty persons, all unarmed. The police drew their batons and felled men right and left. This was naturally resisted, but I saw no stones thrown. Mr. Harrison, one of the Members for the county, was bathed in his own blood—a shocking sight—and with others was taken to the surgeons to have the wounds dressed. Mainly on Mr. Morley's indignant and horrified protest, the officer was induced to reverse his insensate policy; the court then filled, proceedings commenced, and order was re-established.

This morning the gates were left open, every one that wished entered, and there was no disturbance of any kind. The conduct of the Government myrmidons was infamous. The executive is fully within its rights in taking such precautions as it may deem necessary for the preservation of the public peace; but in England and other free countries this right is exercised subject to the curb of public opinion and popular tribunals, while here no such restraints exist. In Ireland, Government may act arbitrarily; redress is out of the question. The police officer, in the course of the afternoon, refused point-blank to parade his men so that those who had inflicted wounds might be identified, with a view to legal proceedings. (It may be mentioned that when the police are employed on country duty, the numbers worn on their collars while they are on town duty are removed, to prevent identification.)

The accused are being tried before and by two removable magistrates on the delicate charge of conspiracy, which, in a freer English-speaking country, is safeguarded by the intervention of a jury. One of the magistrates on the present occasion is Mr. Shannon, who had charge of the police at Cashel last May, when, upon the visit of Mr. O'Brien and others, the people were without cause or justification cruelly batoned. He was then heard to remark to an officer over the troops, "We have batoned hell out of them." The second occupant of the bench has thrice already been selected by the Government to try Mr. O'Brien, and has each time convicted and sentenced him. The attorney conducting the case is a man of low character, guilty of several crimes of omission and commission, who has rendered himself too valuable to the Government for his services to be dispensed with. There is much of the tear and the smile, something of the farcical, in this Irish struggle. To-day, during the Crown counsel's opening address, several of the accused, their advocates and friends, left the court and spent a few hours exploring the beauties of the surrounding country, followed by carfuls of shadowing police. These prosecutions, and the way in which they are carried on, end all questioning as to the wisdom or mistake, the right or wrong, in the Ponsonby-Smith Barry dispute; the whole National party and National feeling at home and abroad will now be thrown into the struggle.

Surely this state of things cannot be allowed much longer to proceed in Ireland. Returning after long absences in England and Scotland, I am renewedly struck by the grimness of the situation, the demoralization and confusion of the results all round. It were better that all pretences should be laid aside, and one course or the other unreservedly and definitely adopted by the British people. Either the Irish at home are different from the Irish abroad and from all other Anglo-Saxon and Celtic races, and should be ruled to their own inevitable injury, for the supposed benefit of the Empire, by force, or they should be trusted to know their own interest, and liberated to act for their own welfare and learn by their own mistakes. Is Ireland to be ruled in the interests of the few or of the many? The Irish people feel that they are engaged in no ordinary political struggle for place or power: the very existence of a nation is believed to be at stake; and if there be no speedy, reasonable

settlement, the world must face a continuation of a disgraceful anachronism in a so-called civilized empire at the end of this nineteenth Christian century.

CATHEDRAL AND OTHER ENGLISH LIBRARIES.

ROWSLEY, DERBYSHIRE, Sept. 26, 1890.

I HAVE recently taken a look at the Cathedral libraries at York, Lincoln, Ely, and Lichfield. Those who are familiar with Dr. Dexter's Bibliography of Congregationalism will know what interest the Chapter Library at York has for the student of our early ecclesiastical history, particularly that of New England. I found Canon Raine helpful in all that gives interest to York, for he is the leading spirit of its Roman and antiquarian museums, as well as the librarian of the Chapter, and this library is not unused by the literary workers of the neighborhood. It has its undue proportion of the old folios of the sixteenth and seventeenth centuries, if one has an eye for the literature most serviceable to the modern scholar; but the lover of the work of the early presses finds much to engage his attention, and Canon Raine proved an excellent mentor in my inquiries. At Lincoln as at Ely, I found that the muniments of the see had been well cared for and arranged by a local student of palæography, whose fitness for the work had been well recognized by their respective bishops. The student could enter upon inquiries with ease, and all the parchments were carefully labelled and boxed. At Lincoln, the library was a little dismal and crowded, but one of the vicar priests who had the collection in charge, is putting it in good order. The Dean, who showed it to me, told feelingly the story of Dibdin's pillage of it to enrich Althorpe with Caxtons and Wynkin de Wordes, since the keepers of those days recognized little difference in value in the modern books which Dibdin gave in exchange. What they have left of Caxton is a poor show compared with what they then lost. The two imprints of the earliest English printer which they still retain, were probably scorned by Dibdin for their imperfections. Ely, where the records were so well cared for, has not much to show for a library. The collection in the Bishop's palace, apart from the private library of Lord Alwyn Compton, the present Bishop, is an heirloom from an earlier bishop, but not, I should judge, of great value.

At Lichfield there was much of interest. The library of the Dean and Chapter suffered destruction in the days of the Civil War, when Cromwell battered the central tower to its fall; and the collection now housed in a room over the Chapter-house owes its restoration to the famous Duchess of Sbrewsbury, whose portrait they preserve on the walls. Fortunately the muniments were in other quarters at the time and were not hurt, and some of the more curious, like a manuscript of their patron, Saint Chad, are now kept under glass in the library, where they have already arranged a collection of royal orders respecting the see, from King John down, with their great seals attached, and in excellent order, since they have been cleaned by the experts at the British Museum. It is not long since all these parchments were in an unassorted mass, but a few years ago the revived interest in muniments led to their assortment and rearrangement; and what gives an additional value to them is, that the Archæological Society of Stafford has, under the care of Dr. Coxe, printed a complete calendar of them.

In the library two things particularly interested me. One was a contemporary copy on parchment of Chaucer's 'Canterbury Tales,' beautifully illuminated and preserved in much of its original freshness. The other was a volume of sermons of the seventeenth century which Dr. Johnson had used in making his dictionary. He had, with a black lead-pencil, underscored the words which he wished to use. Against each word in the margin he had written its initial letter. Each of these was ticked through by his amanuensis as he had copied them for the printer. Mr. Timmins of Arley has another such marked book, and these two are the only ones that I have heard of.

I have not seen of late anything remarkable in private libraries. I found Dean Butler at Lincoln in his library, working over some of the early parchments which he had brought from the muniment-room, and surrounded by a working collection of books, and ready to put his hand on anything illustrative of the beautiful cathedral in which he takes so much pride. The Bishop of Ely was absent when I was there, but I had seen him at the Deanery in Lincoln, and his chaplain took me into the charming working-place of the Bishop's studious hours. I was sorry to miss Sir James Lecaita at Chatsworth, since there was no one but servants at the house. So I failed of seeing some of the choice Americana of its beautiful library. American students have been able to take the measure of that collection since Sir James, the Duke's librarian, a few years ago, compiled the four large volumes which constitute its printed catalogue, with which some of the principal American libraries were favored at the time of its completion. The ordinary visitor is conducted through some of the galleries which contain some of the long serial publications, but the library is classed with the private apartments. I noted casually a few Shaksperian books, like Halliwell's great folios; but it is in the distinct collection at Devonshire House in London that the famous Shakspere rarities are kept, and there is little at Chatsworth to interest the bibliographer of Shakspere.

I spent last week at Reading, in attendance upon the thirteenth annual meeting of the Library Association of the United Kingdom, at which about 150 of the librarians of the British Isles were present, under the presidency of Mr. Maunde Thompson, the principal librarian of the British Museum. I was present in 1877, in London, when, as a conclusion to the international conference of librarians then held in that city, the association was formed, and a former head of the Museum, Mr. Winter Jones, was made its first President. Ever since then it has had its annual meeting, and, all the great towns having entertained them, it devolved upon Reading as a representative of the smaller municipalities to give them welcome this year; and the Association, so far as festivities were concerned, suffered little from the change. Everything was done to make that part of the day not given to business pass agreeably. The members, with their attendant ladies—for I think there was not a single woman librarian present—were entertained every day at lunch in the Town Hall, and at evening receptions given in the municipal apartments by the Mayor.

One day we all went on "brakes" to the Roman ruins of Silchester, where we found the workmen of the Royal Society of Antiquaries just uncovering a tessellated pavement. Mr. Fox, representing that Society, explained everything. A long stretch of the original walls are still standing, overrun with tangled creepers and enclasped by the roots of many trees. The gates have been unearthed, and we were enabled easily to comprehend their plans of defence. One of the finest collections of Roman and early English coins which I have seen is one formed by a gentleman at Wallingford, whom we visited on another day, and who could show us a collection in some ways superior to that of the British Museum, and gathered from the neighboring soil of this peculiarly Roman region of Berks.

Another day we were given a five o'clock tea almost under the shade of the trees surrounding the parish church at Eversley, with its neighboring rectory, and hard by the grave of Charles Kingsley; and we listened with attention while a gentleman of the neighborhood lovingly recounted the story of Kingsley's life and pictured him as his neighbors knew him.

Another day we went in a flotilla of steam launches up the Thames, lunched on the banks near the old dikes of Dorchester, and took our five o'clock tea as we came down the river at Wallingford Castle, where the owner of the private residence within the grounds of the old castle hospitably entertained us. The vicar of the parish made the old story of the ruin real as we rambled with him over its keep and the surrounding parts.

As a conclusion of the week's work the librarians dined together in the Town Hall, and their American guest said what he could in conveying the congratulations of the brothers of the craft who work beyond the sea.

JUSTIN WINSOR.

Correspondence.

THE "CORRESPONDENCE UNIVERSITY."

TO THE EDITOR OF THE NATION:

SIR: The founders of the so-called "Correspondence University" will perhaps be shocked to learn that their names have been used to further a fraud. A number of letters have recently been placed in my hands which clearly show the present status of this remarkable institution. The moving spirit is one who signs himself "F. W. Harkins, A.M., Ph.D." His headquarters is at No. 147 Throop Street, Chicago. His object appears to be to entrap clergymen and teachers into paying for degrees and membership. The letters before me were received by clergymen, one in Pennsylvania, the other in Maine, both in small places. The Rev. A. B., having noticed somewhere an advertisement of the paper called the *Union Reading Circle*, wrote for a copy. He received this reply:

DEAR SIR: In reply to yours of recent date, we mail you a copy of our *Union Reading Circle*, in which you will find full information of our plan and methods. If you wish a degree, you should reply at once, and give in detail the history of your education and claims for a degree, as new rules are soon to go into effect nearly doubling the present requirements. Such information will enable me to judge as to your likelihood of getting the degree, but does not constitute an application. We are graduating as post-graduates some of the best scholars, college presidents and professors, and professional gentlemen in the United States, our latest being the assistant pastor of ——. We shall be glad to appoint you an assistant professor and examiner in your region, but all such must be our graduates in some one degree.

Awaiting an early reply, I remain, very truly yours, F. W. HARKINS.

P. S.—Please state your degrees and dates of graduation.

To this the Rev. A. B. replied, saying he would

enter and take a course leading to the degree of Ph.D. The answer is here given:

DEAR SIR: Your esteemed favor is at hand and contents noted. I write immediately, as so little time now remains [eight days intervened between the former letter and this one] to act in, if you care to secure the degree of Ph.D. from this University, unless you can spend two years in the work of some one department. Our professors being quite conservative, and feeling that our great success warrants their action, have annually raised the standard of their requirements for graduation, and the last action actually added a year's attendance on our University, the requirement being heretofore only one year in some one study. This has seemed to me very severe, but I know it only increases the value of diplomas already issued and to come. Our graduates are first-class without exception, being mainly teachers, superintendents, professional and literary men. The post-graduates are graduates of the best institutions of the United States. Indeed, the accompanying list proves that no American institution can boast of a finer corps of graduates, and none of [our] graduates has ever expressed anything but the highest satisfaction with the result.

However, in order to avoid doing an injustice to several students, the time for effecting the change was put off until July 3, and it was voted to allow all applications filed before July 8, 1889, to come under the old rule requiring but one year's attendance, and, at the discretion of the Council, to consider the year's attendance to be complete if the student pursued some one branch until September 30 next. This makes a remarkable opportunity, if one can take advantage of it, for after July 8 next no one can graduate unless he has been connected with this University two years, and has paid in tuition fees alone at least $50 as shown by the Treasurer's books.

Accordingly, if you wish the degree of Ph.D., I would advise you to complete an application at once as per enclosed rules. Sign the enclosed blank form and remit to me the sum of $25 as a deposit of the graduation fee, and either $25 for tuition fee or a note for the same due in sixty days. (We no longer charge a matriculation fee of $25, as do most colleges, especially of post-graduates.) On receipt of these fees, amounting in all to $50 as a total cost to you, I will file your application for action by our Council of Graduation. This meets next time Saturday, June 29, and weekly thereafter. All applications should be in before July 8. Now, although Chairman of the Council, I do not wish to anticipate their action, and will not guarantee you a degree; but as I wish to have as many worthy graduates as possible by July 8, I will agree to recommend your application, if all is as your letter states, and secure you a degree in every proper way consistent with my office. I am satisfied of your worthiness, for although some technical deficiencies exist, I am disposed to waive them in view of your professional ability and culture, which, in my estimation, are far more essential than mere routine work. Technicalities are less than merit.

Of course, should you not get a degree, I guarantee that your deposit and tuition fee shall be returned to you at once, as is our rule. As to the study, you can choose any subject you please, and all you have to do is to satisfy me that you have done fair work during the next three months in the subject. I forgot to say a thesis on the subject chosen must be handed in by September 30. This, however, need not be new, but must be scholarly. Our degrees are given for merit only; we grant no mere honorary degrees whatever. You will observe that although modelled after the famous London university, this university not only grants degrees, but teaches by correspondence, and has local schools in this city—features that the University of Cambridge, Eng and, has lately approved by imitating. Graduates do not need to come to Chicago to graduate, as their diplomas will be sent to them. On graduation I shall be pleased to have you appointed Assistant Professor and Examiner for your region. All such must be our graduates in one degree. Awaiting your reply and trusting I may serve you,

I am very truly yours,
F. W. HARKINS, President.

Again the Rev. A. B. wrote, saying he could not pay so much money for a degree. Then came the following:

DEAR SIR: Your esteemed favor of July 1 was duly received and carefully noted. I answer it somewhat tardily [July 7] owing to extreme pressure of correspondence and other duties incident to this season of the year. I trust my delay has not affected your ardor or altered your determination. It will not work any injustice to you, as I am allowed under the old rule a month's grace to file your application on account of this delay. In view of what you say as to the financial question, I will make you this proposition: If you will send me $5 cash to guard against actual loss to the University, I will agree to accept your notes for the remaining fees for any convenient time, and also agree that no charge shall be made against you for more than $25, unless payable out of fees due you as Assistant Professor and Examiner. This will comply with our rules and at the same time show my faith in our work, based on the fact that many of our graduates have made graduation a profitable investment financially as well as otherwise.

Hoping that this will be entirely satisfactory to you, and that I shall receive your application within the time allowed me, I am,

Very truly yours, F. W. HARKINS.

These letters need no comment. The fraud attempted in this case has been successful in others. A printed list of the names of those upon whom degrees have been conferred is enclosed in one of the letters of "President Harkins," from which it appears that a number of clergymen and teachers have been caught. Poor souls! Can we wonder that the bunco-steerer still finds victims?

During the present year another clergyman, personally known to me, received a letter which shows that "President Harkins, A.M., Ph.D." is still conducting business at the old stand, 147 Throop St., Chicago, but that he is now "Chancellor of the National University." According to the new letter-head, this great University consists of "forty-five departments, conducted by eminent professors of universities, colleges, etc., affording instruction to 'any person in any study,' through direct correspondence." Of course the "Chancellor" is at his old game, but he has modified his plan somewhat. He is still prepared to confer degrees of all kinds, even including "Master of Accounts," but he also hopes to secure a number of five-dollar fees from those who wish to become fellows of the National University. Any one desiring to become a "F.N.U." need only send the following application signed to the "Chancellor," enclosing ten dollars:

"I, the undersigned, being heartily interested in the education of the people, and desiring to do what I can to advance all good plans for accomplishing this worthy end, hereby make application to be made a Fellow of the National University, and inclose the necessary fees (five dollars for a Certificate of Fellowship and five dollars for the annual subscription to the Library Fund for the year . . . .), subject to these fees being returned to me should I not be admitted a Fellow of the University, and not otherwise.

"Signed ——————."

The "Chancellor's" circular informs us that "hereafter all University graduates and graduates of first-class colleges, and others eminent in Science, Literature, or Art will be eligible for election as Fellows of this University. The rank and title conferred will be F.N.U., duly certified to under the seal of the University."

Is this not a case for the law? In any event, it is desirable that the "Chancellor" should be shown up as quickly as possible, and to this end I ask your aid.—Yours truly,

IRA REMSEN.

JOHNS HOPKINS UNIVERSITY,
BALTIMORE, September 27, 1890.

SUNDAY-SCHOOLS AND CONVICTIONS.

TO THE EDITOR OF THE NATION:

SIR: Is it not possible that some of your recent correspondents are mistaken as to the actual situation with reference to Sunday-school teaching? May it not be that most of us who teach in these schools do actually have the courage of our convictions, and teach just what we believe? Teaching in a Sunday-school is a voluntary service, requiring punctual attendance, and taking considerable time, which those engaged in it could easily spend profitably in some other manner. Under such circumstances there are comparatively few who would find any sufficient motive to spend the time and mental effort in teaching what they do not positively believe to be truth, and important truth.

Of course not one in a hundred has had any opportunity to investigate seriously the results of what is generally known as the "higher criticism." The great majority base their belief or disbelief on evidence of other kinds, and must continue so to do for long years to come. Of those who are versed in the literature of recent Biblical criticism, some have doubtless had their faith weakened, others have had it strengthened, and many others do not profess to have had any faith to begin with. Now, of any or of all of these classes we submit that it is unfair to assume that any considerable proportion is gratuitously engaged in teaching to children what is believed to be false. No man could do so and retain his self-respect—a thing which most people do not care to sacrifice without some strong motive; nor could any one do so and not be compelled to recognize that his own moral conduct was far below the ideal held up in the writings whose claim to more than human sanction he held to be false. For the Sunday-school teacher whose views of the Bible have so changed that he cannot teach just what he believes without trouble, there is the easy resort of resignation. If the tendency of "higher criticism" on the character is such as to make hypocrites of those who accept its destructive conclusions, then for the good of *this* world, to say nothing of the next, such criticism should be discouraged by all who are interested in the present welfare of humanity. Let us rather believe, whatever our opinion of the claim of the Bible to divine origin, that those who are engaged in teaching it are honest men.

W. H. JOHNSON.

GRANVILLE, OHIO.

TO THE EDITOR OF THE NATION:

SIR: "A. F. H.'s" advice to all teachers who have got hold of the higher criticism, or whom the higher criticism has gotten hold of, to quit the Sunday-school, seems rather rash. For one who might be put into that class, I do not find any difficulty in teaching in the Sunday-school, and have not felt called upon to teach what I do not believe. A careful reading of such a conservative paper as the *Sunday-School Times* might show "A. F. H." that a good many of its contributors would have run the risk of the stake in the days of Bruno and Servetus. The world moves—even the Sunday-school world. If Franz Delitzsch could teach in the Sunday-school, why may not many another "higher critic"?

Why a man who loves righteousness, who has something of the spirit in him that was in the lofty minds of the Hebrew race, may not attempt to infuse that spirit into the youth of his own race by reading and commenting on the Old Testament, I cannot see. At least, do not let us advise all those who have a scientific interest in the Hebrew literature, as well as a desire to inculcate the highest truths of religion, to forego the latter because they have got more light on certain questions of Biblical criticism than their fathers had. No; let "B. E. H." keep his place in the Sunday-school as long as he feels within him the burning desire to be righteous and to teach others to be righteous. B.

To the Editor of The Nation:

Sir: Your correspondent "A. F. H.," in the *Nation* of September 25, in commenting on "B. E. H.'s" letter two weeks before, seems to have shifted the issue to quite another question. "B. E. H." had taken the ground that we should be candid with the children of the Sunday-school, and not, either directly or by inevitable inference from our silence, teach them what we have ceased to believe; but his critic raises and discusses a very different question, namely, whether we should teach in the Sunday-school *what we do believe* if the children are as yet too young to appreciate the grounds of the belief. This is quite another question, but one worth discussing, and I beg, as a Unitarian minister and Sunday-school superintendent, to say a word on the other side.

Everything depends on the *attitude* towards the children. We agree that we are never, by word or by silence, to teach what we do not believe. But are we never to teach, on what must be *provisionally* bare authority, what we do believe, and what we believe has the warrant of the strongest evidence attainable outside of the mathematics? To say no, will place us in an awkward position on some other questions. The mother, then, must not care for her babe, the parents for their growing children, till these are able to understand the grounds for what is done. The science of one mind or generation can never get far beyond that of its predecessors because it can take nothing for granted, cannot enter into the inheritance of past generations as heir of all the ages, and build on their achievements, but must go back and start from the foundations again.

We see the absurdity of this in other directions; why do we fail to see it in theology or the science of religion? Why may I, if familiar with the evidence, say to a child, "Such and such facts are established in physics, or such and such are the laws of chemical combination; and you are to accept this until you are ready to examine the evidence," and not tell him, on grounds satisfactory to me, "A large part, certainly, of the stories in the Bible once held to be true are now to be taken as untrue"?

Two objections may be urged: (1) Why teach a child what he is too young to appreciate the argument for? To which it may be replied by asking another question, Why do for the babe according to our best but fallible wisdom during the months when it knows practically nothing? (2.) That it is unfair to bias the child's mind in the direction even of what we believe to be true. But life, and especially school life, is full, and, according to nature's own plan, it should seem, must be full, of such biassing; and to abandon it must be to reduce the child's instruction to a pitiful modicum, and, indeed, to stunt the very faculties and the mental grasp by which he may one day put these Q. E. D.'s to the test.

For, as I have hinted, the authority claimed was but *provisional*, and this fact must be in the forefront of our address to the children. The child has to take a good deal on the bare word of the pianist who is teaching it the rudiments of his art, but by and by it can put the instruction to the test. The fault we find with the Roman Catholic system is, not that it teaches the children with authority, for it must so teach them if it teaches at all, but that that authority *is never relaxed* till the hoary head drops into the grave. It ignores what the Apostle kept steadily in view, that those once children in years and in understanding ought one day to be treated as having come to maturity.

Therefore we will say to the children in the Sunday-school, as we should do in like case in the week-day school, "What we teach you about the Bible is not indeed (much of it) as certain as that 2 and 2 are 4, and there are learned men who take a different view; but to us the stronger evidence seems to favor this view. By and by you may weigh the evidence and judge for yourselves."

We Unitarians, then, do not admit that "criticism and the Sunday-school are incompatible," nor that Sunday-school teaching must be "disingenuous."—Respectfully yours,

H. D. C.

Eastport, Me., September 29, 1890.

THE BLIZZARD FOSSILS.

To the Editor of The Nation:

Sir: A note on page 170 of the *Nation*, No. 1313, speaks of a novel suggestion made by Dr. Nehring in the *Naturwissenschaftliche Wochenschrift*, in which he attributes the cause of certain deposits of fossils to the "fossil blizzards." It is gratifying to me to know that an authority of such eminence has come to the conclusions there set forth, especially so since they confirm so emphatically what I had with some hesitation put forward some years ago on the same subject. My reasons for referring to the matter again are found in present interest as to the formation of the "bone beds," and in the question of priority in discovery of "the theory of blizzard fossils."

My first published mention of the matter occurs in the Annual Report of the Curator of the Museum of Comparative Zoölogy to the President and Fellows of Harvard College for 1881-82, p. 16. It was published in September, 1882, shortly after my return from an expedition to the "Bad Lands" of Dakota, where I had seen in close proximity the bone-beds of the tertiary formations and those formed by the blizzards of 1881 and 1882. The reference in the report relates specially to the several genera of horses, of one to several toes.

"The more recent of these were found in such situations as to suggest the cause of extinction to have been a very severe winter, much more extensive and severe than those that occasionally, at long periods, are met with in the same section of country in modern times. If a winter so severe as to sweep away the cattle and horses were to visit the region, it would leave their remains crowded together in cañons, gulleys, ravines, and other sheltered places in the 'Bad Lands,' very much as the Pliocene mammals are found."

A few weeks later, the subject was brought before a meeting of the Boston Society of Natural History, of which I have not the report at hand. At this meeting, attention was called to particular bone basins formed of cattle in the Medicine Bow and Elk Mountain sections, and others of bisons, apparently from similar cause, in one of the parks.

In *Nature* of February 1, 1883, p. 313, in a letter on "A Possible Cause of the Extinction of the Horses of the Post-Tertiary," the instances were again mentioned, and the letter ended with the quotation given below, which will leave no doubt as to the cause assigned:

"Sections in the Post-Tertiary beds here and there disclosed groups or herds of fossil horses (*Equus*) in circumstances so similar as to leave no alternative to the conclusion that the same causes had filled the bone basins in the olden and most recent time. Stripped of the strata above them, the contour of the surface would have been similar, and the old-time coyotes in their feasting had evidently brought about an equal amount of confusion in the remains. About the time of the deposition of these fossils the horses became extinct. *Why*, is still an open question. Such evidence as was gathered there has led to the belief that, in that region, at least, occasional 'cold waves' of days—perhaps weeks—in duration, with deep snows, caused, or were the principal causes of, the extermination of the horses. Other causes that may be suggested are these: lack of water and an extended glacial period. A consideration of the character of the deposits, the drainage of the mountains at the time, the absence in these beds of proof of a glacial period affecting them since, and the continued existence in the same locality of other creatures, somewhat less sensitive to cold, would seem to be sufficient objections to their acceptance. The tradition of the Indians that there is a winter of terrible destruction to the animals once or twice in the lifetime of man—say once in about forty years—appears to be confirmed by the testimony of the whites. A few degrees or a few days added to the measure of the 'wave' or 'blizzard,' and a few inches added to the depth of the snow, would suffice to sweep the herds from the pastures. Weather of this character is a possibility every winter in the Bad Lands, though we hardly expect it. Apparently the rocks contain evidence of such weather in Post-Tertiary times. And it may not have differed so very much from that we are having to-day."

Unless Dr. Nehring has made earlier publication than that noticed, the first discovery of the theory of blizzard fossils can hardly be claimed for him. S. Garman.

Cambridge, October 3, 1890.

THE CENSUS IN THE KITCHEN.

To the Editor of The Nation:

Sir: In your issue of September 18 you express objections to the acceptance of returns in the household census from a servant of the family. Will it not improve the statistics and tend towards the elevation of the lower classes? The statistics and classifications of the family of which I am a member were given by the cook, who returned herself as "boarder."

O. P.

San Francisco, September 30, 1890.

THE CORRUPTION OF FAMILY NAMES.

To the Editor of The Nation:

Sir: In a certain county of Kentucky lives a family known in their neighborhood by the name of Bat. The father is called "Jim Bat," while among the children are "Henry Bat," "Medley Bat," "Emma Bat," "Lee Bat," "Cora Bat," and others. Many of the people of the vicinity are not aware that the family owns another patronymic. On investigation, however, it may be learned that the true surname is Cansler. It appears that a generation ago the Cansler family was numerous in that part of the country, and that, in accordance with the Southern fondness for certain Christian names, the name of "James" was bestowed upon several of the children in the various branches. When the boys grew up, it became necessary to distinguish them by familiar titles, such as "Big Jim Cansler," "Red-headed Jim," etc. For some years a certain James Cansler lived alone, keeping "bachelor's hall," and thus acquired the distinctive appellation, "Jim Bach," which was soon modified into

the more euphonious "Jim Bat." This name has clung to him to this day, notwithstanding his marriage, and has thus descended to his children.

This case seems somewhat analogous to that of the Enroughty family, reported in the *Nation* a few years ago, which excited a wide interest in the subject of the local corruption of family names. JOHN CLARENCE LEE.

GALESBURG, ILL.

HYPHENATION.

TO THE EDITOR OF THE NATION:

SIR: I had just written an article about this matter when to-day I received the *Nation* for September 25, containing substantially the same statement from Mr. William W. Anderson as I had made in mine. I now throw my article into the waste-basket, but briefly state that I have for the last six years used the two hyphens in some of my books, especially in my treatise on Banking (written in Icelandic), and in my translation (into Icelandic) of Stuart Mill's book on Liberty.

I will further add that the introduction of the German double hyphen, besides unnecessarily annoying the compositor by adding a new box to his case, does not answer the purpose in any way better than the repeating of the hyphen at the beginning of the line.

JON OLAFSSON.

WINNIPEG, September 29, 1890.

Notes.

MR. PAUL LEICESTER FORD of 97 Clark Street, Brooklyn, N. Y., being engaged in the preparation of an edition of the writings of Thomas Jefferson, and desiring to make it as complete as possible, requests that any one possessing any of Jefferson's letters or manuscripts will communicate with him. Or if such persons will either loan these to Mr. Ford for a few days, he will guarantee their safe return; or, if they will have them copied at his expense, and will enclose a bill, he will gladly pay for the copying, and give due credit for such assistance in the work.

Harper & Bros. have in press 'Modern Ghosts,' selected from Continental fiction; 'London Letters, and Some Others,' by George W. Smalley; 'Curiosities of the American Stage,' by Laurence Hutton; 'Christmas in Song, Sketch and Story'; 'A Selection from the Sonnets of Wordsworth,' illustrated by Alfred Parsons; Daudet's 'Port Tarascon,' in Henry James's translation; 'Strolls by Starlight and Sunshine,' by W. Hamilton Gibson; 'A Boy's Town,' being an autobiographic boy's story by W. D. Howells; and 'The Tsar and his People; or Social Life in Russia.'

New and cheaper editions of the late Eugene Schuyler's 'Peter the Great' and of Prof. N. S. Shaler's 'Aspects of the Earth' are announced by Charles Scribner's Sons, who have also under way 'The Lion's Club, and Other Verse,' by Richard Henry Stoddard; 'A Little Brother of the Rich, and Other Verses,' by Edward S. Martin; 'In the Footprints of Charles Lamb,' by Benjamin Ellis Martin; a 'Life of John Ericsson,' by Col. Wm. C. Church, in two volumes; 'Electricity in Daily Life'; 'How the Other Half Lives,' by Jacob A. Riis; and 'In Scripture Lands,' by Edward L. Wilson.

G. P. Putnam's Sons add to their previous announcements 'Cabin and Plantation Lays as Sung by the Hampton Students,' arranged by Thomas P. Fenner and S. G. Rathbun; 'English Fairy Tales,' collected by Joseph Jacobs; 'The Vikings in Western Christendom,' by C. F. Keary; and 'Under Orders, or the Trials and Triumphs of a Young Reporter,' by Kirk Munroe.

Mrs. Annie Nathan Meyer has edited, in notable collaboration with her own sex, 'Woman's Work in America,' which will be published by Henry Holt & Co. The several chapters touch on achievement in education, literature, journalism, medicine, politics, law, industry, and philanthropy.

D. Appleton & Co. issue this month the seventh and eighth volumes of Lecky's 'History of England in the Eighteenth Century,' and 'The Life of an Artist,' being a translation of the autobiography of Jules Breton, by Mary J. Serrano.

Justin McCarthy's 'From Charing Cross to St. Paul's,' illustrated by Joseph Pennell, will have the imprint of Macmillan & Co.

Charles E. Merrill & Co. have arranged with Mr. Ruskin's English publisher for the sole authorized edition of his works in this country, to be termed "The Brantwood Edition." To each volume an introduction will be furnished by Prof. Charles Eliot Norton.

T. Y. Crowell & Co. will publish shortly 'Gospel Stories,' by Count Tolstoi; 'A Web of Gold,' by Miss Katharine Pearson Woods, author of 'Metzerott, Shoemaker'; and limited *éditions de luxe* of 'Tom Brown at Rugby' and 'Jane Eyre.'

'Millionaires of a Day,' an inside history of the great Southern California boom, by Theodore S. Van Dyke, and 'Murvale Eastman, Christian Socialist,' by Albion W. Tourgée, will be published during the present month by Fords, Howard & Hulbert.

Mr. H. C. Bunner's recent stories in *Puck* are to be brought out in book form under the title, 'Short Sixes.'

Thomas Whittaker has nearly ready a second series of the 'Handbook of Biblical Difficulties.'

The third edition of Prof. Garnett's translation of 'Beowulf' (Ginn & Co.) will be accompanied by considerable additions to the bibliography.

The house of G. J. Göschen, Stuttgart, will soon issue 'Aus drei Ländern,' social pictures of Russia, France, and Germany, by Olga Wohlbrück, of the well-known family of German players.

The 'German Newspaper Directory' of Tobias Bros., New York, is a little thing for the side-pocket; but its statistical information is interesting. In the United States and Canada there are 774 newspapers published in the German language, exclusive of such as do not admit advertisements. The oldest, the *Gazette* of York, Pa., was founded in 1795. The totals which follow, and the names and order of States are curious: New York 117, Ohio 105, Pennsylvania 85, Illinois 85, Wisconsin 82.

Mr. G. J. Smith of the Washington English High School has prepared a tabulated 'Synopsis of English and American Literature' (Boston: Ginn) for the use of schools. It consists of dates of important events printed in parallel columns with the names and works of authors arranged topically; the poets in one group, the essayists in another, etc. There are over 100 pages. Comment is of the slightest, both in amount and value. Nothing more is aimed at than a table. In such a work there will always be some difference as to the names to be included in the case of minor writers; but Mr. Smith seems to have used good handbooks and has made no notable omissions. In the American department the standard is very much lower than in the English, as was natural, but it is to be regretted that this lack of discrimination between real and transitory worth should impair the value of the list of books recommended for popular reading.

G. P. Putnam's Sons are the American publishers of Mr. E. Conder Gray's 'Making the Best of Things, and Other Essays,' originally published under the title 'Idle Musings' (which now appears as a sub-title only), and noticed by us at the time of its first issue.

We have received from John Wiley & Sons two new mathematical treatises of more than ordinary interest. One is 'An Introduction to the Logic of Algebra, with Illustrative Exercises,' by Ellery W. Davis, Ph.D. (Johns Hopkins), Professor of Mathematics in the University of South Carolina. The book is, in one sense, not very extensive, containing only 119 pages, although these are of large octavo size; but the exceedingly abstract and condensed form in which everything is presented enables the author to cover a great range of investigation. The work is evidently the result of a vast deal of patient thought, and presents everything it treats in that form which seems most satisfactory to the author's own mind. Few, however, except professional mathematicians, could read the greater part of the book with profit, and they would often ask themselves the question, Is there not some easier and yet equally strict and scientific manner of treating the subject in hand? Yet such readers will find the book well worthy of study as the product of a mind of great mathematical power.

The other book is a treatise on 'Elliptic Functions,' by Prof. Arthur L. Baker of the Stevens Institute. The subject is one that has taxed to the utmost the powers of the mathematical giants of the last and the present century, Euler, Lagrange, Legendre, Jacobi, Cayley, and others. Prof. Baker calls his treatise "An Elementary Text-book for Students of Mathematics"; but the most elementary treatment of a subject which may be characterized as the highest development of the Integral Calculus, will necessarily be intelligible to only a small class. Too high praise cannot be given to the publishers for the mechanical execution of both these books.

The twentieth number of the Complete Index to *Littell's Living Age* (Philadelphia: Edward Roth) concludes the division of Literary Criticism, and embraces the whole of Metaphysics and Science. The next number, to be looked for presently, will complete Vol. I. Vol. II. will be issued rapidly during the coming year.

The second annual issue of *Academy Architecture* (New York: William Mueller) retains the original features of selections from the most prominent architectural drawings hung at the Royal Academy Exhibition, and of illustrations of English and Continental designs or buildings of recent years. In the first section we have samples of the drawings of Norman Shaw, and other lesser lights of the profession for civil, ecclesiastical, and domestic erections, including a project of a high relief by Charles B. Lawes, representing the United States of America, with several attributes, as, Liberty, Peace, Commerce, Indians, The Extinction of Slavery, etc. In the section called "Annual Architectural Review," we meet with important edifices by Mr. Waterhouse, a hall and a villa by Charles Garnier, a variety of Flemish and German town halls, Beltrami's accepted façade for the Milan Duomo, Swedish and Russian constructions, the Imperial Opera-house at Budapest, the Imperial Court Museum at Vienna, etc. Among all these, it need hardly be said, there are not a few warning examples.

We have received in four parts the sixteenth volume of Proceedings of the United States Naval Institute at Annapolis. For the layman the most readable is Commander Henry Glass's humane paper on "Naval Administration in Alaska"—a leaf from his experience ten years ago in imposing civilization on a people neglected by Congress. The raid upon molasses stills, the enforcement of compulsory attendance at school, the healing a bloody hereditary feud between tribes, the overawing of miners until they came to prefer the "naval administration of justice" to any other—is all very simply but effectively related. It was even necessary to make a formal abolition of slavery, and to give immediate effect to it without compensation.

Mr. Sidney S. Rider, in his Providence *Book Notes* for September 27, begins an elaborate historical exposure of "The Great Land Conspiracy of the Seventeenth Century in Rhode Island," of which the first chapter is the William Harris lawsuit.

Mr. Henry F. Waters's "Genealogical Gleanings in England," in the October number of the *New England Historical and Genealogical Register*, are again brilliant as touching famous American characters or families. He gives the will of Capt. George Popham, President of the Popham Colony; that of the mother of Samuel Gorton's wife, whose Christian and probably family names are thus discovered; that of Richard Seymor, husband of a hitherto unknown sister of Lawrence Washington, Rector of Purleigh. Other testaments besides these throw important light upon the families of Somers, Kent (of Newbury, Mass.), Whitehead (of Windsor, Conn.), Whipple (of Ipswich, Mass.), Spencer (of Salem, Mass.), Hooker (of Hartford, Conn.), the Virginia Lees, etc. On p. 382 of this number is given the inquest on Crispus Attucks, of Boston-Massacre fame, who is styled throughout "Michael Johnson," an alias now first revealed.

An earnest effort is making among the students at Harvard to raise a sum of money sufficient to build a reading-room in connection with the library, which will be commodious, well-ventilated, and lighted by electricity, so as to be available in the evening—a monstrous deficiency under existing arrangements. Every alumnus must feel interested in this long-deferred movement, and all who can aid it should do so. An imposing committee, representing each class from 1817 (that of the venerable George Bancroft) to 1889, has been named by way of sanction to the scheme, but for practical information it is enough to know that the treasurer is Mr. Moses Williams, whose address is Brookline, Mass. The amount to be raised is not less than $100,000.

The Boston Museum of Fine Arts has opened an exhibition of the Society of American Wood-Engravers, supplemented by an exhibition of old and modern wood-cuts from various sources. This will last till the end of November.

The American Folk-Lore Society will hold its annual meeting at Columbia College on November 28 and 29.

A subscriber asks what are the provisions of the new tariff respecting the importation of books. They are as follows: All books twenty years old in point of manufacture, and all books in foreign languages, are admitted free of duty. English books less than twenty years old are taxed 25 per cent. ad valorem.

—'Frieden! Frieden! Frieden!' ('Peace! Peace! Peace!') is the title of a pamphlet of seventy-eight pages by Leopold Katscher (Dresden: E. Pierson). It treats of two kinds of peace—peace in its literal sense, considered as a cessation of war, and peace, metaphorically, considered as a cessation of the industrial conflict between capital and labor. The author does not so much express his own views as he commends to his readers three books which he reviews and describes at some length. One of them is Bellamy's 'Looking Backward,' which he praises warmly, but considers too communistic and unpractical. More unreserved is his admiration of a German Utopian imagining, 'Freiland,' by Theodore Hertzka, which has some traits in common with Bellamy's, but is much larger (about 700 pages), and works out a much more detailed scheme. It has attracted a good deal of attention in Germany, and various translations of it have appeared, an English one being in preparation. It has already been discussed in these columns. The third book reviewed by Katscher is a novel called 'Die Waffen Nieder,' by an Austrian baroness, Bertha von Suttner, which, under the guise of fiction, is an eloquent and romantic indictment of the war policy of the European States and of war in general. The passages quoted give evidence of much vigor and of great logical acuteness; and while they may detract from the value of the work viewed simply as a novel, they enhance its weight as a contribution to the discussion of an important moral and political question. This book also has already been translated into Danish, French, Italian, and English; the English edition will be published at a popular price by the International Arbitration and Peace Society.

—Spelling reform, although persistently agitated for many years, has made but little headway in English. English critical journals still find amusement in pouncing on the awful American misdemeanor of spelling favor, color, and the like without a *u*. The Germans have taken much more kindly to phonetic changes, which were first proposed by the brothers Grimm; but as every writer and printer adopts only such innovations as commend themselves to his judgment, German spelling is in a rather chaotic condition. Silent letters, especially the *h*, are pretty generally dropped; thus, where only a few years ago one read "Heute roth morgen todt," we should now find "Heute rot morgen tot," etc. In the last number (September 15) of the *Revue Internationale de l'Enseignement* there is an entertaining and instructive article by M. A. Gazier, on "The Spelling of Our Fathers and that of Our Children," advocating a moderate and rational simplification of French orthography. The argument is an historical one. M. Gazier first reviews the condition of French orthography in the seventeenth and eighteenth centuries, showing, by a number of diverting passages, that not only kings, like Henri IV. and Louis XV. and XVI., and great ladies, like Mme. de Sévigné and Mme. de Montespan, were mere castaways in the matter of spelling, but that great writers like Bossuet, Racine, and even Voltaire spelled the same word two or three different ways and almost always incorrectly according to the present standards. Indeed, in the seventeenth century a candidate for a collegiate degree had no need to know French; to make the students better Latinists they were forbidden to speak French in their play hours. "You write French as if it were your mother tongue," said Chancellor Daguesseau in astonishment to our old friend Rollin, the author of the 'Ancient History.' The present French rigid orthography only dates from 1811, and was raised to its important position in the educational curriculum by the University of Napoleon and by the grammars and dictionaries of Noel and Chapsal, which are still in use as text-books in French and even in American schools. Projects for "ortografik" reform followed hard on the heels of the new régime; pamphlets advocating it appeared as early as 1827. A recent plan, submitted to the French Academy by M. Louis Havet, has the support, in some measure, of members of the Institute and professors of French at the Sorbonne and at the Collège de France; but the Academy cannot take any initiative: it can only register the decisions of the sovereign—that is, good usage. So far, good usage stands in the ancient ways and refuses to budge. M. Gazier proposes that the University, which first did the damage, shall take the first steps to apply the remedy. He suggests a few simple rules which could easily be adopted and would greatly simplify French spelling; but it would lead us too far to follow him into details. We must content ourselves with wishing him the success he deserves.

—Of the late Baron Dr. Johann von Lutz, Bavarian ex-Minister of the Interior, who died near Munich on September 3, in his 64th year, a correspondent writes:

"He was in all respects a remarkable man. His political career is an example of what unwitting good a powerful monarch can do to a nation by upholding a worthy man against the will of an ignorant or misled people. In spite of the strong and unceasing protests of the clerical Ultramontane majority in Bavaria, the late crazy King Ludwig kept this very liberal-minded Minister in power, and sanctioned all his prudent and progressive measures, during his entire reign. Lutz's chief political feats were the formation of the alliance with Prussia in 1866 in terms advantageous to Bavaria, his prompt support of the erection of the German Empire in 1870-71, and his suppression of the fanatic *Culturkampf* on the part of the Ultramontanes. Together with the Cabinet of his Department, he had control over all the universities, schools, and churches of the kingdom; and he brought all the influence of his vast information and learning to bear on this task. As a mere example of his knowledge on school questions, I recall a striking experience I had with him. I happened to mention the little University of Miami—President Harrison's Alma Mater, it will be remembered—to him without precisely recalling what State it was in, when Dr. Lutz remarked: "It is in Ohio, the smallest of the three State universities, I believe; and it has about seventy students." When one considers that there are twenty-three so-called universities in Ohio, and who knows how many colleges, and that there are forty more States, each, perhaps, with a like number of institutions, one can conceive to some extent the knowledge of a man whose mind had to grasp the school systems of all the States of Europe and Asia besides. A Catholic himself, he protected the late Dr. Döllinger in establishing his Old-Catholic schism from Rome. When King Ludwig died, the Ultramontane party was jubilant at the coming fall of their pet foe. But instead of that the present Prince Regent, though Ultramontane in his tendencies, took the old Minister into his favor, as much so as his more radical predecessor, and made strenuous efforts to retain him in office at the beginning of the present year; but Baron Lutz was failing in health, and retirement had to be granted him. The ex-Minister leaves behind him a grown-up son, and a widow, his second wife, whom he married only three years ago."

FARMER'S SLANG DICTIONARY.

Slang and Its Analogues, Past and Present: A Dictionary, Historical and Comparative, of the Heterodox Speech of all Classes of Society for more than Three Hundred Years. With Synonyms in English, French, German, Italian, etc. Compiled and edited by John S. Farmer. Vol. I—A to Byz. London: Printed for Subscribers only. 1890.

THE present is certainly an age of dictionaries. Old ones are undergoing constant revision, and

new ones are projected on a colossal scale. The 'Encyclopedic Dictionary,' which bears the name of the firm of Cassell, by which it is published, was recently brought out in several volumes. The somewhat similar but larger one of the Century Company is more than half finished. That of the Philological Society, planned on even a grander scale than the others, has many years of labor to be spent upon it before it can be even in sight of its completion. Besides, there is projected a Dialect Dictionary, which is to gather together the words and phrases which do not fall properly within the scope of the others, and will, it is expected, put into shape for permanent preservation that decaying speech of the illiterate rural population of England which is now slowly disappearing before the advance of the language of literature.

The work which is now before us is of a different character from any of these. It is the first volume of a dictionary to be devoted to the collection and definition of slang words. It embraces only the letters A and B. It is evident from this single fact that it is no small field which the completed work is expected to cover. Slang dictionaries we have had before, but none on any such scale as this.

The editor of the work has been previously known by a volume of somewhat similar nature entitled 'Americanisms, Old and New.' He brings to the performance of the task he has set before himself several valuable qualities. He has the heartiest interest in his subject; he has enthusiasm and industry. But while these are in themselves most desirable qualities, they are unfortunately not the qualities most desirable in the intellectual equipment of one who attempts to carry through successfully an undertaking of this kind. It needs, in truth, a special training, much beyond that of the ordinary lexicographer. But even the training of the ordinary lexicographer the compiler gives little indication of possessing. At the very outset suspicion is aroused by the title of his work. "Slang" has a reasonably limited meaning; but "analogues" is comprehensive enough to cover almost anything and everything. Under its protection there is hardly any reason except the caprice of the compiler for restricting the number of volumes.

There is, indeed, no question that it is not an easy matter to define the exact limits of a work of this character. No small share of what in its origin is slang is adopted at last into the language of literature; but while it is passing through the transitional stage it is not always clear in which class it is to be reckoned. The history of the term itself is evidence of this fact, for while the thing represented is old, the particular word that represents it is comparatively new—in its modern meaning very new. "Slang," in the sense of the cant language of thieves, appears in print certainly as early as the middle of the last century. It was included by Grose in his 'Dictionary of the Vulgar Tongue,' published in 1785. But it was many years after before it was allowed a place in any vocabulary of our speech that confined itself to the language of good speakers and writers. Its absence from such works would not necessarily imply that it had not been in use, and in frequent use. Still, that this never had been the case we have direct evidence. Scott, in his novel of 'Redgauntlet,' which appeared in 1824, when using the word, felt the necessity of defining it; and his definition shows not only that it was generally unknown, but that it had not then begun to depart at all from its original sense. In the thirteenth chapter of that work, one of the characters is represented as trying to overhear a conversation that is going on, but finds it of no avail, for, according to the story, "what did actually reach his ears was disguised so completely by the use of cant words and the thieves' Latin called slang, that even when he caught the words, he found himself as far as ever from the sense of their conversation." No one who is now accustomed either to speak slang or to speak of the users of it, would think of connecting it with anything peculiar to the language of thieves. Yet it is clear from this one quotation that the complete change of meaning which the term has undergone has taken place within a good deal less than sixty years. Even the sense which it now has is not recognized in a dictionary as late as Worcester's. There it is defined as "vile, low, or ribald language; the cant of sharpers or of the vulgar; gibberish."

In his uncertainty as to what should be regarded as slang and what should not, the compiler resorts to an expedient that is more conducive to his own ease than to the reader's confidence. He first divides the colloquial speech into three great classes—dialectical, technical, and slang—and then informs us that, "after careful consideration," he has adopted, "as a standard between literary and non-literary English, Annandale's edition of Ogilvie's Imperial English Dictionary." Words and phrases that appear in that work can be used with safety by us all. Neither slang nor its analogues are expected to be found within its sacred enclosure. This is certainly cutting the Gordian knot with a vengeance. The divisions given of colloquial English are themselves calculated to excite a certain degree of surprise. Those of us who humbly profess to speak it are apparently cut off from the use of any but dialectical, technical, and slang words. To the painful purists who pride themselves on the avoidance of all these, will be committed the exclusive employment of that high-polite language about which not even the scent of anything colloquial lingers. Still, it is the work which is set up as an authority that will cause most astonishment. The 'Imperial' is little else than an enlarged and glorified Webster. Its material is so plainly based upon the collections made for the latter dictionary that it could not be sold in this country without the consent of the owners of the Webster copyright. It is a useful and valuable work; but to turn it into a court of appeals inevitably begets a feeling of wonder as to what must have been the linguistic training of him who is disposed to recognize it in this capacity. Webster, Worcester, and the 'Imperial' are all dictionaries worth consulting, and worth consulting constantly; but it is only in the most remote recesses of the rural districts that we should expect any one of them to be regarded as a final authority.

The same muddled ideas which affect the nature of the work undertaken affect also its execution. Difficult as it may be to tell what slang is, it is comparatively easy to tell what it is not. To the latter class belong words imported from foreign tongues to denote an idea that no word in the native tongue quite expresses. In what way can *blasé*, found in this dictionary, fall under any possible definition of slang? Or how can the Latin *adsum*, used in certain schools to answer one's name at roll-call, be so classed? Or, can the term be properly applied to the description of a gesture of contempt, such as *biting the thumb*? It is even worse to treat as slang, or as remotely related to it, words and idiomatic phrases that are now part and parcel of the language of literature, and in many cases have been so for centuries. Yet we have included in this volume such common idioms, among others, as *to scrape acquaintance with*, *to be at sea*, and *to go against the grain*. There is a peculiar perversity in this treatment of the subject, for in several instances illustrations of the usage are selected from the best writers, and the words and phrases themselves are all to be found in the 'Imperial Dictionary,' which was to furnish the dividing line between orthodox and heterodox English. From criticism of this sort the compiler may seek to protect himself by maintaining that such expressions are not slang, but its analogues. But if they are of that nature—and the comprehensive title, it must be confessed, covers almost everything—he will have to encounter equal censure for leaving out an immense body of similar phrases of which he has not taken the slightest notice. Hence, between the Scylla of trying to do what he has no business to do, and the Charybdis of not doing what on his own theory he ought to have done, he cannot well escape from being wrecked in these dangerous waters.

The work is further marked in many cases by the incompleteness of the information it gives, and sometimes by its inaccuracy, when a very little research would have enabled the author to ascertain the precise facts. A *Broughtonian*, we are informed, is a pugilist, and the name comes from Broughton, "once the best boxer of his day." The inquirer will naturally ask when was his day. He will get no answer from this work, although it would have been a matter of no difficulty to secure the needed information about the father of British pugilism. Again, to illustrate the word *bull* in its Stock Exchange usage, the first quotation in which it is employed is taken from Colley Cibber's play of "The Refusal." But, instead of giving its date, 1721—the all-important and easily ascertained thing—we are furnished instead with the dates of the author's birth and death; and as he lived for nearly ninety years, this does not fix with much precision when this meaning of the term first came into being, according to the compiler's authorities. *Blue Skin*, it is here said, was formerly a contemptuous term for a Presbyterian. No authority is furnished for the assertion, for the single quotation given—one from 'Hudibras'—contains the adjective and not the noun. But assuming it to be correct, what can be the possible meaning of the further statement that "blue is still the Presbyterian color, and is used as an adjective by them in describing books and people"? The *Black Joke* is defined as the name of a song about 1811. To say nothing of other instances, it is mentioned by Pope in a poem published in the year 1737. It is not a matter of any consequence, save as an exemplification of inaccuracy where accuracy is attainable with the least possible trouble, that Fielding's novel of 'Tom Jones' is dated 1750 instead of 1749.

Even more remarkable is the skill sometimes displayed in missing the exact meaning or origin of phrases. *Blaze away*, the sense of which it seems impossible to mistake, is calmly defined as "Look sharp: stir your stumps—an injunction to renewed and more effective effort." *An affair of honor* is defined as "killing an innocent man in a duel." *Begosh* is put down as an expletive, "probably of negro origin"; and yet this very work contains later the oath *by gosh*, with an English quotation from the early part of this century. The author on one occasion takes an excursion into the field of Biblical criticism, and gives us to understand that Beelzebub found in the Gospel of Matthew should be Beelzebul, and traces

the origin of the misreading to the original Hebrew. A work of this sort is not quite the one where we should expect to find corrections of the Revised Version. Still, in spite of the Semitic lore displayed in this instance, there are other places that lead to the suspicion that the compiler is not especially strong in Scripture. There is certainly a general impression that St. Paul is responsible for the statement that "the love of money is the root of all evil." But here, under the word *actual*, we find the ignorantly abbreviated form of the sentence—"Money is the root of all evil"—put down as an "old saw."

Naturally, errors of this kind are most conspicuous—at least they are most conspicuous to us—in the definitions of Americanisms. An occasional characteristic is the complete reversal of the real meaning. *Boodler* is defined not as one who receives boodle, but as one who offers it. Instead of the bribe-taker, he is turned here into the bribe-giver. The soldiers of the Northern army will be astounded to find from this work that *bushwhacker* was a designation applied to them as well as to the guerilla troops of the South. A curious confusion with the word *Copperhead* is shown in the statement that *Butternuts* denoted "the sympathizers with the South in the North and the Middle States during the American civil war." It will be observed that on this authority the Middle States did not constitute a part of the North. But the most extraordinary instance of misplaced misinformation occurs in the attempt to give an explanation of the origin of the verb *blenker*, used during the civil war in the sense of 'to plunder.' It so closely resembles the philological wisdom of many more pretentious works that it is worth quoting in full. "Possibly allied," says the editor, "to the Northern provincialism *blenk*, 'a trick' or 'stratagem.' *Blenk* was also used in *Morte d'Arthur* in the sense of 'to bilk,' or 'cheat.'" It is sufficient to say that the term as used during the civil war originated in the plundering habits ascribed, justly or unjustly, to a body of troops in the Northern Army commanded by Gen. Blenker. The effort to explain the derivation of this word was made by calling in the aid of philology. Of the origin of the phrase now to be given there is a highly philosophical and somewhat sentimental account furnished. This is the expression *about east* in the sense of "about right." The phrase, we are informed, arose from the fact that "to the frontiersman and pioneer the Eastern or New England States are typical of all he cherishes most and loves best." There is a good deal more about the way these men turn with undying affection to that region. It is evident that the compiler of this work has not the faintest glimmering of the opinion of itself and of other parts of the country that pervades the Western mind. He may rest assured that whatever currency the phrase *about east* has, it is not the West that gave it life or keeps it in circulation.

In truth, it is the list of Americanisms in this volume that confounds us more than any other one characteristic. As we light upon term after term that we have never seen in print, or heard in conversation, or heard of as being used by living men, we are more and more impressed with the fact that the only way to learn the peculiarities of speech in this country is to go to England and consult English books and newspapers. We do not venture to deny that there may be authority for all the words and meanings that are here imputed to the inhabitants of this continent; but if so, it is perfectly certain that the usage prevalent in some special district or at some special period of time has been treated as if it were characteristic of all the people at all periods. *To blow one's bazoo* is an expression found in Bartlett's Dictionary, and is there credited to Tennessee. Here it is simply put down as an Americanism. This is very much as if a phrase peculiar to Cornwall should be cited as belonging to the colloquial speech of the British empire. There has, indeed, been scarcely any discrimination exercised in separating the individual from the general, or the local from the national. In more than one instance the chance coinage of some one person appears to have been carefully registered as if it were part of the speech of all. We mention some of these words and phrases, which may possibly be known to a few, but will certainly seem strange to most. There is *abound*, in the sense of 'to be prominent'; *abskize*, 'to depart'; the noun *accumulatives*, which is not defined, but seems from certain vague remarks under it to be connected with "journalistic sparring matches"; *acquisitive* used as a noun in the sense of 'plunder'; *afterclap*, meaning the attempt to extort unjustly more in a bargain than was at first agreed upon; *bedoozle*, 'to bewilder'; *bell mare*, 'a political leader,' apparently a variant of 'war-horse'; and *bloviate*, 'to talk aimlessly and boastingly.' All of these may exist or may have had an existence, though in not a single instance is there any illustrative quotation given of their usage in this country. But it is ridiculous to speak of them as Americanisms in the proper sense of the word. Some of them are probably the creation of a particular writer, and only found in what he has written. All of them belong to that class of expressions which spring up constantly both in England and America and last but for a day or two. They then entirely disappear from sight and memory, unless they chance to fall under the eye of some lexicographer at the time of their appearance. Embalmed in his work, they then continue to maintain a mummy-like existence for all time.

Other deficiencies there are in this work which sadly detract from its value as an authority. To return, for instance, to Americanisms: not only are we credited with terms which most, and perhaps all of us, know nothing about, but genuine words and phrases, born of the soil—such as *big bugs*, *boom*, and *to get down to the bed-rock*—are included here without any mention of their place of origin. In truth, it is with a good deal of disappointment that we find the work failing to come up in any reasonable degree to the standard which it might fairly have been expected to reach. Its shortcomings are the more unfortunate because the compiler has, as we have said, a most genuine interest in his subject, and the subject is one that demands a fuller and more philosophical treatment than it has yet received. Slang is really the source from which language recruits its decaying energies. It is often weak, often silly, sometimes vulgar; but in the countless number of words and phrases of this nature that are constantly appearing and disappearing there is always a modicum worthy of permanent preservation. This says clearly or concisely or forcibly what the literary speech says obscurely or diffusely or feebly. From the very fact, however, that in its origin slang lives entirely in the mouths of men, and in consequence undergoes constant and sudden changes of meaning, it is all-important that what meanings it has should be clearly ascertained and accurately stated; and this is something the volume before us too often fails to do.

Still, while it is impossible to praise this work as an absolutely trustworthy authority, there is no question that it will be found interesting. It contains, moreover, a good deal of matter that is of permanent value. There is no reason, indeed, why, with proper care, an immense improvement should not be shown in succeeding volumes in the absolutely important matter of accuracy. With this secured we can afford to forgive the mistake of bringing together, under the term "slang," words and phrases which have no real connection with the subject. The compiler, in his prefatory note defending the title of the work, speaks with a good deal of asperity of "those critics who, without examination, seek to decry and put aside that which it has cost years of labor and research to produce." Critics are a hardened race, and it is not upon them that words like these will have much effect. Moreover, it is to be feared that the greatest commendation of this production will come from those of their number who review it without examination. Yet to this extent the compiler is justified, that every dictionary must be more or less full of faults, full of errors of omission and of commission, no matter how profound is the knowledge of those concerned in its production, no matter how much time and thought have been spent upon its details. The objections in this case are not that the work contains errors, but contains errors which the slightest labor or research would have rendered it an impossibility to commit. Defects of such a character can easily be remedied, however, and we are sufficiently interested in the undertaking, and sufficiently unmoved by the detestation which the editor feels for his critics, to wish and hope that future volumes will be found worthy of commendation in the very particulars where this one has been made the subject of censure.

PSYCHOPHYSICS.

Rapporteur Esthétique de M. Charles Henry, permettant l'étude et la rectification esthétique de toute forme. Paris: G. Séguin. 12mo, pp. 22.

Cercle Chromatique de M. Charles Henry, présentant tous les compléments et toutes les harmonies des couleurs, avec une introduction sur la théorie générale du contraste, du rhythme et de la mesure. Paris: Charles Verdin. 12mo, pp. 168.

M. CHARLES HENRY occupies the position of "Bibliothécaire à la Sorbonne," and is also entitled to several other honorable marks of distinction. His investigations in the history of mathematics have been very extensive, and from 1878 down to the present time the *Revue Archéologique*, the *Bulletin des Sciences Mathématiques*, the *Revue Scientifique*, and many other scientific periodicals, the *Actes* of various learned societies, and several independent volumes bear witness to his industry and learning. He has published accounts of many almost, sometimes quite, unknown MSS. of great historical interest in Arabic, Greek, Latin, and various modern languages. Several of these he has edited and published in full, with learned introductions and notes. He has also given to the world a large amount of hitherto unpublished letters and correspondence of celebrated men of science, Euler, D'Alembert, Laplace, Lagrange, and many others. He is at present engaged, in association with M. Paul Tannéry, in editing the works of the celebrated mathematician Fermat, the first volume of which, in 4to, was published a few months ago by the French Government.

The little books before us give abundant

evidence that M. Henry is by nature largely endowed with the inventive, mechanical, and mathematical faculties, and richly equipped with the learning of the past and the positive, experimental knowledge of the present. The problem which he has attempted to solve is the reduction of the science of "psychophysics" (or, as some might prefer to call it, "physical psychology") to a definite mathematical form. He has formed a theory of the relations existing between sensation and mental action—a theory not based upon metaphysical reasoning, not relying upon appeals to the "inner consciousness" of the individual, but upon indisputable facts in the physical structure of the outer world and in the organization of living beings. He would do for the mechanics of psychical action what the mathematicians have done for the mechanics of physical action, and would study the soul as the mathematician studies a machine. The science of psychophysics deals only with phenomena; with the essence and nature of the soul in the metaphysical sense, it has nothing to do. The name "psychophysics" was first proposed by Gustav Theodor Fechner, in his epoch-making 'Elemente der Psychophysik' (Leipzig, 1860). The object of that work was to discover and formulate a measure of sensation. M. Henry deduces the same results from his own theory, but his method is entirely different from that of Fechner, more far-reaching and profound. We must necessarily confine ourselves to very general statements in regard to M. Henry's theory.

Every attempt to investigate the relations between the soul and the body must start with the assumption that every idea, every emotion, is accompanied by some physiological change. The direct investigation of these changes is in most cases impossible and always difficult, laborious, and sometimes dangerous. The exterior manifestations of the interior work are alone open to us. The only things which we can represent and study scientifically are movements. The first step, then, in the formation of an exact science of psychic action is the establishment of definite and precise relations between the psychic functions and external movements; these latter are alone susceptible of measurement and calculation. Without movement no sensation, no idea, is possible. It is, then, in the movements of the living organism that we must seek for the key to the psychic functions of the living being. Now, the only movements which the living being can describe are circular movements, or, as M. Henry prefers to call them, "cyclic movements," in order to keep in view the fact that in any given case the movement is always in one direction. Confining our attention to the human being, all our movements reduce themselves to those of the lever: the bones are the levers, the muscles are the powers, the weight of the limbs or the bodies upon which our force is exercised are the resistances, the joints are the fulcrums or points of rotation; but in every case the movement is cyclic. The description, by a single, simple, continuous motion, of a straight line or of any curve line except a cycle or a cyclic arc—that is, a circle or a circular arc described in one direction—is for the human being an impossibility. The reader may perhaps ask, Cannot I take a pencil and draw an at least approximately straight line and various curved lines which, whatever they may be, are not circular arcs? Certainly, but the upper arm can only describe cyclic arcs about the shoulder as a centre; the lower arm can only describe cyclic arcs about the elbow as a centre; it is only because the cyclic movement of the upper arm continuously shifts the position of the centre about which the cyclic movement of the lower arm is performed, that the hand is made to move in a straight line or some other than a cyclic curve.

Not only are all the movements of the human being limited to cycles and combinations of cyclic movements, but there is no continuous rotation of one piece upon another as in a machine. Among the cycles which the living being is able to describe, M. Henry makes a distinction between great and small cycles, analogous to the great and small circles on the sphere, but we have no space to explain it; enough that the distinction is not a matter of arbitrary definition or hypothesis, but is only a mathematical way of presenting facts in our physical organism. Small cycles can be described continuously, great ones only discontinuously. In describing a great cycle there are always points where the movement is arrested, and can only be continued by a readjustment of our organs. The distinction between movements which the living being can describe continuously and those which it can only describe discontinuously, is one of the fundamental points in M. Henry's theory.

His next fundamental proposition is, that the living being expresses or represents every variation of physiological work by some change in the direction of its force. To the different excitations of the nervous system correspond different directions. "Direction is the representative element common to all sensation." When the directions differ at the maximum or minimum, successively or simultaneously, there is *contrast;* when they differ by certain definite angles, there is *rhythm;* when they may be expressed by denominators of certain fractions denoting certain parts of a cycle, there is *measure.* These three subjective functions, common to all the nervous reactions of the living being, M. Henry has endeavored to reduce to a mathematical form and express in a calculus of numbers. All those excitations of the nervous system which have most engaged the attention of mathematicians, physiologists, physicists, and artists, such as forms, lights, colors, sounds, are subjected to his processes. The phenomena known under the names of optical illusions, consonance, dissonance, modes (major and minor), harmony, and many others are shown to be but particular cases of his three functions of contrast, rhythm, and measure.

In explaining how the living being expresses or "represents" its inward work by its outward movements, M. Henry makes a distinction, which runs through his whole theory, between movements which are *dynamogenic* and those which are *inhibitory.* The human being exercises his force by preference in certain directions. Movements in certain directions are easy, agreeable, or, as the phrase is, natural. Such directions are dynamogenic. The opposite directions are more difficult, less agreeable; movement in those directions is more or less hindered. Such directions are inhibitory. The distinction is the result of the physical organization of the human being. Walking forward or backward may serve as a simple example. So, too, M. Henry states, experiments with the dynamometer show that a person striking upward, other things being equal, always registers a higher number than when he strikes downward. The human being is essentially dissymmetric. In the normally organized human being the right side is stronger than the left. Direction towards the right or from left to right is dynamogenic, from right to left inhibitory. Left-handedness is sometimes congenital, but it is sometimes merely temporary, and often, when permanent, is the result of accidental or pathological causes.

As M. Henry has shown (or rather it had already been shown by other physiologists) that all the elementary movements of the human being are assimilable to those of the compasses—that is, are circular or cyclic; and as he also has shown that certain directions are dynamogenic—that is, easy, pleasing, natural—while their opposites are inhibitory, or difficult, disagreeable, exceptional, the question arises, Are not certain divisions of the circumference (and all directions may be represented by the divisions of the circumference) natural, and based upon the organization of the human being? The division of the circumference into 2, 4, 8 equal parts, or into any number of equal parts expressible by a power of 2, as also its division into 3, 5, 6, 10, 12, and 15 equal parts, was known to geometers long before Euclid. These divisions can all be accomplished by the processes of elementary geometry—that is, with no other instruments than the ruler and the compasses. But the division of the circumference into 7, 9, 11, 13 equal parts is impossible with the ruler and compasses only. At the beginning of the present century Gauss demonstrated that with the ruler and compasses the circumference of a circle can be divided into any number of equal parts expressible by a power of 2 with 1 added to it, provided the number so obtained is a prime number. Thus, 256 is the 8th power of 2; adding 1 gives 257, and 257 is a prime number. Gauss showed that with the ruler and compasses a regular polygon of 257 sides could be inscribed in a circle—that is, that the circumference could be divided into 257 equal parts. This has often been characterized by mathematicians as the greatest discovery in elementary geometry that has been made since Euclid. We need enter no further into the mathematics of the subject. The numbers which express the divisions of the circumference that can be accomplished by the ruler and the compasses are called by M. Henry "rhythmic numbers," and play a great part in his system.

We can now understand the nature of his Æsthetic Protractor (*Rapporteur esthétique*). An ordinary protractor used by surveyors is an instrument for plotting angles on paper. It is generally in the form of a semicircle divided into degrees. Sometimes it is a whole circle, and instruments of different sizes are made. The essential feature of M. Henry's protractor is its graduation. Instead of being divided, like an ordinary protractor, into degrees, its divisions correspond to the rhythmic numbers. Accompanying it is an instrument called a "Triple Decimeter" used in measuring lines. Now suppose a form (or, as it is usually called, a figure) on paper is presented, and the question is asked, Is it a pleasing figure or not? With most people the decision would be wholly based upon sentiment. But M. Henry takes the figure and measures its various angles with his protractor, its lines with his decimeter; he subjects these data to certain fixed arithmetical operations, and he gets a single number as his answer. That number expresses the rhythm of the form. He turns to his tables of rhythmic numbers. If his answer is found in the tables, the form is good; if not, it is bad.

What M. Henry claims to do with his æsthetic protractor for forms he claims to do, by means of his chromatic circle, for colors. The presence of three fundamental colors in the spectrum by the combination of which all the

other tints, tones, shades, etc., are produced, is generally asserted, or admitted, or assumed by all the great physicists who have investigated the phenomena of light. Many of them have constructed chromatic circles, chromatic tops, and other instruments to illustrate their theories. But as to what the fundamental colors are there is great diversity of opinion. Brewster, Clerk Maxwell, Helmholtz, Chevreul, and others have arrived at different conclusions. There seems no prospect of determining the question by experiment. M. Henry attacks the problem in an entirely different manner. Having connected the psychic functions with directions in the manner which we have roughly and inadequately indicated above, having further shown that the forms of perception can be reduced to certain numerical formulæ, he proceeds to analyze the visual sensation, and then constructs his chromatic circle as a deduction from his theory. Finally, he shows that the results of his theory accord with the results of experience, and brings into orderly arrangement what before was a confused mass of isolated facts.

One of the experiments, or series of experiments, mentioned by M. Henry, is so interesting, so important in its bearings, and yet so easily understood, that we will endeavor to make room for it. It is due to the ingenuity of M. Charpentier, one of the most distinguished French physicists. The observer is so placed that the only light which reaches his eye is through four very minute holes, each one less than the hundredth of an inch in diameter. The holes are so situated as to form the four corners of a little square about the twenty-fifth of an inch on a side. The eye of the observer is about eight inches from the hole—that is, at the distance at which the vision of the normal human eye is most acute. When the holes are illuminated with a very feeble light, the observer sees nothing at all. As the intensity of the light is gradually increased, he first sees a faint spot of more or less diffused light. It makes no difference what the color of the light employed may be; a simply luminous spot appears before any appearance of color can be distinguished. As the intensity of the light is gradually increased, when it has reached a considerable higher degree the observer is able to distinguish with certainty what the color of the light is. He still, however, only sees a spot of colored light. As the intensity of the light goes on gradually increasing, the observer is finally able to distinguish the holes and to see that they form a square. Many other remarkable differences between the sensations of luminosity, of color, and of form, for which we have no room, are pointed out.

Having constructed his chromatic circle upon theoretical principles, M. Henry proceeds to examine and explain a great number of optical phenomena: the differences between colored lights and colored pigments, irradiation and the means of avoiding its effects, the illuminating power of the different parts of the spectrum, binocular vision, the salient and indented appearances of stained-glass windowpanes, the different laws that govern mixtures of colored lights and mixtures of colored pigments, the relations between light and vegetation, etc., etc.

Passing from the visual to the auditive sense, M. Henry treats the latter in essentially the same manner as the former. Consonance, dissonance, temperament, scales, modes (major and minor) are only realizations of mathematical formulæ based upon those fundamental numbers which are the abstract representatives of the forms of perception of the human being as manifested in his movements; they are only special cases of contrast, rhythm, and measure. The details of all this we are obliged to pass over. But there is one point, of great interest to students both of music and physics, which seems worthy of notice. If we start with any fixed tone, which we may call C, we can derive from it, without making use of any intervals except the octave and perfect fifth, a series of notes which, when reduced into the same octave, form a musical scale. Its invention is attributed to the Greek philosopher Pythagoras, and it is often called the Pythagorean scale. The fact undoubtedly is, that Pythagoras gave a scientific explanation of the scale universally used by the Greek musicians. It is also sometimes called the Greek scale. For all the purposes of harmonic music, or music of more than a single part, this scale is entirely unsuited. The intervals of the fourth and the fifth are perfect, but the major thirds, major sixths, and major sevenths are too sharp, the minor thirds and minor sixths are too flat. Hence the Greeks had no harmonic music. When two or more persons sang or played together, they always sang or played in unison or in octaves. They sang and played tunes without end; of chords they made no practical use. When the singer accompanied himself on the lyre, he played on the instrument the same notes that he sang with the voice. Of accompaniment in the modern sense he knew nothing.

How came the Greeks to adopt a musical scale which rendered harmony impossible? In 1869 MM. Cornu and Mercadier, two eminent French physicists, laid before the French Academy of Sciences the results at which they had arrived after a long series of experiments, in which they had been aided by amateur and professional violinists and 'cellists. These conclusions were: Musical intervals belong to at least two different systems of different values; violinists and 'cellists when playing unaccompanied melodies without modulations employ the Pythagorean intervals, or, in other words, they play a simple tune on the violin as a Greek would have played it on his lyre; when sounding two notes of different pitch together in "double-stopping," they employ the intervals required by the laws of physics, or, in technical language, the intervals of "just intonation." Many circumstances, especially the greater or less delicacy of ear in appreciating intervals on the part of the player, of course modify these rules in actual practice.

These conclusions of MM. Cornu and Mercadier have given rise to a vast deal of controversy, in which, on the whole, the participants, when artists, have sided with MM. Cornu and Mercadier; when physicists, have disputed them. Let us see what is the result of the application to them of M. Henry's theory. In his theory of contrast he makes a distinction between simultaneous and successive contrast. The distinction is based upon the organization of the human being, and upon the movements by which he represents his psychical operations. It is general, not made to meet any particular case, and is as applicable to the visual as to the auditive sensations. According as the contrast is of the one or the other kind, the result is different. Applied to the phenomena of sound, when two tones of different pitch are heard together, we have a case of simultaneous contrast; when one is heard after the other, we have a case of successive contrast. From the principles of the latter M. Henry "ciphers out" the Pythagorean scale, showing that it is founded in human nature, thus corroborating the conclusions of MM. Cornu and Mercadier, and justifying the æsthetic intuition of the artists and of the Greeks.

"I hope," says M. Henry, "that no one will reiterate in my case the accusation which the stupidity of every age has directed against the efforts to give a rational explanation of taste; that no one will pretend that I wish to substitute for the creation of the artist the mechanism of an instrument. Genius is inimitable, for it expresses itself not only by visible rhythms, but by an infinity of rhythms more or less invisible; is it any the less necessary to give definiteness to the manifestations of harmony, to show the complexity of their beauty, and to aid the feeling for them? Art is not alone interested in this work; it concerns our life itself. The artist is only an eye, an ear, a nervous system normally organized and developed; he feels the rhythm, and because he feels it, because the idea is a virtual realization, he produces it externally. He feels the rhythm and produces it better in proportion as his environment is more normal, more harmonic. It it is not the schools, but brilliant social conditions like life in Greece or at the Renaissance, that produce the great periods of art. Reciprocally, to aid the normal development of art is by so much to favor the realization, still far distant, of our destiny, the creation of universal harmony."

MORE FICTION.

Day and Night Stories. By T. R. Sullivan. Charles Scribner's Sons.

A Little Worldling. By Ellis Worth. American News Co.

A Foreign Match. By Madame Bigot (Mary Healy). Chicago: A. C. McClurg & Co.

The Feet of Love. By Anne Reeve Aldrich. Worthington Co.

The Salt Master of Lüneburg. By Julius Wolff. Translated from the 21st German edition by W. Henry and Elizabeth R. Winslow. Thomas Y. Crowell & Co.

Uranie. By Camille Flammarion. Translated from the French by Mary J. Serrano. New York: Cassell Publishing Co.

The Princess of Montserrat. By William Drysdale. Albany, N. Y.: Albany Book Co.

MR. SULLIVAN'S stories are already so favorably known through the magazines that the collection of seven of them in the volume before us will be to many readers simply a reunion of old friends. To others, who turn affrighted from the appalling mass of contemporary magazine writings, fearful of being drawn from all other reading, once engulfed in that limitless torrent, the present volume will be a royal road to a cheerful hour. No man deserves better of his fellow-men at the present day than he who writes a good short story. Mr. Sullivan's impress one at once by their distinction of both substance and form. His style, without running into any Gallicisms—that passionately loved and encouraged fault of our most finished story-writers—has a finesse, an accuracy, which we are used to associate with the French story. One perforce pauses from attending to the gist of the matter (albeit that is not allowed to weaken) to admire the chosen perfectness of the words, the ripe cultivation of the style. Yet nothing could be further from formalism. The language and arrangement are as natural and clear as they are refined. The story remains the leading affair, and if any one neglects it for a moment, it is not Mr. Sullivan, as a showman of grammar and rhetoric, but the reader, and that upon the gentle compulsion of the charm of good writing. While Mr. Sullivan's invention is everywhere ingenious, our private leaning is to those of his stories which do not touch upon the supernatural. Of the latter, "Cordon" is the most beguiling. Mr. Sullivan, however, seems to us almost more a romancer on earth

than in faery or ghost-land—witness the charming "Rock of Béranger"; and who but a poet would write of "Vaulting Crickets"?

'A Little Worldling' is an unnecessary novel, wherein the wickedness of Presbyterians is brought to confusion by the loving-kindness of heretics, through ways which are ways of unpleasantness from the literary and from every point of view.

'A Foreign Match' is another disappointing book. Its opening pages are full of the promise of an entertaining story, and in the main it is ably written. The *dramatis personæ* and the properties are, to be sure, hackneyed. A young Parisian painter, a crippled sister, a stanch friend in workman's dress, a family of rich Americans living in gilded exuberance—these are types outworn, yet they enter upon the stage with a spring that gives hope of something agreeable. It is therefore depressing to find one's self, in the last chapter, assisting at a Camille-like scene of a dying runaway wife restored to her husband's affections, and to the flowers and silver salvers of accepted repentance.

Miss Aldrich's book is in places clever and throughout supremely disagreeable. It is easily seen that her aim has been to outdo the insanities of certain modern novels, in a saner language than theirs. We commend to her the words of an English reviewer who speaks of a recent work as one "which will be a delight to those who in literature are alone worth delighting—the cultivated students of all that is sweet and high and noble in literary art."

'The Salt-Master of Lüneburg' is a thoroughly good book of its kind. Its kind is somewhat long-winded and given to horse-play, but it is full of life and color and movement, and, moreover, deals with an interesting episode in the history of the fifteenth century—a struggle for power in which the contestants are burghers and guilds, prelates and lords. The fine, sturdy character of the Salt Master, whose personal integrity wins for him the confidence of high and low, and enables him to lead his beloved city out of harm's way into peace, is admirably presented; nor is there a single figure in the crowded canvas which is not clear and individual. The story does not flag, long as it is. The descriptions of life in a German city are particularly readable, and the prominence in all public and private affairs of the system of masters and guilds is set before us as vividly as if we were witnessing another "Meistersinger."

Those whose curiosity has been set tingling of late by mysterious rumors from the Lick Observatory of discoveries in Mars, too startling to be made known until time shall have sufficed for further verification, will find pastime of a suggestive sort in reading 'Uranie.' It may be called an astronomic rhapsody—a fantasia upon the interstellar spaces. Fascinating it is with the fascination of the mathematically true. M. Flammarion's most imaginative conjectures as to life in the stars are no more startling than the well-known facts he rehearses of the physical world. His incandescent beings who can glow at will are not stranger than the sixty different motions of the moon; nor do twelve senses in a planetary being appear more wonderful than a velocity of 320,000 yards a second in a star. It is as a résumé of facts and figures that 'Uranie' will be found readable, rather than as a work of imagination. Its occasional flippancies and irrelevancies are outweighed by a lofty spirit of research, nor do the feebleness and formlessness of the story which serves as vehicle, avail to quench in the reader a sense of having enjoyed a journey full of meaning and suggestion through the heavens.

'The Princess of Montserrat' is a jaunty little tale of desert-island adventure, in which the conquering hero is a New York newspaper reporter. His experiences are interesting and bloodless, and the airy sang-froid supposed to be characteristic of his calling, serves him many a good turn in his checkered career, while lending also to the narrative a happy-go-lucky strain.

Gray and His Friends: Letters and Relics, in great part unpublished. Edited by Duncan C. Tovey, M.A. Cambridge, Eng.: University Press; New York: Macmillan. 1890.

THIS volume of nearly three hundred pages, coming upon the heels of Mr. Gosse's edition of Gray, illustrates the hopelessness of finality in editing. Mr. Tovey, a close student of Gray, is willing that other lovers of the poet should not be confined to what editors have chosen for publication. The new material of Gray consists of eight letters, in two of which Walpole collaborates, notes of travel in France, Italy, and Scotland (54 pages), brief notes to Percy and Brockett from the Percy MSS., thoughts, verse fragments, collectanea and conjectures, among which some of Warburton's Shakspere emendations are to be noted, and Latin poems from either Mitford's MSS. or the Pembroke College MSS. In addition, of matter not Gray's, but now first printed, there are one letter of Walpole, thirteen letters of Ashton, six of West, two of Miss Speed; and the list is completed by three letters of Gray to John Chute, hitherto published only in Mr. Chaloner Chute's 'History of the Vyne.'

The collection is not so piecemeal as this particular account of its contents might indicate. The first half is occupied with the correspondence of the four friends, known at Eton as the "Quadruple Alliance," Gray, Walpole, West, and Ashton, during their college days and the foreign tour of Gray and Walpole to the time of West's untimely death in 1742, at the age of twenty-six. The object is really to set forth West's character and make a memorial of him. The material is drawn from Mitford's MS. copies of the letters, and so much is added from previously published letters of West as will serve to make the correspondence continuous. West was highly valued by Gray, who meant to have collected his poems, but never did that pious labor. Mitford also seems to have intended to edit his remains. Mr. Tovey has now accomplished this long deferred work, and, though the story is brief and slight, it has a literary as well as a pathetic interest, and will be valued by those who care for Gray's circle of friends.

Of West's life no more is told than we knew before—that he was the son of Richard West, Chancellor of Ireland, and grandson of Bishop Burnet, attended Eton and Oxford, studied law without interest, and fell into a consumption and died, after having the close of his life embittered by the knowledge that his mother, whom he loved, had been intrigued with by his father's secretary. Whether we must add to this that he was aware that his father's death was due to poison given by this mother is not certain; but such a story is published by Mr. Gosse as coming through Dyce from Mitford. His letters, however, betray none of this tragic interest, except by the melancholy of their tone. They are made up of such pieces of college news, wishes for reunion, expressions of common literary interests, and other personal matters as one student at Oxford might send to his Eton friends at Cambridge, and they return the same in their answers. After college life was over there was little difference in the tenor, though the matter varies with the changed situation. The strain of personal affection is greater in West's letters to Gray, as his need was greater and his nature more tender; there is much restraint, however, in expression, and one finds in all a certain refinement of personal behavior, a high breeding, which is very charming in effect. We speak particularly of West and Gray; Ashton was of coarser grain, and in Walpole one is more sensible of the man of the world's habit, or suspects its presence.

But whether or not these few literary exercises should detain us on their own account or for their relation to Gray, they serve to make West more substantial, to prove how much he had loved Milton and the more gentle Latin poets, to show a young poet's nourishing in that age as he followed his will among the classics, and the true and carefully wrought, if slight, performance of his learning hand; but it is rather as a side-light that they are welcome, for in his letters the nature of the man is more intimately and excellently shown, such as to win kind memory for him and not the least place among poets' friends. The balance of affection, one thinks, was more on his side than on Gray's, and the two saw little of each other after their boyish friendship at Eton.

The new material of Gray which is collected in the latter half of the volume will be valued according to the attachment of the reader to the poet. We ourselves have found much of curious interest, and are thankful for this gathering of the fragments that nothing be wasted. The journal of the journey from Rome to Naples, in particular, we should be sorry to have lost. Most of the matter, however, is for the close student of Gray, and need not be remarked upon in detail. The editor corrects some errors in Mr. Gosse's work, and restores some texts wrongly given by Mason. His annotations are many, and seem thorough, though he apologizes for not being more thorough. His estimate of Gray's character is unusually good, by virtue of its freshness, simplicity, and naturalness. He particularly turns his face from the infelicitous conjectures of Matthew Arnold, whose essay showed an activity of imagination remarkable in the poet-critic. We are reminded, with regard to the text upon which Arnold built, that it is not to be believed that "when good Mr. Brown said of Gray that 'he never spoke out,' he had anything in his mind but the fact that Gray did not acknowledge to his friends how near he felt his end to be"; and Mr. Tovey goes on to bring our minds back to the obvious meaning of words, to the fact that his melancholy was a kind of "leucocholy," that in "incidental treatment of public events he had about as much 'high seriousness' as George Selwyn," that his description of Pitt's eulogy on Wolfe (a cruel instance) is in "the Walpolian not the Wordsworthian spirit," whence "to attribute *Weltschmerz* to him, or even any latent uneasiness pointing that way, is the merest anachronism." He thinks that if Gray had been "born in the same year with Milton," he would have been a "less finished artist," but much the same man; and if "with Burns," then he would have written "less great poetry" and "perhaps more satirical verses and more prose."

In the way of literature, West sends his verses, Latin and English translation, and original, to Gray; and these, though not such as to foretell a real poet, show many good qualities

of style framed under Latin influences, and, though they have much of false taste derived from the age, exhibit talent and real taste, an occasional directness that might have become vigor, and sincerity of feeling. They are more interesting because they approach Gray, now a rather solitary figure, in their literary characteristics. They mirror, in a way, his early intellectual mood and immaturity. It may be fanciful if one seems to see here the classical influence leaving satire for ode in the development of English literature, the beginning of more personal feeling and a delight in nature, which were faint prophecies of a change in poetic style; but it would be natural to find such signs in Gray's environment. It may, perhaps, not be superfluous to refer, for the curiosity of the matter, to the lines on the "Death of Queen Caroline," which Gray worked over into a famous stanza of the 'Elegy':

> "Ah me! what boots us all our boasted power,
> Our golden treasure and our purple state?
> They cannot ward th' inevitable hour,
> Nor stay the fearful violence of Fate."

It is interesting to note, too, that a month before he died, West sent to Gray an Ode to Spring which was possibly the suggestion to him of his own ode, enclosed to West in a letter written just before learning of his sudden death.

The temper of Mr. Tovey's strictures upon the idealized figure of Arnold's inner consciousness is perfectly modest, and the remarks seem to us unusually sensible, and wholly untouched by that literary mood which impairs and often thoroughly vitiates judgments by literary men, of which Arnold's 'Gray' is a conspicuous example. In this little introduction we get back to the region of plain common-sense, though the criticism is made in so off-hand and unobtrusive a way that the reader hardly knows it is there until he sees how sound it is. The entire volume is a welcome addition to the literature about Gray, which, as Mr. Tovey reminds us, is not to be found in Mr. Gosse or any one book; and for our part we hope for further additions to what is always so delightful.

Civil Government in the United States. Considered with some Reference to its Origins. By John Fiske. Boston: Houghton, Mifflin & Co. 1890.

THIS little book, though meant to be serviceable and suggestive to the general reader, is primarily designed for the instruction of children in schools, after they have reached that stage of mental development in which it is no longer enough that they should be pleased with the rattle of "drum and trumpet histories," or tickled with the straw of story-books and fairy tales. The scholastic use of the book is emphasized (perhaps a little too obtrusively for the mature reader and the intelligent teacher), by an apparatus of "Questions on the Text," appended to each chapter, and also by supplementary "Questions and Directions," designed to facilitate original inquiry on the part of the pupil, after the methods, on a small scale, of the German *Seminar*. For this latter branch of work an ample bibliography is furnished, that the student may betake himself to good sources of knowledge in solving the historical problems here set before him to quicken curiosity and promote intellectual acumen.

In pursuit of his design to exhibit the genetic ideas which lie at the bottom of civil government in the United States, Mr. Fiske has undertaken to select and put together, "bit by bit," as he says, the archaic institutes and social usages which, after passing for long ages through the grooves of change, have resulted at last in that "magnificent piece of constructive work," the Constitution of the United States. That is, he undertakes to show how far our American theory of self-government is an historical evolution, and how far it is an original creation. Such an inquiry into the comparative anatomy and morphology of political structures is a work of much difficulty, but, as the author justly remarks, "our country affords an admirable field for the study of the general principles which lie at the foundation of universal history"; and this for the obvious reason that we live under a government which, in the complexity of its organism, is the most specialized of any on the globe. To explain the genesis of this specialization the student must learn how to trace its descent from that oldest of political cells, the clan of our savage ancestors. For such a cosmical philosophy in politics it does not need to be said that Mr. Fiske is singularly well equipped. On its critical side, as a scientific exposition of the origins of our Government, the work is every way admirable. Indeed, the writer has allowed the modesty of its title to obscure not only the most distinctive feature, but also the most characteristic merit of the book. It purports to be a treatise on civil government in the United States, "considered with *some* reference to its origins." In point of fact, Mr. Fiske avows at the close of his volume that it has been his "*main* purpose" to treat of civil government in the United States with reference to these origins. It was inevitable that he should have spent his strength on this part of his work, rather than on its descriptive analyses of our governmental forms.

The usefulness of such an inquiry needs no enforcement. The comparative method in modern research has been likened by Freeman to a second Revival of Learning, because of the transformation it has wrought in human thought on all subjects. All the so-called Universal Histories written before it are emptied to-day of scientific value for the want of it. If we would know the origins of English jurisprudence, we must look for them in the science of comparative law. So simple an institute as Borough English can be better understood in the pages of Sir Henry Maine and Scrutton than in the pages of Blackstone. In like manner, if we would know the origins of American self-government, we must hunt for them in the cradles of the British race.

It takes a great deal of learning to make these recondite things simple and plain to the youthful reader, and Mr. Fiske has made them simple and plain. That he has pursued the right method in beginning at the bottom of our political evolution and then tracing the gradual progress upwards, instead of reasoning backwards from the top to the bottom, there can be no doubt. In this way the continuity of the historical process is set before the reader in an order which is logical because it is chronological. And if the logic of the book is severe, as becomes a scientific treatise, its style is always clear. Indeed, the style is often enlivened with glimpses caught from the realm of romance. It is evident that the writer wishes his pupils to know their Dickens and Charles Reade as well as their Seebohm and Laveleye. He expects them to take a hint about the wonderful country which Alice visited after she had gone through the looking-glass, as well as a hint about the rectangular cartography of our land office in laying out the townships of a Western State. At page 216 Mr. Fiske even presses the pencil of the painter into the service of his pen, and gives us a grotesque picture of the "Gerrymander," with the dragonly head, wings, and claws appended to that blatant beast by Stuart, the artist.

In the descriptive part of the work we note some slips of the pen—the evident marks of haste. It is a mistake to intimate (p. 230) that the electoral vote of New Jersey was divided between Lincoln and Douglas in 1860 as a result of "the district system." That divided result was determined by a "fusion" among the adherents respectively of Breckinridge, Bell, and Douglas. Their "fusion" electoral ticket comprised three friends of Douglas, two friends of Breckinridge, and two friends of Bell; and as a faction of the Douglas men supported a "straight-out" ticket besides, in which the three "fusion" electors were adopted, it chanced that these three had a majority over the Lincoln electors. It is also a mistake to say (p. 218) that "there is nothing to prevent a State from electing all its Representatives [in Congress] in this way [by a general State ticket], if it prefers to do so; and it has lately been done in Maine." If Mr. Fiske will turn to the United States Statutes-at-Large, vol. xxii., p. 6, he will find that the election of Representatives "in this way" is *not* left to the discretion of the States, and that the election in Maine to which he refers was provided for by a special statute of Congress. Under the census of 1880 the Congressional representation of Maine was reduced from five to four. This reapportionment broke up her then existing districts, and, as Congress foresaw that new districts might not be made in time for the next ensuing Congressional election, it was provided that that next election could be conducted by general ticket.

We do not know what Mr. Fiske means by saying (p. 244) that "Congress may establish a uniform rule of naturalization, and uniform laws on the subject of bankruptcies, *but it has not done so.*" The italics are ours, because we are puzzled to understand what lack of "uniformity" there is in our existing naturalization laws, or what lack of "uniformity" there was in the bankrupt acts of 1800, of 1842, and of 1867. These bankrupt acts, we know, were repealed for supposed abuses under them, but not, so far as we know, for any lack of uniformity in their tenor or application.

Slight inaccuracies of statement should be corrected, as when, in referring to the broad avenues which break up the "checker-board monotony" of rectangular streets in the city of Washington, Mr. Fiske says (p. 84), that these avenues "radiate like spokes of a wheel from the Capitol as a centre." Some of them start at the distance of a mile or more from the Capitol.

We find it hard to agree with Mr. Fiske in the opinion that "the practical questions" which have divided the two great parties concerned with the powers of the national Government before the civil war, may be reduced to these three: the *Tariff*, *Internal Improvements*, and a *National Bank*. Slavery can hardly be ignored in any analysis of the "practical questions" which divided parties in the United States before the civil war. In a work like this there was no room, of course, for the slavery polemic; but it seems to us that Mr. Fiske might have properly found a place for the scientific study of slavery, considered as a social institute which has profoundly colored the stream of American history. It would have been as easy to show that slavery was an archaic institute in our social system as to show that "the township was originally a stationary clan, and a county was originally a stationary tribe." In like manner, it would have been easy to show that this archaic institute, because of its alien nature and intrusive

growth in our political organism, was doomed to destruction from the moment it came to be infiltrated in our civil polity; for slavery in civilized nations has always been, to use the phrase of Lieber, "a deciduous institution." In such nations it has always come to an end, either by slow decay or by sudden shock.

The Golden Bough. A Study in Comparative Religion. By J. G. Frazer, M.A., Fellow of Trinity College, Cambridge. Macmillan & Co. 1890. 8vo, 2 vols., pp. xii.-409 and 407.

THE priest of Diana at Nemi (lately made famous by a drama of Renan) obtained his office by fulfilling two conditions: he had to slay his predecessor, and, that he might have the right to slay him, had to pluck a bough from a certain tree in the sanctuary. Mr. Frazer's book is an attempt to discover the origin of this custom, and his account of it is as follows: The priest, who was also styled "King of the Wood," was an incarnation of the sylvan deity there worshipped, whose life was in the bough, and he had to be killed in order that the divine spirit incarnate in him might be transferred in undiminished vigor to his successor. This conclusion he supports by a large array of facts drawn from European, Asiatic, African, and American peasant and savage folk-customs. In successive chapters he treats of the incarnation of deities in men and in trees, of the royal and priestly tabus by which the soul of the divine man is guarded, of the killing of the god that the people may be saved from the evils attending his senile decrepitude, and of the external soul which may be detached from its owner and dwell in bird or beast or plant, and so be captured and destroyed.

Whether or not he has solved the mystery of the strange custom of Nemi, he has collected a vast amount of curious information respecting ancient and modern religious ideas and usages, and has made probable, if not demonstrated, the persistence, in many popular customs, of primitive savage conceptions of the supernatural. He is doubtless right in assuming that much mythical material is to be regarded as invented explanation of ritual, and that it is to this latter that we must go for the simplest religious ideas of early man. The study of ritual thus becomes of first importance in the reconstruction of primitive religions—a study beset with difficulties, but certain to yield rich results.

The most striking part of Mr. Frazer's book is the chapter on the slain god, an idea the credit of which he gives to Prof. W. Robertson Smith, whose recent work, 'The Religion of the Semites,' has opened a new path for the investigation of the origins of religion. Mr. Frazer has, however, illustrated the idea with abundant learning and ingenuity. He comes, for example, with a new spirit to the examination of the great slain gods of Semitic, Egyptian, Phrygian, and Greek mythology. Adonis, Attis, Osiris, Dionysus, Lityerses, and also Demeter and Proserpine, he explains as deities of vegetation, similar to the corn-spirits of modern Europe; the death and resurrection of the god are held to signify the annual death and revival of vegetation. This view is, to say the least, as satisfactory as the solar hypothesis as a partial explanation of these mythical histories. Elaborate myths are probably never simple in origin; they usually bear evidence of the convergence of different lines of thought. Recognizing this fact, Mr. Frazer is disposed to claim only partial accuracy for his explanations.

The importance of modern folk-lore for the elucidation of ancient customs is becoming better understood every day. Through books of travel, publications of folk-lore societies, and such systematic investigations as those of Mannhardt, the material is rapidly growing, and larger results for ancient mythology may be expected. Mr. Frazer has in this volume made no slight contribution to the science of religion; and from the work on primitive superstition and religion which, as he states in his preface, he is now preparing, we may hope for something of great interest.

Essays of an Americanist. By Daniel G. Brinton. Philadelphia: Porter & Coates. 1890. 8vo, pp. 489.

THIS is the most recent among the bulkier publications of the author, whose productivity in regard to Americanist studies seems to increase with his years. It is a collection of twenty-four articles, with introductions and indexes, all being classed, on the title-page as well as in the book itself, in four divisions: (1) Ethnologic and Archæologic, (2) Mythology and Folklore, (3) Graphic Systems and Literature, (4) Linguistic. The book does not profess to be wholly original; most of the articles have appeared before, being either verbatim reprints or new recastings. Some are of value and worth preserving, while as to the value of others the opinions of Americanists differ largely, as the latest reviews of the book demonstrate. The articles of value are mainly those in which the argument is founded on historic facts, while in the papers of the lighter sort Brinton's lively imagination prevails over his reasoning power, and sometimes, when it suits him, runs directly counter to historic truth. It must indeed be a formidable task for a single scientist to produce something serious and thorough in so many fields of Indian science simultaneously.

To begin with his article on the Toltecs (pp. 83-100), the author is certainly right in declaring their so-called *empire*, which is alleged to have extended across Anahuac from the western to the eastern ocean, a baseless fable, if empire is meant in the sense of a centralized monarchy. One of the numerous places called Tula or Tullan lay on Serpent Hill, and was an antique religious centre of the Mexicans, like Nani Waya, "the sloping hill," among the Choctaws; from it the fabled empire took its name. What was originally meant by Toltec empire is, according to Brinton, the whole extent of the Nahuatl nation, which had extended all over southern Mexico; but other scholars prefer to see in the Toltecs the ancient dominion of the Maya people. That Tollan must be identified with *tonatlan*, 'sun's place,' as the birthplace of Quetzalcoatl, is an assertion which requires more proof to be credible.

Another paper, on "The Earliest Form of Human Speech as Revealed by American Tongues," contains statements which we should expect to find rather in the writings of Rudolf Falb than in those of Brinton. From examples occurring in Howse's Cree Grammar, he thinks it is possible that in early epochs one term may have signified a certain thing and also its exact opposite (like the Cree *eth*, 'being' and 'not-being'), and claims to have found instances to sustain this in Tinné and Nahuatl. This is exactly the theory of Carl Abel, over which many linguists are dubiously shaking their heads. On page 408 we find a description of what the language or speech of the palæolithic man *must once have been*, and a discussion of the problem whether early men modelled their sounds rather from what they saw or from what they heard. Were they *visuaires* or *auditaires?* Brinton is more inclined to make them "visuaires," but we think the question is not well put.

The treatise on "The Conception of Love" is based too largely on imagination and speculative etymology to be of real value to linguists or psychologists. But now comes a rehearsal of the Taensa controversy, which the author brings forward simply to injure Lucien Adam, the scholar chiefly implicated in the affair. As Brinton had lately made peace with him, it is evidence of Punic faith to touch the subject again, and to repeat the same historic falsities as he advanced previously. How little Dr. Brinton is capable of judging about languages and their affinities may appear from the fact that in 1867 he declared the Natchez tongue cognate with Maya, and in 1873 with Maskoki (Choctaw, Creek, Seminole, etc.), but with no open retractation of the former statement. More lately, having asserted that Chorotega, a Chiapanec dialect of Nicaragua, was cognate with Aimará, he made due retractation.

Dr. Brinton's activity has proved very useful in raising new Americanistic problems or presenting the old in a novel light, whatever the real value of his own articles, theories, and publications may be. To become still more useful to science, he should without delay conscientiously edit the Maya dictionary of Motul, composed about 1590. Dr. C. H. Berendt's copy, with his own invaluable annotations, containing parallels from the modern Maya dialects, is in Brinton's hands, and the present state of Maya researches urgently demands the publication of this unique document upon the language.

Sporting Sketches. By Diane Chasseresse. Macmillan & Co. 1890.

IT is related of a certain English prelate that, when reading the third chapter of Daniel, he was wont to omit all the catalogues of musical instruments after the first, and to substitute the words "music as before." This was in the nature of a protest against unnecessary repetition, and the reader of 'Sporting Sketches' will be apt to wish that the lady with the Franco-mythological pen-name, whose wondrous deeds are herein recorded, had taken a hint from the worthy bishop. The desire to slaughter wild animals, which becomes a passion with many men and occasional women, is doubtless inherited from a remote and savage ancestry, and is a survival of a period when meat could not be obtained from a butcher round the corner, and when straight shooting with the weapon peculiar to the age was consequently a talent worthy of careful cultivation. But in these later days, deer-stalking and the pursuit of game generally can only be regarded as means of obtaining healthful and invigorating exercise, while "pot-hunting" for the benefit of the larder, which seems to have been the regular occupation of this modern Diana, cannot be described in book form without boring and wearying the reader. The wounding or killing of one stag is very like that of another, and the monotony of 'Sporting Sketches' is only relieved by the phenomenal character of some of the shots described—any scepticism in regard to which is met by the author's solemn declaration that "every word in the book is true." Moreover, she shows an entire lack of appreciation of the beauties of nature—a defect which is fortunately uncommon among genuine sportsmen, and is probably the distinguishing note of the pot-hunter.

In one respect only is the book remarkable—

in this age of wonderful wood-engraving—and that is in the grotesque badness of the illustrations. The author must be strangely free from vanity to have allowed a cold and possibly critical public to judge of her personal appearance from the illustration at page 158. In this extraordinary picture she is made to look like one of the recently discovered mummies dressed in an early Egyptian mackintosh, while on other pages her appearance, although quite different, can hardly be called attractive. She gives an account of her experience with a semi-tame otter, which is evidently intended to be humorous, but is simply disgusting, and she naïvely relates how a pet rabbit once ate up one of her pictures—and recovered !—thereby showing that it possessed a combination of the critical faculty with strong digestive powers that would have filled the soul of Thomas Carlyle with envy. The book is dedicated to the author's children, and is said to have been written for their amusement. In this it may meet with success, but it should have been strictly preserved for home consumption.

Following the Guidon. By Elizabeth B. Custer. Illustrated. Harpers. 1890.

THE earlier books of her military life have established for Mrs. Custer a personal and sympathetic audience that will accept this as kindly as it did those. The frank simplicity that reports the rather boyish pranks of "our brother Tom," and cites with affection what "our father Custer" did, may continue to be trusted to give a careful and interesting account, only colored by personal feeling as it concerns individuals, of a life whose lines of control were entirely outside those which environ civilians.

The volume opens with the winter march to the Washita, and the surprise and slaughter of Black Kettle's warriors. Taken by necessity from Gen. Custer's official reports, the revival of that combat requires no comment now, but it excites regret that Major Elliott's fate, if noted at all, should be so curtly dismissed.

The book is chiefly taken up with the summer camp of the Seventh Cavalry in 1869, near Fort Hays, and the incidents which revolved around it. Buffalo and Indians were the heroic, the matters of canvas-housekeeping the minor elements. In not much more than ten years it is estimated that nine millions of buffalo were slain, and in less than twenty the plains over which they roamed have been so laced, one had almost said lacerated, with wire fences and iron tracks that the desert, if not blooming as the rose, has at least become an additional granary for the continent, and one that grows year by year. This transformation from the wilderness where troopers marched, savages raided, and the innumerable bison grazed is, if not a miracle, at least a constant wonder to those who knew both conditions. The next generation will accept it as a matter of course, but to those who, like the author, have seen its accomplishment within a short span of active years, it is like enchantment.

In her mention of the buffalo Mrs. Custer does scant justice to either the magnitude or the multitude of that great beast. Eight hundred pounds is a low estimate for the weight of the individual animal, and to the ordinary reader figures convey little idea of numbers. Where not constantly hunted, as along the line of the then advancing Pacific Railroad, in places the whole plane of vision would be brown as with the trunks of a forest. It would matter nothing that vast areas might have none, as long as one's particular horizon was thus filled. Besides these vast herds were smaller groups of from fifty to a thousand, so that within the belt, varying with the season and the year, these untamed cattle might easily be found in season. Mrs. Custer's description of the chase is good, and may be preserved as that of an eye-witness of what is already an extinct sport, although it may be questioned whether the actual equalled the apparent danger. There might have been added, as must have been known at least by report, some account of the occasionally methodical evolutions of the moving herds—so apparently systematic and so closely resembling intelligent manœuvres as to deceive distant observers as to the nature of the masses.

That the rattlesnake is edible was demonstrated in the fifties by an intelligent and inquisitive officer on the upper Missouri.

The preface to the little book is an interesting essay upon guidons and military "calls," and the various chapters have as headings the trumpet-notes that make up the record of the soldier's day. Mrs. Custer's style, while losing none of its attractive simplicity, has much improved by practice, and she has given here a pleasant record of a life of some hardship and many inconveniences, but one which possesses a manifest fascination for the civilized nomads of both sexes. This story of it is gilded throughout with an affection that ennobles the storyteller quite as much as the object of it.

Aztec Land. By Maturin M. Ballou. Boston: Houghton, Mifflin & Co. 1890.

MR. BALLOU dwells delightedly in his preface on the luxurious ease with which one can "visit Mexico" in a Pullman car, in which "the traveller lives, eats, and sleeps." This furnishes the note for his entire volume: it is the most effortless writing imaginable, all the taking-pains being good-naturedly left to the reader. When the journey made by Mr. Ballou had painfully to be done on horseback, or even in the diligence, there was enough novelty in the obvious sights on the way to justify a tourist in making record of them; but, after it has been all told a hundred times, there is really no more reason for putting into a book what can be seen out of a car-window in travelling from the Rio Grande to Vera Cruz than if the route lay simply between Boston and Eagle Pass. To be sure, the author works in several pages of historical writing, but the knowledge displayed in them was evidently come at in a short and easy way. Mr. Ballou is aware that something is wrong with the Spanish chronicles, but is entirely wrong himself in thinking that they are to be incontinently bowled down in the radically sceptical manner of Wilson. Of the later and truly scientific study of Mexican archæology, he appears to know nothing. If he simply aimed to startle his readers by averring that Mexico "nearly equals France and Italy in historic interest," and by maintaining that our war with Mexico was undertaken to repel Mexican aggressions, he may be assured of success. The style of the book is to be commended, for the most part. Several proper names and Spanish words were too much for the proof-reader. The whole, justice compels us to say, has no excuse for being.

BOOKS OF THE WEEK.

INDIAN TALES

BY

RUDYARD KIPLING.

1 vol., 12mo, cloth, gilt top, 771 pages. Price. $1.50.

CONTAINING

"Plain Tales from the Hills,"

"Soldiers Three and Other Stories,"

"The Story of the Gadsbys,"

"Phantom 'Rickshaw."

This is the Only Edition Issued in America with the Sanction of the Author.

EXTRACTS FROM THE PRESS.

"The maturity of philosophic and artistic thought in these stories is quite as striking as the faculty for trenchant characterization and the pungent wit."—*Brooklyn Eagle.*

"It is out of the ordinary groove of fiction, and as such will be greatly enjoyed."—*New York Herald.*

"He is a master in the art of telling short stories."—*Columbus, O., Journal.*

"He has a distinct and decided literary style, which enlists the attention at first glance and holds it to the end."—*Rochester Democrat.*

"Altogether the book is the most readable collection of stories, the freshest and most interesting that has appeared for years."—*Albany Express.*

"These tales are breezy and spicy."—*Public Opinion, Washington, D. C.*

"He is doubtless one of the coming men in literature."—*Peck's Sun.*

"There is about his writings a freshness which is charming."—*Evening Times, Rochester.*

"He never wearies the reader by padding or irrelevant details."—*Boston Gazette.*

"These pleasant stories have actual value."—*Boston Herald.*

"The tales of Rudyard Kipling are vivid, condensed, and suggestive."—*Book News, Philadelphia.*

"Mr. Kipling is a genuine story-teller. He is an extremely bright and clever writer."—*San Francisco Chronicle.*

"In both prose and verse he seems to be the Bret Harte of India."—*"Droch," in Life.*

"Some of his tales are startling, weird, and quite original."—*St. Louis Republic.*

"Rudyard Kipling, the author of this book, is the latest story-telling luminary who has appeared on the London literary firmament."—*Minneapolis Journal.*

"To-day he is considered by many to be the best of the modern short-story tellers."—*Sacramento Bee.*

"The author of 'Plain Tales' is one of the few writers who have become famous before they were twenty-five."—*The Critic.*

"Is the possessor of uncommon abilities."—*N. Y. Tribune.*

"There is no rank short of master in the art of fiction to which he may not hopefully aspire."—*N. Y. Tribune.*

"In style he has brevity, brilliance, selection, he is always at the centre of interest, he wastes no words, he knows not padding."—*Cin. Com. Gazette.*

"The masterly force and grasp of the author are plainly evident."—*N. O. States.*

"The style of the writer is original, vigorous, and clean cut."—*Chicago Herald.*

"His story is always original, often startling, sometimes tragic to a degree."—*Christian Union.*

". . . Whose stories are told with an amiable egotism, infectious humor, and in a picturesque dialect that will send his name ringing down to posterity."—*Louisville Courier-Journal.*

"His work, viewed in the light of his youth, is not far short of extraordinary."—*Brooklyn Times.*

NEW BOOKS.

Brampton Sketches; or, Old

NEW-ENGLAND LIFE. By Mrs. WILLIAM CLAFLIN. Illustrated. 16mo, unique binding, $1.00.

The old New England life is rapidly fading, not only from existence, but even from the memory of people. It is therefore well that those who were in touch with the best elements of this quaint and homely life should put to paper and perpetuate its traditions and half-forgotten memories. This Mrs. Claflin has done for the town of Hopkinton, where her grandparents lived, and Brampton Sketches stand out as a truthful record of a peculiarly interesting provincial town.

Gospel Stories.

Translated from the Russian of Count L. N. TOLSTOÏ by NATHAN HASKELL DOLE. 12mo, $1.25.

Count Tolstoï's short sketches of Russian life, inspired generally by some pregnant text of Scripture and written for the masses, perhaps even more than his longer works show the man's real greatness. Sixteen of these, selected from various publications, are here presented in a neat and attractive volume.

Half a Dozen Boys.

By ANNA CHAPIN RAY. 12mo, illustrated, $1.25.

This is a genuine story of boy life. The six heroes are capital fellows, such as all healthy lads, or girls either for that matter, will feel their hearts warm towards. The simple incidents and amusements of the village where they live are invested with a peculiar charm through the hearty and sympathetic style in which the book is written. It is a book quite worthy of Miss Alcott's pen.

DESCRIPTIVE LIST

OF

NOVELS AND TALES

DEALING WITH

American Country Life.

The object of this list (consisting of extracts from the *Atlantic, Critic, Nation,* and other critical journals) is to direct readers, such as would enjoy the kind of books here described, to a number of novels which, in many cases, have been forgotten within a year or two after publication. It is hoped that the publication of this and similar lists will lessen in some measure the disposition to read an inferior NEW book, when superior OLD books, equally fresh to most readers, are at hand.

Respecting the list, Mr. W. D. HOWELLS writes to the compiler thus:

"I am delighted with the notion of your list of Novels about Country Life in America, and I think you have most charmingly realized it. The book will be useful to every book-lover and critic and librarian. Now that it satisfies it, I know that I have always felt the need of just such a list."

52 double-column pages. Price, 50 cents (32 specimen pages, 10 cents). Address

W. M. GRISWOLD,
Cambridge, Mass.

KRUELL'S CONTEMPORARY PORTRAIT-GALLERY.

"The Nation."

1865-1890.

In commemoration of the 25th anniversary of this journal, Mr. Kruell has engraved on wood, in the highest style of the art, after a recent photograph by G. C. Cox, a portrait of the founder and present editor of the *Nation*,

Edwin Lawrence Godkin.

The size of the block is 9x6 inches; the impression is on Japan paper, under the personal supervision of the artist, and is loosely mounted. *Only one hundred proofs* will be offered for sale, and each will be signed and numbered. Price, Ten Dollars, carriage prepaid. Address GUSTAV KRUELL, East Orange, N. J.

*** Mr. Kruell offers at the same price, and in the same style, proof portraits of CHARLES DARWIN (one in his prime, one in old age), ASA GRAY, WILLIAM LLOYD GARRISON, and WENDELL PHILLIPS. The edition in these cases is limited to 200 copies for all except Gray (100).

"*Certainly we may look in vain among other graphic arts for anything comparable with these portraits.*"—The Nation, January 23, 1890.

The Nation

VOL. LI.—NO. 1320. THURSDAY, OCTOBER 16, 1890. PRICE 10 CENTS.

Choice Illustrated Books.

THE POET'S YEAR. Edited by Oscar Fay Adams. Oblong 4to. 150 illustrations, of which 25 are full-page drawings by Chaloner. Gold cloth, $6; morocco, $10.

"The Poet's Year' is the happy execution of an admirable and original idea. From the writings of the older poets have been culled the choicest descriptions of the seasons, and to these have been added numerous beautiful selections from contemporaneous writers, including many originals contributed especially for the volume, the whole forming a rich and varied collection.

OUT OF DOORS WITH TENNYSON. Edited, with Introduction, by Elbridge S. Brooks. Fully illustrated with views of the localities of the poems. Quarto, $2.50.

Such poems and portions of poems written by the Laureate as have to do with out-door life in any way. This delightful volume will have a special charm for all lovers of the beautiful in nature, as well as all admirers of the poet.

THE CROWN OF LIFE. From the Writings of Henry Ward Beecher. Edited by Mary Storrs Haynes. Introduction by Rossiter W. Raymond. 12mo, $1.

"These extracts are full of the sparkle of genius. We have here a collection of brilliants. Mr. Raymond's analysis is marvellously acute, discriminating, and eminently just."—*Golden Rule.*

THE MIDNIGHT SUN; Adventures in Norway, Sweden, and Russia. By J. M. Buckley, LL.D. 8vo, cloth, $2.25; boards, $1.75.

"A book that for fresh and accurate information of the less travelled parts of Europe is without a rival."—*New York Examiner.*

THE ICE ZONES. The story of American Exploration in the Arctic and Antarctic Oceans. By Prof. J. E. Nourse, U. S. N. 8vo, cloth, $2.25; boards, $1.75.

"Truly a very wonderful record of persistent courage, of intelligent enterprise, and of heroic achievement."—*Chicago Standard.*

FIVE LITTLE PEPPERS MIDWAY. By Margaret Sidney. Illustrations by W. L. Taylor. 12mo, 512 pages, $1.50. A sequel to that most popular of all children's books, 'Five Little Peppers and How They Grew.'

"Margaret Sidney stands side by side with Louisa Alcott in fresh, unstilted style, in refined sensibility, and in pure and wholesome depiction of home life among children."—*Journal of Education, Boston.*

THE LION CITY OF AFRICA. By Willis Boyd Allen. Illustrations by Bridgman and others. 8vo, cloth, $2.25.

The marvelous adventures of two young men marooned on the coast of Africa. The story combines the imaginative charm of Rider Haggard with the probability of one of Stanley's recitals. It is full of information as well as all alive with thrilling and absorbing interest.

RHYMES FOR LITTLE READERS. Illustrated with twelve monotints and twelve colored plates, from original water-color designs, by A. W. Adams. Text in brown ink. Oblong quarto, $1.00.

The familiar rhymes, dear to all children, are so daintily and richly illustrated that the little ones will take fresh delight in them through many happy hours.

HOLIDAY EDITIONS

ROMOLA. In placing upon the market this superb two-volume holiday edition of George Eliot's masterpiece, containing sixty Etchings and Photo-Etchings printed in a variety of delicate tints, we feel that we have attempted and succeeded in giving the public the finest edition of this great historic story of Florentine life ever produced in any form.

2 vols., white vellum cloth, red and gold, $6.00.

ROMOLA—Edition de Luxe.

Limited to two hundred and fifty copies. The plates, sixty-two in number, will be printed on Imperial Japanese paper, and the special Italian method of illuminated colorbinding in full vellum will be executed in the highest style of the binder's art.

2 vols., full vellum, red, blue, and gold, $15.00.

HANS OF ICELAND—Edition de Luxe. This work, which ranks among the best of the author's early writings and is so esteemed in France, has singularly enough been neglected in most "Works of Victor Hugo" published in this country. It has remained for us to properly produce it in a luxurious form, exquisitely illustrated with Photo-Etchings, and half-tone Illustrations from designs by eminent French artists, uniform with the Édition de Luxe Notre Dame.

This edition is limited to *five hundred* numbered copies.

1 vol., crown 8vo, half Roxburgh, gilt tops. $5.00.

Estes & Lauriat, Publishers,
Boston, Mass.

TO-DAY.

A WEEKLY JOURNAL OF

POLITICS.

3 Somerset St., Boston, Mass. $1.00 per Year.

A Record of the **Facts** and **Considerations** which show that Individual Liberty is good for the people of the United States.

And that, therefore, Legislative Regulation is injurious for them.

They are injured by governmental interference with Banks, Railroads, Post-office, Education, International Trade, Relations between Laborers and Employers, and by the countless other extensions of the political function in a socialistic sense,

Leading to the neglect of **Justice**, the one thing needful.

TO-DAY *has been published for over a year. Sympathizers with the object should come to its support. The endeavor will be to provide them with a readable and useful paper.*

MACMILLAN & CO.,
112 Fourth Avenue, New York.

J. B. Lippincott Company's
NEW BOOKS.

In and Out of Book and Journal.

By A. SYDNEY ROBERTS, M.D., with fifty spirited Illustrations by S. W. VAN SCHAICK. 12mo, cloth, $1.25.

A variety of pithy, neatly turned, and witty expressions, collected by Dr. Roberts as he happened to meet with them in book or journal. They are largely from the best authors, and have a certain flavor of worldly wisdom which makes them spicy reading. This is intensified by the characteristic sketches of Mr. Van Schaick, drawn with his usual delicacy and artistic skill, and showing that peculiar genius and sense of humor which make his illustrations so popular.

The Two Lost Centuries of Britain.

By WILLIAM H. BABCOCK. 12mo. Cloth, $1.25.

An account of the period intervening between the evacuation by the Romans and the commencement of authentic history of modern England. The author has carefully and critically sought out the truth embodied in the various legends and traditions current concerning that time, and has woven them with the facts derived from various authoritative sources into a most interesting and reliable narrative.

As You Like It.

Volume VIII of the *Variorum Edition* of Shakespeare. Edited by HORACE HOWARD FURNESS, Ph.D., LL.D., L.H.D. Previously issued—"Romeo and Juliet," "Hamlet" (two vols.), "Macbeth," "King Lear," "Othello," and "The Merchant of Venice." Royal 8vo. Extra cloth, gilt top, $4.00 per volume.

"America has the honor of having produced the very best and most complete edition of our great national poet. For text, commentary, and criticism it leaves nothing to be desired. The editor combines with the patience and accuracy of the textile scholar an industry which has overlooked nothing of value that has been written about Shakspere by the best German and French, as well as English commentators and critics, and what is of no less moment, he possesses in himself a rare delicacy of literary appreciation and breadth of judgment, disciplined by familiarity with all that is best in the literature of antiquity, as well as of modern times, which he brings to bear on his notes with great effect."—*Blackwood's (Edinburgh) Magazine.*

European Days and Ways.

By ALFRED E. LEE, late Consul-General U. S. A. With 12 full-page Illustrations. Crown 8vo. Cloth, $2.00.

"A vivacious record of the travels of a very intelligent tourist."—*Philadelphia Press.*

"Every chapter is as instructive as it is entertaining."—*Chicago Inter-Ocean.*

How to Remember History.

A Method of Memorizing Dates, with a Summary of the Most Important Events of the Sixteenth, Seventeenth, Eighteenth, and Nineteenth Centuries. By VIRGINIA CONSER SHAFFER. Square 8vo. Cloth, $1.00.

*** For sale by all booksellers, or will be sent, prepaid, on receipt of the price, by the Publishers.*

J. B. LIPPINCOTT COMPANY,
715 and 717 Market St., Philadelphia.

Economic and Tariff Books.

Wells (David A.). The Relation OF THE TARIFF TO WAGES. A Short and Simple Catechism. 12mo, paper, 20 cents.

—— Practical Economics. A Collection of Essays respecting certain of the Economic Experiences of the United States. $1.50.

—— Our Merchant Marine. How it Rose, Increased, Became Great, Declined, and Decayed, with an Inquiry into the Conditions Essential to its Resuscitation and Prosperity. Cloth, $1.00.

—— Why We Trade and How WE TRADE. An Inquiry into the Extent to which the Existing Commercial and Fiscal Policy of the United States Restricts the Material Prosperity and Development of the Country. Paper, 25 cents.

"Few writers are more thoroughly studied by economists, or more worthy of study, and it long ago ceased to be necessary to speak of anything from his hands as 'valuable' and 'worthy of attention.'"—*Literary World, Boston.*

"They present in permanent form a mass of information about the actual working of the protective system which nobody but Mr. Wells possesses."—*N. Y. Times.*

Sumner (Prof. W. G. of Yale Col- LEGE). LECTURES ON THE HISTORY OF PROTECTION IN THE UNITED STATES. 8vo, cloth, 75 cents.

"There is nothing in the literature of free trade more forcible and effective than this little book."—*N. Y. Evening Post.*

Atkinson (Edward). The Indus- TRIAL PROGRESS OF THE NATION. Consumption limited; production unlimited. 8vo, cloth, $2.50.

"The problems presented are treated with skill and force, and will interest even those who do not agree with the conclusions reached by the author."—*N. Y. Journal of Commerce.*

Taussig (Prof. F. W.). The Tariff HISTORY OF THE UNITED STATES, 1789–1888. Comprising the Material contained in 'Protection to Young Industries' and 'History of the Present Tariff,' together with the revisions and additions needed to complete the narrative. 12mo, $1.25.

"The value of Prof. Taussig's book is that its conclusions are founded on a careful study of a wide range of facts, covering our whole national history."—*Christian Register.*

Schoenhof (J.). The Destructive INFLUENCE OF THE TARIFF upon Manufacture and Commerce, and the Facts and Figures Relating Thereto. 8vo, cloth, 75 cents; paper, 40 cents.

"An able presentation of the subject by a practical man, which should have a wide circulation."—*Louisville Courier-Journal.*

Philpott (Henry J.). Tariff Chats. 51st 1,000. 12mo, paper, 25 cents.

"To those seeking a bright and sensible work on the tariff, which comprises much in little, and puts that as pungently as possible, we heartily commend a little publication entitled 'Tariff Chats,' by Henry J. Philpott."—*Boston Herald.*

Moore (J. S.). Friendly Sermons TO AMERICAN PROTECTIONISTS. Fifth edition. 12mo, paper, 25 cents.

—— Friendly Letters to American FARMERS. 12mo, paper, 25 cents.

"The pamphlets have the vigor, the clearness, and the eminently readable quality which are most sorely needed in all popular writings on subjects of this class."—*N. Y. Evening Post.*

*** New Catalogue of Works in Political and Economic Science; List of the Questions of the Day Series, and List of Fall Publications sent on application.

G. P. PUTNAM'S SONS,
27 and 29 West 23d St., New York.

These are not extravagant prices, but you secure good material and correct designs.

Send for illustrated handbook of any department, or call and see work at 59 Carmine Street.

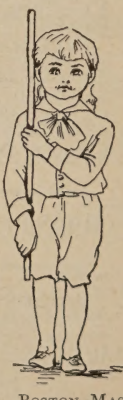
Carmine Street is a continuation of Sixth Avenue south and the Sixth Avenue cars pass the door of No. 59.

FOREIGN BOOKS SENT BY MAIL, postpaid, on receipt of advertised price. A. LEMOIGNE, Libraire Commissionaire, 12 Rue Bonaparte, Paris.

Standard Work on Physical Culture for Young People.

THE NEW CALISTHENICS.

By MARA L. PRATT, *author of 'American History Stories,' etc.*



This is not a treatise on the subject, but is an illustrated course of lessons, beginning with the elementary steps in gymnastic drill and marching, and ending with the finished attitudes of elegant gesture. All the best in the Sargent, the Swedish, the Delsarte, and other systems have been drawn upon to make this what it claims to be and truly is, A MANUAL OF HEALTH AND BEAUTY. Dumb-bell exercises, wand drills, rings, pole exercises, marches, motion-songs with music, gesture drills, and pantomimes, with instructions how to sit, stand, and walk—all find a place in the pages of this School Cyclopædia of physical education. Nearly every page is illustrated. We have expended hundreds of dollars in thoroughly preparing the work, so that every step should be made plain to the most uninitiated. With no further help than this book, any teacher can give a practical and satisfactory course of instruction in this all-important work. The book is handsomely bound, and printed in a beautiful quarto size, and is sold for the low price of $1.25.

"The present enthusiasm for physical exercise in school is a great delight to those of us who have been pleading for it for years. There have been few presentations of the subject so every way serviceable, simple, beautiful, and usable as this volume."—*Journal of Education.*

EDUCATIONAL PUBLISHING CO., 50 BROMFIELD ST., BOSTON, MASS.

☞ When ordering mention the *Nation*, and we will send, *free*, a SUPPLEMENT to the work (sells for 60 cents) containing additional and very pretty Drills, Gesture Exercises, a Little Lord Fauntleroy Exercise, a very pretty Hoop Exercise, with Motion Songs, etc.

The Nation.

NEW YORK, THURSDAY, OCTOBER 16, 1890.

The Week.

It would have been impossible, in the existing condition of politics and society in this city, to have made a ticket better adapted to the situation than that produced by the Municipal League last Thursday. Mr. Francis M. Scott, who heads it, is a man who has been the mainstay of every attempt to improve the city government through legislation for the last ten years. No bill relating to the city has been introduced at Albany during that period on the merits of which his opinion, it is safe to say, was not the best opinion to be had, so familiar is he with the working of our municipal machinery in every part, and so well does he understand all the devices by which it has been deranged or perverted for purposes of private gain. Moreover, he is a man of the highest personal character, whose motives in any public act no one who knows him has ever thought of questioning. He was in the Aqueduct Commission the trusted friend and colleague of the late Walter Howe, a man of precisely the same moral mould and an equally firm guardian of the public interest. In short, in any city in the world in which the chief executive officer is chosen solely with reference to the city's needs, he would be pronounced eminently worthy of the place. That he was not thought of sooner by the Committee of the League, shows how completely, under our present system of government, special fitness is thrown into the background in the minds of all of us when casting round for municipal candidates. We have actually grown accustomed to look on the nomination for an office of a specially qualified man as a piece of Quixotism, which may do for Englishmen and Germans, living under effete monarchies, but is wholly out of place in a model republic. Of the other candidates we believe all we hear of their fitness. It only remains now for the friends of good government, not simply to elect them by a bare majority, but by a majority so great as to convince the vicious and dangerous classes that the honest and industrious are easily masters in this city whenever they choose to assert themselves.

Boss Croker and his liquor-dealing followers have renominated Mayor Grant, as was anticipated. Only one newspaper, the *Sun*, has a word to say in Grant's favor. All the others are either silent on the subject, or strongly opposed. As for the *Sun's* support, one has only to recall the list, with Grant and his semi-criminal supporters at the end, of the rascals and shady political characters whom the editor of the *Sun* has taken to his bosom during the past twenty years. It would have been hard lines indeed for "Hughey" Grant if he had been excluded from this category. It is useless to point to a few respectable names on the ticket put in the field by such a body, and hope for any good to the city in the event of the ticket's election. Tammany is behind the ticket, and it is the Tammany gang that the people are asked to retain in power.

The signs of revolt against Quay in Pennsylvania are multiplying as the day of election draws near. Probably as good an indication as any is found in the increasing amount of anti-Quay literature in the columns of the Philadelphia *Ledger*. This paper is published on commercial principles strictly. The *Ledger* will not do any overt act or commit any offence against decency or good morals for any consideration. On the other hand, it will not knowingly quarrel with its bread and butter. Guided by these maxims, it has until lately dealt very gingerly with Quay and Delamater, and has kept out of its columns some of the most precious news of the day, which if published would have had a damaging effect upon them. The *Ledger* has been growing bolder lately. It published on Monday a sermon of three columns preached by a Philadelphia clergyman against Quayism. Hardly anything could establish more clearly the fact that it pays to oppose Quay.

The Rev. Dr. Phillips Brooks, the famous preacher, now for a long time Rector of Trinity Church, Boston, in his earlier life was for some years Rector of the important Church of the Holy Trinity in Philadelphia, from which it must result that he has still some special interest in Pennsylvania affairs. No doubt he was moved thereby, as well as by his instinct and training, and his duty as a moralist and public teacher, to address to Mr. Herbert Welsh, Secretary of the Lincoln Republican Committee, the following letter, which has been made public and will be circulated, together with other documents, in the anti-Quay interest:

> TRINITY PARISH, BOSTON, September 25, 1890.
>
> DEAR MR. WELSH: As a citizen and a Republican, I am thankful to know that the Republican citizens of Pennsylvania propose to protest against Quay. If ever such protest was needed, it seems as if it were needed now. I cannot come to the meeting, and indeed I think that the voices of Pennsylvania should mostly be heard on that occasion; but I bid you godspeed, and shall rejoice in your success.
>
> Yours most sincerely, PHILLIPS BROOKS.

Now we may prepare to see the Quay managers manifesting the same anxiety that Tammany has betrayed lest the clergy should soil themselves by contact with "politics"; but most honest people will think that when Quay and Tammany have reduced politics to the question of maintaining the Decalogue or not, the clergy have an eminent right to speak.

The nomination of David A. Wells for Congress by the Connecticut Democrats, and his acceptance, are among the best signs of the times. That the Democrats should be willing to nominate such a man shows that the party is gaining rapidly in positiveness and courage on the main question of the day—the gross abuse of the taxing power by the Federal Government. With this question no man in America is so competent to deal as Mr. Wells. No man in the United States, and not many elsewhere, handles economic questions with so sure a touch and with such fulness of information and such power of analysis. He is one of the very few among us whom we could send into any assembly of trained economists or statesmen in the world with the certainty that he would do us honor. He is essentially what Bishop Potter said he was in the Phi Beta Kappa address at Harvard last summer—a man who, "for a long time to come, will be recognized in both hemispheres as, in a department of learning fruitful in fallacies and half-truths, a true interpreter and disseminator of the truth." He will be a powerful reinforcement in Congress if he is elected, as we think he will be, to those in the House who know anything about trade, commerce, or industry.

Dr. William Everett, son of the famous Edward Everett, has been nominated to oppose Mr. Cabot Lodge for Congress. Mr. Everett is well known also as a "Scholar in Politics," and a distinguished Harvard man, and we trust may push Lodge hard, but we may rely on it that Lodge will not let himself be beaten if money and patronage can save him. In a speech at the Tremont Temple two years ago, Mr. Everett alluded to a statement of Mr. Lodge's that, on various political matters, he had "changed his mind," and went on to say that when a rising young statesman had excited the hopes of his friends by his devotion to the cause of reform, and had then gone into close alliance with mere partisan politicians, "he had not changed his mind; he had changed his soul and his heart." The canvass between the two "Scholars in Politics" is made all the more interesting by the fact that, for the first time in Massachusetts history, a political party has gone outside the limits of the district for a candidate. Mr. Lodge resides a part of the year in Boston, but his domicile and his tax residence are in Nahant, within the limits of the Sixth District, which is entirely north of Boston. Mr. Everett resides at Quincy, where he is the head of Adams Academy, and is separated by the whole width of Boston proper and Dorchester from Mr. Lodge's district. Going outside the limits of a district for a Congressional candidate was, before 1882, forbidden by law in Massachusetts, though there were great doubts if the law was constitutional; but this is the first instance of a convention's accepting the opportunity now offered. Of course the Republican papers are much concerned at the insult to the local Democracy, though the nomination was unanimous and by acclamation. We pre

sume if it had not come, Mr. Everett would have been nominated in the district in which he lives.

Mr. Russell, the Democratic candidate for Governor of Massachusetts, has raised a genuine "live issue" in the campaign by embodying in his first formal speech a discussion of the lobby scandal of the last session of the Legislature, as revealed in the West-End Railway franchise inquiry. He declared his determination to fight this "secret, irresponsible body, that stands like a giant robber between the people and the Legislature, demanding money of every interest that comes within its reach," and added:

"It is due to every interest seeking legislation that it should obtain a fair and full hearing without paying tribute to the lobby. It is due to the Legislature that it should not be beset by such secret influences. It is due to the Commonwealth that this body, which has grown up and has thrived under Republican administration—a body for which that administration is absolutely responsible—should be eradicated. What is the remedy? First, something more than measures to legalize the lobby. Measures should be adopted tending to limit or exterminate. Next, let the Governor of the Commonwealth declare that any act which comes to him tainted with improper influences cannot become a law with his approval. Speaking as the candidate of the people's party, charged with the duty of serving their interests only, I pledge myself, if elected, to use all power within my reach to apply these remedies to the evil."

This is the first formal appearance of the anti-lobby issue in our politics, but we are prepared to believe that the day is not far distant when it will be so important an issue that all candidates will have to take a stand on one side or the other of it.

We are under great obligations to the *Tribune* for revealing the date of one of the suspected foreign press extracts upon Belden's Congressional Republican campaign circular, namely, that from the London *Times*. The *Tribune* has found it in the *Times* of July 12, 1880, and gives it in its ungarbled form, which shows it to be quite a different thing from what it appears to be in Belden's circular, and that it was published over ten years ago. Here is the extract as Belden's mutilators give it:

[London Times.]

It is to the New World that the Cobden Club is chiefly looking as the most likely sphere for its vigorous foreign policy. It has done what it can in Europe, and it is now turning its eyes westward and bracing itself for the struggle which is to come. IT CANNOT REST WHILE THE UNITED STATES ARE UNSUBDUED.

Here it is as it appeared originally, and as given in the *Tribune* of Saturday, italics being ours:

It is to the New World that the Cobden Club is chiefly looking as the most likely sphere for its vigorous foreign policy. It has done what it can in Europe, and it is now turning its eyes westward and bracing itself for the struggle which is to come. It cannot rest while the United States are unsubdued, *so it will go on plying them with arguments and statistics, with books and pamphlets and speeches, until reason has at length done its work and has dislodged protection from the great stronghold in which it has entrenched itself.*

It will be observed that Belden's garbler changed the comma after "unsubdued" into a period, and suppressed the sentence which followed explanatory of the kind of work which the Cobden Club was to do in the New World—that is, by means of "arguments and statistics, with books and pamphlets," by appeals to reason. Nobody has ever denied that the Club does this kind of work. The protectionists have represented it as a great corrupting agency, with an illimitable fund supplied by British manufacturers, and the *Times* extract was garbled so as to give color to that view. Else why was it garbled at all? The *Tribune*, curiously enough, appears to think that its presentation of the text refutes our charge of forgery. What it does is, to make it perfectly plain why Belden's rascally hack did not put the precise date on one of the suspected quotations. Now will it help run him down on the other?

That the Cobden Club is an economical association with a small income, which it spends in circulating books and pamphlets, the Republican managers carefully conceal. Here is a specimen of the way the work is done, taken from the Des Moines (Iowa) *Register*, the Republicans being just now greatly alarmed in that State:

"The 'Cobden Club of London, England, and New York,' have actively joined hands with the Democratic party of Iowa and the nation, *to buy out the next House of Representatives of the United States!* Iowa Democracy is making the entire struggle of this year's contest for British interests. Prohibition and all other State and national issues are being held in abeyance, and the whole contest staked on free trade in the interest of English manufacturers, and *Cobden Club funds are paying the entire expenses of Iowa Democracy in this year's campaign!* These facts are undisputed. The conspiracy has been so strongly proven that denial is impossible. The Democratic State and Congressional committees have unlimited Cobden Club funds at their disposal, and Iowa and all other States are being flooded with free-trade documents from 'No. 52, Williams street, New York,' which is the United States office and headquarters of the British Cobden Club!"

Now, every sentence in this contains a lie, the greatest of all being of course the editor's impudent assertion that "the facts are undisputed." But it explains clearly why the Congressional Committee could not allow it to go forth, on the authority of the London *Times*, that the work of the Cobden Club was the supply of "arguments and statistics, books and pamphlets and speeches." So they converted a comma into a period, and suppressed the explanatory portion of the sentence, just like a "Hungry Joe" raising a check; and then chuckled over the trick when found out.

The *Tribune* claims in behalf of the Republican managers and editors, that "not more than three" of the hundreds of campaign extracts from English papers were even suspected of being "inaccurate"—a euphemism for being concocted bodily. This is a mistake. We hunted down more than that number ourselves, and either showed that they were garbled, or altered, or ascribed to important English journals when they came from obscure ones, in some cases American, or that the publishers were unable to say where they got them. In fact, *all* of them were suspected of having something wrong about them, if not of being wholly forged. Our denunciations of them in 1888 were almost constant, and met with no defence. As a general rule, the rascals who were issuing them took refuge in gloomy silence. The *Tribune* apparently forgets the old and well-founded rule, that when a man is found guilty of even one forgery, all papers which he issues for his own profit are justly suspected—that, in short, the presumption is against their genuineness. Its unconsciousness that there is anything wrong in "converting a comma into a period," and leaving out the explanatory portion of the sentence thus mutilated, represents the state of mind of the Beldens, Plummers, Quigs, and the like who are or have been engaged in this wretched business. They do not know how honorable men feel about such things, and are extremely puzzled, and even angry, when called to account for them. We think it no exaggeration to say that, since 1884, scores of cases of this species of dishonesty have passed under our eyes, but we have only exposed the worst ones, or those issuing from the most conspicuous sources. In most of them the game has not seemed worth the candle.

The new document issued by the Republican Campaign Committee must have been conceived in the spirit of insolent contempt for the understanding of those to whom it is addressed. In staring lines it bears the title: "The Tariff not a Tax. At all Events, not upon the American Consumer." Then follows the statement that "among the reckless assertions of the free-traders oftenest met with is the statement that the tariff is a tax upon the consumer. Of course it is, and then again, of course it isn't. A revenue tariff undoubtedly taxes the consumer; *a protective tariff has precisely the opposite effect.*" On another page it speaks of "a protective duty, which is often wholly, and always largely, paid by the exporter." Yet in the very next sentences it says: "By its additions to the free list, then, the Republican party has left in the people's pockets a sum which last year amounted to more than $65,000,000, and has opened our ports to merchandise—upon which the American consumer has heretofore been paying a tax—which was last year imported to the value of $365,406,000. *This is nearly 50 per cent. of the total importation, and is 10 per cent. greater than the face importation provided in the Mills bill.*" What "face importation" may be we shall leave the Republican Committee to explain; but what is to be said of the "face" of those who import into one little eight-page pamphlet such plain contradictions as these? "The tariff not a tax, at all events not upon the American consumer," on one page, and on another page credit claimed for leaving "in the people's pockets a sum which last year amounted to more than $65,000,000," through the remission of tariff duties and opening our ports to merchandise "*upon which the American consumer has heretofore been paying a tax.*" Surely, to print these statements together is the very insanity of presumption. The high-taxers seem to imagine that the farmers to whom this pamphlet is specially addressed cannot remember from page to page. We suspect that this will prove to be a grave miscalculation.

Mr. John R. Morris of Baltimore, who has been investigating the report that a tin-plate factory was to be established at once in that city under the protecting ægis of the McKinley Law, announces as the result of his inquiries that the "works have fled to Chicago," and warns that city to get a tight grip upon them, since the near approach of election day makes it extremely improbable that Chicago will be able to "keep said works over a week at the outside." He adds: "Mr. Quay has got our tin-plate works on the road, as theatrical people say, and St. Louis, Cincinnati, Louisville, and San Francisco must be allowed their turn till the next Congress is elected." Mr. Morris goes on to explain, in a more serious vein, the real object of the travelling "tin-plate factory":

"The whole talk about establishing works to make tin plate here or elsewhere is a fraudulent political device, to gull voters for a month into the belief that there is to be a new industry created. No tin plate is to be made in this country. The purpose in more than doubling the duty on imported tin plate was not to cause tin plate to be made in this country, but to compel the American public to use Pittsburgh sheet iron instead of tin plate for roofing. Our canning and domestic utensil industries were sacrificed to further a swindle. That this is the case is indicated by the clause in the new law taking the metal tin from the free list and imposing a duty of four cents a pound on it. That would never have been done if it had been intended that tin plate should really be made in the United States. Cheap pig-tin is required for a real tin-plate industry. By putting out silly stories just now, Mr. Quay hopes to break the force of these facts till after the election."

That good Republican newspaper, the Pittsburgh *Despatch*, says that a number of Welsh tin-plate men, whose names are given, have just concluded at that place an investigation undertaken with a view to establishing works there. They have decided that no money can be made in the business there or anywhere else in this country.

The public have not been unmindful of an advertisement in all the newspapers lately of the prospectus of the National Cordage Co. We refer to this company because it is one of the producers of binding-twine. The prospectus says that

"the annual aggregate profits of the several concerns for the past ten years have been more than enough to pay the annual dividend on the preferred stock and leave a very large surplus, notwithstanding the fact that, during some of that period, the interests now consolidated were in competition of a character now avoided.

"The Committee further certifies that at no time within the *past twenty-five years* have the aggregate annual profits of the several concerns been insufficient to pay the 8 per cent. dividend on the preferred stock, although the consumption of cordage at the beginning of that period was only one-quarter what it is to-day."

We invite attention to this statement in order to set it in juxtaposition with a statement of "the cordage-manufacturers of the United States" submitted to the Senate Committee on Finance on the 26th of May, 1890, viz.:

"The cordage and binder-twine manufacturers of the United States beg that your honorable committee will amend that clause in the Tariff Bill which relates to our business. It places a duty of 1¼ cents per pound upon binder-twine. *Should this become a law it will close our mills.* We ask for 1⅝ cents per pound, an increase of one-half cent."

Well, what did Congress do? It fixed the duty about one-half a cent per pound *lower* than the rate that these manufacturers said *would close their mills.* And now an important section of them (fourteen out of forty-two concerns) advertise in a strictly business way that the trade is highly profitable, and prospects for the future extremely flattering. We have no doubt that the latter statement is true, and that the former, the one presented with so much solemnity to Congress, was a falsehood, known to be such when made.

The State Department is said to be in some trouble of mind, and not wholly without reason, over the sort of semi-official welcome given to the Comte de Paris by the Collector at this port, who says he received him on behalf of his superior, the Secretary of the Treasury. The French Government may very well take umbrage at this, for two reasons. One is that the Comte de Paris is a pretender to the French throne, an enemy of the Government, and has for this reason been expelled from France. The other is, that he has recently, by his own confession, taken a prominent part in the Boulangist plot to overthrow the French Republic and possibly bring on his country the horrors of civil war. There are about this last incident several aggravating circumstances. Boulanger was the principal instrument, when Minister of War, in procuring the legislation which drove all possible claimants of the French throne, even the Duc d'Aumale, out of France. The baseness of this was shown by the production of a letter in which Boulanger expressed, in the most fulsome terms, his gratitude to the Duke for his promotion in the army. To the baseness of turning on his benefactor Boulanger added by denying falsely that he ever wrote the letter. There never was after this incident any difference of opinion among the best men in France about Boulanger's character. His subsequent conduct as a demagogue, a conspirator, and charlatan, and his exposure by the trial before the Senate as an embezzler of the public funds, therefore, took none of them by surprise. The Comte de Paris must have known him as well as any of them, better than most of them.

Nevertheless, the Comte de Paris did not hesitate to enter into a conspiracy with this charlatan to overturn the Government, and actually supplied him with funds for the purpose through the Duchesse d'Uzès. He has admitted this himself in a manifesto which the friends of the monarchy read with shame and astonishment. "Proscribed by the Republic," said he, "I employed, in order to oppose her, the weapons with which she furnished me. I do not regret having made use of them to divide Republicans." In other words, in order to revenge himself on the Republican Legislature for having exiled himself, he was willing to hire a man whom he knew to be a worthless adventurer, to plunge his country into confusion and disorder, and make Paris the scene of another, possibly bloody, revolution. We doubt if such an avowal from such a quarter can be found in history. There would, after all this, be, of course, a considerable want of good taste and discretion in the offer to the Comte de Paris of any official civilities. In fact, we might go so far as to say that there has been a certain want of judgment shown by him in selecting the United States, a sister republic, for a visit immediately after these unfortunate incidents in his career. He is justly entitled, of course, to a respectful reception from the public, and a hearty greeting from his old comrades of the Army of the Potomac, in consideration of his services in the field during the rebellion; but at this juncture care will have to be taken by our Government to prevent the perfectly proper civilities he will receive in this country from having, in French eyes, the air of a public or official welcome.

Signor Crispi's denunciation of "Irredentism" at the banquet given him in Florence is but an expansion of what he said about it a short time previously in an interview with the correspondent of the *Figaro*. "Irredentism" means, as most of our readers know, a movement to rescue what its promoters call "unredeemed Italy (*Italia irridenta*)"—that is, the territory now belonging to Austria and Switzerland occupied by an Italian-speaking population, but which really has not belonged to Italy proper for centuries. The only portion of it which can be said to be in Italy proper is the Swiss Canton of Ticino, which fills the Italian side of the San Gothard pass; but the trouble here is that the Ticinese want to remain Swiss, for Swiss they have been three hundred years. To the correspondent of the *Figaro* Signor Crispi said: "Irredentism is a fad with some of our young men. In 1866 we might have got more. Our statesmen committed mistakes. I will not jeopardize what I have for the sake of a rectification of the frontiers, either on the side of Austria or elsewhere." This sounds like the robust common sense which has, in fact, on the whole, marked Italian politics ever since the kingdom was established. Irredentism means war with Austria, at least, and would put an end to the Triple Alliance, which is Italy's main reliance for defence against France. To an observation about the size of the European armaments, Signor Crispi answered: "I know it; these armaments will end by ruining Europe for the benefit of America." He apparently knows nothing about our pensions, which as a financial burden surpass in size the military outlay of any of the European Powers. Our advantage over them lies simply in greater ability to pay the money. In folly we should run neck and neck with them but for the fact that we let our pensioners stay at home and work if they please. Thousands have, however, been made by the pensions as unproductive as soldiers, for the pension leads often to loafing and drunkenness.

M'KINLEY PRICES.

PRICES of goods under the McKinley Tariff are now generally called McKinley prices, as distinguished from ordinary or normal prices. The peculiarity of McKinley prices is, that they are generally higher in the things that we are in the habit of importing, but unchanged in the things that we do not import. This is directly contrary to the promise of the framers and friends of the bill, who tell us that protection makes lower prices for the protected goods—a manifest untruth, since it is absurd to suppose that the manufacturers would go to Congress and ask for anything that would make lower prices for what they have to sell. Still more absurd would it be for them to contribute a fund of several hundred thousand dollars and put it in the hands of Matthew Quay, to carry an election for the express purpose of lowering the prices of their products. Still, there were a good many people foolish enough to believe this. They are being rapidly undeceived by the advertisements and circulars flying about the country announcing the McKinley prices of goods.

Our portfolio of McKinley prices is on the increase from day to day. For example, a dealer in hardware informs his customers that wire of which clock springs are made was taxed three cents per pound under the old tariff, but under the McKinley Bill is taxed *one dollar and sixty-three cents per pound*, an advance over the old rate of 5,300 per cent. What the McKinley price of this raw material of clocks may be, we are not advised.

A dealer in pearl buttons sends us an invoice with the duties as actually paid October 7:

1,473 gross pearl buttons, value in Vienna	$628 00
25 per cent. duty	157 00
Additional duty under McKinley tariff	754 80
	$1,539 80

The McKinley Bill is virtually a non-intercourse act as to many countries and things. Accompanying this invoice is a circular from Newell Bros. Manufacturing Co. of Springfield, Mass., announcing the McKinley prices of their make of *ivory* buttons. These are 30, 33, 35, and 45 in place of 26 and 30 as formerly. Ivory, however, is on the free list.

Two circulars have been forwarded to us from dealers in stationery touching the prices of blank-books. Liebenroth, Von Auw & Co., No. 50 Franklin Street, say that they are obliged to charge 25 per cent. advance on letter-copying books and 10 per cent. on all blank books except a few specified classes. Boorum & Pease, manufacturers of the same class of goods, Nos. 30 and 32 Reade Street, say that "*the revised tariff measure* and the steady increase for the past six months in the cost of leather," etc., have compelled them to announce an advance of "*at least* 25 per cent. in prices of our letter-copying books, and also an advance of 10 per cent. on all other goods in our catalogue," except a few specified articles.

The effect of the McKinley prices on the minds of the people has alarmed the Republican Campaign Committee so much that they have printed a new document containing the following statements:

"It [the McKinley Bill] will materially reduce the farmer's expenses and greatly increase his profits.

"It will not raise the price to the American consumer of one single article *that can be termed a necessary expense.*"

Observe the phraseology of the latter paragraph. The framers of the pamphlet could no longer say that the price will not be raised to the American consumer of anything that is bought in the market—evidence to the contrary is coming to them in showers. So they said that it would not raise the price of anything that could be considered necessary. We are thus led to ask what things are necessary.

Are buttons necessary, for example? By one of the most outrageous provisions ever inserted in a tariff bill, or in any bill, the duty on pearl buttons has been raised more than 100 per cent. and the cost doubled "to the American consumer." These buttons are used on the clothing of men, women, and children in countless numbers. They are not made in this country at all. They are made by poor people residing in the suburbs of Vienna. But other buttons, which can be used as a substitute for pearl buttons, are made here. The object of the pearl-button tax was to enable the manufacturers of these substitutes to put up their prices, and they have not lost a moment in doing so. Will the Republican Campaign Committee now tell us whether buttons are "a necessary expense" or not? Shall we discard them and use pins, or hooks and eyes, or holes and strings?

Are carpets necessary to the American people? They have gone up 25 per cent. since the passage of the McKinley Bill, in consequence of the new duty on carpet wool, and a Trust has been formed to control competition. Two-fifths of the looms in Philadelphia have been stopped and put under lock and key.

Is flannel necessary to American consumers? The prices of certain grades and qualities have been raised according to the following schedule:

NEW YORK, October 8, 1890.

Messrs. Le Boutillier Bros.:

DEAR SIRS: On and after October 9, 1890, the price of our 26 27-inch French serge twill flannel will be 52½ cents per yard (present price 42½ cents), 26-27-inch French plain printed striped and dotted flannel 57½ cents (present price 52½ cents), 26-27-inch French fancy printed striped flannel will be 60 cents per yard (present price 55 cents). Yours truly,

ARNOLD, CONSTABLE & CO.

Is linseed oil necessary? The duty is increased by the McKinley Bill from 25 cents to 32 cents per gallon, and the price has risen in our market even more than the duty, the article being controlled by a Trust.

We suppose that the Committee would say that kid gloves are not necessary. The effort of any poor girl to show some mark of gentility is usually manifested by the wearing of kid gloves of some grade or description. But the Committee would say undoubtedly that gentility is not necessary. Gloves of the cheaper grades are advanced by the McKinley Bill from 10 to 25 per cent.

Now, let us see how the two quoted paragraphs from this new Republican campaign document agree with each other. The first one says that the McKinley Bill will greatly increase the profits of farmers. The second one says that it "will not raise the price to the American consumer of *a single article* that can be termed a necessary expense." Even if we allow that buttons, carpets, flannels, blank-books, linseed oil, kid gloves, etc., are not necessary, and that we might make shift to do without them, this cannot be said of farm products. Wheat, corn, pork, and beef are unquestionably necessaries of life. We are now told that the McKinley Bill will not raise the price of any of these things, although we were told beforehand that it would raise the prices of all of them. It has not raised the prices of any of them, because they are articles of export. How, then, will the McKinley Bill "greatly increase the profits of farmers"? In a few localities along the Canadian border, the prices of eggs and potatoes will be raised by the bill. In this way alone will the first-quoted paragraph be made good, but only by giving the lie to the second one, which says that *not a single article* that can be termed necessary will be raised in price? Are not potatoes necessary to the New England operative?

We have cited only a few of the articles necessary to civilized life that have been raised in price by the McKinley Bill. We have not heard, however, of any case in which wages have been raised by it. On the other hand, we have heard of one case where wages have been lowered by it. The silk-ribbon weavers of Paterson reported to the Central Labor Federation on Sunday that their wages had been cut 20 per cent. since the passage of the bill. On the other hand, the McKinley Administrative Bill was intended to prohibit the importation of silks by making new and monstrous requirements of the foreign manufacturers, and the effect has been to produce as much consternation at Lyons as the duty on pearl buttons has produced in Vienna. The first consequence on our side of the water, as we have seen, has been a reduction of wages among our own silk operatives.

ARE SUGAR BOUNTIES CONSTITUTIONAL?

THE Chicago *Tribune* takes leave to advise its party friends that the sugar-bounty clause of the McKinley Bill is unconstitutional, and that it will be so declared by the Supreme Court whenever the question comes before it. There can be very little doubt that the *Tribune* is right in the first half of its contention. Senator Carlisle, in his concluding speech on the McKinley Bill, quoted decisions denying the constitutionality of taxes imposed to aid private persons or corporations in carrying on business, pronounced by the highest courts of California, Michigan, Wisconsin, Maine, Pennsylvania, and Kansas, by the United States Circuit Court of Missouri, and by the Supreme Court of the United States, besides the weighty opinions of Judge Thomas M.

Cooley and of the late Judge Story, in their respective commentaries on constitutional law. These decisions and opinions seem to cover every point that it is possible to raise in relation to bounty-paying, and to leave nothing to be said on the other side. Indeed, nothing was said on the other side. Not one decision was cited in opposition, while no less than three from the Supreme Court of the United States were cited to sustain Mr. Carlisle's positions.

Considering the importance of the principles involved and the possible consequences of such a precedent—which warrants every industry and every man whose profits are not satisfactory to him in calling on Congress for help—it is worth while to look more particularly at the cases in the United States Supreme Court here referred to. The first was that of Parkersburg vs. Brown (106 U. S., 487). The Legislature of West Virginia had authorized the city of Wheeling to issue bonds and loan money for the purpose of encouraging the establishment of manufacturing industries, and to take bonds and mortgages upon the property to secure its repayment. A vote of the people had been taken. The bonds had been actually issued and the money received for them. The Court held that the act was a gross perversion of the taxing power, that the bonds were absolutely void, and that no tax could be levied to pay either principal or interest. In the well-known case of Loan Association vs. Topeka (20 Wallace, 655) the Court said:

> "To lay with one hand the power of the Government on the property of the citizen, and with the other to bestow it upon favored individuals to aid private enterprises and build up private fortunes, is none the less a robbery because it is done under the forms of law and is called taxation. This is not legislation. It is a decree under legislative forms.
>
> "Nor is it taxation. A 'tax,' says Webster's Dictionary, 'is a rate or sum of money assessed on the person or property of a citizen by the government for the use of the nation or state.' Taxes are burdens or charges imposed by the Legislature upon persons or property to raise money for public purposes."

The array of legal authority on this question is overwhelming and is all on one side. In the case of the sugar bounties there is not even the pitiful excuse commonly advanced for such taxes, that the money will put the business on a paying basis, and therefore will be well invested. On the contrary, the very reason for paying the sugar bounties is that the business is a losing one. It is not pretended by anybody that the bounty will be of any avail except to make good the deficits of the sugar-planters. Much was said about the German bounties in the course of the debate, as though that example was a good one for us to follow; but Mr. Carlisle showed that the German Government received a net revenue from beet sugar of $9,000,000 per annum, after paying the bounty on exportation. This bounty is in the form of a drawback. It was, in its inception, the result of accident entirely. At the time when the present internal tax on beet roots was imposed, twelve and a half tons of beets yielded one ton of sugar. A drawback on exported sugar equal to the tax was allowed—that is, the sugar-manufacturer first paid a certain tax on twelve and a half tons of beets; then, if he exported one ton of sugar, the Treasury repaid him exactly what he had paid to it, else he could not have competed with other sugar-makers, or shared in the world's markets. But as time and invention went on, the sugar-makers learned how to get more than one ton of sugar out of twelve and a half tons of beets. They now get one ton out of eight and a half tons of beets, and, as the law has not been changed, they receive from the Treasury in drawbacks more than they pay to it in taxes on *exported* sugar, but not more than they pay on all the sugar produced by them. There is no drawback or refund of taxes on the sugar consumed in Germany, and thus it comes about that the Government receives a net revenue of about $9,000,000 from sugar, whereas our Government has made up an arrangement to produce a net deficit of about that sum, to be made good by taxes on all the people.

But whether this bounty-paying be constitutional or unconstitutional, there seems to be no way to bring the matter before the courts. A mandamus will not lie against a public officer to do a thing as to which he has a discretion. Still less will an injunction lie to restrain him from doing what the law requires him to do. No tribunal has been clothed with power to inquire into the constitutionality of laws except where private rights are affected, and where those rights are properly brought before the court for adjudication. Therefore, there seems to be no way of getting a judicial decision on the question, although the unconstitutionality of the bounty is evident, and the injustice and impolicy of it even more so.

THE POPULATION CENSUS.

It now seems practically certain that the census returns of the total population of the country will themselves demonstrate the defective character of the canvass by which they were obtained, far more conclusively than any number of partial recounts are at all likely to do. Up to October 10 the population of 137 out of the 175 supervisor districts into which the country was divided, had been announced. These districts are scattered all over the land, and there is no reason to suppose that the rate of increase in the 38 districts yet to be heard from will differ materially from that of the 137 already made public. The population of these 137 districts in 1880 was 40,352,446. According to the census returns, the same districts contain in 1890 49,909,961 inhabitants, an increase of 9,557,515, or at the rate of 23.68 per cent. If this rate be not exceeded in the one-fifth of the country not yet counted (and there is nothing to indicate that it will be), the census total of the population of the United States will little, if any, exceed 62,000,000.

According to the official statistics of immigration, the number of immigrants who came to this country during the ten years ending July 1, 1890, was, exclusive of those coming from Canada, 5,242,530, or nearly twice as many as ever before landed on our shores in a like period of time, and one-third more than the entire number of inhabitants of this country when the first census was taken in 1790. Doubtless there was some emigration, of which we have no reliable statistics. It is, however, not at all likely to have exceeded the immigration from Canada, of which of late years no official figures have been given. It is, therefore, safe to assume that of the entire increase, which, according to the Census Office, will be apparently less than 12,000,000, 5,250,000 are to be credited to foreign immigration, and but 6,650,000, or about 13¼ per cent., to natural causes. This percentage is, as the following table will show, so much below the rate of natural increase during any previous decade of the country's history as to amount in itself to a demonstration of the untrustworthiness of the Eleventh Census. (The asterisk denotes an estimate):

Date of census.	Population.	Total decennial increase.	Immigration during decade.	Natural increase during decade.	Percentage of total increase.	Percentage of increase due to Immigration.	Percentage of natural increase.
1890	*62,632,679	*11,976,880	5,245,330	*6,631,550	*23.68	10.45	*13.23
1880	50,155,783	11,597,419	2,812,191	8,785,228	30.07	7.29	22.78
1870	38,558,371	7,115,050	2,453,824	4,838,008	22.63	7.74	14.89
1860	31,443,321	8,251,445	5,573,500	5,611,889	35.58	11.12	24.46
1850	23,191,876	6,122,433	1,713,251	4,409,148	35.87	10.27	25.60
1840	17,069,453	4,203,433	599,125	3,604,308	32.67	4.65	28.02
1830	12,866,020	3,227,198	143,439	3,083,759	33.55	1.49	32.06
1820	9,638,822	2,393,941	*118,385	2,303,941	33.07	*1.64	31.43
1810	7,239,881	1,931,398	*70,000	1,851,398	36.38	*1.32	35.06
1800	5,308,483	1,379,269	*70,000	1,299,269	35.10	*1.78	33.32
1790	3,929,214						

It appears that the rate of natural increase indicated by the census of 1890 is less than 60 per cent of that shown by the census of 1880, is less than during the decade when the country was ravaged by war, is scarcely more than half of that shown by the censuses of 1850 and 1840, and is very much less than half of the natural increase during any decade previous to 1830. It is doubtless true that the rise in the standard of comfort, and the great increase in the proportion of urban to rural population, have caused and have been accompa-

nied by a marked decrease in the birth-rate. But it is not possible to believe that, in the absence of a prolonged and devastating war, or a widespread and deadly pestilence, the rate of natural increase should suddenly, in the short space of ten years, have fallen from 22¾ to 13¼ per cent. Even if allowance be made, as allowance should be made, for the fact that the census of 1870 was very defective, and that therefore the apparent rate of increase in 1880 was greater than was really the case, it still remains true that no such diminution in the rate of natural increase as the census of 1890 will indicate, is at all credible.

RAILWAYS AND FARMERS.

Mr. J. S. Jeans, the Secretary of the British Iron and Steel Institute, now in this country, has a readable article upon American Railways and British Farmers in the September *Nineteenth Century*. He dwells upon the great fall in our average freight rate, and not only ascribes to it the agricultural depression in England, but also calls it a most potent factor in the decline in the values of manufactures and other commodities during the last decade. He gives a number of reasons why our railroads have been able to bear up under such reductions; longer trains, heavier cars, and more work per engine being the principal ones. The English railways come in for severe though but partly deserved criticism, because their charges have not been reduced, and because, from "slower-moving minds," their managers have not availed themselves, even to a small degree, of American experience in transportation economy. The fact is stated that a net revenue of about $3,000 per mile on our roads will pay a 5 per cent. dividend, whereas the same dividend on English railways requires earnings of $12,500 per mile. This leads to the further query why American roads, with all their "water," should have cost but about one-fourth that of the British lines, when materials and labor are higher here. Strange to say, no itemized statement of the capital cost of English railways has been made, so we cannot account for so great a difference.

Passing from this, Mr. Jeans raises two important questions: Will the United States continue to supply Europe with breadstuffs, and will the future supply be carried at charges cheaper than the present? The United States of late have not held their old position in relation to the foreign food supply, but Mr. Jeans thinks that we shall recover it. Our land under cereals now comprises but one-seventh of our area, excluding Alaska; and even with allowances for lakes and mountains we can, by cultivation of available land and by irrigation, bring immense supplies of grain to market "if it is shown to be worth while." The London correspondent of *Bradstreet's*, Mr. Bear, in a late letter, said "the feeding capacity of the United States could be doubled in a single year. It is all a question of price." This gentleman for years has been prophesying a decline in our exports of breadstuffs because of a reduction in the European value of wheat which would leave no profit to our farmers. Contrary to this opinion, Mr. Edward Atkinson calculates that American farmers can sell wheat in Liverpool at 25s. per quarter (say 70 to 75 cents per bushel in New York) and still make a profit. The argument of the *Nineteenth Century*, to the same effect, is based largely on the future construction of railroad mileage, and is in brief this: The average miles constructed yearly have been 5,417. In twenty years, at this rate of increase, our system would contain 270,000 miles. The traffic necessary to support such a system (at the same quantity per mile as now) would require 410,000,000 tons more than are now carried. This great increase would of necessity be composed largely of cereals and products of cereals which can find a market only abroad.

The decline of late years in our exports of breadstuffs has been greater in values than in quantity, and it is possible that this condition may continue. With increasing competition from Russia, India, South America, and other countries, a gradual fall in the price of grain may be expected. If, in addition to these reasons of Mr. Jeans, there should be a permanent check to our international trade, such a check, under the assumption that we must continue to raise and export cereals, would register itself first of all in the prices paid us for our exports, rather than in the quantity exported. This price would be lowered in proportion as trade from Europe to America was made difficult and expensive. The opinion that these exports must continue, finds support in the fact that agriculture is the slowest of all pursuits to accommodate its overabundance in any product to the laws of demand and supply.

Such declines in value, Mr. Jeans thinks, would be inevitably followed by reductions in rates of transportation. Our increasing railroads create traffic and in turn must have it even at lowering tariffs; at the same time, if values of produce fall, a demand for a corresponding reduction in railroad charges is certain to be made. There is also the further probability of better facilities and lower charges for water transportation, both ocean and inland. Under this view of the case, time must be our main reliance for bringing about adjustments and remedies for the lower prices which farmers of the West and East and in England apparently must expect.

As for the railroads, the case looks brighter. Our transportation lines can adjust themselves to altered conditions much more easily and quickly than we can hope for in agriculture. A large export traffic with lower charges need not mean less returns to security-holders. A large expenditure of capital, producing a smaller cost per unit, is the law of progress. Our mechanical engineers and officers think that the limit of cheapness in railroad operating has been reached; but so, indeed, they thought before Bessemer made steel rails, and invention will not die with Bessemer. If air-brakes applied to freight-trains (with other improvements for safety) will enable 50 or 100 per cent. more freight-trains to be run with greater speed over a given piece of track each day, we shall double the earning power of that track without doubling the expenses; but this cannot be done without an outlay of capital for appliances and for terminals which shall be able cheaply to dispose of the increase of traffic. Under this reasoning the outlook is better for railroad than for farm-owners, whether the latter are in America or in England.

A FUGITIVE FROM THE TERROR.

Paris, September 30, 1890.

The Salamons are a family of the Comtat Venaissin. One of them was consul at Carpentras (all these southern cities had consuls: they had preserved the traditions of Rome). He had two sons, Baron de Salamon and Louis Sifferin, who became a bishop and the Pope's internuncio in Paris during the Revolution. The Abbé Bredier possesses a copy of the Memoirs of this internuncio, which have recently been published. Salamon was born in 1760, and was educated at Lyons by the Oratorians; at the age of twenty he was admitted doctor of the famous University of Avignon; at the age of twenty-two he was appointed "auditeur de la Rote d'Avignon." He bought a councillorship in the Parlement of Paris, and took part in the debates at the famous trial of the diamond necklace. In 1790 Pius VI. appointed him his internuncio at the court of Louis XVI. He had been already, for some years, a sort of unofficial correspondent of the Holy See. When the Revolution broke out, Salamon's mission became difficult and dangerous: he spread among the general public the papal briefs, written on the question of the civil constitution of the French clergy. These briefs were sent, with all the canonical forms, to the metropolitan, who had them printed, and they were then distributed by Mgr. de Salamon. The internuncio was arrested and thrown in the prison of the Abbaye. He thus became one of the witnesses of the famous massacres of September, and it is a miracle that he was not also one of the victims of this event, which Napoleon called the Saint Bartholomew of the Revolution.

The first chapter of the Memoirs now published, and dedicated to Mme. de Villeneuve (born Countess of Ségur), has this title: "My martyrdom from Sunday, September 2, 1792, at two o'clock P. M., to Monday, the 3d of the same month, at eight o'clock A. M., in the garden of the Abbey of St. Germain-des-Près." Well could he say to Mme. de Villeneuve, as Æneas to Dido—

"Infandum, regina, jubes renovare dolorem."

Salamon had, after his arrest, been conducted to the dépôt of the mairie (which is now the Prefecture of Police). He was taken before a committee of five men, among whom he recognized Marat, whom he had known as a doctor (of the stables of the Comte d'Artois, a veterinary doctor). At the dépôt he found several priests, the grand vicars of Toulouse, of Bourges, of Strasbourg, together with some Paris curates. On September 1, 1792, a member of the Commune, with his tricolor sash, came and said: "The sixty-three oldest among you will be transferred to the Abbaye; let them come forward and enroll themselves." "Though I was," says the internuncio, "one of the last arrived, I hastened—I do not know why—to present myself, and I was enrolled without anybody asking me any questions. It was surely an inspiration of heaven; for to it is due the fact that I am still alive, as will be seen hereafter." Eighteen prisoners were left behind, the best known among them being the Abbé Sicard, the educator of the deaf and dumb. He was only transferred with the others the next day at two o'clock, at the mo-

ment when the massacres began, and all his companions, without any interrogatory, were massacred when they left their carriage; Sicard alone was saved. A watchmaker who was a great patriot and revolutionist, threw himself between him and the murderers, and begged them to spare a man "who was so necessary to suffering humanity."

Let us return to Salamon. He spent his first night at the Abbaye in the refectory of the monks, with eighty-three prisoners, on a mattress where a place was offered him by an unknown man, a negro soldier, who was a deserter. The next day he was again put among the priests, his first companions; it was the 2d of September and a Sunday. At two o'clock, during a repast which the prisoners were taking, the keeper, opening the door with much noise, said to them: "Make haste! The people are marching against the prisons and have already begun to massacre the prisoners." They left their repast and prepared themselves for death. The screams of the mob were already heard. The prisoners, addressing themselves to the old curate of Saint-Jean-en-Grève, an old man of eighty-four years, who had a great reputation for sanctity, asked him to give them all the absolution *in articulo mortis*. He said to them that the danger did not seem to him sufficiently imminent, and that they had better make confession. The internuncio was making his to the old curate when the keeper came back. "The people are more and more enraged; there are perhaps two thousand men in the Abbaye." He added that all the Carmelite priests had been massacred already. The old curate then consented to give solemnly to all the priests who were round him the absolution *in articulo mortis*. After having done so, he asked the internuncio to give him absolution in his turn.

Then they all began to sing the prayers for the dying, the accustomed litanies; many were crying. Night came; at half-past eleven, the assault on the Abbaye began. Seeing that one of his companions had escaped by a high window, left open, the internuncio, who was very strong, succeeded in reaching the same window, and jumped out. Thirteen prisoners followed them; the fear of death gave them wings—already the doors were forced. Salamon found himself in a little court. Some of the invaders soon arrived; they had for their mission to save a certain Abbé Godard, who knew the mistress of Manuel, the procureur of the Commune. Godard, who was six feet high and had first jumped out into the little court, where he was followed by Salamon, was seized by a tall man, who shouted, "There is the brigand," and disappeared with him. Salamon threw himself towards the door, screaming, "I am not guilty!" An old man, who had a torch in his hand and blood on his clothes, said to him, "Come! if you are not guilty, no harm will be done to you." The crowd opened before them; not a word was said. They crossed a long court and walked unmolested through a great crowd and under "una bella luna, che illuminava tanti furfanti" (the original Memoirs were written in Italian). It is quite clear that among the murderers were some men hired to save certain of the prisoners. The internuncio profited by these arrangements, though they were probably not made in his favor. Some other prisoners also profited by them. Salamon had abandoned the ecclesiastical costume since the 10th of August, and this probably saved him. The candid account which he gives of his emotions is not very creditable to his courage; there was evidently nothing in him of the saint or of the hero, and the rest of the Memoirs proves it.

When we speak of the clergy of the eighteenth century, we can show two extreme types—one the heroic curate of Saint John, who received death with as much calm as the early martyrs; the other the *abbé galant*, such as appears in so many memoirs of the time. The Papal internuncio was something between the two—nearer, I am afraid, the second than the first. He was egoistical, a gourmand, always waited upon by women who spoiled him, sent him presents of fruit and other good things, who felt for him that peculiar sort of devotion which we may call, in want of a better name, ecclesiastical devotion. He saw few priests, and sought the society of men and women of the world. He was, on the whole, very secular. The heroine of his Memoirs is his old governess, Blanchet, who had a sort of canine affection for him.

After the massacres of September he continued to remain in France, but he had no further diplomatic duties and ceased to be an internuncio; he became merely a Vicar-apostolic—a title which shows well the religious condition of France at the time. He continued, in that capacity, to correspond with Pius VI. and Cardinal Zedala, but his correspondence with them is unfortunately lost. We must remember that Salamon had been a lawyer, a member of the Parlement, before he became a representative of the Holy See. As such, like all his confrères, he had signed a protest of the Parlement against the acts of the National Assembly. This document was discovered in 1794, and the name of Salamon was found on it. The members of the Committee of General Security (a singular name for such a committee) issued a writ against him. With his usual luck, he succeeded in escaping, and the Memoirs give us in minute details the history of this Odyssey during the Terror. We see in it a former member of the Parlement, an official representative of the Holy See, obliged to hide in the woods, to sleep on straw, to become a vagrant, to lead, as he says himself, the life of a wild beast of the forest. Curiously enough, he never interrupted, during this period, his correspondence with Rome and with a few priests in France, proscribed like himself. "Ma vie sous la Terreur" reads like a sensational novel, and is full of characteristic anecdotes. Salamon was able to go to Paris every week, and lived the rest of the time chiefly in the Bois de Boulogne or at Passy.

After the death of Robespierre, a great change took place, and Salamon was able to resume his usual life. He remained as Vicar-apostolic till 1801, when he was relieved of his functions by Mgr. Caprara, and was appointed administrator of the dioceses of Normandy. That province was very much agitated. There were divisions between the members of the clergy who had taken the oath to the Constitution and those who had not. The concordat was not yet signed. Salamon sent important notes to the Pope, and, his mission having come to an end, he reëntered private life for a long period. Why was he not appointed to one of the bishoprics after the concordat? We do not know; he was obliged to content himself with being made *episcopus in partibus*. In 1820, at the age of sixty-two years, he was appointed Bishop of Saint-Flour. He performed his episcopal duties with much zeal, and died on the 11th of June, 1829. Though he had sybaritic tastes, at least in his youth, as the Memoirs show almost at every page, he wished to be interred like the poor, and to be put in what is called the "fosse commune."

Correspondence.

PARTIES AND THE PEOPLE.

To the Editor of The Nation:

Sir: It seems to me very strange that anybody who contemplates the session of Congress which has just closed, the actual amount of evil which it has accomplished in the present, and its forebodings of far worse evils in the future, can imagine for a moment that this is a mere question of party or can be remedied by the mere substitution of a Democratic for a Republican majority. The spirit of the Democrats will be to say, as Mr. Bryce puts it in his admirable article in the *North American Review*, "They have chastised us with whips, but if we get into power we will chastise them with scorpions." Even if, chastened by adversity, they begin with moderation, it will not take many years for them to better the instruction they have received.

Will they come into power? The Republicans have set themselves to make friends with the Mammon of Unrighteousness, and they have made them with a vengeance. Witness this story going the rounds of the papers, and which, if not true, is at least well invented. It is said that a gang, of which at least some of the Senators and Representatives are members, taking advantage of the act which they helped to pass, have bought 40,000,000 ounces of silver at about 97 cents, and are selling it to the Government at $1.10 to $1.20. Think what material for a campaign fund is there! And if we add to it the plunder which the robber barons will draw from the McKinley Bill, one is lost in admiration at the resources which a grateful constituency is ready to place at the disposal of the Republican managers, especially when eked out by judicious economy in expenditure in the "doubtful" States. Was there anything more corrupt in the Parliament of George the Third, or in France before the First Revolution? And we are the descendants of the men who rose in armed rebellion because the British Government put a tax on tea!

The fact is, that Congress is suffering from organic disease deeply rooted in its organization and modes of doing business—a disease which will need for its treatment the full strength of a national public opinion under strong leadership, and which, unless it is remedied, will drag us steadily down to a bottomless depth—unless we find a resting-place in the present condition of the Argentine Confederation. In Mr. Bryce's article referred to, he describes the Speaker of the House of Commons and his substitute, the Chairman of Committees, as being, by virtue of custom and the traditions of their offices, so thoroughly impartial and independent of party that they have been intrusted with extraordinary power without fear of abuse, though he expresses some anxiety for the future. In your article of October 2 you describe our Speaker as "a furious and reckless partisan, who has openly taken charge of money-making legislation and browbeaten the minority as public enemies." The difference between the two is owing to a process of evolution from the necessities of Congress, just as the Darwinian theory ascribes the growth of the organs of animals to the pressure of their natural wants and circumstances. Every body of men must have one or more leaders. If these are not provided, they will make them for themselves. You cannot get fifty men together, at least of the Anglo-Saxon race, without their choosing a presiding officer and giving him power to

enforce rules and order. For any permanent efficiency, however, there must be another and separate leader for the conduct of business. In the House of Commons this leadership is exercised by the Ministry, thus leaving the Speaker free to exercise his own invaluable functions. In our House of Representatives, on the other hand, there is no leader of business of any kind. The chairmen of the standing committees, who come nearest to it, are only local representatives, speak only for their committees on their special subject, and are themselves so numerous that no one can be called a leader. The only man who can possibly claim such a position is the Speaker, who has thus developed into a leader of both kinds with the result of spoiling both. He cannot be an impartial presiding officer, because he has to push through the party business. He cannot be an effective party leader, because he has no initiative or voice as to the kind of business, but must content himself with pushing through schemes hatched by other party managers under the influence of the lobby, and for which he cannot be held responsible.

The only reform which will be of any use is to provide adequate leaders of business, who can only be the executive heads of the departments, and thus leave our Speaker also free for his proper functions. No help can be expected from Congress, because the present method is most favorable to the party tyranny which a majority always desires. The only hope is in volunteer crusaders who feel the crisis, and are willing to devote themselves to an appeal to the country. G. B.

BOSTON, October 11, 1890.

THE WORD *RUM*.

TO THE EDITOR OF THE NATION:

SIR: But a very few years ago the origin of the word *rum* was a puzzle to the makers of dictionaries. One after another had been content to describe it as "an American or West Indian word." Indeed, even so late as 1889, no attempt was made to deal with the origin of the word, in 'Worcester's Dictionary.' At length, Prof. Skeat of the University of Cambridge expressed dissent. In the second edition of his 'Etymological Dictionary,' he said: "Sometimes said to be a W. Indian or American word; for which there is not the slightest evidence. The etymology of this word has never been pointed out; I think it is obviously a corruption of the Malay *brum*, or *bram*, the loss of *b* being due to want of familiarity with the Malay language," etc., etc.

In 1885 there appeared in *Timehri*, a periodical published in British Guiana, a paper with the title of "The Etymology of the Word Rum." It was written by Mr. Darnell Davis, the Comptroller of Customs of British Guiana. The writer claimed that Rum was a clipped word, and that it was cut off from *Rumbullion*, which was the original name given to the spirit made from the juice of the sugar-cane in the earliest days of its manufacture by the planters of Barbados. Instances of the use of Rumbullion were given in *Timehri*. The first was from a manuscript in Trinity College, Dublin, which contains "a briefe description of the Island of Barbados," and which, although undated, bears internal evidence of having been written in 1651. In describing the various drinks then in vogue in Barbados, the writer says: "The chief fudling they make in the Island is *Rumbullion alias Kill-Divill*, and this is made of sugar-canes distilled, a hot, hellish, and terrible liquor." The second instance was taken from a news letter from Leyden, dated 23d February, 1652, and published in No. 90 of *Mercurius Politicus* for the week from the 19th to the 26th of February, 1652. There is a report in that news letter of the latest intelligence from Barbados, which includes the following statement:

"He that brings these tydings to us saith the English Lord Willoughby there, that governs for the King, or rather for himself, hath strengthened all the ports and avenues there, as Carlile, Spike Bay, etc. So that part by the Brandywine wherewith we have furnisht him, the spirits of *Rombullion*, which our men there make him, and other good hopes we give him, he becomes Very valiant."

The last instance was taken from volume ii. of Gen. Lefroy's valuable 'Memorials of the Bermudas,' in which the following record was given of an order made on the 27th of November, 1660, at the Assizes: "(1.) John Moclarie, an Irishman, haueing presumptuouslie undertaken to deliver a caske of Rumbullian to the Gouernor's Negroe woman Sarah Simon to keepe, if not to retaile the same for his aduantage, and thereby haueing occasioned great disorder and drunkenesse amongst the Gouernors Negroes and others, and the same Rumbullian haueing bin discouered by Mr. John Bristoe, Marshall, It is vnanimously Ordered that the same shall be sould and the produce thereof be bestowed upon the Scochman latelie wounded by Mathew Makennie for his maintainance."

To the foregoing might be added the reference to the "menaces of these *Rumbullion* Hectors," which is made by Gov. William Byam in his Declaration, printed in a very rare tract, entitled 'Surinam Justice,' which was published in London, somewhere about 1663, when Surinam belonged to England.

Rumbullion, it should be pointed out, is an old Devonshire word, meaning a great tumult, and was doubtless taken to Barbados by the men of Devonshire, so many of whom made their home in the tight little island during the great Civil War. Certainly, when men got primed with "this country's spirits," as a Barbados law of 1655 calls them, they were likely to become tumultuous—in fact, rumbustical.
